We know very well that it has been said during the remarkable debate had on the measure recently rushed through Congress that the Judiciary of the United States will be compelled, in case this measure shall become a law, to give it validity and force over the treaty stipulations of 1868, on the principle that later laws work the repeal of former laws that conflict with them. It is true that under the distribution of powers in our Government it will be the duty of the Federal Judiciary, in taking cognizance of this matter, to look only to the question of priority or subsequence in determining which of two conflicting laws it shall enforce; and since the Judiciary is charged with the administration of treaties not as international compacts, but only as municipal laws, it follows that a later law may work the *practical* repeal of a treaty stipulation, but the binding force of the treaty remains none the less operative in the eyes of international law and of universal jurisprudence. It is only a breach of international faith which has been perpetrated under the forms of municipal law, and which has the demerit of adding a brazen effrontery to the injustice that has been committed in the face of the world.

A treaty which provides for its own abrogation or amendment may be abrogated or amended in the way mutually stipulated by the contracting parties. Where no such way is prescribed by the terms of the treaty, it was once before held that Congress may take the responsibility of declaring the abrogation of a given treaty, for reasons deemed sufficient to justify such a step in morals and in equity. For instance, in the year 1798 the Congress assumed formally to abrogate the treaties of 1778 and 1793 with France. The preamble of the repealing act undertook to recite the grounds on which the statute was passed, but the abrogation was admitted none the less to be a breach of the treaty, and when, two years afterwards, our Government entered into a new convention with France she compelled the United States to admit that the treaty of amity and commerce of 1778 and the consular convention of 1793 had remained in moral obligation and legal effect notwithstanding the repealing Act of Congress. For she compelled us to surrender and assume all the claims we had against the French Government for spoliations committed on our commerce prior to 1800, and in consideration of such surrender she agreed to condone our failure to fulfill the obligations imposed on us by the treaties which we undertook to repeal, without having the right or power to do so under the rules of international law. And having thus set our seal to this principle in the case of France, by what logic shall we now evade its application in the case of China? Are we bound to keep faith with the European only, and shall we publish ourselves as covenant-breakers with the Asiatic whom we are seeking to allure into the paths of civilization and Christianity?

OUR POPULATION IN 1880.

CAREFUL estimates, based upon election returns, State census reports and other information, place the increase of population in the United States and Territories from 1870 to 1880 at 8,500,000, which would give us next year 47,058,371 population. If anything, this estimate is probably below the mark, and it is at least safe as a ground of calculation. Provided the basis of representation is not changed and no new States admitted, the increase in members of Congress and the Electoral College will be sixty-six. This will give the House 359 members, and (if no new States are admitted) there will be in the Electoral College 435 votes, requiring 218 to elect a President. Of these 435 votes, 157 will come from the South, and 278 from the North. This will sensibly diminish the dangers of a "solid South." At present the Electoral College has 369 votes, requiring 185 to elect, the Southern States having 138 and the Northern 231. In the next apportionment, according to the estimate here given, there will, therefore, be an increase of nineteen in the Southern States and forty-seven in the Northern States. This ratio of increase is largely in favor of the North, but not relatively greater than has characterized the growth of the sections for the past half-century. Of the Southern States, Texas will show the largest increase, the estimates indicating a population of 1,300,000 by the end of next year, which will give her ten members of Congress instead of six as now. Relatively, however, Texas is not increasing in population so rapidly as Kansas or Minnesota, and it is possible that either one of these States may eventually outstrip the giant of the Southwest. New York, with a present representation in Congress of thirty-three members, will after the next apportionment, if the basis remains unchanged, have thirty-eight members; and Illinois, Iowa, Kansas, Michigan, Missouri, Ohio, Pennsylvania, and Wisconsin will each show a gain of four representatives. It may be concluded, however, that as a matter of fact it will be necessary to change the basis of apportionment, unless the present Hall of Representatives shall be enlarged. An addition of sixty-six members cannot possibly be seated on the floor with either convenience or comfort. But the relative strength of the States in the House and Electoral College will, of course, be the same whether the basis of representation is changed or not.

RESULTS OF RAPID TRANSIT.

IT is already apparent that the elevated railroads are destined, at an early day, to effect a radical revolution in New York and the neighboring centres of population. In the upper part of the city, and in the direction of Westchester, property is rising in value; in Brooklyn and Jersey City there is a noticeable tendency towards depreciation. These and other significant facts warrant us in believing that at the approaching May "moving" the population of New York will be largely increased at the expense of both her sister cities.

Nor is this much to be wondered at. A very large proportion of the residents of both Brooklyn and Jersey City have their places of business, or are employed, in New York. They cross the ferries to their Brooklyn or Jersey homes not from choice but from necessity. Residences of all kinds have been cheaper in those cities than they have been in New York, and hitherto they have been of easier access. Time and money have both been saved by crossing the North or East Rivers. This state of things was the result, principally, of the geographical formation of Manhattan Island. A long and somewhat narrow strip of land, between two rivers or arms of the sea, and capable of expansion only in one direction, its lower or southern extremity is so crowded with business establishments that there is no space left for the homes of the people. In the up-town districts rents have been enormously high. The shores of Jersey and of Long Island, however, are invitingly close at hand; and in spite of the inconveniences of the ferries, great cities have been built up out of our overflowing population. Rapid transit has now overcome the geographical difficulty; and if we measure distance by time, the upper part of New York is brought nearer the business centre than either Brooklyn or Jersey City. With the prospect of reduced fares and cheap house accommodation, with none of the inconveniences which attach to the ferries, it is certain that large numbers who have hitherto sought homes on Long Island and along the Jersey coast will find it convenient to transfer their household gods to Manhattan Island.

It is not conceivable that the change can be other than in the highest degree beneficial to New York City. Nor are we disposed to believe that it will be other than temporarily an inconvenience to the sister cities on the east and west. That New York should be a great gainer by the elevated railroads is as natural as that the sunlight should warm and gladden the earth. The want of rapid transit from the extreme points of the island has in those later years been the great drawback to the city's growth and general prosperity. The inconveniences, all of which resulted from the same cause, were numerous. We shall content ourselves with mentioning only one. We do so the more readily because in this one may be summed up most of the others. Our resources for taxation, for years past, have been increasingly out of proportion to our business development. Property to many has become a burden rather than a benefit. It would not be difficult to show that this state of things is due in part to the extravagant and wasteful manner in which the financial affairs of the city have been managed. It would be useless, however to deny that it is due mainly to the fact that so large a proportion of the people who do business in New York have their homes and pay taxes elsewhere. It has been estimated, and we think not unfairly, that probably about one-half only of those who do business here reside and pay taxes in the city. Rapid transit, by offering superior comfort and accommodation on the island or in the adjoining County of Westchester, will make an end of this evil. It will lead to a redistribution of the populations; it will bring these thousands of wanderers home; and henceforth New York will reap the full benefit of the resources of her own trade and of her own people.

The change has not come too soon. In the opinion of many competent judges New York was in danger of losing that supremacy which gave her the name of the Empire City. Philadelphia, Boston and Baltimore were making vigorous efforts, and, enjoying certain advantages which were denied to New York, were pressing close upon her, and threatening to become dangerous rivals. Now she may defy all competitors. There are some who see in the present aspect of things that which recalls the memory of 1825—the year which witnessed the opening of the Erie Canal, and when New York received that impulse which pushed her ahead of Philadelphia, and gave her that primacy among the cities of the Union which she has since, in spite of varying fortune, steadily maintained. We can see no reason to dispute this view of the case. What we want now is wise and economical government, the steady and satisfactory improvement of our docks and piers, and the multiplication of all those facilities which connect our magnificent harbor with the fertile regions of the South and West. With economy, prudence, and well-directed enterprise, New York may become a second London; and in the prosperity of this city, all the neighboring cities, if they should temporarily suffer, will ultimately share. The overflow will again come, and it will be richer and more copious than ever.

THE NATIVE PRESS OF INDIA.

FORTY years ago Lord Macaulay said he hoped to see the day when India would have a free Press of its own, published in its own vernacular, and edited by native journalists. The reply of the friend to whom he expressed this hope was, "When there is a free Press on board a man-of-war it will be time enough to think of that!"

This was in 1835, and now there are over eighty newspapers published in the vernacular of India, and edited and owned by natives. Very few of these native journals, however, exceed in circulation a thousand copies, and even this number includes the subscription of the Viceregal Government. But it must not be inferred that the number of their readers is as limited as their editions. It is not the custom of the natives of India to purchase individual copies of a paper for themselves, but they adopt the plan occasionally pursued in this country of borrowing a neighbor's copy, and nothing is more common in India than to see one of these placid Hindoos reading his paper to a circle of attentive listeners. Thus a small edition does the work of a large one, and becomes a power in the community.

With regard to the papers themselves, their language betrays their origin. The style is as un-English as it is possible to be. It is crowded with Eastern imagery, and frequently raises a smile at the sublimity of the metaphor and the meanness of the application. It is an illustration of the old Eastern venders' cry, "In the name of the Prophet, figs." The names also of these newspapers are redolent of Orientalism, and would raise a smile upon the face of a New York newsboy. One of the most influential in Gaya is called the *Gobkasha Nasser*, which means the Nosegay of Precedents. This prints 700 copies, and is popular with native lawyers, many of whom contribute to its columns in a style which would astonish the Bennetts of our Press. In one leading article the editor thus commences: "Oh! golden morning breeze! I pray thee to speed over land and sea, and, kneeling at the feet of that great incarnation of majestic wisdom, the Empress of India, humbly beg her to repeal the *road cess* and the *land tax!*" Surely, this is equal to the old cry of the fig-vender! The *Bharat Mihir* has a leader telling its readers how often he had wept like a Hindoo widow over the iniquities of the Civil Service rules; and then, suddenly launching into the Bulgarian question, finishes with the following laudation of English rule:

"But, compared to the Turks, the English are gods. Through their means we have exchanged the intolerance and oppression of the Mohammedans for an inheritance of happiness and prosperity. We emphatically declare that the awakening of our native energy is due to the English Government; nevertheless, if the English do not learn to be more liberal, and if they do not gradually restore to the people rights from which they are now excluded, it will be a matter of wonder if they do not rise like the Bulgarians, and demand a share of civil service promotion."

But let us give one quotation from the *Amrita Bazar Patrika* of Moorshedabad, a vernacular journal which has published more sedition than any dozen of them put together. After arguing that the Hindoos ought to have assumed the sceptre of the Mogul, rather than allow the English to grasp it, the writer observes:

"But let us be just; the most uncompromising enemy of the English Government must admit that the country never before enjoyed the blessings of peace and the administration of justice which now prevail. We do not say that the British rule does not possess many faults, but with an increasing acquaintance with them and ourselves these will gradually disappear. At all events, it is our duty to strain every nerve to oppose the advance of so barbarous and bigoted a race as the Russians in their persistent and insidious advance upon our country. Now it is perfectly well known that the chief object Russia has in her war with Turkey is to attack India. It is, therefore, our duty to help Turkey to defeat the objects of Russia."

Sometimes, however, the "mild Hindoo" tries his hand at the sarcastic, as when the *Benares Patrika* gets hold of the inquisitive nature of British rule:

"Our condition is like a state of tutelage in the Patshala (school). No one can be born or die in quiet. You must take out a pass for a marriage. You cannot have a feast or a dance without a pass. You must get a pass to let off fireworks. You want a pass to possess a club to drive away the dogs. The British authorities take so much interest in us that it will soon not be lawful to sneeze, cough, or breathe without a pass."

But underlying all Hindoo patriotism is

Digitized by Google

the grand substratum of uncompromising hostility to Russia. The *Urdu Akhbar*, a native paper published in Delhi, says:

"It is true that Russia can bring an army into the field a hundred times as numerous as that of England, but the strength of the Russian army consists only in its numbers, that of England in discipline and valor, and there is no nation on the face of the earth so remarkable for its patriotism, loyalty, spirit and steadiness as the British, and the native subjects of the Empress of India."

The *Sufir-i-Hind*, of August 3d, declares "that, after all the kindness shown to Shere Ali by the Empress, his conduct is the height of ingratitude," and the *Moorshedabad Pratenidhi* says that the Ameer of Cabul is utterly unworthy of keeping his position. The *Lucknow Mazir-i-Quisar* denounces Russia for its apoliation of Turkey, and calls upon all civilized men to help the Turks; and the *Cawnpore Shed-i-tur* calls upon the British to help the Turks to the uttermost, and promises them the full aid and prayers of every true Hindoo.

Nevertheless, there are many journals, like the *Aligarth Institute Gazette*, which is the organ of the Mohammedan Progressists, or Naturalists, as they are called in Upper India, which hold other views. That paper has this significant passage:

"No thinking man should ever entertain the thought that Cyprus shall ever return to Turkish rule, which would undo all that British Administration has done; nor do we believe that the inhabitants of the island, when accustomed to the peace and tranquility of British rule, will ever willingly return to Turkish misrule."

The Indian Mohammedan Liberals, of which the *Aligarth Institute Gazette* is the prime exponent, are growing every day more powerful, and promise to divest Mohammedanism of many of its most repulsive features.

Our space will not admit of further extracts from these native journals; suffice it to say that, making every allowance for the immediate pressure of the Viceregal Government, the general feeling of the people of India is a settled hostility to Russia, and the conviction is that Shere Ali is a mere tool in the hands of that great Power.

AFFAIRS ABROAD.

THE Asiatic plague—one of the fatal bequests of the Russo-Turkish war—is alarming all Europe. The President of the Board of Health at Rome has predicted, in a speech before the Italian Chamber of Deputies, that if the plague penetrates Europe it will destroy a third of the population. It is hoped, however, that the measures adopted by the various countries to ward it off may prove successful. No cases have occurred for several days in Astrachan, but, according to the latest dispatches, it is raging with increased violence at Tzuritzin, on the Volga. The sanitary commissions of St. Petersburg and Moscow are multiplying precautions against it. The interior of Russia is reported to be in a condition of general unhealthiness and predisposition to epidemic diseases. The worst feature about the outbreak of the plague is that it has occurred in the depth of Winter, thus suggesting its diffusion through the air, and not through water, making its prevention all the more difficult. Nihilism continues to be dreaded as a political plague in Russia even more than the "black death" itself. It is a curious symptom of the mental unrest disturbing Russia, and of the natural reaction against the enforcement of a single, exclusive ecclesiastical system, that no less than one hundred and thirty-seven new sects were founded in Russia last year. The most singular of these sects is that of the Leeches, which exists among the peasants of Gajasonetz, in the Government of Vologda. Babes and "children of a larger growth" are baptized in blood drawn from a woman, and draughts of warm human blood are given to the new-born children of members.

Emperor William, in his speech from the throne, at the opening of the German Reichstag on the 12th of February, manifested the same dread of Socialism as that with which his nephew, the Czar, is inspired by Nihilism. The German people, however, do not seem to share the dread. Several Socialists, who are members of the Reichstag, regarding its convocation as annulling the decree of banishment against them, have returned to Berlin. The Federal Council has passed, but only by a single vote, the Reichstag Discipline Bill. All the eloquence of Prince Bismarck could not induce the Council to restore the obnoxious features which they had stripped it of. And the Chambers of Commerce throughout the Empire have expressed their disapproval of the Chancellor's customs programme. The German people are still tenacious of their own preference of free trade and free speech, in spite of the grim old Chancellor.

The reassembling of the British Parliament on the 13th of February quickly followed the startling news of the altogether unexpected defeat of British troops in South Africa. Vigorous movements are already on foot to retrieve the disaster, and however warlike King Cetywayo's Zulus may be, they will doubtless be compelled to yield to what Americans call "manifest destiny." British colonization will now advance more rapidly than ever towards the equator. The day has been hastened when a future Lord Beaconsfield shall make some successor of Queen Victoria Empress, not only of India, but of Africa. At present, however, in view of two wars that England has on hand, one with the Afghans and another with the Zulus—in view also of the labor strikes spreading throughout the United Kingdom like a prairie fire, and of the harsh and party measures of the Government in aid of interested parties who wish to stop the importation of American cattle—many Englishmen are greatly dissatisfied with Lord Beaconsfield's foreign policy. They complain that, so far, it has brought little "honor" and no "peace." And they cry "Hear, hear!" when even so hesitating a Liberal as Sir John Lubbock has hitherto been tells them that "he believes the country has more to fear from Lord Beaconsfield than from the Czar," and that "the Tories had increased the expenditure of the country by £14,000,000 a year—from £71,000,000 in 1873 to £85,000,000 in 1878—and we had nothing to show for it." The outlook for England is indeed somewhat gloomy at this moment.

The new Government of the French Republic is vigorously pushing forward its proposed measures relative to amnesty, official changes and army reform. The distribution of the prizes won at the greatest Lottery ever known began on the 12th of February. The newly founded Society of Painters in Water Colors, numbering among its members Madame Nathaniel de Rothschild and Madame Madeline Lemaire, is busily arranging for its exhibition in the Spring. Many artists, including a few Americans, are preparing works for the International Fine Art Exhibition at Munich, to be opened July 1st. His eccentric Majesty, King Louis of Bavaria, has published, under the pseudonym of Prince Aègon, a volume of poems in the Swinburne style. And King Humbert and Queen Margaret of Italy are making the Quirinal at Rome gayer with festivities than it has ever been before.

THE ranks of the "stalwart" Republicans in Congress will be strengthened by the election of Zachariah Chandler as Senator from Michigan, in place of Mr. Christiancy. Mr. Chandler is not a statesman, but he possesses great force of character, is a man of positive convictions, and in a long public career his personal integrity has never suffered a moment's eclipse.

SECRETARY SHERMAN has called the attention of Congress to the fact that there is a threatened deficiency of over $27,000,000 in the revenues of the current fiscal year. He recommends that authority be given him to sell bonds to meet the deficiency rather than to increase taxation. If the session were not so far advanced it is quite possible that the re-enactment of the income tax would be attempted. It appears to be the plan of some Congressmen ultimately to abolish taxation on tobacco, and, possibly, on whisky, and to substitute an income tax.

A BILL designed to prevent such desecrations of graves as that of the late A. T. Stewart has passed the State Legislature. It provides that any person who may remove a dead body from a grave or vault, "without authority of law, with intent to sell the same, or for the purpose of dissection, or for the purpose of procuring a reward for the return of the same, or from malice or wantonness, shall be deemed guilty of a felony, and on conviction thereof shall be punished by imprisonment in the State Prison for a term of not more than five years." Such a law, vigorously enforced, may possibly abate somewhat the evil at which it is aimed; but it should be made universal to accomplish fully the object desired.

A VERY effectual refutation of the charge that the national banks do not pay their proper share of tax for the support of the Government is furnished by the report of the State Assessors to the New York Legislature. The report shows that the taxes paid on $60,057,247 of national bank capital in 1877 in this city, to the State and the United States, was $3,072,832. The State taxes in the city in 1878, levied on an equalized valuation of $1,292,942,850, were but $3,749,534, only $676,702 more than the taxes paid by the banks to the Government and State on $1,232,885,603; or, the national banks paid more taxes than the amount of the State taxes paid by all the counties in the State except New York, Kings, Albany, and Westchester, and $34,712 over.

PRESIDENT HAYES is said to have written a letter to Collector Merritt, asking that no discrimination may be made in Custom House appointments against friends or supporters of the late Collector. Such a request is a great deal more creditable than certain letters of members of the Cabinet, addressed to ex-Collector Arthur, soliciting the appointment to "good places" of *protégés* or relatives of the writers. One such letter, written by the Secretary of the Treasury, asked the appointment of a young gentleman on the ground that he was the son of the President's law partner. Another asked that a Deputy Collectorship should be given to an Ohioan, because he had written a life of the President. It is not to be wondered at that *this* sort of civil service "reform" has failed to commend itself to the popular approval.

Now that New York has a new Capitol, it is suggested that the State should purchase a coal-mine to keep it warm. It appears that it takes 1,000 tons of coal a month to heat one side of the building, and it is estimated that when the whole is occupied at least 3,000 tons will be required for this purpose. The annual consumption, estimating the period in which heat will be required at six months, will amount to at least 15,000 tons, which, at an average of (say) four dollars a ton, will involve an expenditure of $60,000 per year for coal alone. By all means let the State purchase a coal-mine. It could utilize its convict-labor in getting out the "black diamonds," and put upon the market what it could not consume at the Capitol and in other State institutions which it must now supply at heavy cost.

THE report of the Superintendent of the Life-saving Service shows that during the last year there were 171 disasters to vessels, having on board 1,557 persons, within the limits of the operations of the service; that the number of lives saved was 1,331, the number of shipwrecked persons sheltered and succored at the stations was 423, and the total value of property saved was $1,097,375. A large proportion of the loss of life is made up of the 183 persons who perished at the wrecks of the *Huron* and *Metropolis*. There were four other wrecks, involving the loss of 10 lives, which occurred when the stations were closed; and one other disaster, involving the loss of four lives, happened at a distance, which made prompt assistance impossible. The report shows that the number of lives lost fairly and legitimately within the scope of the effective operations of the service was but 29, and further shows that this loss of life was not preventable by human effort. There is no department of the public service which is entitled to higher praise than this.

A BILL introduced into the New York Legislature proposes the establishment of a Bureau of Labor Statistics for the purpose of collecting and reporting to the Legislature, annually, statistical details relating to all kinds of labor in the State. The total expenses of the Bureau shall not exceed in any one year the sum of $10,000. Such a Bureau in Massachusetts has gathered a vast amount of highly useful information as to the relations of labor and capital, the condition, wages and needs of the laboring classes, the development and production of leading industries, etc. New Jersey, a year ago, established a similar Bureau, and its first annual report embodies an array of facts which will be found of great utility in the discussion of the subject of technical schools now under consideration in that State. With the "Labor question" forcing itself everywhere upon the attention of legislators and publicists, comprehensive statistical details of the character gathered, especially in Massachusetts, are more than ever desirable as assisting to an intelligent solution of problems involving the welfare alike of individuals and the State.

THE operation of the Compulsory Education Law in this city appears to be eminently salutary. It is steadily lifting the children of the streets out of the depths of vagrancy and vice, and out of the clutches of the law, and placing them in schools and institutions, "to be cleansed, instructed and reformed, and made a blessing rather than a curse to society." The reports of the agents of Truancy show that during the four years the law has been in operation they have investigated 48,907 cases, and have returned to school 13,683 truants taken from the streets. They have also put into schools 2,473 idle, disobedient or disorderly children, and have sent or caused to be sent to reformatory institutions 627 more who could not be induced to attend school. The records of the police courts also show the good effect of the law in the decreased numbers of children arrested. Previous to the passage of the law the arrests, for four years, of children between the ages of eight and fourteen years were 4,956, while during the last four years the number was 3,796, a decrease of about twenty-four per cent., without making any allowance for increase of population. There can be no question as to the wisdom of the compulsory system in thickly-populated communities, and if it could be introduced generally throughout the country no doubt vast benefits would result.

NEWS OF THE WEEK.

Domestic.

AN attempt is being made to suppress the Oneida (N. Y.) Community.

ON February 15th the Chinese Immigration Bill was passed in the Senate by a vote of 39 to 27.

CONGRESSMAN BUNCHARD, of Illinois, has been appointed Director of the Mint in place of the late Dr. Linderman.

TWO MEN have been sentenced to imprisonment for life at Terre Haute, for wrecking a train on the Indianapolis and St. Louis Railroad.

THE bondsmen of J. H. Wright, the defaulting Treasurer of Saratoga, have paid to the Supervisors $24,000 to make good the deficiency.

JOHN HOPE, who was arrested as one of the Manhattan Savings Bank burglars, has been identified by two witnesses as the man who spoke to the milkman.

MR. THOMAS LORD did not leave a will. His property is to be divided among his six children, in accordance with an instrument that was executed when the trust deed was made.

THE new capitol at Albany was formally dedicated February 12th in the presence of a distinguished concourse of officials and guests. Lieutenant-Governor Dornheimer made the speech of the occasion.

AN official call has been issued for a meeting to be held in New York City on April 30th, to consider the advisability of holding an international exhibition in 1889, the centennial anniversary of the foundation of the Government.

SENATOR BRUCE occupied the chair in the Senate on February 14th during a portion of the debate upon the Chinese Bill. This is the first time a colored man ever sat in the seat of the Vice-President of the United States.

A JOINT Democratic Congressional caucus has adopted a resolution binding the party to insist upon the repeal of the test-oath laws for jurymen, but declaring any action upon the election supervisor laws inexpedient at this session.

THE trustees of the Peabody Institute of Baltimore, which counts in its endowment fund $384,000 of Tennessee bonds, have resolved to accept a new 6 per cent. bond for 60 per cent. of the debt, or a 4 per cent. bond for the face value, accrued interest to be added.

PRESIDENT HAYES has written letters to Collector Merritt, Surveyor Graham and Naval Officer Burt, in which he says that no removals should be made for personal or political reasons. In accordance with his request the three officers have decided to fill vacancies after March 1st by competitive examinations.

THE stables at Blissville, L. I., have been seized by the sheriff under orders from Governor Robinson and will be quarantined. All diseased cattle are to be killed. A large quantity of milk from sick cows has been destroyed. The Legislature has appropriated $10,000 to defray the expenses of checking the spread of pleuro-pneumonia among cattle.

Foreign.

AN Austrian cabinet will be formed with Dr. Streumayr as Premier.

THE Powers have approved the occupation of Arab Tabia by Roumania.

THE Parisian Government contemplates the purchase of all the private railways in the kingdom.

THE Pope has proclaimed a universal jubilee and indulgence on the anniversary of his election.

THE Sultan of Morocco has been stricken with paralysis, and anarchy is said to reign throughout his dominions.

THERE is strong opposition in Germany to Bismarck's protection schemes, and a free-trade coalition will be formed in the Reichstag.

THE Liverpool carters and carpenters have struck. The strike among the sailors has practically ended in the submission of the strikers.

PREPARATIONS have been commenced in Japan for the reception of General Grant. A new residence is to be built expressly for him in the precincts of Yeddo Bay.

A DECISION has just been reached at the Vatican to create certain new dioceses in the United States, in consequence of the growth of the Church in that country.

TWO-THIRDS of the Dufferin Breakwater at St. Johns, N. B., was washed away by the recent heavy storm, causing considerable loss and damage to wharves and the old breakwater.

BY the resignation of Mr. Williamson, the United States Mission to Central America has fallen vacant. Mr. Williamson has abandoned a diplomatic career to enter upon the duties of superintendent of the Loma Large Mine.

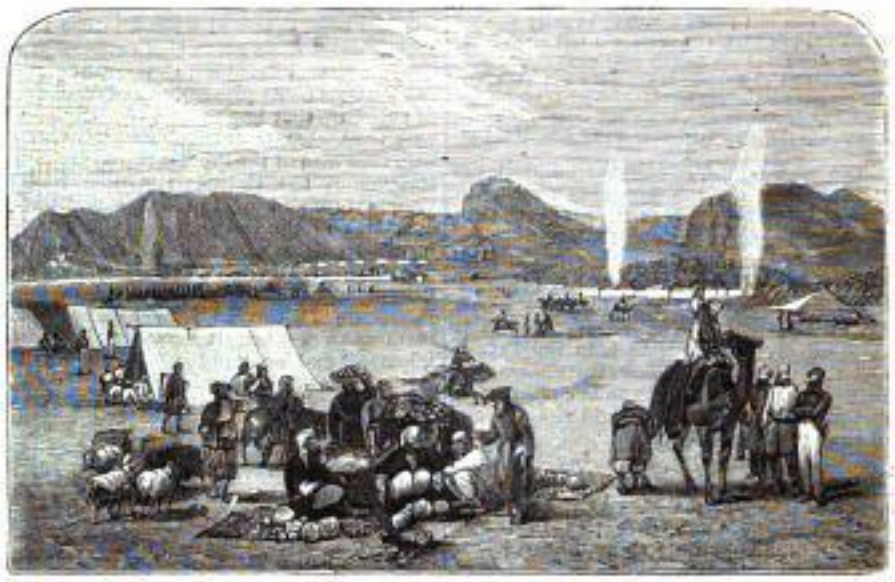
THE Boundary Commissioners on the part of Greece have decided to sign a protocol declaring that the negotiations had been broken off by the refusal of the Turkish Commissioners to proceed on the basis of the Treaty of Berlin.

IT is reported that M. Waddington is not in accord with his colleagues of the French Cabinet, and that his position is precarious. M. Gambetta and President Grévy counsel moderation and caution in the administration of the Republic.

THE British Parliament reassembled February 13th. Lord Beaconsfield, in the House of Lords, and Sir Stafford Northcote, in the House of Commons, reviewed the state of foreign relations and made announcements of proposed legislation.

AN Imperial manifesto has been issued announcing that the Czar has ratified the definitive treaty of peace with Turkey, and that orders have consequently been given the troops to return home. The manifesto closes with thanks to God for Russia's glorious victories. St. Petersburg was illuminated in honor of the event.

EMPEROR WILLIAM opened the German Reichstag in person on February 12th. Herr Forkenbeck was re-elected President. A declaration was presented on the 13th that a partial state of siege at Berlin was necessary to repress the secret Socialist propaganda and to prevent communication between the Foreign and German Socialists.



THE Japanese Government has notified Mr. Stevens, United States Charge d'Affaires at Yokahama, that any effort to establish treaty relations between the United States and Corea will be actively assisted by Japan. An American commissioner, if sent, will be escorted to the Corean capital, and Japanese moral and material support will be cordially rendered. No such assurance has been given any other nation.

SUBMARINE TELEPHONY.

A SERIOUS difficulty in submarine examinations has been lately triumphantly overcome by the employment of the telephone by the Department of Docks. It often happened that the divers who examined the submarine portions of the bulkhead wall and piers were compelled to come to the surface in order to make reports of their work and examinations. In cases of measurement, etc., this was not only annoying but often impracticable. In March last, the idea suggested itself that by using a telephone a means of communication direct and at the same time reliable could be obtained. Upon putting this idea into practice it was found that it was based upon sound principles, but was, in fact, not as successful as was hoped. Mr. C. W. Raymond, a graduate of Cornell University, one of the engineers of the Dock Department, then began, in September last, a series of experiments by which he has at last obtained perfect success. He first used two Phelps duplex telephones, one placed in the diver's helmet, and so arranged that by simply turning his head the diver could place either his mouth or ear to the instrument, and the other on the scow or barge where the pumps and divers' helpers were. This was found to work well in communication from the diver to his helper, but not so satisfactory in the contrary direction, as the escape of air from the diver's helmet, making a bubbling noise in the water, prevented his hearing as distinctly as desirable. Several expedients were resorted to, but still with unsatisfactory results, until at last Edison's Carbon Transmitter was added, which, by means of an induction coil and one cell of battery, gave perfect results. Conversation was carried on with the utmost facility, and the diver could talk and at the same time continue his work. Our illustration shows the submarine telephone in operation.

NEW YORK CITY.—THE TELETHONE AS USED BY THE DEPARTMENT OF DOCKS IN SUBMARINE DIVING.

HON. DANIEL W. VOORHEES,

U. S. SENATOR FROM INDIANA.

DANIEL W. VOORHEES, who was elected United States Senator from Indiana on January 2d last, for both the short and long terms, was born in Fountain County, Ind., September 26th, 1828. He graduated at the Indiana Asbury University in 1849, studied law, and entered upon its practice in 1851. In 1858 he was appointed United States District Attorney for Indiana, and held the office for a term of three years. He was elected to the Thirty-seventh, Thirty-eighth, Thirty-ninth (in which his seat was successfully contested), Forty-first and Forty-second Congresses, and defeated for the Forty-fifth. On the death of Hon. O. P. Morton he was appointed to fill the vacancy in the Senate, taking his seat November 12th, 1877. The contest in the Legislature, in which he gained his seat, showed the following voting results: In the House, for the long term, Daniel W. Voorhees received 57, Harrison 38, Buchanan 2. In the Senate, Voorhees received 26, Harrison 22, Buchanan 1. There were three absentees in the House and one in the Senate. For the short term Voorhees received the same vote in both Houses as for the long term, and the Hon. Godlove S. Orth received 37 votes in the House and 22 in the Senate. General Shackford received one vote in the House.

Senator Voorhees has been chiefly conspicuous on account of his radical "soft money" views and his opposition to the policy of resumption. His influence in this direction has been undoubtedly mischievous. He is a bitter partisan, but there is no reason to believe him other than conscientious in his views, and his personal integrity is beyond question.

HON. D.W. VOORHEES, U. S. SENATOR FROM INDIANA.

HON. Z. B. VANCE,

UNITED STATES SENATOR FROM NORTH CAROLINA.

ZEBULON B. VANCE, the new Democratic Senator from North Carolina, was born in Buncombe County, N. C., May 13th, 1830. He studied law, and was admitted to the Bar in 1853. In 1854 he was elected to the State Legislature. When Congressman T. L. Clingman (who had been elected Senator) resigned in 1858, Governor Vance was elected as a State's Rights American to succeed him. He was re-elected to the Thirty-sixth Congress, and served till the close of his term in March, 1861. Then he went into the Confederacy, and was elected Governor of North Carolina, serving from 1861 to 1864. During the early part of the war he was colonel of a regiment raised by him for the Confederate Army. In 1863 he addressed a letter to Jefferson Davis on the subject of peace, declaring that the only way of removing the discontent then prevailing in North Carolina was by making some attempt at negotiating with the Federal Government. In August, 1864, he was again elected Governor, defeating William H. Holden by 34,000 majority. He served until May 29th, 1865, when Holden was appointed Provisional Governor. In 1870 he was elected United States Senator, but it was declared that he was not eligible. In 1872 he again ran for the Senatorship, but withdrew before the contest ended. His disabilities had been removed in the meantime, and he would have been admitted if elected. Governor Vance still continued to be very active in North Carolina politics after his unsuccessful attempts to secure the Senatorship, and in 1877 was elected Governor for the term ending in 1881. The Senatorial contest which closed with his election on January 21st lasted six months.

MYRON W. WHITNEY.

THIS distinguished basso, whose voice and face are familiar to all lovers of oratorio, was born in Ashby, Mass., in 1837, and began the study of music when twenty years of age. The development of his magnificent voice was very rapid, and he soon began to take a prominent place at concerts and performances of oratorio. Mr. Whitney sang regularly with the Handel and Haydn Society and other first-class musical organizations from 1858 to 1861. In the home of the great maestro Vanuccini, Mr. Whitney spent several years in acquiring a thorough knowledge of the Italian language and method of singing, attending regularly the performances of opera at the Pergola Theatre, and hearing the most celebrated artists of the age. He took his departure for England in the year 1870, and spent several months in London, making a special study of oratorio singing with the celebrated composer Randegger. Returning to this country, Mr. Whitney found himself in great demand. So many urgent requests were constantly made to him to revisit England, that in August, 1871, he left Boston under engagement to the directors of Covent Garden Theatre. From August until November Mr. Whitney made an extended tour of the British Isles, singing almost every night, and everywhere meeting with the most enthusiastic reception. He took part in the oratorios of "The Messiah," "Elijah," "The Creation" and "Moses in Egypt," at the great Handel Festival at the Crystal Palace, and at the musical festivals at Glasgow, Nottingham and Leeds. In the Summer of 1874, Mr. Whitney again paid a visit to England and sang for a season of three months at the Royal Albert Hall. Here he was associated with Madame Patey, Madame Lemmens Sherrington, Mr. Sims Reeves, and other well-known oratorio artists, singing, besides the better-known works, many new ones not as yet made familiar to the public. In May, 1875, he took part in the Cincinnati Musical Festival and returned immediately to continue his engagements in England, where he remained until the Spring of 1876, when he came back to America and sang at the

Digitized by Google

celebrations in connection with the great Centennial Exhibition.

He has paid two visits to California, singing in San Francisco last Summer at the State Musical Festival held in that city, under the leadership of Herr Carl Zerraher. Enjoying the highest popularity on both sides of the Atlantic, and endowed with a robust frame and vigorous constitution, there seems every reason to predict that Mr. Whitney will long continue to occupy his position as the leading oratorio and concert basso of the world.

PERSUASION.

HE.

"LET us burst these bonds that bind us,
Leaving cruel wrong behind us,
Let us shape our own course, darling, and enjoy our brief life's span;
If earth's discord stands for duty,
And deformity means beauty,
Let us set our faces seaward, seek elysium while we can!"

SHE.

"If our lives would last the longer,
Our delight in life wax stronger,
Could I dream that ill remembrance and disquietude would cease,
I would go with you, my lover,
Had we not a roof to cover,
If the sea-ways held no quicksands and the farther shore were peace!"

HE.

"Oh, my soul's life, pause and hearken,
Ere the daylight round us darken,
While our hearts are strong in passion and our lives disdain at death,
We may build a glad, green bower,
Not to wither in an hour,
But to live and bloom abiding in love's fructifying breath."

SHE.

"I will go with you, my lover,
Though dark storm-clouds o'er us hover;
You have joyed in my rejoicing, you have sorrowed in my pain;
Let men's voices rise in chiding,
In your loyal faith confiding,
Unto you I trust my future, and I count my loss for gain."

BOTH.

"Heart to heart on glad lips greeting,
Heart's-desire all fear defeating,
We have set our faces seaward, and we front the rising sun:
While a spirit-chorus singing,
And far toneful bell-chimes ringing,
Bid us take it for a token that elysium is begun!"

JOHN MORAN.

THE FALLEN LEAVES.

BY WILKIE COLLINS.

CHAPTER IX.

AMELIUS rose impulsively from his chair. Mrs. Farnaby turned at the same moment, and signed to him to resume his seat. "You have given your promise," she whispered. "All I ask of you is to be silent." She softly drew the key out of the door, and showed it to him. "You can't get out," she said—"unless you take the key from me by force?"

Whatever Amelius might think of the situation in which he now found himself, the one thing that he could honorably do was to say nothing, and submit to it. He remained quietly by the fire. No imaginable consideration (he mentally resolved) should induce him to consent to a second confidential interview in Mrs. Farnaby's room.

The servant opened the house door. Regina's voice was heard in the hall.

"Has my aunt come in?"

"No, miss."

"Have you heard nothing of her?"

"Nothing, miss."

"Has Mr. Goldenheart been here?"

"No, miss."

"Very extraordinary! What can have become of them, Cecilia?"

The voice of the other young lady was heard in answer. "We have probably missed them, on leaving the concert-room. Don't alarm yourself, Regina. I must go back, under any circumstances; the carriage will be waiting for me. If I see anything of your aunt, I will say that you are expecting her at home."

"One moment, Cecilia! (Thomas, you needn't wait). Is it really true that you don't like Mr. Goldenheart?"

"What! has it come to that, already? I'll try to like him, Regina. Good-by again!"

The closing of the street-door told that the ladies had separated. The sound was followed, in another moment, by the opening and closing of the dining-room door. Mrs. Farnaby returned to her chair at the fireplace.

"Regina has gone into the dining-room to wait for us," she said. "I see you don't like your position here; and I won't keep you more than a few minutes longer. You are, of course, at a loss to understand what I was saying to you when the knock at the door interrupted us. Sit down again for five minutes: it fidgets me to see you standing there, looking at your boots. I told you I had one possible consolation still left. Judge for yourself what the hope of it is to me, when I own to you that I should long since have put an end to my life, without it. Don't think I am talking nonsense: I mean what I say. It is one of my misfortunes that I have no religious scruples to restrain me. There was a time when I believed that religion might comfort me. I once opened my heart to a clergyman—a worthy person, who did his best to help me. All useless! My heart was too hard, I suppose. It doesn't matter—except to give you one more proof that I am thoroughly in earnest. Patience! patience! I am coming to the point. I asked you some odd questions on the day when you first dined here? You have forgotten all about them, of course?"

"I remember them perfectly well," Amelius answered.

"You remember them? That looks as if you had thought about them afterwards. Come! tell me plainly what did you think?"

Amelius told her plainly. She became more and more interested, more and more excited, as he went on.

"Quite right!" she exclaimed, starting to her feet and walking swiftly backwards and forwards in the room. "There *is* a lost girl whom I want to find; and she is between sixteen and seventeen years old, as you thought. Mind! I have no reason—not the shadow of a reason—for believing that she is still a living creature. I have only my own stupid, obstinate conviction, rooted here," she pressed both hands fiercely on her heart, "so that nothing can tear it out of me! I have lived in that belief—oh, don't ask me how long, it is so far, so miserably far, to look back!" She stopped in the middle of the room. Her breath came and went in quick, heavy gasps; the first tears that had softened the hard wretchedness in her eyes rose in them now, and transfigured them with the divine beauty of maternal love. "I won't distress you," she said, stamping on the floor, as she struggled with the hysterical passion that was raging in her. "Give me a minute, and I'll force it down again."

She dropped into a chair, threw her arms heavily on the table, and laid her head on them. Amelius thought of the child's frock and cap hidden in the press. All that was manly and noble in his nature felt for this unhappy woman, whose secret was dimly revealed to him now. The little selfish sense of annoyance at the awkward situation in which she had placed him vanished to return no more. He approached her, and put his hand gently on her shoulder. "I am truly sorry for you," he said. "Tell me how I can help you, and I will do it with all my heart."

"Do you really mean that?" She roughly dashed the tears from her eyes, and rose as she put the question. Holding him with one hand, she parted the hair back from his forehead with the other. "I must see your whole face," she said—"your face will tell me. Yes, you do mean it. The world hasn't spoilt you yet. Do you believe in dreams?"

Amelius looked at her, startled by the sudden transition. She deliberately repeated her question.

"I ask you seriously," she said; "do you believe in dreams?"

Amelius answered seriously, on his side. "I can't honestly say that I do."

"Ah!" she exclaimed, "like me. I don't believe in dreams, either. I wish I did! But it is not in me to believe in superstitions; I'm too hard—and I'm sorry for it. I have seen people who were comforted by their superstitions; happy people, possessed of faith. Don't you even believe that dreams are sometimes fulfilled by chance?"

"Nobody can deny that," Amelius replied; "the instances of it are too many. But for one dream fulfilled by a coincidence, there are——"

"A hundred at least that are *not* fulfilled," Mrs. Farnaby interposed. "Very well. I calculate upon that. See how little hope can live on! There is just the barest possibility that what I dreamed of you the other night may come to pass—and that one poor chance has encouraged me to take you into my confidence, and ask you to help me."

This strange confession—this sad revelation of despair still unconsciously deceiving itself under the disguise of hope—only strengthened the compassionate sympathy which Amelius already felt for her. "What did you dream about me?" he asked, gently.

"It's nothing to tell," she replied. "I was in a room that was quite strange to me: and the door opened, and you came in leading a young girl by the hand. You said, 'Be happy at last; here she is.' My heart knew her instantly, though my eyes had never seen her since the first days of her life. And I woke myself, crying for joy. Wait! it's not all told yet. I went to sleep again, and dreamed it again, and woke, and lay awake for a while, and slept once more, and dreamed it for the third time. Ah, if I could only feel some people's confidence in three times! No: it produced an impression on me—and that was all. I got as far as thinking to myself: There is just a chance; I haven't a creature in the world to help me; I may as well speak to him. Oh, you needn't remind me that there is a rational explanation of my dream. I have read it all up in the Encyclopedia in the library. One of the ideas of wise men is that we think of something, consciously or unconsciously, in the daytime, and then reproduce it in a dream. That's my case, I dare say. When you were first introduced to me, and when I heard where you had been brought up, I thought directly that *she* might have been one among the many forlorn creatures who had drifted to your Community, and that I might find her through you. Say that thought went to bed with me—and we have the explanation of my dreams. Never mind! There is my one poor chance in a hundred still left. You will remember me, Amelius, if you *should* meet with her, won't you?"

The implied confession of her own intractable character, without religious faith to ennoble it, without even imagination to refine it—the unconscious disclosure of the one tender and loving instinct in her nature still piteously struggling to live, with no sympathy to sustain it, with no life to guide it—would have touched the heart of any man not incurably depraved. Amelius spoke with the fervor of his young enthusiasm. "I would go to the uttermost ends of the earth, if I thought I could do you any good. But, oh, it sounds so hopeless!"

She shook her head, and smiled faintly.

"Don't say that! You are free, you have money, you will travel about in the world and amuse yourself. You will see in a week more than stay-at-home people see in a year. How do we know what the future has in store for us? I have my own idea. She may be lost in the labyrinth of London, or she may be hundreds and thousands of miles away. Amuse yourself, Amelius—amuse yourself. To-morrow, or ten years hence, you *might* meet with her!"

In sheer mercy to the poor creature, Amelius refused to encourage her delusion. "Even supposing such a thing could happen," he objected, "how am I to know the lost girl? You can't describe her to me; you have not seen her since she was a child. Do you know anything of what happened at the time—I mean at the time when she was lost?"

"I know nothing."

"Absolutely nothing?"

"Absolutely nothing."

"Have you never felt a suspicion of how it happened?"

Her face changed; she frowned as she looked at him. "Not till weeks and months had passed," she said, "not till it was too late. I was ill at the time. When my mind got clear again, I began to suspect one particular person—little by little, you know; noticing trifles, and thinking about them afterwards." She stopped, evidently restraining herself on the point of saying more.

Amelius tried to lead her on. "Did you suspect the person——?" he began.

"I suspected him of casting the child helpless on the world!" Mrs. Farnaby interposed, with a sudden burst of fury. "Don't ask me any more about it, or I shall break out and shock you!" She clinched her fists as she said the words. "It is well for that man," she muttered between her teeth, "that I have never got beyond suspecting, and never found out the truth! Why did you turn my mind that way?" You shouldn't have done it. Help me back again to what we were saying a minute ago. You made some objection; you said——?"

"I said," Amelius reminded her, "that, even if I did meet with the missing girl, I couldn't possibly know it. And I must say more than that—I don't see how you yourself could be sure of recognizing her if she stood before you at this moment."

He spoke very gently, fearing to irritate her. She showed no sign of irritation—she looked at him, and listened to him, attentively.

"Are you setting a trap for me?" she asked.

"No!" she cried, before Amelius could answer, "I am not mean enough to distrust you—I forgot myself. You have innocently said something that rankles in my mind. I can't leave it where you have left it. I don't like to be told that I shouldn't recognize her. Give me time to think; I must clear this up."

She consulted her own thoughts, keeping her eyes fixed on Amelius.

"I am going to speak plainly," she announced, with a sudden appearance of resolution. "Listen to this. When I banged to the door of that big cupboard of mine, it was because I didn't want you to see something on the shelves. Did you see anything in spite of me?"

The question was an awkward one to answer. Amelius hesitated. Mrs. Farnaby insisted on a reply.

"Did you see anything?" she reiterated.

Amelius owned that he had seen something.

She turned away from him, and looked into the fire. Her firm, full tones sank so low, when she spoke next, that he could barely hear them.

"Was it something belonging to a child?"

"Yes."

"Was it a baby's frock and cap? Answer me. We have gone too far to go back. I don't want apologies or explanations—I want Yes or No."

"Yes."

There was an interval of silence. She never moved; she still looked into the fire—looked as if all her past life was pictured there in the burning coals.

"Do you despise me?" she asked, at last, very quietly.

"As God hears me, I am only sorry for you!" Amelius answered.

Another woman would have melted into tears. This woman still looked into the fire—and that was all. "What a good fellow!" she said to herself—"what a good fellow he is!"

There was another pause. She turned towards him again as abruptly as she had turned away.

"I had hoped to spare you, and to spare myself," she said. "If the miserable truth has come out, it is through no curiosity of yours, and (God knows!) against every wish of mine. I don't know if you really felt like a friend towards me before—you must be my friend now. Don't speak! I know I can trust you. One last word, Amelius, about my lost child. You doubt whether I should recognize her if she stood before me now. That might be quite true, if I had only my poor hopes and anxieties to guide me. But I have something else to guide me—and, after what has passed between us, you may as well know what it is; it might, even by accident, guide you. Don't alarm yourself; it's nothing distressing this time. How can I explain it?" she went on, pausing, and speaking in some perplexity to herself. "It would be easier to show it—and why not?" She addressed herself to Amelius once more. "I'm a strange creature," she resumed. "First, I worry about my own affairs—then I puzzle you—then I make you sorry for me—and now (would you think it?) I am going to amuse you! Amelius, are you an admirer of pretty feet?"

Amelius had heard of men (in books) who had found reason to doubt whether their own ears were not deceiving them. For the first time, he began to understand those men and to sympathize with them. He admitted, in a certain bewildered way, that he was an admirer of pretty feet—and waited for what was to come next.

"When a woman has a pretty hand," Mrs. Farnaby proceeded, "she is ready enough to show it. When she goes out to a ball, she favors you with a view of her bosom and a part of her back. Now, tell me! If there is no impropriety in a naked bosom, where is the impropriety in a naked foot?"

Amelius agreed, like a man in a dream. "Where, indeed?" he remarked—and waited again for what was to come next.

"Look out of the window," said Mrs. Farnaby.

Amelius obeyed. The window had been opened, for a few inches at the top, no doubt to ventilate the room. The dull view of the courtyard was varied by the stables, at the further end, and by the kitchen skylight rising in the middle of the open space. As Amelius looked out, he observed that some person in the kitchen required apparently a large supply of fresh air. The swinging window, on the side of the skylight which was nearest to him, was invisibly and noiselessly pulled open from below, the similar window, on the other side, being already wide open also. Judging by appearances, the inhabitants of the kitchen possessed a merit which is exceedingly rare among domestic servants—they understood the laws of ventilation and appreciated the blessing of fresh air.

"That will do," said Mrs. Farnaby. "You can turn round now."

Amelius turned. Mrs. Farnaby's boots and stockings were on the hearthrug, and one of Mrs. Farnaby's feet was placed ready for inspection on the chair which he had just left. "Look at my right foot first," she said, speaking gravely and composedly, in her ordinary tone.

It was well worth looking at—a foot equally beautiful in form and in color; the instep arched and high, the ankle at once delicate and strong, the toes tinged with rose-color at the tips. In brief, it was a foot to be photographed, to be cast in plaster, to be fondled and kissed. Amelius attempted to express his admiration, but was not allowed to get beyond the first two or three words. "No," Mrs. Farnaby explained, "this is not vanity—simply information. You have seen my right foot, and you have noticed that there is nothing the matter with it. Very well. Now look at my left foot. She put her left foot up on the chair. "Look between the third toe and the fourth," she said.

Following her instructions, Amelius discovered that the beauty of the foot was spoilt, in this case, by a singular defect. The two toes were bound together by a flexible web, or membrane, which held them to each other as high as the insertion of the nail on either side.

"Do you wonder," Mrs. Farnaby asked, "why I show you the fault in my foot? Amelius! my poor darling was born with my deformity—and I want you to know exactly what it is, because neither you nor I can say what reason for remembering it there may not be in the future." She stopped, as if to give him an opportunity of speaking. A man shallow and flippant by nature might have seen the disclosure in a grotesque aspect. Amelius was sad and silent. "I like you better and better," she went on. "You are not like the common run of men. Nine out of ten of them would have turned what I have just told you into a joke—nine out of ten would have said, 'Am I to ask every girl I meet to show me her left foot?' You are above that; you understand me. Have I no means of recognizing my own child, now?"

She smiled, and took her foot off the chair—then, after a moment's thought, she pointed to it again.

"Keep this as strictly secret as you keep everything else," she said. "In the past days, when I used to employ people privately to help me to find her, it was my only defense against being imposed upon. Rogues and vagabonds thought of other marks and signs—but not one of them could guess at such a mark as *that*. Have you got your pocket-book, Amelius? In case we are separated at some later time, I want to write the name and address in it of a person whom we can trust. I persist, you see, in providing for the future. There's the one chance in a hundred that my dream may come true—and you have so many years before you, and so many girls to meet with in that time!"

She handed back the pocket-book, which Amelius had given to her, with a man's name and address inscribed on one of the blank leaves.

"He was my father's lawyer," she explained; "and he and his son are both men to be trusted. Suppose I am ill, for instance—no, that's absurd; I never had a day's illness in my life. Suppose I am dead (killed, perhaps, by some accident, or by my own hand), the lawyers have my written instructions, in the case of my child being found. Then again—I am such an unaccountable woman—I may go somewhere, all by myself. Never mind! The lawyers shall have my address, and my positive orders (though they keep it a secret from all the world besides) to tell it to you. I don't ask your pardon, Amelius, for troubling you. The chances are so terrible against me; it is all but impossible that I shall ever see you—as I saw you in my dream—coming into the room, leading my girl by the hand. Odd, isn't it? This is how I veer about between hope and despair. Well, it may amuse you to remember it one of these days. Years hence, when I am at rest in mother-earth, and when you are a middle-aged married man, you will tell your wife how strangely you once became the forlorn hope of the most wretched woman that ever lived—and you may say to each other, as you sit by your snug fireside, 'Perhaps that poor lost daughter is still living somewhere, and wondering who her mother was.' No! I won't let you see the tears in my eyes again—I'll let you go at last."

She led the way to the door, and opened it.

"Good-by and thank you," she said. "I want to be left to myself, my dear, with that

Digitized by Google

little frock and cap which you found out in spite of me. Go, and tell my niece it's all right—and don't be stupid enough to fall in love with a girl who has no love to give you in return." She pushed Amelius into the hall. "Here he is, Regina!" she called out; "I have done with him."

Before Amelius could speak, she had shut herself into her room. He advanced along the hall, and met Regina at the door of the dining-room.

(To be continued.)

PETER COOPER.

ON Wednesday evening, February 12th, the eighty-eighth birthday of Peter Cooper was fittingly celebrated at the residence of his daughter, Mrs. Abram S. Hewitt, by a company of the most eminent ladies and gentlemen of the city, all personal friends of the esteemed philanthropist. In the midst of the congratulations the guests were assembled in and about the drawing-room to witness the presentation to Mr. Cooper of the diploma and honorary degree of Doctor of Laws by the Regents of the University of the State of New York.

At the head of the room were Hon. Erastus C. Benedict, Chancellor of the Board of Regents, with Hon. Henry R. Pierson, Vice-Chancellor, and Hons. Chauncey M. Depew, Whitelaw Reid, George William Curtis, and O. H. Warren, Regents of the University. Chancellor Benedict made the address of presentation, in which he announced that the guest of the evening, having arrived at the age of eighty-eight years, this occasion was deemed a fitting opportunity, by the Board of Regents, to confer upon him the degree which they had so long been desirous of investing him with; not so much, perhaps, for his scholarly attainments as for the dignified and philanthropic position to which he had been exalted by his own efforts, after a long life of laborious exertion and good deeds, in founding an institution of learning for the common people of New York, and putting it upon a basis which would permanently endure when he had passed away.

Mr. S. B. Woolworth, Secretary of the Board of Regents, then read the resolution of the board conferring upon Mr. Cooper the honorary degree of LL.D.

Revs. Drs. Adams and Harris were requested to present Mr. Cooper for the conferring of the degree, and these venerable gentlemen led him forward to a table, upon which laid the diploma, engrossed in Latin script upon vellum, when Chancellor Benedict delivered a brief formal address of investiture in Latin, presented Mr. Cooper with the diploma, and announced that he was a Doctor of Laws.

Mr. Cooper read a feeling response, and at its close surprised the company by repeating a long and appropriate quotation from Pope, without the omission of a word. After this, refreshments were served, and the congratulations renewed until eleven o'clock, when the company departed.

Mr. Cooper was born in the City of New York, February 11th, 1791. His maternal grandfather, John Campbell, was alderman of New York and a deputy quartermaster-general during the Revolutionary War, and expended a considerable private fortune in the service of his country. The early life of Mr. Cooper was one of great labors, struggles, and anxieties, as it is with most of our successful and prominent men in this country. He began in early boyhood to help his father in the manufacture of hats. He attended school only for half of each day for a single year; and beyond this very humble instruction, his acquisitions were all his own. At the age of seventeen he was placed with John Woodward to learn the trade of coachmaking. At this he served his apprenticeship so much to the satisfaction of his master that he offered to set him up in his business; but this he declined, on account of the debt and obligation it would involve. The foundation of Mr. Cooper's fortune was laid in the opportune invention of an improvement in machines for shearing cloth, which was largely called into use during the War of 1812, when all importations of cloth from England were stopped. This lost its value on the declaration of peace. Then he turned his workshop to the manufacture of cabinet-ware; then he went into the grocery business in New York, and subsequently he engaged in the manufacture of glue and isinglass, which he carried on for more than fifty years.

Mr. Cooper's attention was early called to the great resources of this country for the manufacture of iron. In 1830 he erected iron-works at Canton, within the limits of the City of Baltimore. Subsequently he erected a rolling and a wire mill in the City of New York, in which he first successfully applied anthracite to the puddling of iron. In 1845 he removed the machinery and shops to Trenton, N. J., where he eventually erected the largest rolling-mill, at that time, in the United States for the manufacture of railroad iron. In these works he was the first to roll wrought-iron beams for fire-proof buildings. These works have grown to be very extensive, including mines, blast furnaces, and water-power, and are now carried on by his successors. While in Baltimore, in the year 1830, Mr. Cooper built, after his own designs, the first locomotive that was ever turned out on this continent. The trial trip was run, Mr. Cooper himself acting as engineer; and when his wheezing little baby locomotive threatened to lose too much steam he held down the safety-valve with his own hands. The run was made with thirty passengers, thirteen miles in one hour, and Baltimore was happy.

Mr. Cooper took a great interest and invested a large capital in the extension of the electric telegraph. He was the first and only President of the New York, Newfoundland, and London Telegraph Company, which was the first ocean telegraph company organized, and continued in existence for nearly nineteen years. He became also President of the American Telegraph Company, and of the North American Telegraph Association, which at one time represented and governed more than two-thirds of all the lines in the United States. He was one of the first expedition to lay a cable in 1857 across the Gulf of St. Lawrence, and, though this enterprise partially failed at that time, it was the pioneer of final success. Mr. Cooper also was early interested in the canal navigations of the State of New York, and made experiments in substituting other than horse-power in the propulsion of boats.

Mr. Cooper has served in both branches of the New York Common Council, and was a prominent advocate of the construction of the Croton Aqueduct. His great object, however, has been to educate and elevate the industrial classes of the community. He early became a trustee of the Public School Society, and at the time of its being merged in the Board of Education, Mr. Cooper was its Vice-President. He subsequently became a School Commissioner; but feeling that no common school system could supply a technological education, he determined to establish in his native city an institution in which the working classes could secure that instruction for which he, when young and ambitious, sought in vain. This was felt by himself to be the great want of his early life. In 1854 he laid the foundation of the building at the junction of the Third and Fourth Avenues, "to be forever devoted to the union of Science and Art, in its application to the useful purposes of life."

The Cooper Institute building cost $634,000. To this donation Mr. Cooper added $10,000 in money, that the institution might be placed in running order. Other sums were contributed by him from time to time, including one of $20,000 to furnish the Institution with a museum. Altogether, he expended upon it about three-quarters of a million of dollars. The Institute consists of a series of free schools of instruction in practical art and science, a free reading-room and free courses of popular lectures on subjects of science, art and social reform. About twenty professors and instructors are employed. The influence of such an institution, in the promotion of art and its utilization in practical life, cannot be measured in ordinary language. It constitutes a factor of growth and progress whose potency will reach to remote generations. We have numbered among our own employés graduates of this grand Art School of the people, and therefore speak intelligibly as to its value and efficiency.

Sheep as Beasts of Burden.

SHEEP do not appear to be well adapted for use as beasts of burden, and it is often as much as they are capable of doing to carry their own carcasses or fleeces to market. In Central Asia, however, these surefooted animals are employed to carry small loads over the difficult hilly country, and part of the import trade of India is due to the service rendered by sheep. In Eastern Turkestan and Thibet, for instance, borax, of which considerable supplies are exported to Europe through India, is borne on the backs of sheep over the mountains to Leh, Kangra and Rampur on the Sutlej. Borax is found at Rudok, in Changthan, of such excellent quality that only twenty-five per cent. is lost in the process of refining, while the borax found elsewhere is reduced by one-half before it can find a market. The Rudok borax is carried on sheep to Rampur, traveling at the rate of two miles a day; and, notwithstanding its superior quality and the demand that exists for it in Europe, the expenses attending its transport seriously hamper the trade, which, if it were not for the sheep, would scarcely exist at all. A similar use of animals as beasts of burden which are not usually so employed, but are, on the contrary, bred for the sake of their hair or wool, or for their flesh, may be met with in Peru, where the llamas are made to carry heavy loads—often as much as sixty to ninety pounds each—up and down the mountains, to and from the nitrate and other mines. These animals, with such loads, will travel as many as twelve miles a day.

The Chinese Post Office.

EACH city has a certain number of licensed companies who make a business of receiving and sending letters and small parcels at charges depending upon weight and distance, but always most moderate; and the companies of the several cities being in partnership or in confidential relation one with the other, a network of communication of a most efficient character, considering its materials, is kept up from one end of China to the other. So much reliance is placed by the public upon the safety and certainty of these conveyance companies that large sums of money in paper, and smaller amounts in cash, are fearlessly consigned to their charge, and instances are rare of the trust being betrayed. Speed, of course, is less of a consideration than safety, owing to the defective means of communication at present existing; but the carriers employed by the companies travel at the fastest rate possible under the circumstances, and cover much more ground in the time than was the habit with English postboys previous to the mail-coach days, who never exceeded, even on horseback, their three and a half miles per hour. Robberies of the bags must at times occur, but the public are at any rate safe from the risk to their letters which our ancestors so frequently incurred through the loitering and drunkenness peculiar to the English postboy tribe. The practice of using carrier-pigeons for express intelligence is common throughout China, and is largely resorted to by merchants and traders for business purposes. The pigeons are usually provided with one or more whistles, often of elaborate make and finish, to protect them from the ravages of hawks, etc., en route.

Influence of Railways on Towns.

THE *Allgemeine Zeitung* publishes some interesting figures relative to the influence of railways on the increase of the town populations of Germany. Of 2,528 towns of over 2,000 inhabitants only 867 in the year 1867 were provided with a railway. In 1871 there were 1,049, and in 1875, 1,270. In the course of these eight years the total population of 2,528 towns rose from 8,848,000 to 12,424,000. Of 1,837 towns of from 2,000 to 5,000 inhabitants, in 1867 there were 1,188 without any railway communication. In 1871 they had fallen to 1,263, and in 1875 to only 1,095. Of 591 towns of from 5,000 to 20,000 inhabitants in 1867, 208 were without a railway; in 1871, 213; and in 1875 only 162; while those provided with railways increased from 323, with a population of 2,759,000, to 429, with a population of 4,060,000. Of the 88 towns of from 20,000 to 100,000 inhabitants all were provided with railways in 1875. Their population increased from 2,750,000 to 3,500,000 during the interval in question. Of towns of more than 100,000 inhabitants, all, of course, also provided with railways, the population increased from 2,050,000 to 2,665,000. The total increase of the population of the towns of more than 2,000 inhabitants from 1871 to 1875 was 1,511,000. The population of the whole German Empire only increased in the same period by 1,658,000.

Cigarette-smoking among Russian Ladies.

LADIES as well as gentlemen smoke cigarettes in Russia—ladies of all classes and under all circumstances, I was about to say. I would not, however, give the reader to understand that ladies of the highest class would stroll the streets of a great city puffing a cigarette, though they might parade a small village in that fashion. But they smoke at railway stations, on steamboats and at hotels, dozens of cigarettes a day sometimes, scratching the necessary matches on pillar or post, just like a man. Sometimes a light goes out and they try again—as why shouldn't they? If they have no matches or wish to save themselves the trouble of lighting one, they ask the first gentleman smoking they meet to favor them with a light! Leaning forward to the cigar, pipe or cigarette, which he extends, they ignite their little roll, bow silently and pass on. Sometimes a gentleman asks a lady to extend to him the same favor, and sometimes I am inclined to believe the spark of love as well as the fragrant tobacco-leaf is kindled in the course of these civilities. The only difficulty the lady labors under in the whole matter is due to the character of her costume. She cannot scratch a match on her pantaloons like an Irishman! I speak of these things here because my ride from Vladikavkaz to Tiflis determined me to become a smoker, if I continue my travels in the East, as I intend to. The ladies who were in the diligence smoked cigarettes nearly all the way, and when I got out at Tiflis I felt more like a piece of New England bacon than a human being. When I told them I didn't smoke, they seemed disinclined to believe me. "You an American and don't smoke!" they explained. "I thought all the Americans smoked." But I shall learn.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS

The Afghan War.

In the centre of the Afghan fort at Dakka, upon an artificial mound, is the house of the late Afghan commandant, Ghulam Haidar Khan, which is now the headquarters mess-room of Lieutenant-General Sir Samuel Browne. The mess-house is a spacious apartment of rather stately proportions, and decorated in a rough style. The superintendence of the headquarters mess is confided to Captain Mure, who is assisted by Lord William Beresford; and here we see both those gallant officers, at the table on the right-hand side of the room, ladling out the soup and the stew, which are received by the attendant "kitmutgars" to be handed to the company sitting at other tables. Sir Samuel Browne, with Major Cavagnari on his right, and Captain Guy Campbell, aide-de-camp, on his left, sits in the far left-hand corner. The gentlemen are not in strict military costume; some are wearing ulster great-coats, and some, as Lord William Beresford does, wear the sheepskin coat, or "poshteen," of the native hillmen; one gallant major, who is assistant quartermaster-general, has on a red night cap. Mr. Archibald Forbes, special correspondent of the *Daily News*, sits in the left-hand foreground. Another of our engravings has been drawn from several combined sketches representing the artillery and troops of General Appleyard's brigade, making the direct attack on Fort Ali Musjid from the Shagai ridge, at the entrance to the Khyber Pass, on November 21st, while flank attacks were simultaneously made by the other brigades, under Generals Macpherson and Tytler. The batteries of Royal Artillery and of Horse Artillery engaged upon this occasion were assisted by one of light mountain-guns, carried upon the backs of mules, as shown in our illustration. The scene at Kohat, with the piper and two men of the Seventy-second Highlanders (Duke of Albany's Own) performing a Tullochgorum reel before the camp bonfire, must delight the heart of every Scotchman. That "smart, clean, and well-behaved" Highland regiment, a few days later, had an opportunity at the Peiwar of showing its prowess by the smartest bit of fighting yet seen in this Afghan war. The City of Candahar, which was occupied by General Sir Donald Stewart on January 9th, is situated about 200 miles southwest of Cabul. It is surrounded by a mud wall, while its streets, which were remodeled by Ahmed Shah in 1753, are unusually regular, four broad lines of bazaars running at right angles through the centre, whence rises a domed building called the Chaursoo, a species of Town Hall, where the Ameer's proclamations were wont to be read out, and where the dead bodies of criminals were exposed to view. Candahar, which contains a population of some 150,000, is one of the great centres of the Central Asian trade, as it is a junction of the main roads between Cabul and Herat, and is always crowded with traders of all nationalities, ranging from the wild-looking Turkoman or Bokharan to the mild-spoken Hindoo. Candahar was occupied by the British in the war of 1842, and will be a valuable wintering-place for the forces of Generals Stewart and Biddulph, as stores are plentiful, and the climate is far milder than the regions through which they have been passing.

Ice-breaking Steamer in Christiana Bay.

The operation of cutting a channel through the ice for the passage of steam and other boats from the bay to the City of Christiana, Norway, as shown in our illustration, will have a familiar appearance to people who live in or pass through Baltimore this Winter. The severe cold weather produced much thicker ice than usual, and the boats that are ordinarily able to force a passage were for many days absolutely powerless. Extra efforts were made to secure a channel in order to release the large number of boats of the oyster fleet that had been caught in Chesapeake Bay by the frigid wave and held there, but it was not until the recent spell of comparatively warm weather that the release was effected. The interruption of business in Christiana by a complete locking of her beautiful bay is a more serious matter, as the city is the chief seaport of the country. Hence, whenever ice forms so thick as to impede navigation powerful ice-breaking boats are sent out to cut a channel

The New War in South Africa.

The great defeat of the British troops in the Zulu country, South Africa, has called renewed attention to the subject of British conquests in that far-off section. The Caffre War had scarcely been brought to a close when Lord Chelmsford delivered an ultimatum to the King of the Zulus. No notice being taken of it up to the date designated, the British began advancing across the border, and the first intelligence of consequence received in London was on February 10th, announcing the attack upon a portion of the troops by the Zulus, and the loss of 600 officers and men, with a vast amount of prisoners and munitions of war. Later in the week came news of the rising of the native levies serving with the British, the massacre of their officers, and the general desertion of the native force along the frontier. At the present writing the last reports are not credited, but they have added much to the prevailing excitement. Troops and war materials are being forwarded to Natal from various depots, and a most vigorous campaign is imminent. Our illustrations are of timely interest in connection with the new war. The troops departing from Southampton belong to the Ninety-ninth Regiment, numbering 700 officers and men, who were drawn directly from Aldershot. M'Naughten's Kranz is one of the many precipices which rise abruptly out of and about the Peri Bush, and is so called after an officer of Carrington's Light Horse, who lost his life in an engagement with the Caffres, which took place on the spot depicted in the foreground of the illustration, and resulted in the driving of the enemy out of his positions behind the huge boulders over the Kranz, which they descended in safety, marvelous to say, although they assisted themselves with grass ropes. In placing themselves in such a position, it is evident the chiefs considered a safe retreat to consist in the inability of their opponents to follow them when defeated. Directly opposite is Murray's Kranz, all around stretches the Peri, the difficulty of penetrating which consists not merely of the extreme closeness of the vegetation, but also of huge rocks, piled and strewn about amongst the trees, but perfectly invisible from outside.

AT HOME AND ABROAD.

—THE German Federal Council has adopted the Parliamentary Discipline Bill as modified by the committees.

—THE Berlin *Gazette* announces that a treaty of commerce between Germany and Samoa was signed January 24th.

—ENGLAND has concluded the convention with Turkey, purchasing the State domains in Cyprus, with the exception of the Sultan's private estates.

—IT is reported that the Chinese have been defeated by the Sarts, who captured the city of Kashgar, but the Chinese fortress, near Kashgar, was not taken.

—IT is said that no less than thirty officers high in authority in the Russian police have been assassinated since the murder of Mesentzoff, the chief of police in St. Petersburg.

—A NATIONAL convention of prominent and influential colored men will be held at Nashville, Tenn., in May next, to consider the condition of the colored people in the South.

—THE Spanish Government has purchased all the private rights in Cabrera, one of the Balearic Islands in the Mediterranean. They intend to establish there a penitentiary and an agricultural colony.

—A BUNCH of pinks from the village of Celerina, in the Engadine, has been a favorite bridal gift in England lately, principally because the peasants would only give up their beloved flowers after long coaxing.

—IT is probable that Theodore Thomas's string band, with Neuendorf as conductor, will supply the music at Brighton Beach next season. Gilmore's band, with Levy, will be at Manhattan Beach, and Dodworth's band, with Arbuckle, at Cable's.

—IT is intended to commemorate the centenary of the birth of the poet Thomas Moore on the 28th of May by a grand musical performance of Irish melodies in Dublin, on a scale somewhat similar to the Burns Centenary in Scotland.

—THRUM is a curious creek in West Texas, which enters a rocky gorge and runs under ground for forty miles. In some places natural wells 240 feet deep are found, through which the roaring of this subterranean creek can be heard plainly.

—BY a new law in Georgia, murder is to be punished by death, unless the jury shall recommend imprisonment for life, or the judge shall, in his discretion, extend that clemency where the conviction has been found solely on circumstantial evidence.

—THE utilizing of waste leather from a shoe factory is an active industry at Hingham, Mass. The oil is extracted from the leather, the best of chips are afterwards pressed into heels, and what is left is shipped to Philadelphia and manufactured into a fertilizer.

—THE cigar business of Maine has become an important industry. The collector of internal revenue reports that 3,606,465 cigars were manufactured the last year and 5,500 cigarettes, consuming 89,814 pounds of tobacco. The revenue stamps on the same amounted to $20,831.60.

—AMERICAN coal is sold in Switzerland, coming from Philadelphia by sailing ships to Marseilles, and thence by rail to Geneva, where it costs about $10 a ton. The price is a little under that of the German and French coal at the same point, and the quality is pronounced much better.

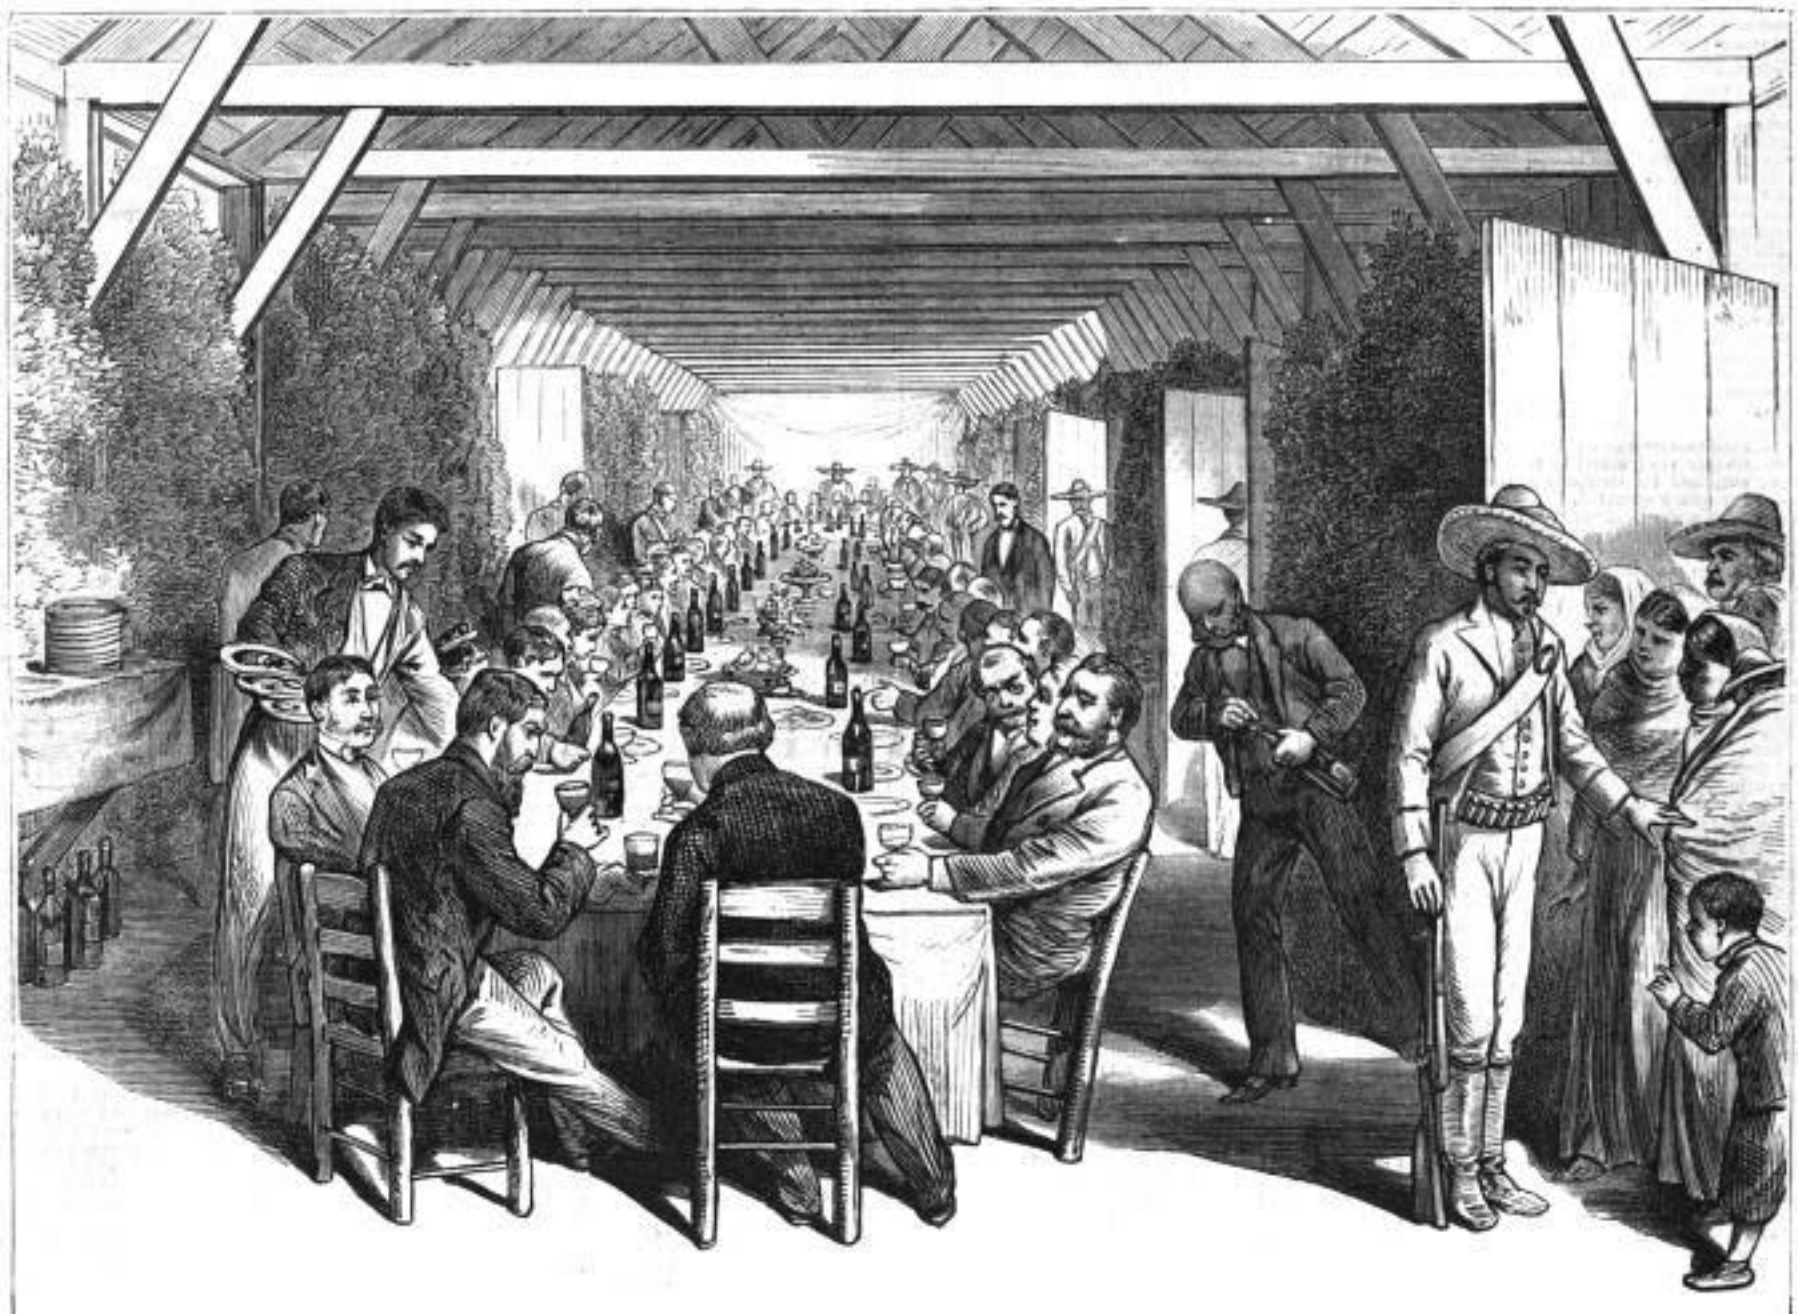
—THE committee appointed to investigate the disaster on her Her Majesty's iron clad *Thunderer* have discovered that the gun which exploded had already been loaded with an extra charge, which missed fire, when a full charge was inserted and fired, and the explosion occurred.

—THE Mississippi State Board of Health passed resolutions to the effect that, in the opinion of the board, the true cause of yellow fever is exotic, and that it only exists in that State by importation; that it is transportable in vessels, railroad cars, clothing, goods, etc., and that an efficient quarantine will exclude it from the State.

—CATS are largely cultivated in Holland, especially for their skins. The fur of the Dutch cat is very long and soft as compared to that of the English cat, the fur of which is hard and wiry. There is some secrecy as to how the cats in Holland are fed: Mr. Frank Buckland states that it is possible they are fed on fish. The best Dutch cats are black. A good skin of jet-black color is worth half a guinea.

—ACCORDING to the French census of 1876 the foreigners resident in France numbered 801,700, of whom 30,000 were English. It is curious to note the occupations of the French people, of whom 18,968,000, or fifty-three per cent., are engaged in agriculture, 9,274,000, or twenty-six per cent., in manufacturing and similar industries, 3,837,000, or fourteen per cent., in trade, and 1,231,000, or four per cent., in liberal professions. Of the agricultural population, 10,620,000 cultivated their own property, 5,708,000 were farmers, and 2,639,000 laborers and gardeners.

—CALIFORNIA is experimenting with Egyptian corn, and the results are so satisfactory that it is believed the cereal will become popular with the farmers of that State, especially in San Joaquin Valley. It is planted in hills, sixteen to eighteen inches apart, not over two grains to the hill, and has yielded eighty bushels to the acre. The planting is done in the middle of May. The heads for planting are cured on the ground before being put away or thrashed. The harvest is usually double that of Indian corn, and the meal makes delicious bread. The white variety is preferred for table use.



—AS ABOUT 3,000 weight of slag is made for every ton of pig iron, the importance of utilizing this waste product is very obvious. In England slag has been turned to account in the formation of breakwaters, such as that at the mouth of the Tees. Bricks, pavingsets, concrete and other articles are also made of it. Three millions of slag bricks, most of which go to London, are manufactured annually. Glass works are now in operation at the blast-furnaces in Northamptonshire, where the slag is run direct from the iron-furnaces into the glass-furnaces, mixed with other materials, and converted into glass for bottles, etc.

—IN 1876 a Compulsory Education Act was passed in the British Parliament, to come into operation gradually, the full working to be delayed till 1881. After that year no child between the ages of ten and fourteen is to be employed in any labor unless he has passed an examination in the "Fourth Standard," a grade in the London public schools which comprehends a moderately good knowledge of what are called in America common school branches. "Labor certificates" will be granted to pupils who pass examination to this grade, and it will be unlawful to employ any children within the ages named who have not such certificates. During the year 1879 children that have passed the Third Standard will be permitted to be hired out to work. The Third Standard includes reading, writing, and arithmetic through compound addition and subtraction. The managers of schools will be required to send to the trustees a list of all the children in their charge, and their attendance. This has long been the practice in America. The School Boards have power to grant the Labor Certificates.

THE COMMERCIAL EXPEDITION TO MEXICO.

INCIDENTS OF A TRIP FROM VERA CRUZ TO ORIZABA.

AS we sped slowly past the crumbling walls of the ancient fortifications of Vera Cruz, and its Arab-like suburbs, drawn by a monster Fairlie engine—an engine destined to drag the American Industrial Deputation 7,500 feet above the level of the sea, 4,700 in the comparatively small distance of twenty-five miles—I prepared myself to enjoy a railway ride that for hairbreadth engineering surpasses the wildest imaginings of a Stevenson or a Brunel. The iron road from Vera Cruz to the City of Mexico has been constructed in the teeth of natural, political and financial difficulties such as have never been experienced by any kindred scheme; and when I alighted at the depot at Mexico, and flung my thoughts down the track to the place from whence I came, I involuntarily paid a tribute of respect and admiration to all those concerned in its construction, from the bluest-blooded Hidalgo who advocated the measure in Congress to the humblest Indio who aided it through the medium of his shovel and pick. Save the marvelous railway between Callao and Oraya, in Peru, that scales an altitude of 15,000 feet, there is nothing to compare to the portion of this line situated between Orizaba and Boca del Monte. The first concession for the construction of the railway from Vera Cruz to Mexico was given on the 22d of August, 1837. In 1842 Santa Anna, then President, issued a decree re-establishing the tax, called *averia* (damage), which consisted in an additional duty of two per cent. on the imports of the Vera Cruz Custom House, the produce of this extra duty to meet the expenses of the construction of the line. In 1851 the line was completed to San Juan, and six years later the work was begun from Mexico to Guadaloupe, under the direction of A. G. Girard, an American engineer. The survey of the line to the capital began at the end of 1857. The revolution, which had its precursor in the Holy Week of 1857, broke out at the end of the year and stopped the works. In 1865 the ill-fated Maximilian interested himself in the project; operations were again resumed, and when Benito Juarez, after the death of the emperor, took possession of the country, the line was constructed as far as Paso del Macho, forty-seven and a quarter miles from Vera Cruz, and to Apizaco eighty-six and a half miles from Mexico. After numerous stoppages, impediments, and embarrassments, and until almost every hope of completing the iron link between the capital and the sea had been abandoned in despair, the line was finally completed in 1872, and solemnly inaugurated on the 1st of January, 1873, in the presence of the then President Lerdo de Tejada, and is now known as "La Compañia del Ferrocarril Mexicano." To construct this line it took thirty-six years, forty presidents and one emperor, and up to the 30th of June, 1874, it cost the Government alone twelve million five hundred and seventy-three thousand six hundred and ninety-five dollars! How many lives did it cost? *Sabe Dios!*

A MILITARY RECEPTION AT A RAILROAD STATION, NEAR ESPERANZA.

GLIMPSE OF ORIZABA FROM MALTRATA, WITH THE EXCURSIONISTS DEBARKING FROM THE CARS.

The members of the deputation were in the highest possible spirits. The dangers and ghastly troubles of the Gulf had been passed, the lions had been fed, and well fed, albeit an *entrée* of snails formed a portion of the *menu*, and every individual countenance was one vast expansive smile. The ladies were placed in a centre carriage, the smokers in the rear, while three or four intrepid explorers, having made interest with the inspector of the line, occupied posts of honor on the engine. On leaving the depot at Vera Cruz, the line cuts through the fortifications of the city; crosses the Boulevard de Santiago; passes in sight of the Alameda, the Vera Cruzian promenade; the cemetery of Casa Mata; then across the lagune of Cocas, near the spot where the Vera Cruzian defenders surrendered to General Scott in 1847; and, forming a sharp curve, runs straight to Tigeris, nine and a half miles, and 196 feet higher than Vera Cruz.

A WATER-TROUGH AT LA BOTA, ON THE ROAD FROM ORIZABA TO MEXICO.

Here Doblado, the Mexican General, received Sir Charles Wyke and General Prim, to celebrate the La Soledad Treaty, and here Santa Anna proclaimed the second Mexican Republic. The country so far is perfectly flat, showing now and then a strip of swamp, at best but a cheerless waste of sand, betraying the scantiest of vegetation. Palms and bananas were conspicuous by their absence, and low jungles on patches of marsh, with a few deformed cacti peering between rough masses of rock and shingle, scarcely repaid the anxious deputationists, who, with craned necks and strained eyes, kept bobbing from window to window on either side, in the delusive hope of catching sight of something that would realize,

Digitized by Google

even in part, the conjurings of their respective imaginings; and one New Yorker, in a tone of disgust, was heard to mutter: "I'm blessed if we ain't stuck on the Harlem flats!" Soledad, situated on the eastern bank of the Rio Jamapa, was next reached. This village of 200 inhabitants gives name to the celebrated convention between the invading power and Mexico, signed on the 19th of February, 1862, by Generals Prim and Doblado respectively. The longest iron bridge on the line is built here, supported by pillars, four of which intersect the Jamapa. Paso del Macho was our next stopping-place, and I may mention that the instant the train came to a standstill—this the entire way to Mexico—the deputationists sprang from the cars, some to refresh at rudely improvised wooden or sugar-cane booths, some to sweep the surrounding country with formidable-looking glasses, some to cross-examine the engine-driver, some to torture the natives by a series of mysterious sounds honestly intended to represent pure Castilian, some to gossip with the members of the Mexican Commission, and some to scamper off in search of flowers or vegetation of any sort, shape, size or description whatsoever. Paso del Macho was the central point for the employés during the construction of the line, and from 1865 to 1870 it contained 1,400 inhabitants. We were now 1,550 feet above the level of the coast, and still in a thirsty, gritty country, sprinkled with gaunt shapes of rock. We had seen nothing as yet to distinguish the ride or the railway from the merest ordinary, and save where the monotony was relieved by a river refreshing the cracking soil, with its border of succulent green, or an Indian village, rich in unsymmetrical downy-roofed cabins, and copper-colored natives attired in the purest and scantiest of white, the scene scarcely demanded a comment; and, as a voluntary upon the text, several of the deputation snatched an honest forty winks, indulging for the first time in the demoralizing but singularly refreshing *siesta*. One of the Mexican Commission now hustled frantically through the cars, shaking up those who were engaged in wooing the drowsy god, and causing those whose eyes were open to open them still wider. We were upon the threshold of the beauties of the line, 1,550 feet above sea-level, and forty-seven miles from Vera Cruz. Aromatical odors borne by caressing breezes now superseded the chill *acrite*, vegetation took the place of the dreary, desolate sand wastes, and at Paso del Macho we began to realize that Mexico contained something more pleasing to the eye than distorted cacti and jagged masses of dull gray rock.

Exclamations of "Oh!" and, "Ah!" ran along the cars, and when we reached the bridge of San Alego enthusiasm commenced to manifest itself; diaries and crayons were flung aside; even flirtation—this tender plant is blossoming under the fostering care of some of the party—ceased for the moment as the superb beauty of the tropical scenery flashed upon us, filling us with an admiration spontaneous as it was earnest. San Alego Bridge is 318 feet long and 36 feet above the ravine. It is entirely constructed of cast-iron, and springs from out a bed of verdure, so rich, so varied, so glowing, so concentrated, that it would serve for the couch of Titania herself—reds and yellows, and blues and greens and purples, lichens, mosses and ferns—a veritable tropical treasure. Creepers cling amorously to the yielding trees, and parasites—orchid and bromelia—beautiful as butterflies, seem fluttering on the branches, as if just alighted and again about to take wing.

"*Now* we are in the tropics!" was the universal exclamation, as the train sped rapidly past sugar-cane and coffee plantations, bananas, palms, and other in-dwellers of the tropical forest; and ere we could quaff of the bejeweled cup so graciously extended to us by the full, fair hand of Nature, we suddenly came upon the lovely Chiquihuite; and while our greedy eyes snatched up its loveliness, lo! we were in the tunnel that pierces the Chiquihuite Mountains, the barriers that intervene between the interior and the coast. The Rio Chiquihuite, a cascade starting from a rift in the sheer cliff, bounds sixty feet into the gorge below.

The line for two miles follows the winding of the Atoyac River; and we reached the little town of the same name, sleeping softly in its narrow valley. For seventeen miles the route is traversed by a continuous track of tropical forest, deep in shade and shining flowers, and it seemed as though we were gliding over an ocean of verdure—the misty hills its waves, the brilliant blossoms its foam. At this point of our journey two of the ladies of our party, escorted by a chivalrous representative of a New York daily, elected to grace the engine by their presence, while a vice-president, together with three of the male excursionists, boldly took possession of the cow-catcher. "What a chance for a cow!" We now passed rapidly through the most entrancing scenery to the *frigol* country—that small brown bean so dearly prized by the Mexicans—and on to Cordoba, a city of 9,500 inhabitants. This town is specially famed for its coffee, which is said to equal that of Colima and Mocha; extensive *haciendas* are exclusively employed in coffee-raising, and one of our deputation has made arrangements to place Cordoba coffee upon the American market upon such terms as will repay both importers and consumers.

Cordoba goes back to 1618. A station was built here for the purpose of protecting carriers on their way from Vera Cruz to the interior. The first occupants—Spaniards—lived on the product of the wild fruit-trees; the banana was their bread, the banana and aloe gave them fruit, maguey furnished them with *pulque*, and its fibre served to weave them garments. Then they cultivated oranges and other fruits, which they sold at Vera Cruz, and finally they grew sugar-cane and built factories. In 1757 there were thirty-two sugar-mills and twenty-two *haciendas* (farms) situated around the town, producing 1,200 tons of sugar per annum. *Aguardiente* distilleries now came into operation. Civil war has utterly wrecked it, and now Cordoba, once so thriving and so opulent, is nothing better than a large deserted village; the land is overrun with weeds and the mills are in ruins. The city is two miles from the station, rapid transit being effected by one mule street-cars. Cordoba is 2,690 feet above sea level. A little further on and the immense horizon which extends to the base of the peak of Orizaba exacted universal comment. The country through which we now traveled—and, alas, the shades of night were falling fast—was an absolute hothouse of fertility, *huacales*, *huastas*, and *bizarre* patches of delicate lealaxe succeeded one another, and the more we advanced the more tropical became both plants and climate. Expectation was on tiptoe as we entered the famous Barranca de Metlac, so full of splendor, so full of horror, so completely Dantesque! The bridge that spans the ravine is 250 feet long and 92 high. It is shaped in a curve from one side to the other, and is one of the most marvelous successes on this railway, which is nothing short of a succession of engineering triumphs. The rails are of pure steel, with braces at every seven feet, and a guard-rail. The barranca rises at the foot of Orizaba, finally disappearing at the base of Chiquihuite. Its narrowest part measures 900 feet, its greatest depth 375 feet, and its borders for steepness have been compared to those of Niagara near the Falls. The curves are so sharp that we interchanged signals with the occupants of the engine during our serpentine transit; while in passing through tunnels, there were moments when we imagined that the engine had completely gotten away from us.

It was dark when we slowed into the station at Orizaba, where carriages were in waiting to convey us to our respective hotels. We—that is, the artist and myself—were deposited at the Fonda San Pedro—a great, gloomy edifice with a *patio* or courtyard, within whose inclosure a small army might be successfully maneuvred. Our bedroom was a monster apartment, red-tiled, the ceiling nearly as high as the peak of Orizaba, the windows barred with iron, the beds pieces of canvas laid on steel cross bars, which later on too forcibly reminded us of the sufferings of those Christian martyrs who were grilled *pour l'amour de Dieu*. Unsavory-looking insects, all legs and arms, crawled upon the dark, dank walls, and the whole place resembled a prison into which a batch of political desperadoes had just been hastily consigned. What a rush for dinner! What calls for viands in United States Spanish! What full-flavored language when the Indian waiters failed to comprehend a jargon utterly incomprehensible even to the deputationists themselves! We were Cook's excursionists with a vengeance, and possibly more exacting. The members of the deputation strolled through the town in the evening, and were fortunate enough to stumble upon an enormous marquee wherein the game of *Keno* was being carried on amid a breathless silence. All the inhabitants were participating in the pernicious pleasures of the game, those who were impecunious keeping count, while a happy few ventured their medios and reals upon the hazard of the dice. The crafty-looking old gentleman who was keeping the bank would have proved a superb study for Rembrandt, every wrinkle beneath his silver-laced *sombrero* was a cradle for graft, his smile a *fascinate ogni speranza*. There were other booths at which a rude roulette was being played with considerable spirit, his *Americanos* sporting the almighty dollar after a very spread-eagle fashion. There was no moon, but there were stars, and such stars, flashing white light in the clear, dark blue done as we picked our steps over a pavement composed of a series of small stone islands in a vast sea of knee-deep dust. *Bizarre* were the sights that greeted our hungry gaze. Indian women wrapped in their *rebozos* seated beside quaint little stoves engaged in cooking the muchly-prized *tortillas*; *serenos* or watchmen, enveloped in cloaks never bereft save upon the stage, whistling, at the corner of every street—a long, low, wailing whistle, through the medium of which perpetual communication is maintained from guard to guard; Mexicans, rich in *serape* and *sombrero*, overtaken by the *pulque* fiend, uttering deep guttural sounds and clinging frantically to the posts and pillars that grow like excrescences upon the outer walls of every domicile; strings of mules humbly winding their way to a *hacienda* high upon the side of the volcano, to return laden with ice for the fever thirst of Vera Cruz; members of the Industrial Deputation cursing the clear, thin air to ring again with the peals of right joyous and happy laughter; groups of Indians posed around hotel-doors in every conceivable position of indolent grace; and, touching the dark-blue vault, the snow-capped peak of Orizaba white in the starlight. Such was the scene in this Mexican town upon the night of Monday, the 13th of January, 1879. The deputation arose early; to quit the gridiron was an intense relief, and almost ere the day broke, the sounds of human voices made themselves manifest in the *patio*.

Orizaba is eighty-two miles from Vera Cruz. It contains about 13,000 inhabitants; but, during the prevalence of the dreaded *vomito*, the Vera Cruzians repair thither, since the climate, though humid, is proverbially healthy, its altitude insuring the city against the spread of epidemics. It presents to the eye the appearance of an immense color-glowing garden, in the midst of which, like a bunch of white lilies, spring up the domes and steeples and houses, while the icy minaret of the peak, towering 17,375 feet above the level of the sea, forms a background such as has been accorded to but few of the habitations of the earth. It was at Orizaba that Marshal Bazaine took leave of the ill-fated Maximilian—a ghastly shadow upon the future of both. Maximilian died like a soldier; why did not Bazaine die at the head of the Guard? In the direction of the western part of the city stands Mont Borrego, known in the annals of the French invasion as the point where the Mexican army, 5,000 strong, were routed by 100 zouaves, who scaled its steep sides under cover of night. A rude wooden cross marks a spot upon the summit where two of the sturdy, baggy-breeched veterans "flunking fell." It was to Orizaba that Cortez, with his band of desperadoes, hastened in the hope of looting its treasures, of the richness of which the Aztecs gave such glowing descriptions. Orizaba stands 4,027 feet above the level of the sea, and the average temperature is seventy-two degrees Fahrenheit. The town is an old, noiseless place, with straight but irregular streets and quaint houses, tiled with sloping and overhanging roofs; wide gutters, like open sewers, run down the centre of the streets; the buildings are one-storied, and without the remotest attempt at ornamentation.

A SECRET MARRIAGE
AND
ITS CONSEQUENCES.

BY THE DUKE DE POMAR,

AUTHOR OF "THE HONEYMOON," "THROUGH THE AGES," "WHO IS SHE?" "FASHION AND PASSION," ETC.

BOOK FOURTH.

LADY ROLLINGFORD'S SECRET

CHAPTER VI.—(CONTINUED).

THE prophecy of the gypsy is thus only too soon fulfilled, and Louisa and Rupert feel that after this but few moments of peace and happiness can await them in the future.

However, in spite of her husband's despondency, Louisa—who is ignorant of what Lady Rollingford has told him concerning her birth, and what he has deduced for himself out of her equivocal words and half-confidences, for he has been faithful to his promise, and kept all she has said a close secret from his wife—is ready enough to front with upraised head the fatal storm which has burst upon them in the midst of their happiness, and is for writing to the papers and contradicting the scurrilous attack against her fair fame; a proposition which, to her horror, her husband declines to accede to.

Blinded with indignation, and wounded in her pride as a woman and a wife, she rises from the breakfast-table pale as death, and confronts him in a menacing attitude.

"You believe, then, what this wretched paper says?" she exclaims, looking at him straight in the eyes. "Do not attempt to deny it; I can see it by your looks: you believe it—you, who have sworn to love me! Great God! what love is this, that the basest and most unfounded calumnies of any penny-a-liner can so easily scatter to the winds? But I will not consent to be thus exposed to the insults of the first who may chance to have a spite against me and wish to ruin my reputation to gain some paltry end of his own, merely because I have married a man who loves me so little, who is so utterly careless of his wife's honor that he will not even take the trouble to contradict the base attack. I am your wife, your lawful wife, Mr. Cassilis; a scoundrel has dared to question your wife's honor: it is your duty to defend her."

And without saying another word she walks out of the room as stately as a tragedy queen, but with the seeds of death in her poor young heart.

What can Rupert Cassilis do?

Gradually the secret cause of this villainous attack upon his wife dawns upon him. He discovers, just below the characteristic title of the new paper, which he still holds in his hand, the name of its editor, Mr. Arthur Smith; and it flashes upon him that not a month before, just when he was about to marry Miss Reymond, this man—whom he had met at a literary friend's house the previous year, and who ever since had called upon him at short intervals, pretending to feel a great sympathy for him—had asked him for the loan of a few hundred pounds to bring out a weekly paper, which he was thinking of editing—probably this very one—and that he had refused point-blank to lend them to him. This, then, is doubtless the cause that has pointed the shameful attack.

His wife's words still resound in his ears with all their peculiar significance, "A scoundrel has dared to question your wife's honor; it is your duty to defend her." Yes, and it is doubtless his duty to defend the honor of his wife, which is now his, and to clear her name of all calumnies—for this attack upon her good name, has it not been aimed, as it were, against him?

In his utter bewilderment he scarcely knows what to do, and it is only on the morrow, when he has had time to think the matter over and over again, that he determines to write to Lady Rollingford (who by this time has returned to her home in England), begging of her to contradict the report spread against his wife, and almost commanding her to declare to him the real name of her adopted daughter.

But ere he receives any answer from that lady, the ill-natured paper comes out with another article against poor Louisa, declaring that in Paris every one has known for the last six years that the adopted daughter of Lady Rollingford was the love-child of a French nobleman, by a ballet-dancer of most questionable reputation; and further assuring the honorable readers of *Topsy-turvy* that in France, at least, no one will think of visiting the newly-married couple, and that every one rejoices at the thought that at last the vulgar adventuress, who for so many years has been deceiving every one, beginning with the noble lady who so generously adopted her, and introduced her into London society, in a moment of too generous expansion of heart, should have been thus publicly exposed.

I must say in favor of Rupert Cassilis, that he had the forbearance and nobility of heart not to show this new paragraph to his wife, and that he even did all in his power to prevent her seeing it; but all his precautions were of no avail, for, of course, some kind friend in London lost no time in forwarding it to her. Yet he is not the less struck to the heart by it, and from this moment he curses the day in which he had made her his wife, and united his fate to hers, though still at the bottom of his heart he loves her as dearly as ever.

Rupert Cassilis, though a very good-hearted fellow, lacks the moral courage to face society unmoved, and to consider even the world well lost for love. And so he determines to see as little of his wife as he can, and, if possible, to forget her sweet face, with those large, thoughtful eyes so full of just indignation which is for ever haunting him, in gay and dissipated scenes.

CHAPTER VII.—THE STORM CONTINUES.

THE numbers of the new weekly paper, *Topsy-turvy*, which contain the articles about Louisa Cassilis circulates like wild-fire; such articles always do. For some weeks London talks of nothing else, for it is the very height of the season, just between Ascot and Goodwood, and not long after the accounts of the great marriage *fêtes* which had caused such general interest in all circles, and awakened more than one person's envy. Strange to say, no other paper takes the matter in hand—a diplomatic forbearance from mentioning, or even approaching, the subject seems to be the course adopted by the general press—and Mr. Arthur Smith, after a few weeks, finding to his regret that no one has dared to take the matter up publicly, begins to feel uneasy as to the course events will take, and fearing that perhaps he has gone too far, and that his suppositions as to Mrs. Cassilis being an illegitimate daughter of the Comte de la Mazerolle—a conclusion to which, no doubt, he had arrived by putting two and two together from what he had heard from his former friend, but now bitter enemy, Rupert Cassilis—are too bitter and too absurd to take deep root in the minds of his readers, comes out with a new article conceived in the following terms:

"*Q.* If the young lady lately married to the son of a baronet is not the daughter of a French nobleman we mentioned some weeks ago, whose daughter is she?

"*Q.* Who were her ancestors?

"*Q.* Had she ever a grandfather?

"*Q.* Or a grandmother?

"*Q.* Who was her mother?

"*Q.* What is her real name?

"*Q.* Has she any name at all?

"*Q.* Is she the daughter of a royal house, as we believe she likes it to be supposed?

"*Q.* If so, of what royal house?

"*Q.* What relation is she to the noble lady with whom she lived for so many years?

"*Q.* If she is none, why does she not come forward and explain who she is?

"*Q.* Does this lady know who she is?

"*Q.* Or has she been also the dupe of a clever adventuress, who imposed upon her well-known kindness of heart to gain a footing in English society?"

"If she cannot answer any of these questions the inference is clear—she must be an impostor."

This new article creates even a greater sensation, if possible, than any of those before published, and as no answer whatever is given to it either by Louisa, her husband, or Lady Rollingford, society concludes that Rupert's wife is an impostor, and is very bitter against her in consequence.

Our poor Louisa finds no mercy after this at the hands of her old friends. She has been guilty of the offense which, of all offenses, society punishes most severely—she has been over-popular—she has taken up the attention of the world too long, she has excited too great and general an interest; and society, with its usual justice, chastises her for its own folly.

It would be very difficult to describe Lady Rollingford's feelings at this critical juncture.

The articles in *Topsy-turvy* have indeed wounded her far more deeply than she would have cared to confess. Yet the thought that Louisa should be generally supposed to be a child of the Comte de la Mazerolle is not altogether displeasing to her; at all events, she is sure that while people imagine such a thing, no one will think of supposing that she is Lord Rollingford's daughter, and that her own character will remain stainless to the last.

When she received Rupert Cassilis's letter, her better nature was touched, and her first impulse was to write to the papers contessing everything, and clearing poor Louisa's stainless name from all false and scurrilous charges, for she is, upon the whole, both kind and good; and, though her poor heart had been crushed and embittered at the beginning of her life, it still beats at times with the old, generous feelings which had once so characterized her.

But the shame that such a step would entail horrified her, and all her good intentions are only too soon changed by the world's most worldly verdict. So she determines to take no step in the matter, to let events take their own course, and, if possible, not to mix herself in the awkward adventure.

The determination once taken, her line of conduct becomes easy enough. She does not condemn Louisa herself, but she echoes the opinions of her friends. She even tries hard to excuse her, and assures some of her most intimate acquaintances that poor Louisa is but a creature of impulse, and that while she has remained under her roof her conduct was everything that any one could have desired. All of which, of course, is soon repeated over the town, and wins for her the character of being the most good-natured and kindest-hearted of women.

At last, persuaded by her friends, and desirous of doing that which is right and proper in the eyes of the world, she consents to write to Louisa, telling her that, after a great deal of hesitation, and, as she most kindly puts it, to please her poor old father, Lord Westra, who has been greatly shocked by what the papers have been saying about her, she in future declined to have any further intercourse with her, and, acting on his advice, ceases to be her adopted mother. Then, summoning her lawyer, she makes a new will, in which the name of Louisa Cassilis is not once mentioned, and in which she leaves everything she possesses, at her death, to her beloved brother, Lord Inganess.

This will soon becomes known to every one, and society at large rejoices in the thought that so immense a fortune as that of the Reymonds will not pass into the hands of so questionable a person as Mrs. Cassilis.

The dreadful news is not long in reaching Paris. Rupert, who has lived in a horrible nightmare ever since the first article in *Topsy-turvy* came to put an end to his happy honeymoon, is now aroused to the sad reality of the situation. Lady Rollingford has washed her hands of them for ever; and, without her, how is he ever to discover who his wife really is?

He still loves her; between them, personally, nothing has yet come to cool their mutual love; but he now sees, too clearly, all that he has brought upon himself and upon his family by marrying her.

His position after this becomes most awkward, for both the names of La Mazerolle and De Cassilis are but too well-known to every one, and there is scarcely a man or a woman from the Barrière de l'Etoile to the Batignolles who has not heard and discussed the scandal. Wherever he goes, mocking smiles and suspicious whispers follow him. The Comte de la Mazerolle, whom he had gone to see soon after the publication of the first article in the English paper, though himself implicated in the charge, had refused to move in the matter, and, like Lady Rollingford, will have nothing to say to the world about Louisa Cassilis. Even his own father, Sir Robert, though he will not quarrel with him, refuses to see his wife until the whole affair is cleared up, and begs of him to put an end to the scandal by announcing to the world her real name and those of her parents; and his poor mother, though not quite so hard upon him, bursts into tears whenever she sees him, and keeps advising him to quit France and to take this dreadful wife of his, who is the cause of all his misfortunes, as far away from her as possible.

Utterly unable to revenge himself upon the world, unable even to contradict the villainous stories which are circulated on every side about himself and his wife, he turns his anger and indignation against her—forgetting all the love he has sworn, and forgetting also that, after all, it is not her fault that he has married her without properly ascertaining her real name and origin. He makes her suffer for the reverses of fortune.

Such is the sudden end of our poor Louisa's honeymoon. And the girl who had but so recently arrived in Paris a gay, light-hearted, happy bride—the girl who had received the written congratulations of the *crème de la crème* who had flocked to

Digitized by Google

the sumptuous halls of the Rollingford House, where she had reigned for so many years a little princess, flattered and spoiled by all, supposed by every one to be the heiress of a more than princely fortune—is now a poor, wretched, forlorn and deserted woman, living in a tiny *appartement* in Paris, neglected and forsaken even by the man to whom she has given herself, with all the warmth and enthusiasm of first love.

CHAPTER VIII.—BEHIND THE SCENES.

THE Théâtre des Folies Amoureuses, if not one of the largest, is certainly one of the most fashionable and elegant, in Paris. Though its *répertoire* seldom soars above burlesques, *revues féeries*, and the mildest of *opéras bouffe*, and its actors lay no claims to high art and great histrionic powers, its performances are always bright, dazzling and amusing, and its *salle* is, as a rule, crowded to overflowing by the throng, gay, yet most difficult to please, which constitutes that part of the Parisian world addicted to theatre-going.

Yet, though doubtless a great deal of amusement may be enjoyed in its velvet-covered and, I must confess, rather close and uncomfortable boxes and stalls, its true pleasures can only be properly appreciated by those privileged few who have an *entrée* into the sacred precincts of its "green-room" behind the scenes.

This is by no means an ordinary green-room, but a truly elegant and gorgeous apartment, decorated with almost Oriental splendor, and in which one may meet as distinguished and fashionable a society as in the famous *foyer de la danse* in the Grand Opera—which, indeed, it has no reason to envy.

To this sumptuous retreat flock, on certain nights of the week, all that Paris can boast of as most exclusive and *re-herché* amongst its *viveurs argenté* and *jeunesse dorée*. And it is not uncommon to see reclining upon its soft yellow-satin ottomans, not only young and foolish *petits crévés*, and *gommeux* addicted to fast living, but even respectable old gentlemen who ought to know better, and wise and profound politicians and statesmen, and brave and gallant generals, whose names would grace the annals of any country.

It is rather curious to study—from a distance—the philosophy of "behind the scenes," and many a moral might be drawn from the lives of that little world of young woman—almost all sprung from the dregs of society—who so often succeed in rising to the highest pinnacles of the social scale, but, too often, alas, to fall back again into its lowest depths!

Young girls of from fourteen to twenty years of age, who have lived all their lives in a dreary little cottage in the country, or in some dismal back parlor of the *loge* of a *concierge*, who have grown up upon dry bread and onions, and have never worn anything but cotton dresses and *sabots*, come to the theatre, generally brought by their affectionate parents, and a few weeks afterwards find themselves attired in silks and gauze, sparkling all over with jewels, more or less genuine—all at the expense of the State—and more dazzling than the fairies of whom they have so often dreamed, or the angels their priests have told them about: whilst princes and ministers and generals crowd about them, and seem to feel honored when their black coats get whitened by too close proximity to their freshly-painted arms.

At the Folies Amoureuses there are from forty to fifty of these young ladies, all of them more or less beautiful, all of them more or less amiable and charming, and all, of course, quite ready to throw up their present engagement for any new one which may offer more advantages, however trifling. But amongst these, or, rather, above these, there is one who is the queen of them all, and who rules supreme upon those boards, though the theatre does not belong to her according to the English meaning of the word. Zoé de Fleurville is as well known as the Folies Amoureuses itself; and who has ever been in Paris a week without paying a visit to that theatre to feast his eyes upon her, and to give himself the treat of listening to her sweet, melodious voice?

Of all actresses, the lovely Zoé is the most run after and the most courted by men; for her wit, like her beauty, is transcendental, and her conversational powers and gift of repartee are as famous as her golden locks and her large, almond-shaped, jet-black eyes, which contrast so strangely with them. No woman is so much admired and courted as this Zoé, and yet, strange as it may seem, no woman can boast of having such a character for virtue—at least so her most ardent admirers inform me.

It is behind the scenes of this theatre that we again meet our old friend Inganess, who, ever since Glamour's marriage, has been traveling over the Continent—perhaps to try and forget the bright eyes of that sweet little flirt, Bella Champion; but if such were indeed his object, I fear he has not succeeded.

He is to leave Paris by to-morrow morning's train, and this is his last night in the gay capital. This is the reason why, to please his old friend Lord Dare, with whom he has been dining at the Maison Dorée, he has consented to accompany him to the Folies Amoureuses, and once there, has been forced, perhaps not altogether against his will, to go behind the scenes to be introduced to the new admiration of that ever-gallant young nobleman, Zoé de Fleurville.

The curtain has just gone down upon the second act, and, after having had to appear before it three consecutive times to hear the applause of the enraptured public, and to receive the numerous floral offerings, the lovely Zoé has entered the gorgeous green-room—of which I have spoken before, and into which I now take the liberty of introducing my readers—and with a smiling face she is receiving the compliments of her numerous admirers.

The play to-night is one of those annual revues so common in Paris, in which the various actors and actresses of the company, attired as gods and goddesses, caricature the latest fashions, discuss the topics of the day, and make fun of the various pieces lately brought out at the larger theatres. Madame de Fleurville plays the principal *rôle* in this trifling extravaganza, which, thanks to her, in spite of its commonplace character and weak puns, has already produced a great sensation; and she is attired as the fair and chaste Diana.

Standing in the centre of a group formed mostly of men, against whose black evening clothes her white sylph-like form looks indeed statuesque, she is, of course, the observed of all observers, although forty other women, each beautiful in her own way, are in the room.

It is just at this moment that the two Englishmen make their appearance, and after a time, and not without difficulty, they approach the queen of the evening.

Inganess, though he has often admired Zoé on the stage, and has seen her over and over again in almost all her parts, has never before been in such close proximity to the beautiful actress; and while his friend converses with her, and compliments her on her singing, he has time to criticise her closely.

At length a strange expression of sadness overshadows her face, before so bright and joyful, as she turns towards the door and perceives the figure of a tall, fair-haired man who is crossing the threshold.

There is something in this melancholy smile which reminds Inganess, he cannot tell why, of his sister's adopted daughter Louisa; and at that moment, strange to say, he recognizes in the newcomer her husband, Rupert Cassilis.

As I have said above, Inganess has been traveling for the last three months in Germany and Italy, and he has only been in Paris for a couple of days or so; he therefore was not aware that the Cassilises were still in this city, and believed them to be traveling about somewhere on the Continent; so his astonishment on seeing Rupert is indeed great.

Of course, he had read in the newspapers of the scandal recently circulated all over Europe about Louisa Cassilis and her supposed father; but he had no idea of his sister's new will, by which *he* had been made her sole heir, and still entertained vague hopes that after all the unpleasant story might have no foundation, or that, at all events, Lady Rollingford might not have heard it. He waits until Cassilis has shaken hands and exchanged a few words with Madame de Fleurville, and then, in utter ignorance of what has lately taken place, he approaches and is about to shake hands, when Rupert, recognizing him, becomes suddenly livid with rage, and turning his back upon him, addressed himself to the actress again.

Inganess, unable to understand this strange conduct on the part of a man with whom he has always been the best of friends, seeks Lord Dare—who, not having met with so friendly a reception as he expected from the beautiful Zoé, is conversing with a pretty little shepherdess, all smiles and blushes, in a distant corner of the room—and informs him of what has just occurred.

"Let's see," the gay lordling answers, rather annoyed by this untriendly interruption of his agreeable flirtation, "his wife is a sort of relation of yours, is she not?"

"Well, not exactly, but she is my sister's adopted daughter."

"Ah, just so; that accounts for it. Why, man, surely you don't expect the fellow, in the name of anything that is reasonable, to speak to you after that?"

"And why not?"

"By Jove, Inganess, you don't mean to tell me that you have not heard of what has taken place?"

"You mean those dreadful articles in the *Tipsy-farcy*, about her supposed father, the Comte de la Mazerolle? Well, yes, of course, I know all about that; but what can that have to do with our friendship? Besides, are you quite sure that it is true?"

"True! Of course it is true, or he would have contradicted it fast enough, trust him. It is only too true; and, moreover, I hear he has quarreled with his wife, who, he says, married him under a false name, and won't have anything more to say to Lady Rollingford—who, he takes care to inform every one, deceived him—or with any member of her family."

Inganess is greatly moved by this; he had no idea that events had taken such a serious turn, and Dare's words fill him with sadness and grief, for he really entertains a great affection for his sister's little *protégé*.

"Poor Louisa! I will go and see her to-morrow. I will put off my journey to London, and see what I can do."

A bell rings at this moment—it is the signal which announces that the curtain is about to be raised, and which summons the *artistes* to the stage.

Madame de Fleurville, erect and stately as a statue, and walking with a slow yet graceful step, crosses the room, and, as Inganess and his companion are standing close by the stage-door, she passes so near that she almost touches them.

Cassilis is beside her, and seems to be anxiously demanding some favor from her, so entreating is his look, so tenderly does he press the hands which he holds.

At the threshold he is forced to detain her—as gentlemen are not permitted on the stage by the rules of the theatre—and then, standing as they are within a few paces of them, the two Englishmen are able to hear their parting words, which serve to increase Inganess's suspicions and uneasiness respecting Louisa's future peace and happiness.

(*To be continued.*)

The Carrara Marble Quarries.

THE famous marble quarries of Carrara, although they have been worked since the reign of Augustus, and have furnished a steady and enormous supply to the whole civilized globe, seem to be inexhaustible. According to the London *Engineer* they compose an entire mountain range, and embrace every variety and quality of marble, from the coarse, common kind to the statuary marble. Monte Crestola and Monte Sagro yielding the largest and finest blocks. The blocks are detached, drawn out by oxen, and rolled down the hill. The quarries number some five hundred, only about twenty of them furnishing the marble used by sculptors. Most of the inhabitants of Carrara and the vicinity—some 6,000 workmen in all—are employed in the labor, at two or three lire—45 cents to 60 cents—per day. The marble taken out during the year before last was about 120,000 tons, valued at $2,400,000, of which 40,000 tons went to the United States. The export of marble to this country has increased immensely within twelve to fifteen years, the third largest firm of marble quarry owners now at Carrara being American. The American Consul there is a member of the firm, and his consulate is said to produce a larger income than any other in Italy.

SCIENTIFIC INTELLIGENCE.

The Well-known African Traveler, Dr. Nachtigal, has been elected President of the Berlin Geographical Society.

A New Botanical Society has been formed at Munich; the President is Professor Robert Hartig, and the Vice-President, Dr. Arnold, an eminent lichenologist.

Dr. Crevaux, the explorer of French Guiana, has reached the source of the Oyapok, and crossed the range which separates the Oyapok from the Amazon basin.

The Chinese are about to commence the erection of a line of telegraph from Tientsin to Taku at the mouth of the Pei-ho, and also to make the necessary surveys for another line between Tientsin, Paoting-fu and Peking.

Excavations are now in progress on the Limburg, in the Bavarian palatinate, which will lead to important results for pre-historic investigation, inasmuch as they are directed to the elucidation of the much-contested question regarding the constructors and former inhabitants of the Ringwall, near Dürkheim.

Explorations in Brazil.—Dr. Edwin R. Heath, of Wisconsin, is about undertaking the exploration of the Beni and Madre di Dios Rivers of Brazil, his sojourn in South America some years as Secretary of Legation in Chili giving him excellent advantages for this purpose. Dr. Heath had arranged to visit South America with the late Professor Orton, but was detained, and he now desires to carry out some of the work that the untimely death of that well-known explorer has left uncompleted.

The Smithsonian Institution at Washington has issued a catalogue of their valuable publications and a list of various societies, journals, etc., with which they exchange publications. The Institution is anxious to add to this list any societies with which they have not hitherto been in communication, and also the names of specialists in all parts of the world. Communications should be addressed to Dr. Spencer F. Baird, Secretary of the Institution, Washington, D. C.

Underground Telegraph in Germany.—The underground telegraph in Germany has been so successful that it is proposed to extend the system over the whole empire. A new line is to be built connecting Cologne with Metz, crossing the Mosel on bridges and sometimes under the bed of the stream. The cable is composed of seven isolated conductors, each made up of five fine copper wires set in gutta percha, and the whole is protected by a web of iron wire wound about the conductors, and also surrounded by gutta-percha. The insulation proves to be all that could be desired, and the expense, all things considered, is less than under the old system.

Pre-historic Man in Russia.—M. J. Polikoff has found very interesting collections in a mound close by Tarnaliff, consisting of the skulls of men of recent stone period, together with polished silex hatchets and hammers and numerous bones of animals of existing species. But a far more important discovery was made close by Karacharove, in a very old lake alluvium. Here he found rough stone implements of the paleolithic period, together with bones of the mammoth, rhinoceros and the primitive ox. The character of the deposits proved without doubt the co-existence of man with those extinct mammals in Russia as well as in other parts of Europe. He also discovered vestiges of old wood structures, very like the lacustrian dwellings of Switzerland.

An Electric Pen for Engraving.—A. M. Bailey, of Paris, has applied the electric pen to engraving. A sheet of thin paper is attached to a plate of copper or zinc, and one side of the metal is connected with one of the poles of a Ruhmkorff machine, and the other pole to the upper end of the pen; the current runs through the paper to the metal performing the paper. When the drawing is finished, ink is laid on with an ordinary roller and the greasy fluid penetrates through the holes. The paper is floated off under water and the plate is ready for immersion in acid. The advantage claimed for this method is that the artist does all parts of his work, and has no more trouble than if he were working with an ordinary pencil. He can even work in a dark room without any other light than the glare from the ludoxine spark.

A Compound of Hydrogen and Boron.—A hydride of boron analogous to the hydride of silicon has been prepared by F. Jones. The author first made a gray friable mass of magnesium boride by strongly heating a mixture of magnesium dust and boron trioxide. On heating this mass with hydrochloric acid, a colorless gas is evolved, spontaneously inflammable, burning with a green flame, and possessing a disagreeable odor. No doubt if the gas were to be passed through a red hot tube metallic boron would be deposited. It remains to be seen whether the new hydride is not in fact the well-known compound of silicon and hydrogen described by Wöhler. The green color could easily be produced by traces of boron, and the silicon be derived from impurities in the magnesium. An accurate analysis can alone determine the question.

To Prevent the Fading of Carbon Prints.—Dr. Van Monckhoven, the author of a standard treatise of photography, calls attention to the fading of carbon prints. He asserts that neither hot water nor alum fix the prints, although thorough washing is greatly beneficial. Although the excess of bichromate of potash is removed, still the chromic salt, which has rendered the gelatine insoluble, not only remains, but undergoes a change by subsequent exposure to light, and thus accelerates the action of light upon the organic color of the pigment, which fades rapidly. He suggests a new fixing agent, bisulphite of soda, and for color some of the oxides of iron, mixed when moist, with glycerine and gelatine, which he states are absolutely unalterable by exposure to light. The suggestion, coming from such high authority, is worthy of attention and ought to be given a fair trial. The fading of carbon prints has been a great disappointment to the profession, as they were believed to be absolutely permanent.

A Lake Village in Switzerland.—The remains of another lake village have just been brought to light at Lorcas by the shrinkage of the waters of the Lake of Bienne. The village, assigned by experts to the age of stone, is situated at a short distance from the shore, not far from another and singular station which was explored in 1853. An exploration conducted by Dr. Gross has resulted in the gathering of many novel and interesting objects, pierced stone hatchets, similar to those found in Denmark, large flint lance-heads, jade hatchets with stag horn and wooden hafts fastened with pitch; vessels in wood, among others a colander and a vase in a good state of preservation. Near these were found several arms and instruments of pure copper, a circumstance which points to the probability that intermediate between the age of bronze and the age of stone was a period when pre-historic man had not discovered the art of alloying copper with tin. This was the age of copper of North America. Still more remarkable is a find of human skulls, which bear unmistakable marks of having been trepanned. Round pieces have been cut out, doubtless after death, for use as amulets, and pieces of infants' crania were found in the skulls of the dead, put here to protect the bodies from the wiles and assaults of evil beings in the world of spirits.

PERSONAL GOSSIP.

SENATOR CHRISTIANCY will leave this country for Peru about the last of February.

M. HEROLD, the new Prefect of the Seine, is a Senator, and son of the composer of "Zampa."

EDWARD R. THOMPSON, a retired commodore of the United States Navy, died February 12th, in Philadelphia, aged 71 years.

VON BULOW'S theory is that the Italian school of music is delunct, and that the Russians will produce the music of the future.

THE Duke of Connaught's marriage to Louisa Margaret of Prussia will be celebrated with great magnificence at Windsor on March 13th.

THE little town of Correggio has at last determined to do honor to its distinguished painter, Antonio Allegri, by raising a monument to his memory.

THE President has nominated William Butler to be United States District Judge for the Eastern District of Pennsylvania, vice Cadwallader, deceased.

THE Rev. O. B. Frothingham has arranged to give up his charge in this city in the Spring, and go abroad for an absence of a year or a year and a half.

GENERAL SAIGO, the Japanese Minister of Education, has presented to Roanoke College thirty Japanese books, and nine boxes of minerals from the Royal Museum.

SENATOR GORDON will deliver the Commencement Oration at the Mississippi University, Mr. Jefferson Davis having declined the invitation because of the precarious condition of his health.

PRINCESS MATILDA, the niece of the King of Saxony, is one of the few marriageable daughters of Roman Catholic reigning houses, and has been for some time spoken of as the future Crown Princess of Austria.

KING HUMBERT has had to designate a special room at the Quirinal, and that by no means a small one, for the preservation of the innumerable votive crowns offered to his father's memory by Italians in all parts of the world!

JULIUS BLUM, the Austrian Jew, whom the Egyptian Khedive has raised to the rank of Pasha and made Assistant Secretary of State, is said to be the first Israelite who has held so high a position in Egypt since Joseph's time.

THE High Church clergy have sent to the Queen a protest against the Duke of Connaught being married in Lent, and asking that the wedding be deferred. They forget that the Prince of Wales was married in Lent by the Archbishop of Canterbury.

THE monument to Victor Emmanuel which Italy desires to raise will cost, it is estimated, not less than $2,000,000. It is to consist of a colossal equestrian statue mounted on a triumphal arch, and the competition is to be thrown open to all the world.

IT IS said that the Princess Beatrice, Queen Victoria's youngest child, will soon visit Berlin, and it is further rumored that the trip is not entirely unconnected with a matrimonial scheme planned in her behalf by her eldest sister, the Crown Princess of Germany.

THE tribute which the workingmen of England will present Lord Beaconsfield is of a unique character. It is to be a laurel wreath of gold. Each town will contribute one leaf. Subscriptions were limited to one penny. An accompanying address will contain the names of the donors.

AN order has been recently received by Mr. Joseph Milmore, of Boston, to execute marble busts of Lord Lorne and Princess Louise. The marble statue of Lord Dufferin, placed in Montreal, Canada, from the Milmore studio, has given such satisfaction that an order has been received for a duplicate in bronze, to be mounted in Hyde Park, London.

THE King of Spain recently met King Louis II. of Braganza of Portugal in Elvá, on the frontier, on the occasion of the opening of a new railroad from one kingdom to the other, and it is said that their meeting, ostensibly to honor the opening of the railroad, was really to treat upon the marriage of Louis's eldest son to the Princess Maria Pia, second sister of Alfonso.

HENRI DAUMIER, the French caricaturist, is dead. Fashion, tittle-tattle, scandal, politics, blemishes of figure and oddities of character have in turn inspired his inexhaustible genius for mockery. "Few among his illustrious contemporaries," says M. Vapereau's "Dictionnaire des Contemporains," "have escaped his pencil, and the worst of it is that his caricatures have always some strikingly truthful lessons about them."

THE marriage of Grand Duchess Anastasia, daughter of Grand Duke Michael, with Prince Frederick of Mecklenburg-Schwerin, was solemnized on January 29th, at the Winter Palace, in St. Petersburg, according to the Orthodox and Lutheran rites. All the dignitaries of State, the chief officers of the army and navy, the administrative functionaries, and the members of the diplomatic body, were present. On the entry of the Emperor and Empress into the palace chapel a salvo of twenty-one guns was fired from the fortress.

MR. GLADSTONE is a pianist of no mean merit, and has a sweet and powerful voice which he loves to exercise. When he was Prime Minister it was his habit, and is still, on quitting the stormy arena of debate, to sooth his vexed spirit on one of Erard's grands. No matter at what hour of the morning he arrived home, he was never too tired to sit down to the piano, and with some simple strain shake off the soil of party strife as he warbled to it. He prefers sacred and ballad music, Scotch airs and Moore's melodies being his special selections.

IF Senator Conkling serves out the term to which he has just been elected, his length of continuous service will be without a parallel in the history of New York State. No New York Senator has ever served eighteen years without a break, and only one served that length of time at all. Rufus King, who was one of the two original senators from this State—he and Philip Schuyler being chosen as its first delegation to the Senate—served from 1789 to 1796, and then again from 1813 to 1825. The only other long terms have been those of Silas Wright, eleven years, Nathaniel P. Talmage, ten years, and Seward two full terms. Mr. Conkling's repeated re-election confers upon him, therefore, a distinction which is wholly unique.

THE Marquis of Tseng, the new Chinese Envoy to France, is a thorough diplomatist and a man of the world. He is accompanied by his wife and three children, and his brother in law; the Secretary of Legation has his spouse with him also. Tseng was careful to make anticipatory arrangements for preventing any misunderstanding as to the social position, duties and privileges of his wife. He addressed a letter to the French Consul in Shanghai asking him to inform the high authorities at Paris that the lady would not be able when she arrived in France to shake hands or dine with any gentlemen visitors, only ladies. Should, however, any of the ministers desire to be introduced to her, she will have to stand a short distance off and courtesy. Such, he adds, will be strictly in accordance with Chinese customs and the precepts of Confucius.

SONS OF GROS VENTRES AND SIOUX CHIEFS.

SARAH WALKER, ANNA AND CARRIE ANDERSON.

CIVILIZING THE RED MEN.

WE recently illustrated certain features of the work of educating the Indians at the Normal and Agricultural Institute at Hampton, Va. In our present Number we add further illustrations of the same subject, upon which, on January 21d, General S. C. Armstrong, Principal of that Institution, addressed an audience of leading merchants and capitalists of New York at the Chamber of Commerce. General Armstrong, after explaining the circumstances under which the experiment of Indian education was undertaken, said that at present there are 67 Indian boys and girls at the Institute, besides 250 negroes of both sexes. This system of mingling them with each other is found to be better for their morals than the separation plan. No race conflict is allowed. The Indians absorb the ideas of civilization just as they inhale the air they breathe. It is proposed to put these Indian boys at trades or on farms, in order that they may learn the true secret of the white man's power. This is better than showing him big guns and public buildings, and loading him down with presents. The girls are born drudges, and expect to work. The boys do not see the point of hard labor, but would rather sit on the ground than hoe any day. But their dislike for labor will be gradually overcome as they are introduced into workshops and upon farms. The older Indians make little progress in their studies; the younger ones learn rapidly. In the three and a half months that they have been there they have taken up more ideas of work than they would have done in three years at their own homes. The Government pays $167 each for the forty-nine Dakota Indians.

The Rev. Dr. H. W. Bellows, following General Armstrong, said the Indians cost an immense amount of money, and they cost the national reputation, by the manner in which the Government dealt with them. "They cost us," he said, "our character as Christian people. As the result of the ten years of civilizing and Christianizing experiment, we find that 75,000 out of 300,000 are already civilized; 150,000 are semi-civilized, leaving one-quarter who may be said to be in a savage condition. I doubt if their savageness is greater than 75,000 persons who could be roll-called in the City of New York. There are 116,000 Indians who know how to read and write. There are 20,000 Indian church members, and 300 church buildings among the Indians. It is perfect nonsense to talk about Indians not being susceptible to civilizing influences."

Professor H. D. Hitchcock closed the meeting by a peroration, in which he remarked that where 100 civilized men can stay and till the soil, one savage hunts and fishes. We have been on this continent 250 years face to face with a race which we cannot deny are men and have a mission to fulfill. Congress should place the Indian on the same footing as the Swede or other foreigner who preempts his 120 acres of ground, and let him know that this possession, properly worked, not only gives him his existence but an heirloom to his family. Then churches, homesteads, and educational institutions will spring up among them, and the problem of Indian civilization will be promptly solved.

Of our present illustrations, the first shows the sons of three Gros Ventres and Sioux chiefs, very bright and promising boys; the second, three girls between nine and thirteen years of age—Sarah Walker, of the Gros Ventres, Anna, of the Arickarees, and Carrie Anderson, of the Uncahpa Sioux; the third, Little Chief, of the Cheyennes, and one of the St. Augustine prisoners, welcoming two new students—One-Who-Carries-Flying, a Sioux, and White Wolf, an Arickaree; the fourth, the nine girls who were first sent to the school; and the fifth, a group of the youngest boys. It was intended that an equal number of boys and girls should be sent to Hampton, but Captain Pratt was able to obtain only nine girls, the principal reason being, that, as the females do all the hard work, they are too valuable to be spared by their husbands and fathers.

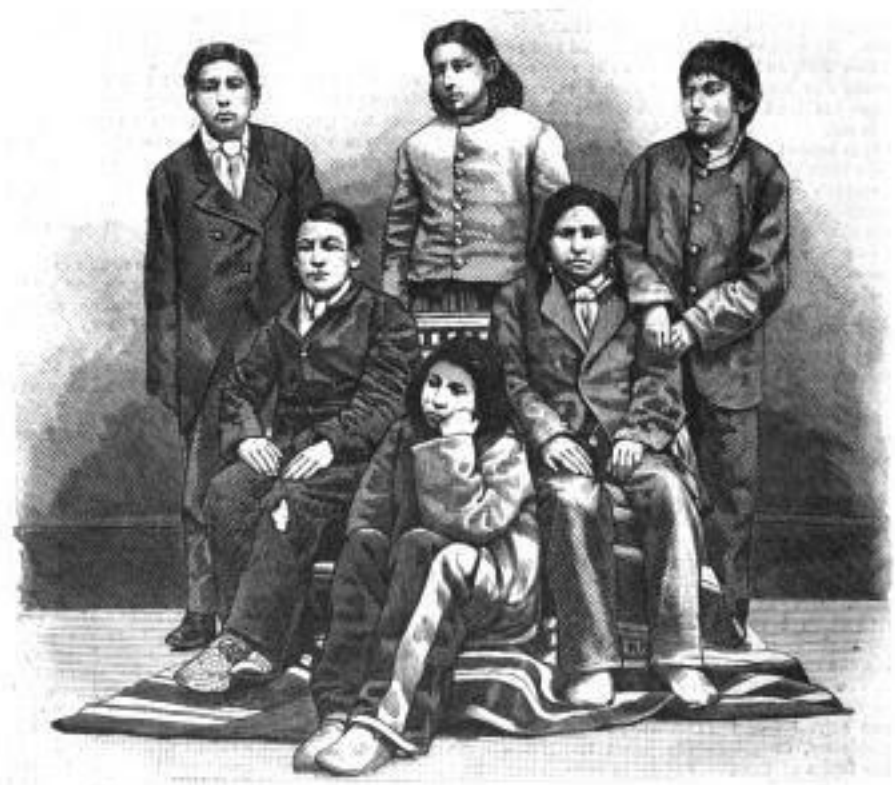
A TREE GROWING IN A COURT-HOUSE TOWER.

A CURIOUS and interesting fact is reported from Greensburg, Indiana. The tower of the court-house at that place is 140 feet in height. One hundred and five feet from the ground is the water-sheet of the tower, and above that it is covered with dressed stone, made to fit closely, in slabs two by five feet, inclining at an angle of about 30 degrees from upright. From a crevice about the water-sheet, 110 feet from the ground, a small twig sprouted out some eight years ago, and continued to grow until, in the third Summer, it put forth leaves, and was decided to be a silver-maple, sprung, no doubt, from a seed carried by a bird or whirlwind, and lodged in that exalted place. By this time the tree had become famous. Accounts of it had appeared in the papers; but the story was not generally believed. But, nevertheless, the tree lived and grew. It is now more than twelve feet high, and is thought to be three inches in diameter. The top is quite bushy, and, in the Summer season, the leaves are numerous and luxuriant. It can be seen for many miles around, and the stranger approaching first sees the tower, and then this phenomenon. The rapid growth of the tree is forcing the stones apart. This is readily seen with a glass, and the ambitious maple must soon be brought down, or damage to the building must ensue.

"LOOK AT ME, AND I WILL IMPART WHAT I HAVE LEARNED."

STATUE TO GENERAL CUSTER.

WILSON MACDONALD is now putting the last touches upon his statue of Custer, at his studio in Booth's Theatre building. The figure which the sculptor has made is a statuesque portrait of the original in his last and fatal fight. It is eight feet in height, and dressed in the colonel's uniform. The pedestal is to be of polished granite and will be nine feet high, which will make the whole structure about eighteen feet from the ground to the top of the head. On the four sides of the die of the pedestal are three medallions and a tablet all of bronze. The front medallion represents General Custer on horseback, in the characteristic costume in which he delighted to appear while on a warlike expedition. The other two medallions on the right and left sides give buffalo-heads with Indian weapons and implements. The original cost of the whole was fixed at $15,000, but it will probably cost much more, as it is to be made a fitting tribute to a great soldier. The monument will be unveiled at West Point during the coming Summer, probably on the 4th of July.



OPENING OF THE DOMINION PARLIAMENT.

THE opening of the Dominion Parliament at Ottawa, on February 14th, was an occasion of great interest to the people of Canada, being attended with ceremonies of an unusually imposing character. The city was crowded with strangers, over 3,000 having arrived during the two days previous. The Senate Chamber, where the ceremony took place, was beautifully decorated, the dais of the throne having been widened and adorned with heavy curtains, and two carved oak chairs, upholstered with silk crimson velvet, stood side by side upon it. One of these, which the Marquis occupied, bore the royal coat-of-arms. That intended for the Princess Louise bore the Argyle family arms with one of their mottoes, of which they have two—"Ne obliviscaris," being the Latin for "Dinna forget," and "Vix ea nostra voco."

His Excellency the Marquis of Lorne and Princess Louise left Rideau Hall, the official residence, at half-past two o'clock in the afternoon, the Princess being attended by Lady Sophie McNamara, the Hon. Mrs. Moreton and Mrs. De Winton; and the Marquis by Major De Winton, Colonel Littleton, Captain the Hon. E. Harbord, Captain Chayter, Captain Hervey and the Hon. R. Moreton. Under escort of the Dragoon Guards, now known as the Princess Louise's Dragoons, the party proceeded to the Parliamentary buildings, where they were welcomed by a royal salute from the batteries, the royal standard being at the same moment run up on the flagstaff of the central building. The Ottawa brigade of garrison artillery and the Ottawa cavalry troop formed part of the guard of honor, which was composed chiefly of the Governor-General's Foot Guards under Major Macpherson. On the

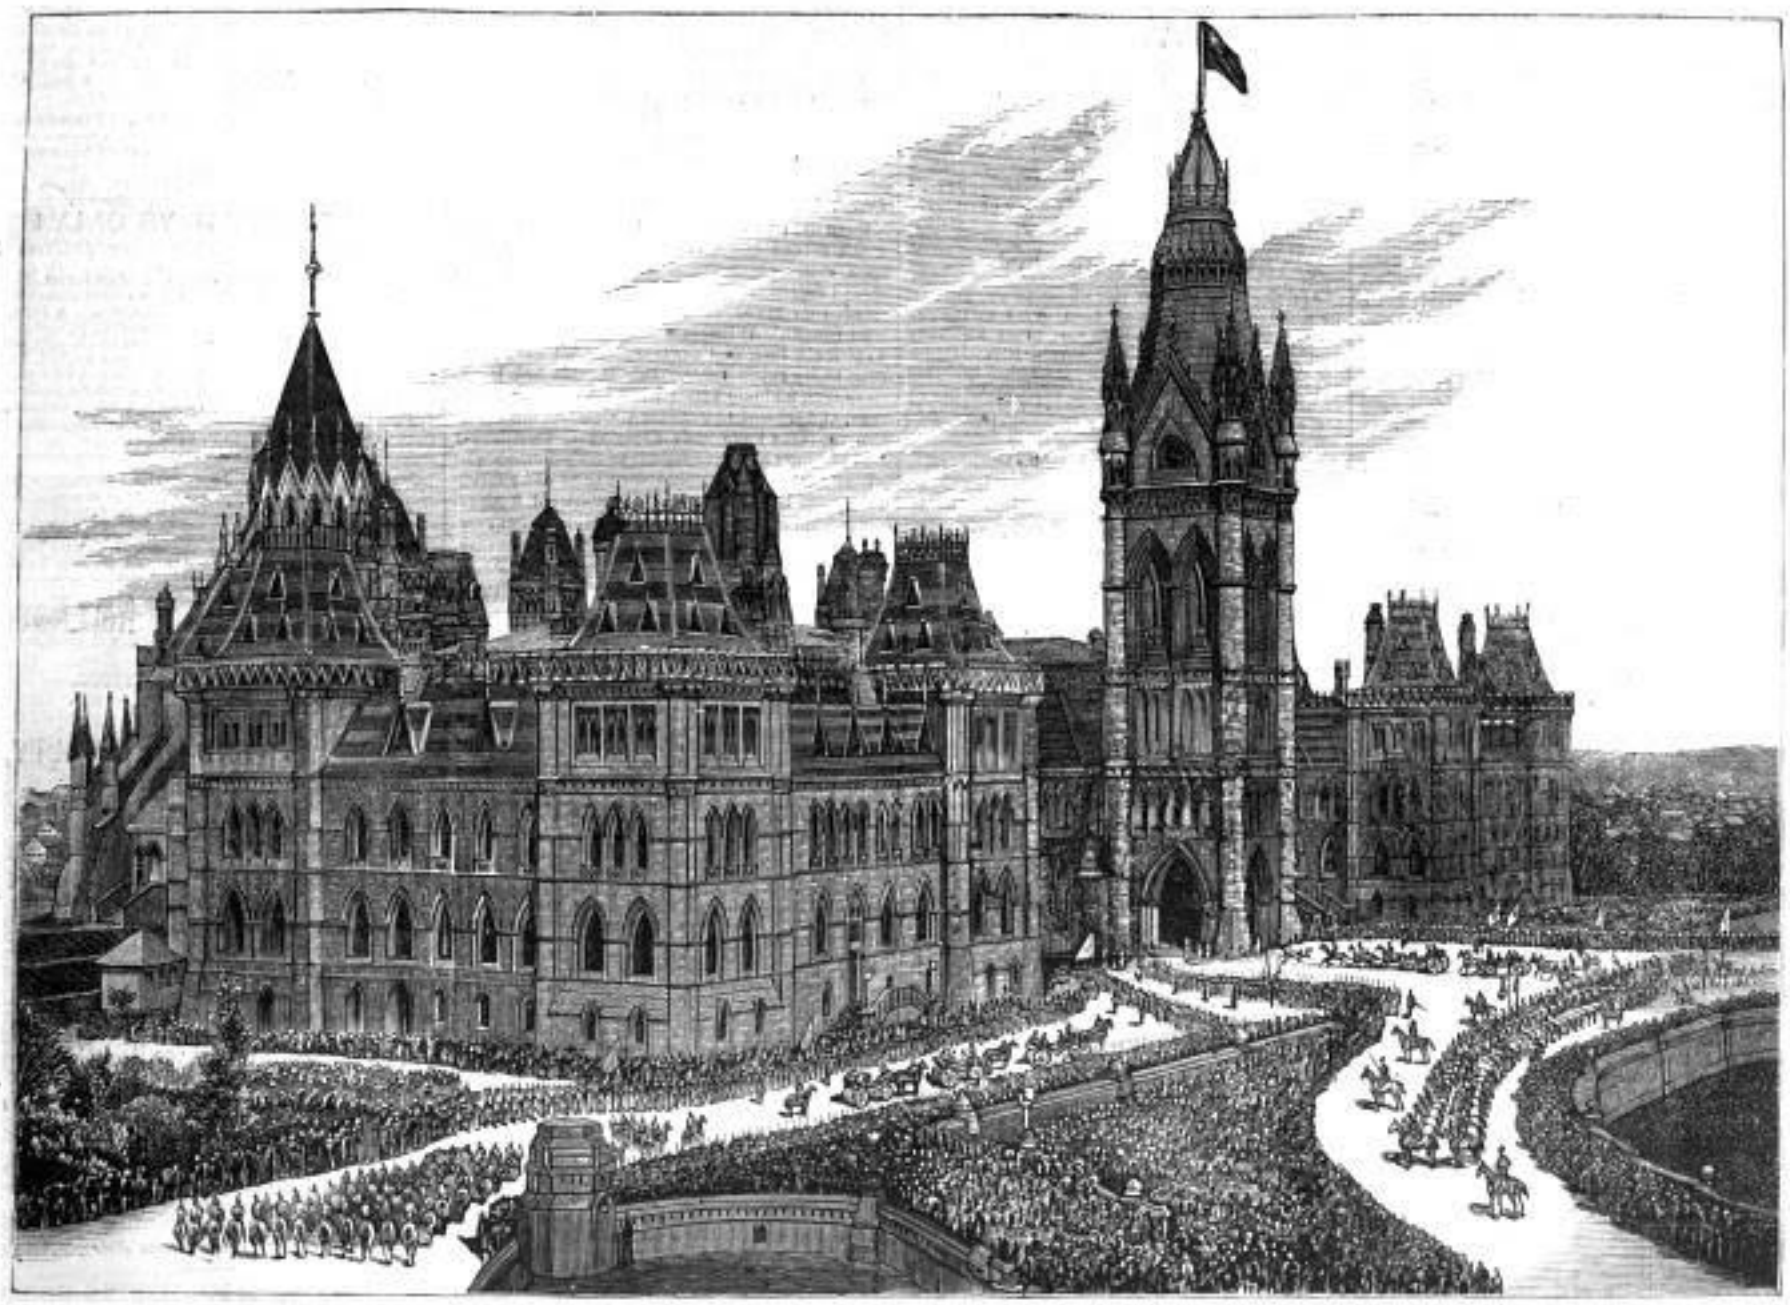
arrival of the Viceregal party at the main entrance the guard of honor gave the royal salute by lowering their colors at the present, and another royal salute was fired from the Nepean Point and Major's Hill batteries. Their Excellencies entered the Senate Chamber at three o'clock precisely. The members of the Commons having been summoned, the Governor-General read the speech from the throne in due form. The scene was a very brilliant one; Ministers of the Crown wore the Windsor uniform, and the judges of the Supreme Court of the Dominion appeared in their robes of ermine and scarlet. Officers of the militia also wore their uniforms. Ladies appeared in full evening dress.

Having formally opened the Parliament, the Viceregal party returned to Rideau Hall, another royal salute announcing their departure from the Parliament buildings.

THE LIEDERKRANZ BALL.



THE annual carnival ball of the Liederkranz Society, at the Academy of Music, in this city, on the night of February 13th, was in many respects the most brilliant ever given by that Society. Its management was simply superb. The decorations could scarcely have been excelled; large vases, filled with living plants bearing flowers of gorgeous hue, flanked each entrance to the Academy, each entrance to the dancing platform, and the stairways leading to the upper floor. The lobby thus resembled a huge conservatory. Over the principal entrance to the ballroom were the letters "L. K." in pink flowers, encircled by a wreath of roses, which in turn was surrounded by a drapery of smilax. The promenade concert was advertised to begin at nine, and on the moment, the first strains of the grand march, "König Karl," were heard. Dancing (in front of the curtain) was fixed to begin at ten, and opened a few moments earlier. At eleven the floor was cleared, and in response to the notes from a dozen trumpets in the gallery, the curtain slowly ascended, disclosing a spectacle of rare beauty. The rear of the stage was occupied by a high balcony with three carpeted stairways—one in the centre and one at either side. The balcony was painted to represent carved stone with roses creeping up over its face. The bottom was banked its entire length with potted natural flowers. Potted palms graced the railings. At top in the centre stood a tall yellow canopy bearing the motley coat-of-arms under two fool's wands crossed, and edged with artificial flowers. From each side were draped hangings of purple, embroidered with gold. Long narrow banneretti of red silk on tall poles stood at intervals on each side, and at either end was an enormous champagne-bottle. At the top of the stairway, on the extreme left, was a throne, and at that on the right was a rustic table, chairs, bottles and glasses. On the central throne sat *Prince Carnival* (Mr. C. S. Von Schaller) in parti-colored costume of blue, white and red silk, with a white slouched hat, gorgeously trimmed. In his hand he bore a fool's wand. This dress was a pleasing variation of the stereotyped attire of the patron of masked balls. In front of him stood, with hands clasped, and about to be united in marriage, *Bacchus* (Mr. Carl Kapff) and *Terpsichore* (Mrs. Joseph Keppler). *Bacchus* was appropriately attired in white flowing robes, edged with bands of gold, crown of grapes, and tiger-skin cloak. *Terpsichore's* abundant blonde hair hung loose over her shoulders from a diamond pin which clasped it in a bunch on top. In her hand she held a golden tambourine. On the throne on the left sat *Princess Carnival* (Miss Thöne), and on the table on the right stood *Bacchante* (Miss Waehner). Around the table sat a gay group of drinking roysterers, to whom two satyrs furnished appropriate music on the reeds. *Princess Carnival* was attended by *Mephisto* (Mr. Gus Deitrich) and a group of pages, fools and minstrels. *Prince Carnival's* taste ran to dancing-girls. Grouped in other parts of the balcony, and filling all the stairways, were heralds, hunters, bakers, harlequins, knights and ladies. On the floor, in front of the balcony, were other picturesque groups—Alpine hunters, glittering falconers, and nondescript characters.

The brilliant hues of the dresses and the drapery, the glitter of gold and silver which ornamented everything, and the gorgeous tints of the flowers, together with the admirable character of the grouping and the symmetrical anatomical development of the participants, male and female, formed a scene of rare beauty. In front of all stood gracefully posed a *corps de ballet* headed by Mademoiselle Caroline Schroetter as the *premier danseuse*. The other members were dressed half in close-fitting bodices of leopard-skin with sashes of ivy leaves, and half in the usual coryphée costume, with the addition of crowns and sashes of similar leaves. *Prince Carnival* having arisen and waved his hand thrice, the band struck up and the spectators were treated to a genuine ballet dance, which—the performers being professionals—was executed in the highest style of art, and was warmly applauded. This over, the groups on the balcony dissolved into a procession which moved slowly around the hall. First came six hunters, then two heralds, then two pages, then the ballet, then two fools, then a *Columbine* and *Harlequin*, then *Prince Carnival* and his consort, then two fools, then *Bacchus* and *Terpsichore*, and following a string composed of the other characters and their retainers, which completely encircled the dancing platform. When the head of the procession had reached the balcony again the band struck up a waltz, and immediately the floor was covered with whirling couples.

One of the pleasantest innovations at this ball was the lining of the stage with sofas, to which dancers were permitted to retire, so that the entire dancing space was fringed all the evening by elegantly dressed ladies and gentlemen. The usual characteristic of German balls—the presence of children and very young misses—were not absent on this occasion, and it lent beauty and grace and pleasantness to the scene. The boxes and seats in the balcony were filled by an elegantly dressed company, and the proscenium boxes were the resorts of large and merry groups of friends displaying here and there a mask. Some curious incongruities were noticed while the maskers were amusing themselves in the dressing-rooms and corridors waiting for the opening of the ball. What appeared to be the *Queen of Sheba* walked in arm-in-arm with *Ah Sin*. *Mephistopheles*, whose red statuesque pedestals were objects of general admiration, coquetted

NEW YORK.—WILSON M'DONALD'S STATUE OF THE LATE GENERAL CUSTER, TO BE ERECTED AT WEST POINT.

Digitized by Google

in front of a proscenium box with the *Evening Star*. Finer costumes or more varied dresses were probably never seen at a Liederkranz ball. A superb *Huguenot* was among the gentlemen, and a lovely *Sultana* was among the ladies. The latter was a rich, graceful costume, more modest, and in some respects more beautiful and picturesque dressing of the figure, than the conventional European toilet. *Prince Egmont*, of Flanders, danced the lancers with *Annie Laurie*, while *Robin Adair* paced it back and forth with the *Lady from Cork*. *King Solomon*, or somebody like him, arrayed in considerable glory, kept step with *Dolly Varden*; while *Mr. Micawber*, "owing to circumstances over which he had no control," stepped on the train of the *Bride of Lammermoor*, and, with characteristic dignity, asked her escort to beg his pardon.

Financially, socially and terpsichorally the ball was an absolute success. Not an offensive incident marred its progress from beginning to close. Our illustrations represent the more salient features of the occasion, and will give the reader a faithful idea of its festivities.

COLONEL WILLIAM T. PELTON.

WILLIAM TILDEN PELTON was born in Ithaca, N. Y., July 20th, 1838, and entered Williams College in 1854, taking the regular collegiate course, but withdrawing near the close of his junior year to enter business. Shortly after the inauguration of his uncle, Samuel J. Tilden, as Governor of New York, he was made military secretary with the rank of colonel. Since 1874, when Governor Tilden received the Democratic nomination for the Gubernatorial chair, Mr. Pelton has been largely occupied with politics. He was present at the St. Louis Convention which gave Mr. Tilden the Democratic nomination for President, and, according to his testimony before the Potter Investigating Committee on February 6th, he was one of the most active managers of the Presidential campaign in the interests of his uncle. His connection with the cipher dispatches was that of an active participant in the effort to procure the electoral votes of Florida and South Carolina for the Democratic candidates for President and Vice-President.

A Romance of the Gambling Table.

A LADY of rank in Paris died three weeks ago in the fashionable quarter of the Arc de Triomphe, of whom an interesting story is told. She was a famous card-player, and was credited with knowing every game there was to know. When traveling in a foreign land, she met, one day, in a hotel, a Russian lady with that passion for gambling said to be inherent in the Russian nation. Anxious to play with the lady from Paris, she wrote requesting a few games. Her request was granted, and the ladies played all night, the Russian losing at every hand, until her opponent had won from her more money than the mines in the Ural had produced for her revenues in twenty-five years. At last the Russian lady made a despairing effort to regain her fortune, but without avail. Rising from the table, she told the French lady how she had lost more than she possessed, but that in her desire to pay a debt of honor she would instruct her steward to convey to her the title deeds of all the mines and estates she owned. At this the victorious antagonist smiled and requested that she might have her own way in the matter, since she had won. A priest and a lawyer were sent for. When they arrived, the Russian lady was asked to bind herself by a solemn oath never again to touch a card or risk money at any game of chance. She did so, and then signed an engagement to pay her antagonist the annual sum of $2,000. The vow never to play cards for money again she faithfully kept, and the $2,000 was punctually paid every year, the French lady giving it the name of the "Queen of Spades Bounty," and invariably giving it to the poor of Paris.

An Afghan Beauty.

THE correspondent of a London paper describes an Afghan beauty as having blue-black hair plastered stiff with gums, and either worn in various forms on the head or plaited in long braids down the back. The margins of the ears are pierced and decorated with rows of small silver rings, while large rings hang from the lobes. The neck and breast are tattooed with little figures of stars and flowers, and the sparkle of the lustrous black eyes is enhanced by coating the lids with black antimony. The cheeks are rouged and dotted with little round moles of gold and silver tinsel fastened on with gum. A loose muslin or silk jacket of yellow, blue, or red hangs below the waist, and wide trowsers of silk or other colored materials complete the indoor costume. On going out, the lady wears leggings of cotton cloth, gartered at the knee, shoes of red or yellow leather and a hookaposh or cloak. Some ladies wear horsehair veils, and others fasten vinaigrettes to their foreheads which contain attar-of-roses or other scents. Afghan ladies exercise much influence over their semi-savage husbands, and one of Shere Ali's wives sometimes smartly boxes him on the ear with a slipper.

A New Mammoth Cave in California.

A NEW mammoth cave has been discovered in Tuolumne County, California. The cave is adorned with decorations of dazzling beauty, unsurpassed in character on the Pacific slope. Access is had through a crevice in the ledge 3 feet in width by 6 feet in length. Descending by ladder 10 feet, the visitor reaches the floor of an inclined archway, dipping at an angle of 25 degrees, from 20 to 30 feet in height, by 20 feet in width. Descending the incline, which is 100 feet in length, the floor of the grand archway is reached, from 40 to 60 feet in height varying in width from 20 to 30 feet, from which radiate scores of similar archways leading to spacious chambers, with their lofty ceilings draped with brilliant stalactites, that glitter and sparkle in the light of a lamp like gems of ocean waves of which we read. The floors and walls of this subterranean hall are entirely coated with stalagmites, pure crystalization. The formation resembles in make-up, and appears to the vision, like a sheet of snow lying loosely in large flakes on a pane of glass. "The Bridal Chamber" is 60 feet in length, 20 feet in width, with slightly arched ceiling 10 to 15 feet; floor and walls crystalized; from the ceiling depend hundreds of stalactites from 1 to 6 feet in length. Explorations made of the cave extend over an area of one-half a mile. In no direction already explored has there been found any terminating point to the cavern. Its extent is believed to exceed four miles.

FUN.

"BRICK-A-BACK" is what the hod-carrier calls it.

WHAT do they weigh down upon the Swanee River?

A SURVEYOR of the port—He that looketh upon the wine when it is red.

A SERMON is like a building—the longer it is the more sleepers there are.

GO TO thy aunt, thou sluggard, and if she is worth money consider her ways.

THE Israelitish leader, Moses, ought to have been a New York police captain. He is the only man on record who ever succeeded in suppressing farts.

THE schools are deprived of the presence of many a boy who has just enough of a sore throat to keep him at home in the back yard building snow forts.

"GOVERNESSES should never be required to do low, menial work," said a gentleman. "Certainly not, but they frequently aspire to the hymeneal," replied a lady.

COURT.—Prisoner, you are accused of vagrancy, having no means of existence. *Prisoner*—"No means of existence! What do you call that?" (Produces red herring from pocket and offers it in evidence.)

A STINGY husband accounted for all the blame of the lawlessness of his children in company by saying his wife always gave them their own way. "Poor things, it's all I have to give them," was the prompt reply.

AT a wedding party at a restaurant, a maladroit waiter contrives to upset a tureen full of rich soup on the satin dress of a lady guest, who takes on terribly and threatens hysterics. "Do not worry, madam," says the waiter, kindly, "there's lots more soup in the kitchen."

AT a children's party, the other day, oysters were served for supper. Noting that one little shaver was remarkably fond of the bivalves, the lady of the house, anxious lest he should allow his appetite to exceed his judgment, inquired if he thought his mother would permit him to eat so many oysters at home. "Yes," said the young gourmand, "if there was enough to go 'round."

Advertisements for any of Frank Leslie's Publications will be received, at regular rates, by Col. W. B. Crooks, 1309 Chestnut St., Philadelphia, Pa.

WE publish in another column the thirty-fourth annual report of the New York Life Insurance Company. The public has come to expect from this company a showing of unquestioned strength and steady progress, and it has never been disappointed. The company has increased its assets, its surplus, its interest receipts—in short, it has increased everything except its expenses and its new business, and for these omissions it will be readily pardoned. Its receipts from policy-holders were nearly six millions, and its payments to them well on towards five millions, while its assets increased nearly two millions. The explanation of this is found in its extraordinary receipts from interest and rents, which exceeded its death-claims by $399,989.52. These receipts average about five and one half per cent. on the mean amount of assets held during the year. The secret of this is, of course, in the high character of its investments, upon which only a trifle over one per cent. of interest remained unpaid at the end of the year, and much of this was not due. After making allowance for all possible liabilities, including a contingent fund of over a million dollars for its tontine policies, the company shows a clean surplus, by the Massachusetts standard, the highest in use, of nearly three million dollars (2,811,436.64). Such a showing is not only exceedingly creditable to the managers of the New York Life, and assuring to its policy-holders, but it makes easy work for a man who needs life insurance—as thousands do—to determine where he can insure with a moral certainty of being liberally dealt with, and of having his policy as secure as human wit and skill can make anything.

THE CROWNING DISCOVERY.

ALL the "phones" of this phonetic age are surpassed in practical benefit to mankind by the discovery of Allan's Anti-Fat, the great and only known remedy for obesity or corpulency. It produces no weakness or other unpleasant or injurious effect, its action being simply confined to regulating digestion, and preventing an undue assimilation of the carbonaceous, or flesh-producing, elements of the food. Sold by druggists.

ELLSWORTH, KAN., July 15th, 1878.

BOTANIC MEDICINE CO., Buffalo, N. Y.:

Gentlemen—Allan's Anti-Fat reduced me seven pounds in one week. Yours respectfully,

MRS. TAYLOR.

DR. ANDREW URE, the eminent English chemist, almost forty years ago, pronounced Nelson's Gelatine to be equal in strength and purity to the best isinglass, and to be entirely free from acids or other harmful ingredients. The gelatine costs only about one-third as much as isinglass, and is as pure and excellent as when Dr. Ure first tested and approved it.

WHEN the St. Nicholas Hotel was opened, twenty years ago and more, the journals devoted many columns each to the description of the most magnificent public house in New York, perhaps in the world. The same pre-eminence is retained today, in spite of great rivalry. Nowhere can the stranger find more luxurious and elegant hospitality as regards table, rooms, and universal attention to his wants.

YEARS ago when any one was troubled with Bilious Attacks, Sick Headache, Nausea, etc., the remedy used was Blue Pill or Calomel. To-day people want something purely vegetable and easy to take, like Carter's Little Liver Pills, which are sold by all druggists.

INDIGESTION, DYSPEPSIA, nervous prostration, and all forms of general debility relieved by taking MENSMAN'S PEPTONIZED BEEF TONIC, the only preparation of beef containing its *entire nutritious properties*. It is not a mere stimulant like the extracts of beef, but contains blood-making, force-generating and life-sustaining properties; is invaluable in all enfeebled conditions, whether the result of exhaustion, nervous prostration, overwork, or acute disease; particularly if resulting from pulmonary complaints. CASWELL, HAZARD & CO., Proprietors, New York.

ALLCOCK'S PLASTERS

Need no other Award of Merit than grateful testimonials of cures. These are better than anything from Expositions of Paris or Philadelphia, where ALLCOCK'S PLASTERS were not exhibited, being too widely and favorably known to need any such props.

ALLCOCK'S PLASTERS QUICKLY CURE CHILBLAINS.

OFFICE OF
THE HALL HUSKING GLOVE COMPANY,
No. 145 SOUTH CLINTON STREET,
CHICAGO, February 2d, 1876.

Hon. B. Brandreth:

DEAR SIR: I have given ALLCOCK'S POROUS PLASTERS a thorough trial for Chilblains, which have afflicted me for 25 years past. I applied strips on the inflamed and itching part, and the relief was immediate. I used them for a week, and my feet became perfectly well. If you can get ALLCOCK'S PLASTERS there will be no trouble about chilled or frosted feet. My wife and self have used them with the greatest effect in backache and liver complaint. They give a fine appetite if worn on the pit of the stomach. Yours truly, WM. E. HALL.

HUDSON RIVER RAILROAD STATION,
SING SING, February 6th, 1879.

MY DEAR DOCTOR: YOUR ALLCOCK'S PLASTERS have been in constant use by myself and family for the last ten years. They are invaluable in colds, coughs, pains in side and chest. My children never complain of ALLCOCK'S PLASTERS; you don't have to hold noses to enable them to be taken.

On the 10th of January, just past, I was attacked with a most severe influenza. It prostrated me for a week; nothing relieved me, and I was afraid of pneumonia. I therefore sent to your factory and got a quarter of a yard of plaster and applied it to my chest. In twenty-four hours my breathing was much easier, and in forty-eight hours I was well. I wore the plaster for weeks without inconvenience. Yours truly,

W. T. LYON, Ticket-Agent.

To Hon. B. BRANDRETH.

LETTER FROM THE HON. JAMES W. HUSTED, EX-SPEAKER OF THE ASSEMBLY.

PEEKSKILL, Oct. 30th, 1878.

B. Brandreth, President of the Porous Plaster Company:

MY DEAR SIR: I desire to bear witness to the virtues of ALLCOCK'S POROUS PLASTERS. About a year ago I was thrown from a carriage and badly bruised. Suffering great pain, I was carried home, and some three or four of ALLCOCK'S PLASTERS were applied. The effect was almost immediate, and in a short time all pain left me, and I was soon up and attending to business.

Your plasters are very useful in cases of severe colds and coughs. I used three—one on my back and two on the chest—when I had so bad a cough that my friends thought nothing but a trip South would save me. These plasters, however, soon effected a perfect cure. My family use them constantly. There is no humbug about them; they perform all they promise. Yours truly,

JAMES W. HUSTED.

BROOKLYN, No. 64 MINDAGH STREET,
January 23d, 1879.

Dr. B. Brandreth, Sing Sing:

DEAR SIR: Last October I took a severe cold, which settled in my side, chest, and small of my back, causing much pain, inconvenience and anxiety. I thoroughly tried several applications recommended for my trouble, but without obtaining the least benefit. At length a friend advised me to try ALLCOCK'S POROUS PLASTERS, which I have since done to my entire relief. This trouble had lasted more than a month before I tried ALLCOCK'S PLASTERS, and seemed to increase in violence, but within two or three days after applying the plasters I could discern an improvement in my condition, and within two weeks the pain and soreness had entirely disappeared, and I have felt nothing of it since.

Yours truly, L. H. SANTEE.

At Tatham Brothers, 82 Beekman Street, N. Y. City.

Beware of imitations. ALLCOCK'S POROUS PLASTERS are sold by all druggists. Principal office, No. 294 Canal Street, New York.

Easy Shoes.—Superior quality for gentlemen at reduced prices. EDGELL FRANCIS & SON, No. 81 Nassau Street, West Side.

Keep your Bird in health and song by using SINGER'S PATENT GRAVEL PAPER. For sale by druggists and cage-dealers. Depot, 582 Hudson St., New York.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast-tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—See article in the *Civil Service Gazette*.

There is a Chance in every Man's Life to
MAKE A FORTUNE
IS NOT THIS YOURS?

Many of the wealthiest men in California made and are making fortunes by investing small sums of money in **GOLD MINES.** It is now conceded by all that Colorado in the future is to take the lead of the world in producing the Royal metals, and we predict that within the next six months a greater excitement will exist in Colorado, and there will be a greater rush of people than there was to California in 1849. **Railroads are being built, Towns are springing up, and the hum of prosperity is heard throughout the State.** While men are starving in cities and on worn out lands, Colorado steps to the front with her millions of hidden wealth and **INVITES YOU TO ACCEPT IT.**

THE GOLD HILL DISTRICT MINING COMPANY, is duly incorporated, William M. Riley being President, and T. S. Page, Secretary. This Company was organized for the purpose of developing valuable Colorado property. **THE CINCINNATI LODE,** which is the property of this Company, is situated in Boulder County, Colorado, being on **Melvina Hill,** in the **Gold Hill Mining District.** Nestling in a beautiful valley, encircled by picturesque mountains, and at the foot of Melvina hill, rests the little village of Gold Hill, than which there does not exist a more charming or healthful, in that Switzerland of America. From the Cincinnati Mine you look down upon it, and can cast a stone into its streets. The **Cincinnati Mine** is continuous, being but a few hundred feet, and on the same mountain as the **CELEBRATED MELVINA MINE.** For the amount of money expended in developing it, the Melvina Mine is the richest and best paying mine in the world today. In a **historical descriptive** and **statistical** work on the **Gold** and **Silver** resources of Colorado, written by Frank Fossett, we quote the following in reference to the Melvina. (see page 210.) "**The richest** and most famous mine in this locality, is the **MELVINA,** located on **Melvina Hill.** It was discovered in July, 1873. The first month gave a yield of **$8,000,** of which nearly **$8,000** was profit. It has been worked steadily and has given the largest proportionate profit of any mine of which there is any record in the **wide world over.**"
What is said in favor of the **MELVINA** may be said of the **CINCINNATI MINE.**

THE GOLD HILL DISTRICT MINING COMPANY propose to do what has never been done by a **responsible mealed corporation** before, viz.: The capital stock of the company is $100,000—$20,000 of which has been placed in the **Treasury** of the company to be sold and the proceeds to be applied as **working capital for the development of the mine** for the **necessary Machinery** and to **erect Stamp Mills.**

We propose to sell **ONE OR MORE** shares of this Stock at **$2.00** per share, its par value.

To persons seeking investment of money in small sums, we can say, this investment may be the means of **making your fortune.** What **Merchant, Mechanic** or **Laboring Man** would not be acting wisely in investing $2 to $10 in Stock of our Company? become one of the **Stockholders** and in direct communication with us? and receive the handsome dividends we will make as soon as we have received the necessary money to get a fair start. We say we **WILL MAKE HANDSOME DIVIDENDS,** because we **know** we have one of the **Richest True Fissure Veins in the World** to work on. Each and every stockholder will be brought in direct correspondence with our Company; and to any contemplating going to a mining country our **advice** may be the means of making for you a **future and prosperous home.**

To illustrate how fast money is made in mining, we note below a few results of investment.

R. C. Winchester bought **Union Consolidated** at **$7.50** per share. It went up to **$170** per share and he cleared **$23,000 in 15 Days!** A. W. Conant bought **MEXICO** at **$2.50,** sold it at **$30,** and cleared over **$100,000 in Two Weeks!!** H. R. Williams offered the Sheet below for **$100,** and in six weeks after sold it for **$85,000!!!** Look at the Caribou mine 10 miles from the **Cincinnati,** have taken out over five millions of Dollars!!! Hundreds of other mines are equally rich, but are lying idle for want of capital to open up and pay for machinery. Just what we want for our mine. **Invest a few dollars in this enterprise and your children will thank you for it.** Below we annex assayer's report on ore taken from the **Cincinnati Mine.**

"Deposited at the mint of the United States, at Denver, Colorado, the 12th day of September, 1878.
From the **Cincinnati Lode,** Gold Mining District, Boulder Co., Colorado.

One fine assay per ton Gold,	159.15.	Value in coin per ton Gold,	$3,289 73

The Popular Pictorial Weekly.

Frank Leslie's
Illustrated Newspaper

ADMIRABLE ILLUSTRATIONS
OF THE
Current Events of the Day (Political, Social, Scientific, Commercial, etc.) at Home and Abroad.

OPINIONS:

"FRANK LESLIE'S ILLUSTRATED NEWSPAPER offers new attractions every week. It is ably edited, fair and impartial in its criticisms of men and measures, and gives all the foreign and home news in circulation. It is worth many times the price of subscription every year to its patrons."—*Dysart (Iowa) Reporter.*

"FRANK LESLIE comes to us for January full of beautiful pictures and excellent reading. The Holiday Number was exceptionally fine—filled with choice cuts and some very beautiful stories; 'The Governor's Dinner,' by Edward Everett Hale, is unusually good. This popular weekly paper will be more attractive for 1879 than ever. No family should be without a pictorial paper; the children will gain a more intelligent idea of current events through its pictures than by reading through columns of editorials. It is edited with ability, is moderate in its views, and is always reliable in point of news."—*Observer, Celina, Ohio.*

"There is more literature sent out from Frank Leslie's Publishing House in the way of periodicals than any other in the United States, and it is of that popular kind which pleases all ages and classes—even those who cannot read, for FRANK LESLIE'S ILLUSTRATED WEEKLY would make a Sandwich Islander's eyes sparkle with delight as he looked upon the large number of attractive woodcuts."—*Wythesville (Va.) Enterprise.*

"The Publishing House of Frank Leslie is one of the extensive institutions of the Western Continent. His pictorial journal (LESLIE'S ILLUSTRATED NEWSPAPER), issued from this establishment, possesses extraordinary merits, artistic and literary, such as to insure the greatest popularity. Its numbers are filled to the brim with good things."—*Pulaski (Va.) Enterprise.*

The ILLUSTRATED NEWSPAPER has reached its FORTY-EIGHTH VOLUME, affording, for nearly A QUARTER OF A CENTURY, a Complete Review of Current Events, Foreign and Domestic.

There are able editorials on all subjects of public interest. In its columns will also be found Domestic and Foreign News of the Week, Personal Gossip, Musical and Dramatic Items, the Money Market, interesting Serial and Short Stories, Sketches, Biographies, etc., etc., together with admirable Cartoons, humorously hitting off peculiar incidents, prevailing follies, foibles, etc.

WILKIE COLLINS'S GREAT NOVEL,

"The Fallen Leaves,"

Now being published in its columns, is strikingly original in plot, and it is being developed with that masterly skill which distinguishes all this popular author's works. Order the back numbers, containing the opening chapters, of your newsdealer.

PUBLISHED EVERY WEDNESDAY. TO BE HAD AT ALL NEWSDEALERS', PRICE 10 CENTS.
ANNUAL SUBSCRIPTION, $4, POSTPAID.

FLORILINE!

"FLORILINE"—FOR THE TEETH AND BREATH,

Is the best liquid dentifrice in the world. It thoroughly cleanses partially decayed teeth from all parasites or living "animalcule," leaving them pearly white, and imparting a delightful fragrance to the breath.

THE FRAGRANT "FLORILINE"

removes instantly all odors arising from a foul stomach or tobacco-smoke. Being partly composed of honey, soda, and extracts of sweet herbs and plants, it is perfectly harmless and delicious as sherry.

Prepared by **HENRY C. GALLUP, No. 493 Oxford Street, London, England,** and retailed everywhere.

SUCCESS OF THE POPULAR CRAFT "H. M. S. PINAFORE."

PERHAPS it is the smallness of our own navy that has led Americans to give such a hearty welcome to "Her Majesty's Ship Pinafore." Certain it is that no English craft that ever visited our ports has received a warmer greeting. A burlesque founded on the Royal English Navy, written by that well-known dramatist and satirist, W. S. Gilbert, with music by Arthur Sullivan, who has been called the "musical hope of England," bristling with wit and sparkling with melody—no wonder it has been a success.

"Pinafore" was first brought out at the Opera Comique Theatre, London, in May, 1878, and at once bounded into popular favor, on the billows of which it is still riding. In this country the first one to see the coming success was Manager Field of the Boston Museum, who put it on his stage, where it remained for nearly seventy nights, in full tide of favor.

The Rice Opera Bouffe Extravaganza Company, which had made a famous name with the burlesque on Longfellow's "Evangeline" in 1874, at Niblo's, in this city, and later in Boston, at the old Globe Theatre, saw the prevailing attraction, and some weeks ago brought it out at the Lyceum Theatre in this city, with a strong cast, composed largely of those who had established their fame in "Evangeline." The representations by this company have attracted very large audiences, and deservedly so, as every possible attention is paid to details, and the members of the cast not only sing the music, but are in addition good actors, and this, in a burlesque such as "Pinafore," is equally necessary with good singing. The company has appeared in Brooklyn, and will play in other suburban cities.

Other managers in New York have also found that Sullivan and Gilbert's collaboration is a mine which will bear working, but in many points the Rice company stand head and shoulders above all their rivals. Mr. J. Nunnemacher, of Milwaukee, purchased an interest in this enterprise at the beginning of the present season, and Mr. Charles E. Rice, who wrote the music of "Evangeline," is also an interested party, while Mr. A. S. Penoyer, the veteran business manager, formerly with Caroline Richings and the Hess Opera Company, performs the duties of his position with exceptional success.

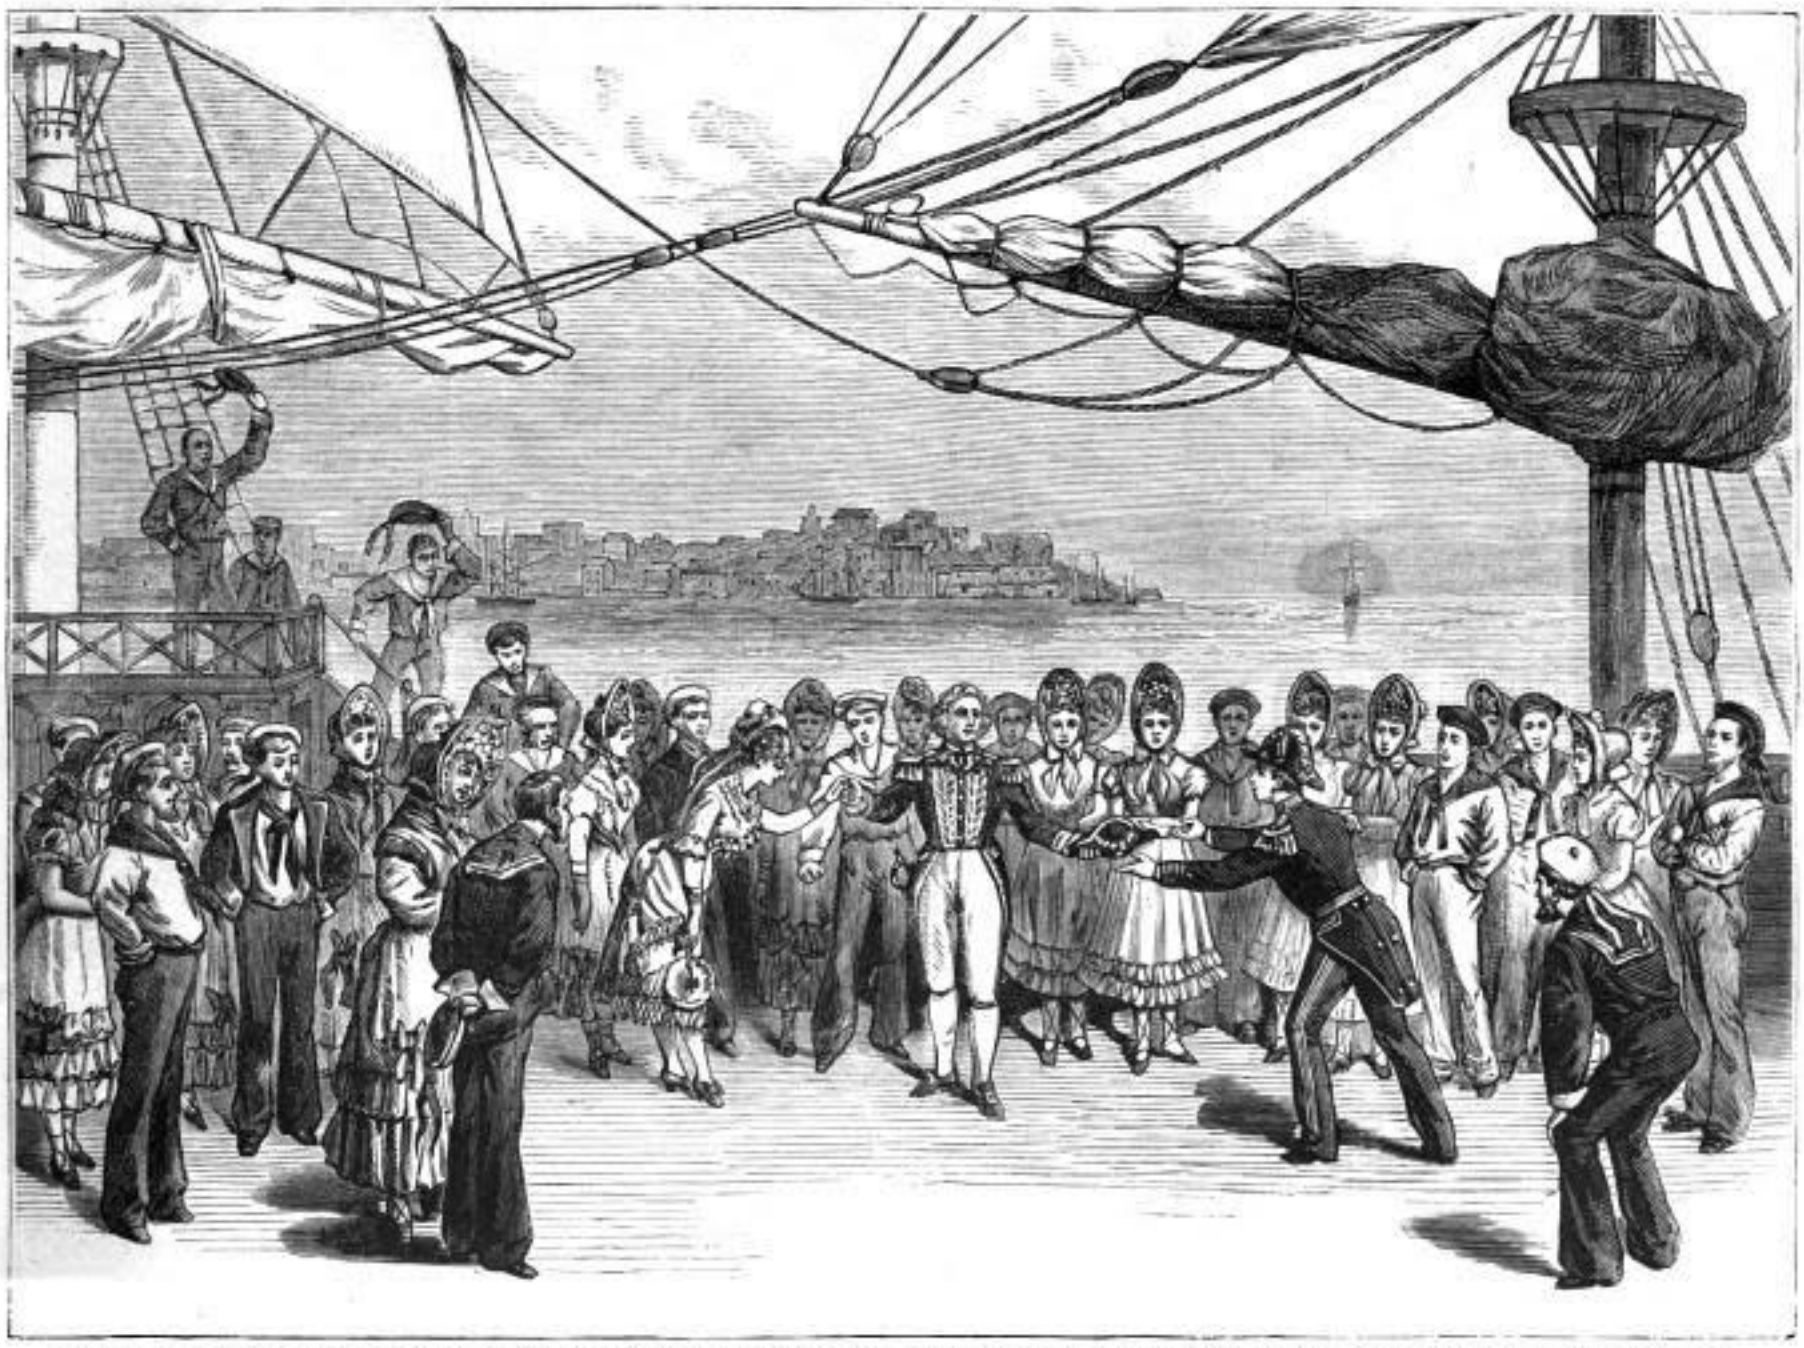
THE WAR IN ZULULAND.

THE attempt of Great Britain to extend her possessions in South Africa, prosecuted with characteristic pertinacity for many years, has recently encountered a check in Zululand which may lead to very serious consequences, and which lifts that colony and its people into instant prominence in the eyes of the entire world.

The British colony of South Africa now consists of Cape Colony proper, with its dependencies of Caffraria, Basutoland, Fingoland, Griqualand and the Transvaal, the latter having been annexed in 1877, and the settlement of Walfish Bay, on the Atlantic coast, far to the northward, the annexation of which was consummated by a proclamation of Queen Victoria last month (January, 1879). Caffraria still enjoys a nominal independence, but its speedy absorption by the voracious Government of Cape Town may be regarded as inevitable. Eastward from Cape Colony, and separated from it by the lately independent province of Caffraria, lies the Crown colony of Natal, fronting on the Indian Ocean, and bounded on the northeast by Zululand, the present scene of hostilities. Natal is vigorously independent of Cape Colony, from which it was separated in 1856, when a constitutional charter was granted, which was essentially modified in 1875. At that time there were not a thousand white settlers in Natal, and the native inhabitants—the fine race called Zulus or Amazulus—were also few in number.

Zululand proper was then, as now, a vast region stretching along the Indian Ocean, separated from Natal by the Tugela River (the scene of the recent disaster), bounded on the northwest by the Transvaal Republic and on the northeast by the Portuguese colony of Delagoa Bay. The northern portion of Zululand was inhabited by a race known as the Amaswazis, of kindred origin and language, but owing only a feeble allegiance to the Zulu King. Since 1850 there has been a steady stream of Zulu emigration southward across the Tugela River into Natal, and the Zulu population of that colony has increased from less than fifty thousand in 1850 to 290,000 at the last census, taken in 1877. Probably they now number above three hundred thousand. The white population of Natal comprises but 22,654 persons of European descent, many of them Dutch Boers, more or less disaffected to the British Government.

Zululand proper, the vast region under the government of Cetywayo (pronounced Ketshwayo), is inhabited by some 300,000 natives who are admitted to be the finest and most powerful race of South Africa. Their country is a fine upland region, of uncertain extent, the northern boundaries having never been determined. The territory on the Blood River, or Transvaal border, was for many years in dispute between the Zulu King and the lately annexed Transvaal Republic. This quarrel was the proximate cause of the present hostilities. Some years ago Cetywayo offered to cede the territory in dispute, not to the Boers of the Transvaal, but to the English of Natal; but his offer was not then accepted. The war between Cetywayo and the Boers having resulted in the annexation of the Transvaal to Cape Colony on the plea that the little republic was unable to defend itself and preserve the peace, the rights of the Boers were, of course, transferred *de facto* to the Colonial Government, and the boundary quarrel was referred to a commission, which quite recently decided in favor of the Zulus. That decision, however, was accompanied by other terms in the nature of an ultimatum, which led to the present war.



MAP OF ZULULAND, SOUTH AFRICA.

One of the demands of the British Government is that Cetywayo shall abolish his present military system, and adopt such military regulations as may be decided upon by the Great Council of the Zulus on consultation with the representatives of the British authority. The present Zulu army must be disbanded and the men allowed to return to their homes. Every man must be free to marry without the King's permission, now often refused. No Zulu can hereafter be punished without a regular trial before the "Indunas" or magistrates. A British Resident must be admitted at the Zulu capital to watch over the fulfillment of these conditions and "be the eyes and ears and mouth of the British Government toward the Zulu King and the Great Council of the Nation." Missionaries must again be permitted to settle in Zululand under the protection of the British Resident, and no native must be molested for listening to them.

The British ultimatum was delivered late in November, and the time was subsequently extended to January 11th. Before that, a force of Zulus has invaded Natal and seized two refugees, who were afterward killed on Zulu territory. The British demanded the surrender of the two leaders of the invading force. Cetywayo replied by calling out his army and at the same time offering to pay a fine. When his answer was returned, the British columns invaded the enemy's country, and the campaign opened on January 22d, with a disastrous defeat near the Zugela River. A column consisting of a portion of the Twenty-fourth Regiment, a battery of artillery and 600 native auxiliaries, with wagon-trains of supplies and ammunition, was surrounded by 20,000 Zulus and cut to pieces. The British loss was thirty officers and about 500 non-commissioned officers, rank and file, of the Imperial troops, and seventy men of the Colonial troops. The Zulus captured a valuable convoy of 102 wagons, 1,000 oxen, two cannon, 400 shot and shell, 1,000 rifles, 250,000 rounds of ammunition, and 60,000 pounds of provisions. At last accounts it was feared that the Zulus might march upon Natal, and great consternation prevailed.

Of course the struggle will not end here. The British Admiralty has already chartered fifteen steamers to carry troops and supplies to the Cape, and the campaign will be pushed with all possible dispatch and vigor. The British commander, Lord Chelmsford, had under his command late in December about 10,000 European troops and a large force of native auxiliaries, armed with breech-loaders and light mountain guns. The Zulu King had brought into the field about 40,000 men, and his recent success will no doubt help to swell his fighting columns. There can be but one result to the war now commenced; but it admits of doubt whether, after all, Great Britain will be able to justify to the world, no matter how complete her success may be, the arrogant, aggressive policy which in this instance, as in others in South Africa, has provoked a needless conflict. It cannot be forgotten that in the matter of the disputed territory on the Blood River the claim of the Zulus was admitted to be sound and just; then the demands of the ultimatum concerning the appointment of two

British Residents on cantonments of large extent, over which the Zulus would have no jurisdiction, and vested with "a potential influence on all national questions," are not those to which a jealous, powerful and warlike monarch would willingly consent, being a visible limitation of his power and prestige, while the demands for a complete revolution of the social, judicial and military system of Zululand are such as no independent sovereign could entertain with self-respect or safety. The real ground of preferring these demands is found, of course, in the necessity for disarming a dangerous and haughty neighbor, and they were unquestionably preferred without any expectation that the Zulus would receive them, and consent without a struggle to their own effacement.

ANNA GRANGER DOW.

FEW American sopranos have attained distinction in their art by such legitimate and estimable methods as Mrs. Anna Granger Dow. The artist was born in Hartford, Conn., and at an early age displayed such decided musical talent as to induce her parents to give her a thorough musical education. Her family removing to Boston, she enjoyed in her earlier years the numerous advantages that attend a student in the most distinctively musical city of America. She, of course, joined the Handel and Haydn Society, where her exceptional talents at once secured recognition, and an engagement was offered her as soprano of the choir of the Bulfinch Street Church. She remained here for a time, and then, being urged by her friends to prepare herself for a musical career, went to New York to place herself under the tuition of Signori Steffanoni and Barili, the Italian masters. She made rapid advances in her art, developing the pure Italian style, which is now one of her marked characteristics. Visiting Europe, she placed herself under the famous *maestro*, Duprez, of Paris, and became his favorite pupil. But it was not until she had caught from the celebrated Vannecini, of Florence, the leading exponent of the Italian method, the art of finished phrasing, that she felt that her education as an artist was complete. She returned to America, and was welcomed with enthusiasm at her *début* in Boston at Miss Adelaide Phillipps's concert. She was offered and accepted the position of soprano of Rev. Dr. Ellis's First Church, where she remained for four years, singing in concert at frequent intervals, and in oratorio with the Handel and Haydn Society. Later, her engagements becoming so numerous, she devoted herself exclusively to the concert stage, singing with the Theodore Thomas orchestra, with Miss Kellogg, the Mendelssohn Quintet Club, and in English opera. Mrs. Dow has recently removed to New York, where her varied gifts as an artist have found the immediate recognition that was to have been expected in engagements in the symphony concerts and in oratorio.

INDIANA.—SILVER MAPLE-TREE GROWING FROM THE TOWER OF THE GREENSBURG COURT HOUSE.—FROM A PHOTOGRAPH BY SNYDER & THIMBLE.—SEE PAGE 468.

INSANITY IN GREAT BRITAIN.

WE are constantly hearing of the increase of insanity consequent on the high pressure under which are habitually carried on the various avocations of life. Some fourteen thousand insane patients, we learn, were admitted into asylums of all kinds in England and Wales during one year, rather more than half of whom were females.

MYRON W. WHITNEY.—FROM A PHOTOGRAPH BY MARSHALL. SEE PAGE 461.

By far the most prolific source of insanity appears to be intemperance, especially among the male sex. Bodily disease and old age come next on the list, and then domestic trouble, of which, as might be supposed, females are the greater sufferers. Business anxieties, on the other hand, claim some male victims. Taking domestic trouble, adverse circumstances and mental anxiety as inclusive of the ordinary strain of everyday life, we find that females have rather the worst of it under these headings; while in cases of insanity caused by overwork the male sufferers are in the majority.

Subscribers, in ordering our publications, should be careful to write the name of FRANK LESLIE *in full, and direct their letters to 53, 55 and 57 Park Place, New York, from which address all our publications are issued.*

SYMPOSIARCHS AT FAULT.

WHAT is called a "symposium" has of late become a fashionable literary contrivance for the sake of bringing together a number of disputants who are supposed to represent in their several persons the different aspects in which any given subject of public concern may be viewed according to the natural varieties of public opinion. The device is as old as the time of Plato, who used it for the purposes of Greek speculation in an age when the "conversational drama" was a natural form of literature, because its root was planted in the habits of an inquisitive and colloquial people.

The modern "symposium," however, is not a conference between a company of talkers who mutually "give and take" their respective opinions according to the drift of the discussion and the play of a dialectic logic, but as rather a congeries of cut-and-dried deliverances representing the predeterminate judgments of the parties presumed to be more or less at variance on the topic in hand. In this way a modern symposium does not so much propose to mold and fashion a fluent state of public opinion as to give us a vertical section of the rigid and heterogeneous strata into which that opinion has been already consolidated and divided.

In the March number of the *North American Review* we find a symposium which has for its thesis the questions whether the freedmen of the South should have been clothed after our civil war with the elective franchise, and whether, in view of the use that has been made of that privilege, they should now be disfranchised. The parties to the colloquy joined on this subject are Senator Blaine, Mr. Garfield and Wendell Phillips on the one side, and Senator Lamar, Mr. Stephens, General Wade Hampton and Mr. Montgomery Blair on the other.

It is not our purpose to indulge in a running commentary on the peculiar views enunciated by the individual disputants. It seems to us a mark of weakness in each of the controversialists that he seems much more skillful in detecting the loose joints in his adversary's harness than in protecting his own exposed flank from the sharp point of the adversary's spear. Without waiting to close the rivets which were loosened in the Republican shield by the shocking abuses of negro suffrage in South Carolina and Louisiana, Mr. Blaine bears down with bold defiance upon the Democratic champions whom he is called to confront in this wager of mimic political battle, and he is not slow in finding the weak spot in the enemy's armor. But in the very act of delivering his telling blows the weak spots in his own shield expose him to the counter-strokes of the spear held in the hand of Senator Lamar, until in the end each of the gladiators appears to the observer on the outside of the lists pretty well spitted on the weapon of his opponent.

When Mr. Blaine contends that the ballot, in spite of all its drawbacks, has been a benefit to the negro, and cannot therefore be now withdrawn, he does not succeed in making a defense of the "drawbacks" which, for a time, imperiled the very existence of civilization in South Carolina, and of social order in Louisiana. When Mr. Lamar contends that in order to make the negro a "free citizen" it was first necessary to take him from the party which claimed his vote as absolutely as his master once claimed his body, and that "*the next step* will be to take him as a class from either party and allow him to differ and divide, just as white men do," he virtually admits the full gravamen of the Republican complaint in the premises, for this form of statement implies that the freedmen are not yet permitted to "differ and divide, just as white men do."

In fact, each party can clearly see the intolerable nature of the pretensions advanced by the other. The moral coercion which the Republicans brought to bear on the freedmen in the days of the "carpet-bag domination," as it was called, is resented by the Democrats as an inversion of the social pyramid. The physical coercion which the Democrats of South Carolina and Louisiana are known to have brought to bear on the freedmen, at least in some parts of those States, at the last election, is resented by the Republicans as an inversion of the political fabric. The Democrat makes his quarrel with the Republican in the name of "civilization." The Republican makes his quarrel with the Democrat in the name of "personal rights, of public justice and of civil liberty." The impartial citizen makes his quarrel with "both their houses" so far as each succeeds in convincing the other of sin in the premises.

For who will pretend that the interests of civilization require that despite should be done to the fundamental maxims of political ethics? There is no such schism in the body politic as the antagonisms of party would seem to imply. The schism comes from the wrench and strain of partisan discord, not from the natural and normal functions of the social organism. That this is the deliberate judgment of the American people has been sufficiently proved by the verdict which they have rendered upon the abuses of colored suffrage in the hands of the Republicans under the late Administration. Those abuses have wrought the overthrow of the Republican Party in every Southern State, and enlightened Republicans at the North confessed to a sentiment of relief when the Administration of President Hayes cut itself loose from all complicity with a degrading phase of politics. But the evils of a historical epoch can never be made a pretext for the evils of a current epoch. The Republicans of the South have not been put into "circumscription and confine" for the creation of a Democratic preserve within which another set of abuses are to be tolerated under the plea of reactionary politics. These actions and reactions and counteractions of rival politicians must come to an end, and they can come to an end in nothing less than the renunciation of wrong-doing by the one party and by the other. The people will turn and overturn the politics which stand in their way until the state of a stable political equilibrium shall at last be reached on this question, as it has been reached on the other questions which from time to time have been set for the rise and fall of parties.

THE SOUTH AND IMMIGRATION.

GENERAL SHERMAN has done the South a real service in the publication of his recent letter on the resources of that section and the advantages which it offers to persons of moderate means desirous of improving their condition. Few persons have had better opportunities to study that section, and especially the State of Georgia, with respect to the natural advantages of soil, climate and healthfulness. His testimony, based upon actual observation, is positive and pronounced upon every point which can interest the intending settler. After speaking particularly of Georgia, he says that, in his opinion, no region on the face of the continent offers "as strong inducements for industrious emigrants as that from Lynchburg, Va., to Huntsville, Ala., right and left, embracing the mountain ranges and intervening valleys, especially East Tennessee, North Georgia and Alabama." He adds:

"Two or three millions of people could be diverted from the Great West to this region with profit and advantage to all concerned. This whole region, though called 'Southern,' is, in fact, 'Northern'—viz., it is a wheat-growing country; has a climate in no sense tropical or southern, but was designed by nature for small farms and not for large plantations. I know that no section is more favored in climate, health, soil, minerals, water, and everything which man needs for his material wants and to contribute to his physical and intellectual development. The railroads, already finished, give the people cheap supplies and the means of sending in every section their surplus products of the soil or of manufactures. There are immense beds of iron and coal, besides inexhaustible quantities of timber, oak, hickory, beech, poplar, pine, etc., so necessary in modern factories, and which are becoming scarce in other sections of our busy country."

As to whether Northern professional men, manufacturers, mechanics and farmers, may settle in that region with the certainty of fair dealing and cordial encouragement, General Sherman speaks with great confidence. Whatever of intolerance may exist elsewhere, "it is certain that in Georgia ostracism for opinion's sake will never be attempted." It may be that a small part of the community clings to distinctions founded on past conditions, but the number is growing less and less, and must soon finally disappear. General Sherman closes his letter by advising the people of Georgia to make the most of their opportunities by advertising broadcast the localities where cheap lands may be had with reasonable credit, where companies may open coal and iron mines, where mills may be erected to grind wheat and corn, spin cotton, and to manufacture the thousand and one things now supplied from abroad.

With the adjustment of the social and political relations of the Southern States, and the disappearance of the antagonisms and prejudices which grew out of the war, it can scarcely be otherwise than that the tide of emigration will flow in that direction with steadily increasing volume. There are thousands of small farmers, mechanics and laborers in our populous Eastern and Northern States who could vastly improve their condition, now one of drudgery and scanty comfort, by locating in Virginia, Georgia, Northern Alabama or East Tennessee. The attractions and resources of that great area exceed those of any Western State, Kansas alone, perhaps, excepted, while the hardships and rigors which the emigrant must encounter in establishing his home are far greater on the frontier than in any of the older Southern communities. If the people of Georgia and the other States we have named will act upon the advice of General Sherman and "look ahead and not behind," and "help every emigrant to realize that his business and social position will result from his own industry, his merits and his virtues," it will not be long before the great advantages of climate, soil, minerals, timber, etc., will fill up their country and make it blossom with the evidences of a genuine prosperity.

THE SUPERIORITY OF SOME AMERICAN METHODS.

WE have before referred to the dairy industry of this country, and the increasing significance of its relationship to our general agricultural interest. Without venturing upon the stupendous statistical embellishments with which it is becoming the fashion to emphasize all discussions of the subject—such as comparing the value of our annual dairy product with the aggregate bulk of gold, silver and paper currency in circulation in America, or jubilantly proclaiming the supremacy of Queen Cow over King Cotton—we still are able to recognize in this branch of industry the tokens of a development fraught with most important consequences to both agricultural and commercial enterprises. Already the effects of the application of American methods and ingenuity are making themselves felt in the dairy systems of Great Britain and Europe. In the same manner that textile fabrics which we formerly were obliged to import are now largely exported by us and placed in successful competition in the very markets whence we recently drew our supplies, American cheese and butter are replacing the native products in countries which a few years ago were large exporters of those commodities. One of the most potent causes of this commercial revolution has been the extension of the factory system which originated about 1851 in New York State. By this co-operative plan the producing farmers are placed on a footing of complete equality in the distribution of profits, the newest and best appliances are available for all at the absolute minimum of cost, and a uniformity of manufacture is insured which is of the utmost importance in establishing the commercial status of the industry. Great and desirable as are these advantages, they are only beginning to be appreciated in Europe. There the custom has been for merchants to gather up throughout the interior the production of innumerable dairies, large and small, and pack it at the seaboard, with due reference to differences in grade, for wholesale traffic or exportation. The famous Irish butter of commerce is to-day garnered in this manner almost by the single pound from thousands of peasants' cottages in all parts of the Green Isle. While the potato supports him in a way, the pig and the cow pay Paddy's rent in favorable seasons. In the United States our best butter is made at so-called "creameries," which manufacture for numbers of dairies simultaneously, the "maker" receiving a salary or a percentage on his sales, and the owners of the tributary cows participating in the profits of each season in the proportion of their respective contributions of milk. Even this system seems likely to be improved upon. A new creamery has just been organized in Wisconsin, at which cream only and no milk whatever is to be received from the milk-farmers. By this plan it is believed the production of fully four thousand cows can be regularly manufactured in one creamery, covering an area of eight adjacent townships, and the expense will be materially lessened, while the quality of the product will be greatly improved. Many of our leading dairy experts regard this "new departure" in an obscure Wisconsin village as the first step in a complete change of our national creamery system, and the results of the approaching season will be watched with close attention.

It is under the inspiration of enlightened effort of this kind that the foreign exports of American butter rose from 3,000,000 pounds in 1858, worth $540,000, to over 21,500,000 pounds in 1877, worth nearly $5,000,000. The statistics for last year are not yet complete, but the figures are undoubtedly larger than those of the preceding year. In the article of cheese, in the manufacture of which the same co-operative principle is availed of, the increased exportation from the United States in the same period was from 8,000,000 pounds in 1858, worth $732,000, to over 107,000,000 pounds in 1877, worth over $12,000,000.

These figures, for which we are indebted to the courtesy of the chief of the Bureau of Statistics at Washington, serve not only to show what progress has been made in this branch of American agriculture, but also to indicate in some degree its possible future development. As we have already stated, our rapid advance is attracting attention in countries, which, until recently, prided themselves upon their superiority. Lord Combermere, a wealthy English landholder, recently made a speech to his tenants in Cheshire, in which he attributed the depression in the cheese-making districts of that county to the fact that American cheese improved steadily, while the art of its manufacture in Cheshire was as steadily retrograding. The obstinate free trade policy of Great Britain has opened the way to importations from abroad which are gradually stilling the life out of the domestic production. Professor Sheldon, of Cirencester, one of the highest British authorities, declared recently: "America is distancing us in cheese-making; we shall have to adopt, as far as we can, her methods of improvements, or lose the race!" On the European continent the case is much the same. The best cheese of Switzerland, Holland and France is, with few exceptions, imitated so successfully in the United States as to have virtually put an end to its importation. And in all these countries, from which we hear such lamentations over the decadence of a former profitable branch of commerce, it is noticeable that the co-operative or "factory" system, which is essentially American, is being rapidly introduced. Another purely American method which is fast gaining ground in Europe is that of the dairymen's association, with its corollary, the annual "convention." This was inaugurated by the dairymen of New York State, in 1864. Now nearly every dairy community in the country has its representative association. Within the past eight weeks two such organizations have held conventions in this State, and similar meetings have taken place at different points under the auspices of the American Association, the International Fair Association and the State Associations, belonging, respectively, to Pennsylvania, Illinois, Minnesota, Vermont, Iowa, Wisconsin, Indiana and California. The series is to be closed early in March by a convention at Chicago of the National Butter, Cheese and Egg Association, which numbers several hundred members, many of whom attend its meetings annually from New York, Boston, Philadelphia and Baltimore. These organizations are potent promoters of progress. Each one serves as a focus, in which is concentrated the practical intelligence of the community it represents. But they have never, until very recently, existed outside of the United States, and the convention plan is nowhere else practiced. Dr. Fleischmann, the highest authority on dairy subjects in Germany, in a paper lately published in Oldenburg, declares that the "associations" are among the principal supports of the industry. And yet the only bodies of the kind in Europe are the Swiss Alpine Association, founded in 1863, the German Association founded in 1864, and the National Dairy Society of France, which had its birth during the Paris Exhibition of 1878.

The facts here recited present a fair showing of the relations of the American dairy industry to the interest in other lands. We have purposely avoided introducing statistical comparisons, as our purpose has been rather to indicate the intellectual bearings of the subject than those purely commercial. The latter are as encouraging as the former are creditable to American enterprise, and it is believed that the dairy trade of 1879 will exceed in magnitude and profit that of any previous year.

TECHNICAL SCHOOLS.

THE suggestion in favor of technical and industrial schools made by Governor McClellan to the New Jersey Legislature has crystallized in a Bill which has the approval of the State Board of Education, and will be urged to a passage. The Bill gives to the Board the power to establish such schools upon the application of not less than ten citizens, who shall agree to pay part of the expenses of the same. The schools, when established, are to be for the training and education of pupils in any of the industrial pursuits now established in the State, including agriculture, so as to enable them to perfect themselves in the several branches of industry which require technical instruction. There is to be a Board of Trustees of five members for each school, who shall have entire charge of the school, and shall report to the State Board annually. Any local authority may appropriate funds for the support of a school within its limits, and the schools are to be supported, first, by tuition fees received; second, by money contributed by petition-

Digitized by Google

ing citizens; third, by the amount appropriated by the local authority; and, fourth, by the amount contributed by the State Board of Education from the School Fund.

It is possible that this measure, being in the nature of a radical innovation upon existing educational methods, may fail to command, at this time, the approval of the legislators of our somewhat conservative sister commonwealth, but the fact that it has the sanction of many of the leading educational authorities, and will be vigorously urged by prominent citizens, is a hopeful indication of the progress of public opinion on the subject of technical instruction. The time is coming when men will view with amazement the stupendous folly of our present educational policy, under which vast sums of money are expended with but a modicum of the benefit which would result from an adaptation of the course of study to those special ends which the pupil is to pursue in life. If it is the duty of the State to educate its children, as it is, it is no less its duty to make that education tend as far as possible to the benefit of the industrial and commercial pursuits, upon the development of which the material welfare of the State depends.

THE WEEK'S EVENTS ABROAD.

THE intelligence from the scene of hostilities in Zulu'and shows the situation to be a critical one for British interests. Subsequent to the disastrous engagement of January 23d, several unsuccessful attacks were made upon detached British columns by the Zulus, but the latter, at last accounts, were concentrating in strong force, evidently with a view of renewing hostilities, and great anxiety was felt as to the result. Meanwhile, reinforcements are being hurried from England as rapidly as possible, both the populace and troops manifesting great enthusiasm and confidence as to the issue of the trouble. More thoughtful observers, however, regard the task in hand as a very grave and serious one. It is feared that the savages will largely confine themselves to a guerrilla warfare, harassing the British communications, and, by cutting off small bodies, weakening and disintegrating the invading force. Sir Charles Dilke has given notice of a motion in the House of Commons that, while ready to assist in retrieving the situation at the Cape, the House considers that Zulu territory was invaded on inadequate grounds.

The German Reichstag insists tenaciously upon its prerogatives. The arrest of two Socialist members having been demanded for violating the anti-Socialist law the Reichstag by a large majority refused its assent to the arrests, and at the same time declared the Government interpretation of the law in question to be wholly indefensible. As one result of this controversy, the Disciplinary Bill, suggested by Prince Bismarck, will probably be defeated, the National Liberals and Progressists being now for the first time united.

The lean condition of the Egyptian Treasury has led to a Cabinet crisis. Some four hundred army officers who had been discharged unpaid stirred up a tumult, during which the Khedive was insulted and his Ministers shot at, the rioters being dispersed only when fired on by the troops. In consequence of the trouble the Khedive insists on reconstructing his Cabinet to suit himself and embarrassing complications are likely to ensue, especially as a general revolt is threatened by the comrades of the discharged officers, many of whom have been imprisoned. Besides, "neither England nor France will be disposed to witness with indifference the success of a *coup d'état* which would place Egypt once more under the personal rule of the Khedive." The Budget proposes that the Egyptian army shall be reduced to 10,000 men, and that the remainder, including 2,000 officers, be disbanded.

France remains tranquil. Special elections to fill vacancies from two Departments in the Chamber of Deputies have resulted favorably to the Republicans. The Chamber has been occupied with the consideration of the Bill which extends the benefits of amnesty to all persons convicted of crimes in connection with political acts, and the indications are that the Government will be sustained in its opposition to the measure. The Minister of the Interior has annulled the vote of the Municipality of Paris granting money to assist returning Communists. Evidently the ruling minds among the Republicans are not yet prepared to pardon those who boast that they will yet revive the Commune upon the ruins of social order.

The labor troubles in Great Britain are abating. At Liverpool the strikers on the docks are resuming work, and in other branches of industry, the temporary paralysis of operations has been broken. The Home Rulers have won a significant victory in the election, by a large majority, of a member of Parliament from the County of Cork. The "Irish University scheme" has fallen through. Lord Beaconsfield could not induce his colleagues to make concessions that would satisfy the Catholics, and Cardinal Manning declined to accept the concessions that the Cabinet was prepared to make. Parliament has been informed that the Government has decided not to deal with the question.

Dispatches from Constantinople announce that a new insurrection is imminent in Eastern Roumelia, and that the Sultan has asked General Tobleben to postpone the withdrawal of his troops from that province. The news is not entirely unexpected. The International Commission appointed to provide for this province an administrative organization has not as yet reached a conclusion, and meanwhile a large part of the population declare that they will not accept the new order of things, and that if the proposed liberal institutions are imposed upon them they will resist by force. It is stated that the Porte has appointed four commissioners to superintend the proposed reforms in the administration of Asia Minor. The Austrian Prime Minister announces that that Government has no programme for the future other than to execute fully the task as to Eastern affairs assigned to it by the Powers, on the basis of the Berlin Treaty. A petition from the workingmen of Austria asking for universal suffrage has been presented in the Lower House of the Reichsrath.

The prompt and energetic measures of the Russian Government appear to have arrested the progress of the black plague. Despite the general thaw and warmth throughout the infected district, both public and private advices state that no fresh cases of the plague have occurred. A commission is forming in St. Petersburg specially to watch over the sanitary condition of the troops with reference to the prevailing typhus and plague epidemics.

Republicanism in Spain is not yet extinct. Señor Castelar and eight of the principal members of his Ministry in 1873 will contest large towns in the South in the approaching general election. A significant emigrant movement from Switzerland to this country has commenced, a number of young and adventurous residents of Zurich having started for Georgia, where it is proposed to establish a Swiss colony, under the auspices of the Workmen's Society. Others will follow.

THE thirty-eighth annual commencement of the Medical Department of the College of the City of New York, held on the evening of February 18th, was marked by the addition of 205 members of the graduating class to the roll of full-fledged doctors. The address of Chancellor Crosby to the graduates sparkled with felicitous bits of good advice, and those of them who shall take his counsels with them into active life will be pretty certain to achieve honorable success.

A PROPOSITION to impose a tax upon tea of ten cents per pound, and upon coffee of two and a half cents a pound, has been rejected by the Senate by a practically unanimous vote, only four Senators recording themselves in its favor. It was argued that such a tax would yield an annual revenue of $15,000,000, but the Senate wisely decided that some other sources of revenue should be sought than the breakfast and tea-tables of the people. The tax upon friction-matches is to remain, the Senate having rejected a motion for its repeal.

GENERAL BUTLER is credited with having already initiated another movement for the control of Massachusetts politics. This time, it is said, he means to make defeat impossible by occupying the ground in advance of both the regular parties, and it is added that he expects to draw largely from each and especially from the younger Republican element which last Fall so vigorously opposed him. Butler is one of the men whom it is never safe to regard as dead until the turf is piled six feet deep above the inanimate clay; and it is by no means impossible that he may yet lead the Massachusetts politicians who have flouted him a very lively dance.

A CORRESPONDENT, "Yale," takes exception to the character of our recent illustrations of Henry Ward Beecher's lecture on "Amusements." He is in error in supposing that we condemn the views of the reverend gentleman as to the value and necessity of wholesome amusements, and especially his theory that "a man's amusements should be the opposite of his daily occupation." We concur entirely in that view. But the subject obviously had its humorous side, and if our correspondent were as familiar as he should be with the "points" of "H.M.S. Pinafore," he would understand that our sketches simply caught and reflected the spirit of a passing theme, as illuminated by the sidelights of a popular piece of fun.

THE adulteration of food is a great and growing evil which should by all means be arrested by positive legislation. In the article of bread, for instance, adulterants of the most injurious quality are largely introduced by bakers, while thousands of housekeepers use baking powders which are supposed to be pure, but are really made of alum, the effects of which on the stomach are most deleterious. It is to be hoped that the Bill making it a misdemeanor to manufacture or sell adulterated food or liquors, now awaiting consideration in the State Legislature, may be enacted into a law before the session closes. A Bill before the New Jersey Legislature imposes a fine of $500, or imprisonment for five years, or both, for the adulteration of any food, drinks or medicines.

LATER testimony elicited by the Potter Committee in connection with the cipher dispatches goes to show that the Returning Boards of Florida and South Carolina were never, as has been believed by many, actually in the market for sale. The truth appears to be that certain impecunious politicians, who had made corrupt propositions to members of these Boards, were led on by them until the proofs of the attempted bribery were complete, when an end was put to the whole matter by the formal declaration of the result as to Presidential electors. Undoubtedly, the individuals who were conducting the negotiation believed all they said in their dispatches as to the possibility of buying the Boards to decide according to the wishes of their principals, but all the evidence shows them to have been egregiously deceived.

THE beauties of Civil Service "reform" are best illustrated by facts. One of the Collectors of Internal Revenue in Indiana has just been invited to resign because a member of the Cabinet wished the place for another man. The Collector had held the office seven years; $10,000,000 had passed through his hands and had been accounted for unto the uttermost nickel, and four official investigations of affairs in his district had all resulted favorably for him. Under an honest interpretation of the Civil Service rules of the Administration, he would have commanded the hearty approval of his superiors, and no "personal or political consideration" would have been permitted to prejudice his claims; but some henchman of a Cabinet minister wanted the place of the faithful official, and so he is thrown overboard to the sharks among other unfortunate victims of a deformed—sometimes misnamed reformed—Civil Service.

WHY should not corporations created by the State bear their just proportion of the public burdens? There is no doubt that, owing to the peculiar provisions of our tax laws and their loose execution by public officials, millions of dollars are lost to the State of New York every year, and it is to be hoped, therefore, that the effort to cure the evil now making at Albany may result in success. The Bill which proposes this result creates a board of assessment and taxation, with the Governor at its head, which is required on the 1st of September in each year to file its decision with the Secretary of State declaring the actual value of the steam railroads within the State, and on those values the respective companies are to pay a tax of two per cent. into the State Treasury. No other tax shall be assessed on these roads, either by the State, counties or towns, nor shall money invested in stocks of the road so taxed be liable to further taxation. The sum so collected is to be applied towards the expenses of the State; and if at any time a surplus remain it is to be divided between the counties. This tax, it is estimated, will produce $6,000,000 a year.

THE question as to what shall be done with the tramp is engaging the attention of several of our State Legislatures. In the Assembly of this State a Bill has been ordered to a third reading which proposes to impose upon every "person without visible means of support, moving from place to place without employment and begging, beyond the limits of the town or city of which he is a resident," a punishment of one year's confinement at hard labor in a penitentiary or county jail. In the debate upon the Bill a member, who was a former Commissioner of Emigration at this port, stated that ten per cent. of the emigrants were at one time of the tramp class, and he added that, in five years' experience with them, he had never known of one who would accept of work when offered. The evil is every day acquiring larger and more dangerous proportions, and if legislation can cure it, the remedy should be applied at once. Why could not people of this class, when arrested, be employed, as convicts are in some States, in work upon the streets and public roads, and in other spheres of industry where convict labor is utilized? In this city it has been found impossible to keep the streets properly cleaned, even at large expense. Why could not the tramps who burrow here in Winter be marshaled into street-cleaning brigades, and a necessary and neglected work be thus accomplished at a trifling expenditure?

NEWS OF THE WEEK.

Domestic.

EX-COLLECTOR ARTHUR has been chosen Chairman of the Republican Executive Committee of New York.

THE Virginia Senate has passed a Bill providing for the settlement of the State debt. Opposition is expected in the House.

A CLASS of 205 students was graduated by the Medical Department of the University of the City of New York on February 18th.

THE Brazilian Subsidy Amendment to the Post-office Appropriation Bill was adopted by the Senate on February 21st, by a vote of 33 to 17.

IN the House of Representatives the Florida contested election case was taken up on February 20th, and Mr. Bisbee, the Republican member, was unseated.

SIXTEEN persons were instantly killed and twenty-six injured by a boiler explosion at a trial of a new propeller pump at Stockton, Cal., on February 22d.

CAPTAIN BLAIR, United States Army, has pleaded guilty to the charge of bigamy, and his second wife, the widow of General Granger, has begun proceedings for divorce.

THE Legislature of Montana has adopted resolutions asking that that Territory be made a separate military department and placed under the command of General Miles.

DANIEL ROBERTSON, Treasurer of the Troy and Boston Railroad, has been jointly indicted with D. Thomas Vail, President of the Merchants' and Mechanics' Bank, for conspiracy to defraud creditors of said bank.

THE Senate Committee on Appropriations has struck from the Army Appropriation Bill, which was reported February 20th, all of the sections relating to army reorganization, including the posse comitatus clause.

SECRETARY SHERMAN has telegraphed to the Collector of Customs at Port Townsend, W. T., to direct Captain Selden to proceed at once to Sitka in the revenue cutter in his charge and to take measures to preserve the peace.

THE creditors of the A. & W. Sprague Manufacturing Company are signing an agreement to form a corporation to take control by purchase of the property, and to take stock in proportion to their claims with a view to liquidating the debt.

IN the Senate of Arkansas the House Bill—a Bill, in effect, to dispossess counties of all powers as bodies politic and corporate, and of the capability of suing and being sued, and repealing all laws regulating proceedings in suits by and against counties—was passed by a vote of 23 to 7 on February 20th.

THE Rev. Dr. Reuben Nelson, senior agent and publisher of the Methodist Book Concern, and Treasurer of the Methodist Missionary Society, died in New York on February 20th, aged sixty one years; and Rev. Dr. Green, for thirty years steward of the Wesleyan book-room at Toronto, died on the same day, aged seventy-eight. On the 21st the Hon. Jacob A. Westervelt, ex-Mayor of New York City, died at his residence, aged seventy-nine, and President Fisher, of St. Lawrence University, at Canton, N. Y., fell dead in a fit while on his way to the University building.

THE Connecticut Legislature has adopted unanimously the resolution pronouncing the passage of the anti-Chinese Law a flagrant violation of a sacred and honorable treaty and a disgrace to the national statutes. The Missionary Committee of the Methodist Episcopal Church declares the Bill "a crime against colonization," other secular and religious bodies, including the Rhode Island Assembly, have spoken with like emphasis, and the Press everywhere, except upon the Pacific Slope, denounces the measure as inconsistent with the principles and traditions of the republic.

Foreign.

THE Canadian Senate has adopted a resolution of condolence with Queen Victoria at the death of the Princess Alice of Hesse.

THE directors of the St. Gothard Railway say they will complete the line at least 6,000,000 francs cheaper than the estimated cost.

THE French Chamber of Deputies has elected a Budget Committee, all the members of which favor the conversion of five per cent. rentes; rentes declined in consequence.

ANNOUNCEMENT is made that the arrangement for a loan of £8,000,000 to Turkey was successful, and that the Porte has promised to withdraw the paper money from circulation.

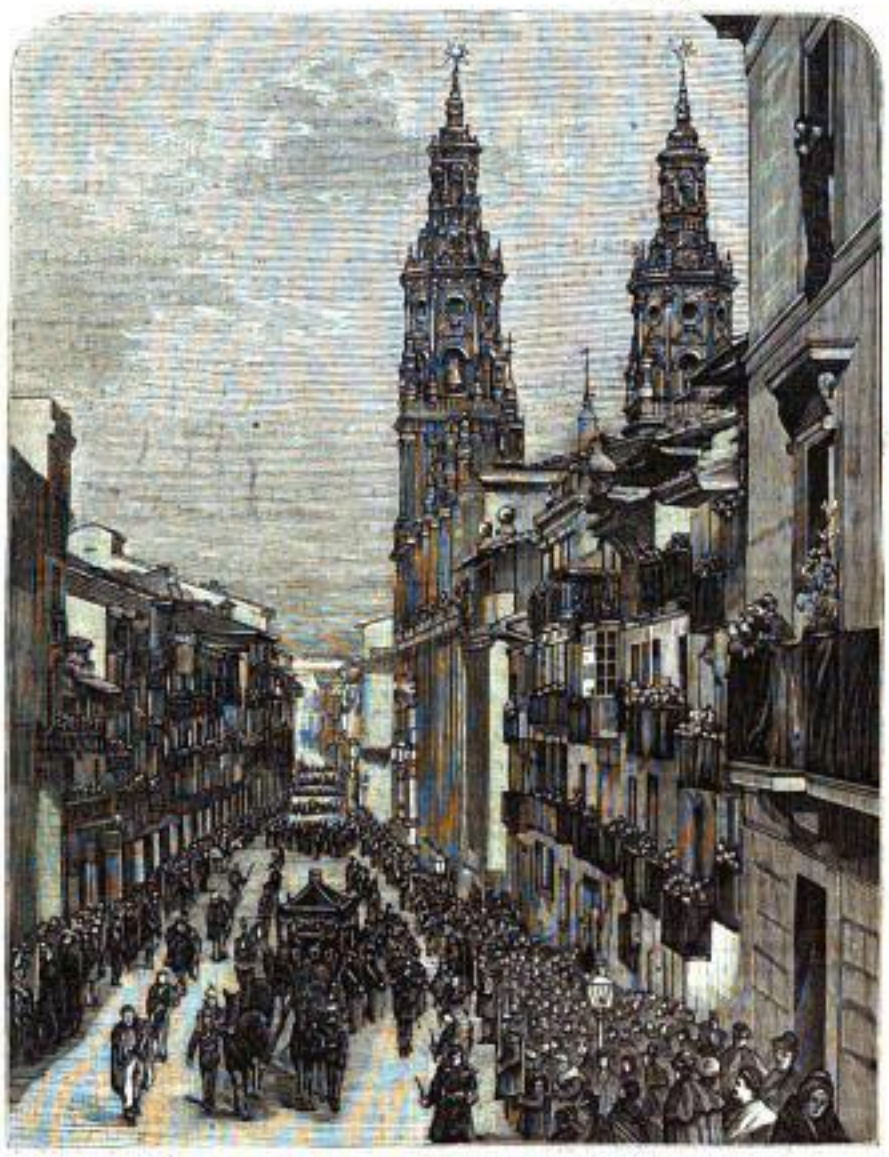
IN the German Reichstag Prince Bismarck has declared himself in favor of protection of home industries; he fully supported the commercial views expressed in the speech from the throne.

BY a majority of over two hundred the French Chamber of Deputies has refused to accept the extreme proposition of the Radicals that all offenses committed in the name of the Commune in 1871 should be wiped out.

THE new French Cable Company have under serious consideration a proposal of the Anglo-American Cable Company for an understanding whereby the competition between the two companies may be considerably reduced.

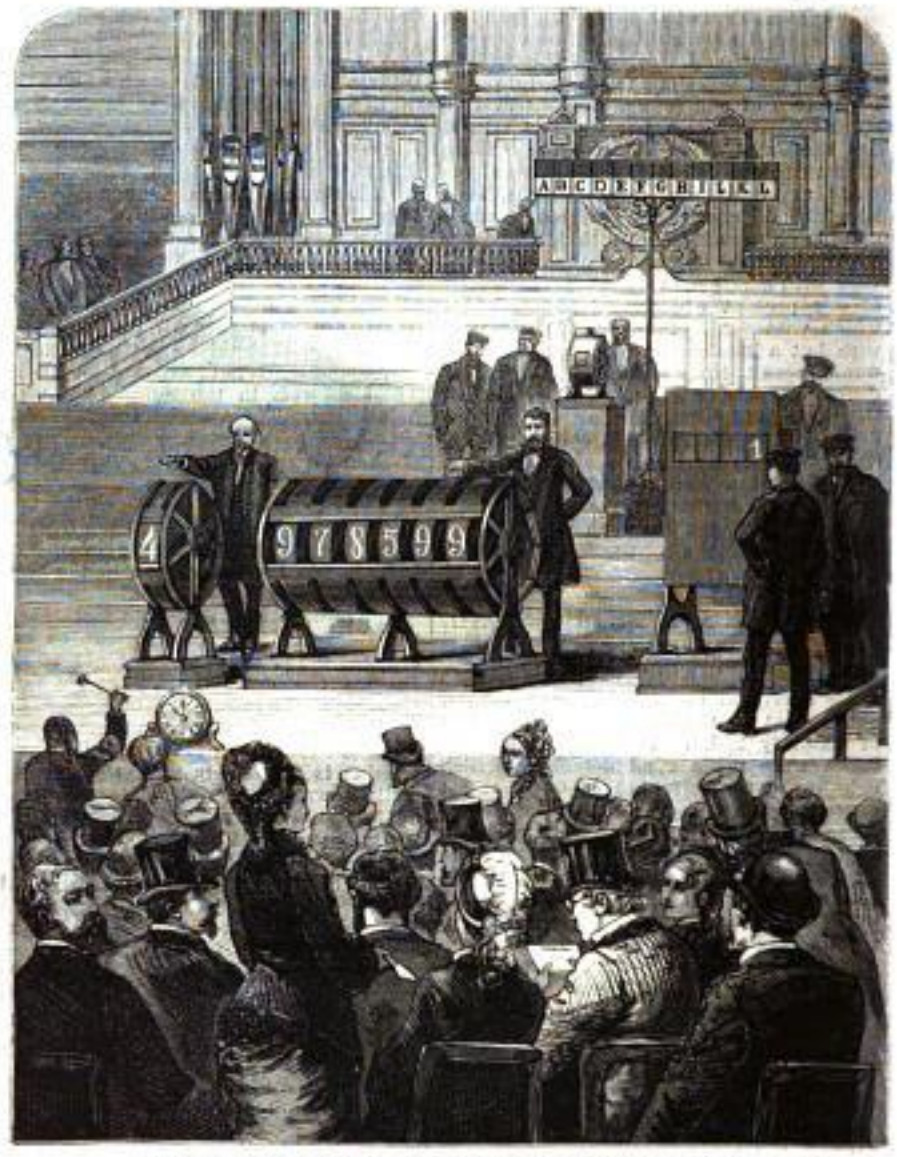
THE French section charged to call together an International Committee to study the different plans for an interoceanic canal across the American Isthmus has decided that the meeting shall be held in Paris on the 15th of May next.

A REPORT from Mandalay asserts that the King of Burmah has murdered all the royal princes and their families, and removed the new Ministers and replaced them by the Ministers who were formerly in office, thus restoring the former despotic Government.



THE Pope received representatives of 1,502 Catholic publications issued in Europe and America, on February 23d, and addressed them on the influence and mission of the press. He incidentally stated that the temporal power was indispensable to the Holy See.

THE Privy Council have informed the Liverpool authorities that it would prohibit the landing there of American cattle if proper accommodations were not provided for their reception by March 24. It has been decided by the Liverpool authorities to spend £35,000 immediately for additional accommodations.



THE latest information from Maritzburg, South Africa, states that the total loss in the attack on Colonel Glyn's camp on the 22d of January is now estimated at only from 250 to 300 whites. Colonel Wood's column has been victorious in all its encounters with the enemy. Reinforcements of British troops have arrived at Helpmakaar. Cetywayo is reported to be discouraged, the fearful havoc among his finest troops having counteracted the effect of their victory.

HON. N. P. HILL,

U. S. SENATOR-ELECT FROM COLORADO.

PROFESSOR N. P. HILL, United States Senator-elect from Colorado, is a native of Orange County, N. Y., and now forty-seven years of age. His father was a farmer, and conducted a large place in Orange County, near the Hudson River. The father died when the future Senator was a mere child, and at the early age of sixteen he took upon himself the entire management of the farm left by his father. His experience in this position was a valuable one. As a boy he was placed in a position where he was called upon to control men. He remained on the farm, superintending it, until he was twenty-one years of age, spending his Summers in the pursuit of his calling and attending school during the Winter seasons. There was a good academy in his immediate neighborhood, and in this he was fitted for college. In 1853 he entered Brown University, at Providence, Rhode Island, as a student. He made rapid progress in all his studies, and he excelled all others in chemistry. His advancement had been so rapid and his knowledge had become so extensive, that in 1856 he was made tutor in the department of chemistry. He was elected professor of chemistry in 1860, and continued to occupy this chair until 1864.

This was the turning-point of his life. He was engaged during this year by a party of business men to visit Colorado for the purpose of making an examination of the Gilpin land grant. In 1865 he returned to Colorado, this time to examine the mines of Gilpin County. On noticing the imperfect manner in which the ores of this section were treated, he determined to investigate the subject thoroughly, with a view to engaging in the business in which he afterwards embarked and in which he is now employed. Having resigned the professorship in Brown University, Professor Hill sailed for Europe during the latter part of 1865, and spent the Winter of 1865-66 in Swansea and Freidburg, Wales, studying ore reduction. He again visited Colorado in 1866, made a purchase of seventy tons of ore from the Bobtail lode and shipped it to Great Britain, and again crossed the ocean to witness the result on his Colorado ore. This brought him to Colorado in the Spring of 1867 to become a permanent resident, having organized a company in Boston, under the title of the Boston and Colorado Smelting Company, and assumed the position of manager.

HON. N. P. HILL, UNITED STATES SENATOR-ELECT FROM COLORADO.—FROM A PHOTOGRAPH BY CHARLES SOHM, DENVER, COL.

These works are by all odds the largest of the kind in the world, and the work done is the most complete. They are almost of twice as great capacity as when located at Black Hawk. There their capacity was sixty tons of ore per day; at Argo, a suburb of Denver, it will be one hundred tons. In other words, where they turned out two and a quarter millions of precious metal in 1878, they will this year be able to produce three millions and three-quarters. Seventy tons of coal and six cords of wood are consumed daily; and one hundred and fifty men, about twenty-five of whom do skilled labor, are employed every day in the year. About $800,000 has been invested in the enterprise and the capital stock of the company, which has all been paid in, is $500,000.

Professor Hill is a man of fine stature and the very best of features. His skin is clear and his eye bright. He does not look as if he had ever been sick a day in his life.

CHILDREN'S CARNIVAL AT THE ACADEMY OF MUSIC.

THE Academy of Music in this city has not this Winter been the scene of a prettier pageant than that which filled it with life and light and beauty on the evening of February 17th—the Children's Carnival. Some two hundred children in all participated, but the scene was quite as full of interest to the adults in attendance as to the fairies who appeared in the tableaux. The audience occupied the balcony-seats around the edges of the parquet, which was floored over, and the boxes and upper gallery were also thronged with persons in evening dress. Promptly at eight o'clock the bell rang, the lime-lights were turned upon the stage and the curtain rose upon a tableau representing the "Fairy Queen," who sang the pretty little song, in a sweet, childish treble, "Come, Birdie, Come," standing on the shores of the Atlantic to welcome "Prince Carnival," whose arrival was heralded by a grand march played by a full band of boys dressed in Turkish costume. Then the other important personages arrived and were welcomed by the "Goddess of Liberty," and the procession, headed by the "King's Jester," defiled upon the floor; then came the band, the little "Prince Carnival" seated

Digitized by Google

astride the American eagle and preceded by the "Goddess of Liberty," the Neapolitan wedding party, in a gilded gondola drawn by goats, and "Bacchus" seated astride a wine cask. After circling the floor several times they returned to the stage. Ranged once more in line, in turn each troupe of little ones came forth and danced in the middle of the floor its own peculiar dance. A little *virtuosine*, and dressed after the accepted manner of stage *virtuosines*, with scarlet skirts and jacket, cap and barrel, danced "La Lithuanienne," and gave place to the Pierrots and Pierrettes, in their blue-and-white and pink-and-white suits and high, pointed caps, who danced a unique quadrille. The Chinese nation, dressed as little "Celestials," danced a comic dance, holding parti-colored umbrellas above their heads. The old woman who lived in a shoe then gave her little ones a recess, and the family, all dressed in brilliant "Dolly Vardens," were soon spread about the floor performing with great glee a "witch polka." Suddenly a discord in the music scared them back into the shoe, from which emerged the "old woman" herself to see "What can the matter be?" In a moment her mask of age was thrown off, and she emerged a Spanish gypsy girl in brave attire and danced "El Galeo des Jeres," accompanying herself with castanets.

The Neapolitan wedding party took the floor, and the national dance was executed by the bride and groom—the latter in tasseled cap, rolled-up sleeves and trowsers, and the bride in a blue chenille net over her dress. The bridesmaids danced a mandoline dance and retired amid loud applause. The most charming part of the evening's entertainment, however, was the adagio and waltz by the nine muses. The daughters of Zeus and Mnemosyne were personated by young girls, pretty, graceful creatures just budding into womanhood, "standing with reluctant feet where the brook and river meet." They were dressed in white satin dresses reaching to the knee and covered with a skirt of tulle, embroidered with silver and crowned with laurel. They danced the slow movements of the adagio with swaying forms and easy movements, grouping themselves in tableaux, and dissolving again into the waltz until they were tired. They were recalled several times. The whole entertainment was concluded with the "Whiteberry Waltz," by eighty-four girls.

The ball was then formally opened with *polonoise en cour*, danced by ladies and gentlemen in evening dress. The toilets were very elaborate, and the presence of a number of military and naval officers and the Old Guard gave to the scene upon the floor much life and color.

THE FALLEN LEAVES.

BY WILKIE COLLINS.

CHAPTER X.

THE young lady spoke first. "Mr. Goldenheart," she said, with the coldest possible politeness, "perhaps you will be good enough to explain what this means." She turned back into the dining-room. Amelius followed her in silence. "Here I am, in another scrape with a woman!" he thought to himself. "Are men in general as unlucky as I am, I wonder?"

"You needn't close the door," said Regina, maliciously. "Everybody in the house is welcome to hear what *I* have to say to you."

Amelius made a mistake at the outset—he tried what a little humility would do to help him. There is probably no instance on record in which humility on the part of a man has ever really found its way to the indulgence of an irritated woman. The best and the worst of them alike have at least one virtue in common—they secretly despise a man who is not bold enough to defend himself when they are angry with him.

"I hope I have not offended you?" Amelius ventured to say. She tossed her head contemptuously. "I may sometimes feel offended," she replied, "with persons whom I respect. Certainly not with a gentleman who manages to get into the house so that the servants don't know it, and who allows himself to be shut up secretly in my aunt's room!"

In the short experience of her which had fallen to the lot of Amelius she had never looked so charmingly as she looked now. The nervous irritability under which she was suffering brightened her face with the animation which was wanting in it at ordinary times. Her soft brown eyes sparkled; her smooth, dusky cheeks glowed with a warm, red flush; her tall, supple figure asserted its full dignity, robed in a superb dress of silken purple and black lace, which set off her personal attractions to the utmost advantage. She not only roused the admiration of Amelius—she unconsciously gave him back the self-possession which he had, for the moment, completely lost. He was man enough to feel the humiliation of being despised by the one woman in the world whose love he longed to win; and he answered with a sudden firmness of tone and look that startled her.

"You had better speak more plainly still, Miss Regina," he said. "You may as well blame me at once for the misfortune of being a man." She drew back a step.

"I don't understand you," she said.

"Do I owe no forbearance to a woman who asks a favor of me?" Amelius went on. "If a man had asked me to steal into the house on tiptoe, I should have said—well, I should have said something I had better not repeat. If a man had stood between me and the door, when you came back, I should have taken him by the collar and pulled him out of my way. Could I do that, if you please, with Mrs. Farnaby?"

Regina saw the weak point of this defense with a woman's quickness of perception. "Your excuse is quite worthy of you," she remarked, with merciless sarcasm. "You lay all the blame on my aunt."

Amelius opened his lips to protest—and thought better of it. He wisely went straight on with what he had still to say.

"If you will let me finish," he resumed, "you will understand me a little better than that. Whatever blame there may be, Miss Regina, I am quite ready to take on myself. I merely wanted to remind you that I was put in an awkward position, and that I couldn't civilly find a way out of it. As for your aunt, I will only say this: I know of scarcely any sacrifice that I would not submit to, if I could be of the smallest service to her. After what I heard, while I was in her room——"

"Which is a profound secret between you, of course!" Regina interposed.

"Which I am bound to keep a secret," Amelius proceeded, "as you say. But one thing I may tell you, without breaking my promise. Mrs. Farnaby has—well, has filled me with kindly feelings towards her. She has a claim, poor soul, to my truest sympathy. And I shall be faithful to what I feel towards her as long as I live!"

It was not very elegantly expressed, but the tone was the tone of true feeling; his voice trembled, his color rose. He stood before her, speaking with perfect simplicity straight from his heart—and the woman's heart felt it instantly. This was the man whose ridicule she had dreaded, if her aunt's rash confidence struck him in an absurd light! She sat down in silence, with a grave, sad face, reproaching herself for the wrong which her too-ready distrust had inflicted on him; longing to ask his pardon, and yet hesitating to say the simple words.

He approached her chair, and, placing his hand on the back of it, said gently, "Do you think a little better of me now?" She had taken off her gloves; she silently folded and refolded them in her lap.

"Your good opinion is very precious to me," Amelius pleaded, bending a little nearer to her. "I can't tell you how sorry I should be if——" He stopped, and put it more strongly. "I shall never have courage to enter the house again if I have made you think meanly of me."

A woman who cared nothing for him would have easily answered this. The calm heart of Regina began to flutter; something warned her not to trust herself to speak. Little as she suspected it, Amelius had troubled the tranquil temperament of this woman. He had found his way to those secret reserves of tenderness—placid and deep—of which she was scarcely conscious herself, until his influence had enlightened her. She was afraid to look up at him; her eyes would have told him the truth. She lifted her long, finely-shaped, dusky hand, and offered it to him as the best answer that she could make.

Amelius took it, looked at it, and ventured on his first familiarity with her—he kissed it. She only said, "Don't!" very faintly.

"The Queen would let me kiss her hand, if I went to Court," Amelius reminded her, with a pleasant inner conviction of his wonderful readiness at finding an excuse.

She smiled in spite of herself. "The Queen wouldn't let you hold it," she said, gently releasing her hand, and looking at him as she drew it away. The peace was made, without another word of explanation. Amelius took a chair at her side. "I am quite happy now you have forgiven me," he said. "You don't know how I admire you—and how anxious I am to please you, if I only knew how!"

He drew his chair a little nearer: his eyes told her plainly that his language would soon become warmer still, if she gave him the smallest encouragement. This was one reason for changing the subject. But there was another reason more cogent still. Her first painful sense of having treated him unjustly had ceased to make itself keenly felt; the lower emotions had their opportunity of asserting themselves. Curiosity, irresistible curiosity, took possession of her mind, and urged her to penetrate the mystery of the interview between Amelius and her aunt.

"Will you think me very indiscreet," she began, slyly, "if I make a little confession to you?"

Amelius was only too eager to hear the confession; it would pave the way for something of the same sort on his part.

"I am surprised," Regina proceeded. "Not at my aunt being overcome by the heat in the concert-room—that was a mere pretense for taking you away with her. What astonishes me is that she should have admitted you to her confidence after so short an acquaintance. You are still—what shall I say?—you are still a new friend of ours."

"How long will it be before I become an old friend?" Amelius asked. "I mean," he added, with artful emphasis, "an old friend of *yours*?"

Regina quietly passed the question over without notice. "I am Mrs. Farnaby's adopted daughter," she proceeded. "I have been with her since I was a little girl—and yet she has never told me any of her secrets. Pray don't suppose that I am tempting you to break faith with my aunt! I am quite incapable of such conduct as that."

Amelius saw his way to a thoroughly commonplace compliment, which possessed the charm of complete novelty so far as his experience was concerned. He would actually have told her that she was incapable of doing anything which was not perfectly becoming to a charming person, if she had only given him time!—she was too eager in the pursuit of her own object to give him time. "I should like to know," she went on, "whether my aunt has been influenced in any way by a dream that she had about you."

Amelius started. "Has she told you of her dream?" he asked, with some appearance of alarm.

Regina blushed and hesitated. "My room is next to my aunt's," she explained. "We keep the door between us open. I am often in and out when she is disturbed in her sleep. She was talking in her sleep, and I heard your name—nothing more. Perhaps I ought not to have mentioned it? Perhaps I ought not to expect you to answer me?"

"There is no harm in my answering you," said Amelius. "The dream really has something to do with her trusting me. You may not think quite so unfavorably of her conduct now you know that."

"It doesn't matter what I think," Regina replied, a little confusedly. "If my aunt's secrets have interested you, what right have I to object? I can understand now that a man would be better able to advise her than a woman. Still, though she is always doing odd things, poor dear, it does seem strange that you should be the man. Will my aunt's business take you away from London?"

She slipped in this last question with a dexterity which seriously embarrassed Amelius. His one chance of escape was to take refuge in another commonplace compliment. "Going away from London," he said, "would be going away from you. I couldn't think of it."

Regina successfully concealed whatever mortification she might feel on receiving this reply behind the mask of satirical approval. "Quite right!" she said. "You couldn't possibly reprove me for asking an indiscreet question in a more delicate way. I am sincerely obliged to you, Mr. Goldenheart. Not that I spoke from mere curiosity! I was only wondering what my uncle would say, if he found you suddenly leaving London. Of course he is to know nothing of what has happened to-day. I am sure *I* shall say nothing. Though I am not in my aunt's confidence, or in your confidence, you will find that I can keep a secret."

She folded up her gloves for the twentieth time at least, and gave Amelius his opportunity of retiring by rising from her chair. He made a last effort to recover the ground that he had lost, without betraying Mrs. Farnaby's trust in him.

"I am sure you can keep a secret," he said. "I should like to give you one of my secrets to keep—only I mustn't take the liberty, I suppose, just yet?"

She knew perfectly well what he wanted to say. Her heart began to quicken its beat; but she could still trust her pride to answer him.

"You have dined with us once," she said, coldly, "and lunched with us once, and you have called here to-day. I am not like my aunt; I must know people a little better than that, before I talk of their secrets with them. Don't let me detain you if you have any engagement."

Amelius felt the reproof; he silently looked round him for his hat. On a table behind him a monthly magazine lay open, exhibiting one of those melancholy modern "illustrations" which present the English art of our day in its laziest and lowest state of degradation. A vacuous young giant, in flowing trowsers, stood in a garden, and stared at a plump young giantess with enormous eyes and rotund hips, vacantly boring holes in the grass with the point of her parasol. Perfectly incapable of explaining itself, this imbecile production put its trust in the printer, whose charitable types helped it, at the bottom of the page, with the title of "Love at First Sight." On those remarkable words Amelius seized, with the desperation of the drowning man, catching at the proverbial straw. They offered him a chance of pleading his cause, this time, with a happy indirectness of allusion at which not even a young lady's susceptibility could take offense.

"Do you believe in that?" he said, pointing to the illustration.

Regina declined to understand. "In what?" she asked.

"In love at first sight."

It would be speaking with inexcusable rudeness to say plainly that she told him a lie. Let the milder form of expression be, that she modestly concealed the truth. "I don't know anything about it," she said.

"*I* do," Amelius remarked, smartly.

She persisted in looking at the illustration. Was there an infection of imbecility in that fatal work? She was too simple to understand him even yet! "You do—what?" she inquired innocently.

"I know what love at first sight is," Amelius burst out.

Regina turned over the leaves of the magazine. "Ah," she said, "you have read the story."

"I haven't read the story," Amelius answered. "I know it by what I once felt myself on being introduced to a young lady."

She looked up at him with a saucy smile. "A young lady in America?" she asked.

"In England, Miss Regina." He tried to take her hand, but she was too quick for him. "In London," he went on, drifting back into his customary plainness of speech. "In this very street," he resumed: seizing her hand before she was aware of him. Quick as he was, the readier lady was quicker still. She dexterously turned his own familiarity into a polite means of disabling him, by shaking hands in the friendliest manner, and saying, "Good-by, Mr. Goldenheart!"

Amelius submitted to his fate; there was something in her eyes which warned him that he had ventured far enough for that day.

"May I call again, soon?" he asked, piteously.

"No!" answered a voice at the door which they both recognized—the voice of Mrs. Farnaby.

"Yes!" Regina whispered to him, as her aunt entered the room. Mrs. Farnaby's interference (following on the earlier events of the day) had touched the young lady's usually placable temper in a tender place—and Amelius reaped the benefit of it.

Mrs. Farnaby walked straight up to him, put her arm in his, and led him out into the hall.

"I had my suspicions," she said; "and I find they have not misled me. Twice already I have warned you to let my niece alone. For the third and last time, I tell you that she is as cold as ice. She will trifle with you as long as it flatters her vanity; and she will throw you over as she has thrown other men over. Have your fling, you foolish fellow, before you marry anybody. Pay no more visits to this house, unless they are visits to me. I shall expect to hear from you." She paused, and pointed to a statue which was one of the ornaments in the hall. "Look at that bronze-woman with the clock in her hand. That's Regina. Be off with you—good-by!"

Amelius found himself in the street. Regina was looking out at the dining-room window. He kissed his hand to her; she smiled and bowed. "Damn the other men!" Amelius said to himself. "I'll call on her to-morrow."

CHAPTER XI.

RETURNING to his hotel, he found three letters waiting for him on the sitting-room table.

The first letter that he opened was from his landlord, and contained his bill for the week. As he looked at the sum total, Amelius presented to perfection the aspect of a serious young man. He took pen, ink and paper, and made some elaborate calculations. Money that he had too generously lent, or too freely given away, appeared in his statement of expenses, as well as money that he had spent on himself. The result may be plainly stated in his own words: "Good-by to the hotel; I must go into lodgings."

Having arrived at this wise decision, he opened the second letter. It proved to be written by the lawyers who had already communicated with him at Tadmor, on the subject of his inheritance. "Dear Sir—The inclosed, insufficiently addressed as you will perceive, only reached us this day. We beg to remain, etc."

Amelius opened the letter inclosed, and turned to the signature for information. The name instantly took him back to the Community; the writer was Mellicent.

Her letter began abruptly, in these terms:

"Do you remember what I said to you when we parted at Tadmor? I said, 'Be comforted Amelius, the end is not yet.' And I said again, 'You will come back to me.'

"I remind you of this, my friend—directing to your lawyers, whose names I remember when their letter to you was publicly read in the Common Room. Once or twice a year I shall continue to remind you of those parting words of mine; there will be a time perhaps when you will thank me for doing so.

"In the meanwhile, light your pipe with my letters; my letters don't matter. If I can comfort you, and reconcile you to your life—years hence, when you too, my Amelius, may be one of the Fallen Leaves like me—then I shall not have lived and suffered in vain; my last days on earth will be the happiest days that I have ever seen.

"Be pleased not to answer these lines, or any other written words of mine that may follow, so long as you are prosperous and happy. With *that* part of your life I have nothing to do. You will find friends wherever you go—among the women especially. Your generous nature shows itself frankly in your face; your manly gentleness and sweetness speak in every tone of your voice; we poor women feel drawn towards you by an attraction which we are not able to resist. Have you fallen in love already with some beautiful English girl? Oh, be careful and prudent! Be sure, before you set your heart on her, that she is worthy of you! So many women are cruel and deceitful. Some of them will make you believe you have won their love, when you have only flattered their vanity; and some are poor weak creatures whose minds are set on their own interests, and who may let bad advisers guide them, when you are not by. Take care, my friend—take care!

"I am living with my sister at New York. The days and weeks glide by me quietly; you are in my thoughts and my prayers—I have nothing to complain of, I wait and hope. When the time of my banishment from the Community has expired, I shall go back to Tadmor; and there you will find me, Amelius, the first to welcome you when your spirits are sinking under the burden of life, and your heart turns again to the friends of your early days.

"Good-by, my dear—good-by!"

Amelius laid the letter aside, touched and saddened by the artless devotion to him which it expressed. He was conscious also of a feeling of uneasy surprise, when he read the lines which referred to his possible entanglement with some beautiful English girl. Here (with widely different motives) was Mrs. Farnaby's warning repeated, by a stranger, writing from another quarter of the globe! It was an odd coincidence, to say the least of it. After thinking for a while, he turned abruptly to the third letter that was waiting for him. He was not at ease; his mind felt the need of relief.

The third letter was from Rufus Dingwell; announcing the close of his tour in Ireland, and his intention of shortly joining Amelius in London. The excellent American expressed, with his customary absence of reserve, his fervent admiration of Irish hospitality, Irish beauty, and Irish whisky. "Green Erin wants but one thing more," Rufus predicted, "to be a Paradise on earth—it wants the day to come when we shall send an American minister to the Irish Republic." Laughing over this quaint outbreak, Amelius turned from the first page to the second. As his eyes fell on the next paragraph, a sudden change passed over him; he let the letter drop to the floor.

"One last word" (the American wrote) "about that nice, long, bright letter of yours. I have read it with strict attention, and thought over it considerably afterwards. Don't be offended, friend Amelius, if I tell you in plain words, that your account of the Farnabys doesn't make me happy—quite the contrary, I do assure you. My back is set up, sir, against that family. You will do well to drop them: and, above all things, mind what you are about with the brown miss, who has found her

Digitized by Google

way to your favorable opinion in such an almighty hurry. Do me a favor, my good boy. Just wait till I have seen her, will you?"

Mrs. Farnaby, Mellicent, Rufus—all three strangers to each other, and all three agreed, nevertheless, in trying to part him from the beautiful young Englishwoman! "I don't care," Amelius said to himself; "I'll marry Regina, if she will have me!"

(*To be continued.*)

THE MARTHA WASHINGTON RECEPTION.

THE chief feature of the Martha Washington Reception, held in the Academy of Music, on Thursday evening, February 20th, for the benefit of the charitable enterprises under the management of St. John's Guild, was the tableau of the first inauguration of President Washington. The scene on Wall and Broad Streets, taking in the old Federal Hall, where Washington was inaugurated on April 30th, 1789, with which our readers are doubtless familiar through the many engravings that have been published, was very accurately laid out on the stage. In the background, facing the spectators, was an excellent scenic representation of the old stone City Hall, afterwards called Federal Hall. Everything was a literal transcript of the decorations of the old Federal Hall. On the left of the square was the scenic counterpart of the old Verplanck mansion, an eminently respectable house, in red brick, two stories in height, with narrow stone trimmings. The other side of the street exhibited three dwellings characteristic of those days, one being a Dutch gable of brick and another of brick and frame.

Gayly dressed ladies were at all the windows, gazing down into the street, where the military were drawn up on two sides in double files. The military consisted of five separate detachments of from twenty to thirty men each. Colonel Laing, of the old Highland Regiment, the Seventy-ninth, now disbanded, was the senior officer. His command, personating the Scotch Infantry, were in full Highland costume. Captain Philip Courtland's old Continental Infantry were personated by Captain Norman's company of Continentals in the original uniform. Among the other troops were Captain Stokes's troopers and the German Grenadiers of Captain Scribas.

George Washington was personated by Mr. Tibbetts, of Boston, an old gentleman of seventy. He wore a brown coat, a ruffled shirt, and silver shoe-buckles, and presented a very imposing figure. He stood at the left of a table on the balcony; on the other side was Robert R. Livingston, great-grandson of Chancellor Livingston, who administered the oath. Behind the table stood a descendant of Samuel A. Otis, then Secretary of the Senate, who held the crimson cushion on which rested the original Bible that Washington kissed. Grouped about the three central figures were a descendant of Count de Moustier, then Ambassador from France, William W. Ellsworth, a descendant of Oliver Ellsworth; the great-grandson of General Samuel B. Webb, who was marshal of the day, and many others.

After the tableau the troops of horse, dismounted, German Grenadiers, New York Grenadiers, Scotch Infantry, Continental Infantry, marshaled and officered, and a committee of Masons, showed how the original party went to St. Paul's Church after the delivery of the inaugural address in the Senate Chamber, by marching around the stage and retiring to the music of "Yankee Doodle."

The dancing of the evening was opened by forty-eight young ladies and gentlemen attired in Norwegian peasant costume, who formed three sets with eight couples in each. There were twenty-five dances on the order, the music being furnished by Graiulia's and Bernstein's bands. Supper was served in Nilsson Hall.

THE JOLLIEST MOMENT IN ARION'S LIFE.

REMARKABLE in every sense as was the masquerade ball of the Arion Singing Society last year, it was completely eclipsed by the magnificence, novelty and drollery of the one given in Gilmore's Garden on Friday, February 21st. At nine o'clock an introductory concert was begun, a military band dividing selections from Bach, Herold, Wagner and Meyerbeer, with an orchestra of 150 pieces, led by Dr. Damrosch. During the progress of the concert two immense dolphins, one seemingly of burnished gold and the other of silver, were observed tranquilly lying with their tightly-shut mouths resting upon the east end of the ballroom floor, partly facing each other from opposite corners. As the last strain of Meyerbeer died away, the golden fish slowly opened his ponderous mouth and permitted a number of gentlemen in the costume of Wallenstein to pass out thereof. These gentlemen were the Floor Committee, and were followed from the dolphin's capacious stomach by the Lobby Committee, each dressed in the costume of Shere Ali; the Finance Committee, as so many King-James-the-Firsts; and the Committee of Arrangements, dressed each as a Rembrandt. The sleepy dolphin then closed its mouth, and the several committees, saluting the audience, invited the masquerading portion of it to take part in the opening polonaise.

The coming of Prince Carnival was announced by the heralds, and, the dancers having resumed their seats, the golden dolphin again slowly opened his mouth. First emerged a band, and following it a battalion, in the centre of which was a standard announcing that it hailed from Rome. In this battalion there were trumpeters and Roman chariots drawn by slaves.

The second battalion, according to its banners, hailed from Venice. Here were chariots occupied by Pantaloon, Harlequin, Pierrot and Columbine, and a gondola, borne on the shoulders of strong gondoliers, containing a pair of Venetian lovers. Paris came next in the comprehensive procession. Gambetta was seen riding on an immense hat, carried by MacMahon, a Bonapartist, a Bourbon and a Jesuit. After Paris came Madrid. First a carriage drawn by monks, and then a castle, on the balcony of which a Spanish beauty was receiving the homage of grandees, students and cavaliers. Cologne was represented by a drum-corps in the uniform of the City Guard of olden times. After Cologne came the Prince of the Carnival, preceded by a drum-major and favorite orchestra. His throne was in the form of a globe, borne upon the backs of three dolphins driven by Arion himself.

After the Prince was a delegation from the New World, represented by Indians, wigwams and such things. A battalion representing the "Sixteenth Amendment," and consisting of female physicians, lawyers, soldiers senators and female militia and fire department, immediately followed the aborigines. These in turn were followed by the city journalists, the irrepressible drummer association, and finally, what was called Comstock's Art Gallery, and in which the most famous Venuses of ancient art were attired in costumes agreeable to the most critical and refined modern taste.

Besides these there were a Spanish banner-dance, an Indian camp attacked by United States soldiers, in which the soldiers were defeated and scalped, and numerous other humorous and satirical allusions to prominent public individuals and national and international affairs. Having made the complete circuit of the immense ballroom, the procession slowly disappeared between the jaws of the second or silver dolphin, when the floor was given over to the dancers.

As may be imagined from this running account, the merriment was intense. All the costumes, trappings and paraphernalia of every description were of the most sumptuous and artistic character. No end of money appeared to have been employed in producing the most grotesque effects ever seen on a masquerading floor, and the efforts of the managers were rewarded by the presence of an audience that truly overflowed the Garden, spacious as it is. We take pleasure in acknowledging the courteous services paid our artist by Mr. Lafayette Seavey, the scenic-artist, whose work was the subject of general and deserved commendation.

SINGING BY MAGIC LANTERN DISPLAYS.

EVERY Sunday-school teacher is fully alive to the ease of gathering children into classes as the holidays approach, and the difficulty of retaining them after the annual distribution of presents. Provisions have to be made constantly for attractions to draw the children to the schoolrooms, and these in the course of a few months greatly tax the ingenuity and tact of the teachers. Picnics, excursions and May-day frolics in warm weather, tableaux, stereopticon exhibitions, illustrated lectures and concerts in the Winter, follow one another as interest in the curriculum begins to lag; and still new devices have to be contrived when these features have lost their attractions. And in many instances entertainments arranged solely for the little folks prove so absorbing and agreeable to the children of a larger growth, that they pass from the Sunday-school room into the church itself. This fact is illustrated in a novel manner in Boston, where the throwing of verse after verse of a hymn upon a screen by a magic lantern, first adopted as a new idea in school entertainments, has led to the laying aside, temporarily, at least, of the hymn-book during the congregational singing in a number of churches. Where this innovation is made there is no reason why one who can sing won't sing. The objection of having no book, or of having left the book at home, or of eye-trying fine type, are annihilated. The apparatus requires but a small amount of space and necessitates no disfurement of auditorium or walls. It has already been found to please the old as well as the young, and there is no reason why the plan should not be widely adopted, particularly during the camp-meeting season.

Queen Victoria at Home.

MOST premiers have been extremely deferential toward the Queen, and the only one who was not so—Lord John Russell—had no reason to congratulate himself upon his crabbedness, for he got into very ill odor at court, and found no support there in trying times. He was one of the very few statesmen who ever received a downright sharp answer from the Queen. This was in 1860, after the Italian Revolution, when the different grand dukes were being dispossessed. The Duchess of Parma, in great distress, wrote to the Queen, beseeching her to intercede with Victor Emmanuel, so that her private property might not be confiscated; and the Queen, compassionately willing to do what was asked, showed the letter to Earl Russell. "The carnatitushion demands that I should answer that," replied his lordship, in his piping, ungenial voice. "Well, then, answer it," said the Queen, curtly, and turned away much offended. It has often been said that the Queen liked Lord Palmerston, but this is an error. Her favorite ministers have been Lords Melbourne and Aberdeen. Sir Robert Peel she at first disliked intensely, but her aversion wore off when she came to know him better; and exactly the same thing occurred in the case of Mr. Disraeli. Lord Beaconsfield is perhaps not aware that until he acceded to the premiership in 1868 the Queen had only read one of his novels—"Henrietta Temple." She read all the others in the course of the three months after Mr. Disraeli had become her chief adviser, and in due time enjoyed "Lothair," though the present premier has never ranked among her favorite authors. For this his lordship may console himself, seeing that Thackeray and the late Lord Lytton are under the same ban as himself. The Queen likes Dickens's novels, one or two of George Eliot's, but chiefly Wilkie Collins's and Mr. Black's, the latter's description of Scotch scenery being very dear to her. The Queen also reads and rereads Walter Scott's novels, which is more than most of her subjects do now, more's the pity. On the whole, though, she inclines rather towards the serious reading of history and theology, and the libraries at all her palaces are richly stocked with books of chronicles and memoirs, though it has been noticed that she never calls for a French book, having a deep objection to French literature in all its branches.

The Queen leads a very quiet and yet a busy life, and few great ladies find time to compress so many occupations into a daytime as she does. She breakfasts at nine, lunches at two, and dines at eight. From three to five she generally drives or walks out; but the remainder of her hours is devoted to state business, study or correspondence with her widespread family. All the Queen's private letters are written in English, not in German, as many think; and, in fact, German is so little spoken among the royal family, that even when the Crown Prince of Germany comes over he speaks English at court like his wife's relatives. The Queen reads all the daily newspapers, and the proprietors of the *Daily Telegraph* print several copies of their journal for the royal palaces on special paper. The Queen's devotion to state affairs is well known, and her intervention in them, particularly when religious questions are involved, is not at all half-hearted. She also exercises her own discretion very freely in the appointment of bishops and peers. Dr. Tait was nominated by her to the See of Canterbury before Mr. Disraeli had recommended any one; and about a year previously Her Majesty had flatly refused to bestow a mitre on Dr. Wordsworth, owing to the protests which this divine had emitted when Dr. Stanley was made Dean of Westminster. A little later she consented to appoint Dr. Wordsworth to the See of Lincoln, but rather as a compliment to his scholarly attainments than out of any leeling for his views as a churchman. As to peers, the Queen, anxious to preserve the prestige of the nobility, has made it her rule never to ennoble men of small fortune unless they were persons of fairly advanced age, having no sons.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

Funeral of General Espartero.

There was profound mourning throughout Spain on the occasion of the death of General Espartero, the ex-Regent, which occurred in January, and the City of Logroño bore evidences of extreme sorrow on the day of the funeral. Drapings of black cloth were hung in profusion from windows, balconies and porticos; business was suspended; a proper military escort with local troops and civic authorities formed a lengthy procession, and impressive services were held in the church. Our illustration represents the head of the *cortège* passing through Mercado Street, and gives an idea of the style and extent of the funeral decorations.

The National French Lottery.

The official drawing of this mammoth lottery began on Sunday, January 26th. The manner of drawing is perfectly simple, honest, and beyond fraud. The wheels are in the Palace of the Trocadero in the large hall, and in the presence of thousands of people. There are seven wheels, each holding ten numbers from 0 to 9; the first is turned and a number stops before an open glass window on the wheel, which indicates the number of the series. The other six wheels are then turned, and as each figure stops the result is immediately announced. To explain—if 4 is the number of the series 6 on the first wheel, 4 on the second, 5 on the third, 8 on the fourth, 9 on the fifth, and 0 on the sixth, the lucky person holding in the fourth series 645,890 will get a prize, all of which are numbered, and, in consequence, follow each other in distribution. There are twelve series of numbers of 1,000,000 numbers in each series, making 12,000,000 of chances and 83,000 prizes. The drawing commences every morning at half-past ten and lasts until the afternoon. Eighty to one hundred numbers are drawn in the hour. The prizes consist of diamonds and precious stones, paintings, busts, statues in marble, rich stuffs, laces, china, glassware, pianos, organs, boats (both rowing and sailing ones), dresses, and all manner of objects of art, useful and ornamental. There have been three or four reports as to the lucky winner of the 125,000 franc prize, some saying it was the driver of an omnibus, others a concierge, others a conductor of a tramway, others a cab-driver, others a washerwoman in the Rue de Bac, etc., etc., but it has turned out to be a poor workman in the Rue St. Honore. Every one holds tickets—rich and poor—as, being issued at one franc, every one had a chance equal with all classes.

With the British in Afghanistan.

After General Sir Samuel Browne had secured Dakka, on November 23d, he dispatched General Macpherson, with two squadrons of the Tenth Hussars, five guns, the Fourth Battalion Rifle Brigade and the Fourth Ghoorkas, to occupy Boaswal, which was done on the 1st of December. On December 3d Major Stewart, of the Corps of Guides, the political officer attached to the brigade, learnt that the supplies from the extensive and flourishing village of Pesh Bolak, near the foot of the Safed Koh range of mountains, were held by order of Ali Muhamad, the Kabulee governor and headman of these villages. It was decided, therefore, either to depose him or to enforce his submission. Accordingly General Macpherson, accompanied by his staff and Majors Blair and Lovett, R. E., and a squadron of the Tenth Hussars, under Major Wood, advanced to Pesh Bolak. On approaching the chief village, which, as usual, is surrounded by high walls, flanked by towers, the Governor, Ali Muhamad, followed by the principal elders of the village, and by the representatives of the Hindoo community, were observed coming forward to meet the general. After a short parley, in which Ali Muhamad expressed his willingness to provide supplies, the general and his staff proceeded to partake of some refreshments offered by the Afghan chief, and at which the majority of the British officers made their first acquaintance with the Afghan cuisine. The Christmas festivities in the British camp before Jellalabad have been glowingly described by Mr. Forbes in the *Daily News*, where the banquet of the headquarters mess, with their priceless magnums of champagne, and the excellent catering of Captain Hill, who provided a menu of delicacies, ranging from Julienne soup and whitebait to cheese fritters and the inevitable plum pudding, are picturesquely dilated upon with the writer's well-known humor. Our engraving, however, depicts the evening festivities of the Tenth Hussars, where, by the side of a glorious camp-fire, a crowd of officers, with a wider circle of stalwart troopers and natives, kept Christmas right merrily. There was a kettle in which neat rum was kept boiling, and from this reserve receptacle the cups were kept fed with a fluid of a fiendish potency. Men who in another scene might have grumbled at a crumpled rose-leaf, lay or sat on the dusty ground and sipped with a hearty relish the red-hot rum. Vocal music was the order of the evening; but it must not be thought that instrumental music was wholly wanting, as Gough performed with surpassing brilliancy and effect on that extremely "high art" instrument, the Pan-pipes, and he filled up intervals with its strains with a versatility and emphasis which kindled universal enthusiasm.

The Monastery of Belen, near Lisbon, after the recent Catastrophe.

The monastery of Belen "Os Jeronymos," or Santa Maria de Belen, is the most magnificent specimen of ecclesiastical architecture in Portugal, rich in the ornate work, the sculptured saint and flower, so characteristic of that kingdom. On its site once stood a chapel in which Vasco da Gama and his companions passed the night in prayer before setting out on the voyage which led to the discovery of India. The church begun by Manoel was completed by John II., and has long been regarded with patriotic pride by the Portuguese. A few months since one of the towers gave way, and in its fall carried away a part of a beautiful cloister that adjoined. Our illustration shows the condition of this monument after the ruin was cleared away. The Portuguese Government, which has more than once restored the building, will undoubtedly at once proceed to rebuild the fallen portion; and as the moderns are true to the ancient taste, the restoration, we may be assured, will be perfectly Manoelino.

Fingo Levies in South Africa.

The first thing that the Fingoes do to make themselves comfortable, after having made fires, etc., is to gradually divest themselves of all clothing, which they hang on bushes, etc., with the exception of the sheepskin carosse, or blanket, which admits of various styles of wearing. The gentleman with the long feather behind his ear is engaged in eating. Having seized the meat in his teeth, and the other end held tight in his left hand, he is sawing off the lump required for immediate consumption by using the sharp edge of the assegai, held in his right hand. Most of the party have already finished their meal, and are enjoying the long pipes, of their own manufacture, which the women would do too if present; but this being a war-party, as the assegais stuck in the ground denote, no women accompany them. The Veldt of the eastern province varies much from that of the western, where the bush growth is low and more continuous; whilst in Caffraria the bush is larger and more scattered in clumps. "Veldt" is merely the Dutch of our word "field."

AT HOME AND ABROAD.

—THE City Council of Nashville will reduce official salaries $17,000.

—IT is proposed in Texas to sell enough wild lands to build a new State House.

—FOR fifteen years no Governor of North Carolina has served out his full term.

—PHILADELPHIA claims to have a population of nearly 900,000, on the strength of its new directory.

—MOBILE takes her stand with Memphis, a bill ousting her charter having passed the Alabama Legislature.

—THE North Carolina Senate has reduced the salaries of the State officials. The Governor is to receive $3,000 per year.

—A BILL to allow persons charged with crime to testify in their own behalf has been defeated in the Texas Legislature.

—LAST year there were in attendance on the public schools of Georgia 207,000 children. Of this number 73,000 were colored.

—STRANGE to say, there are not enough lawyers in the lower house of the North Carolina Legislature to make a judiciary committee.

—ACCORDING to the report of the Commissioner of Agriculture, it would cost the people $15,000,000 to rebuild all of the rail fences in North Carolina.

—THE Finance Committee of the City Council of Richmond, Va., reports a shrinkage of $4,000,000 or $5,000,000 in the assessed valuation of that city.

—THE Rev. Dr. H. C. Potter, rector of Grace Church, recently stated that during the past ten years that church had contributed $1,082,368 for missionary work alone.

—FIFTY THOUSAND tea-plants have been distributed in the Middle and Southern States, and in from three to four years they will have attained a size to permit a full picking.

—THE Court of Appeals of New York have decided that errors had been committed on the trials of Dr. Lambert and Robert L. Case, of insurance notoriety, and that they must be re-tried.

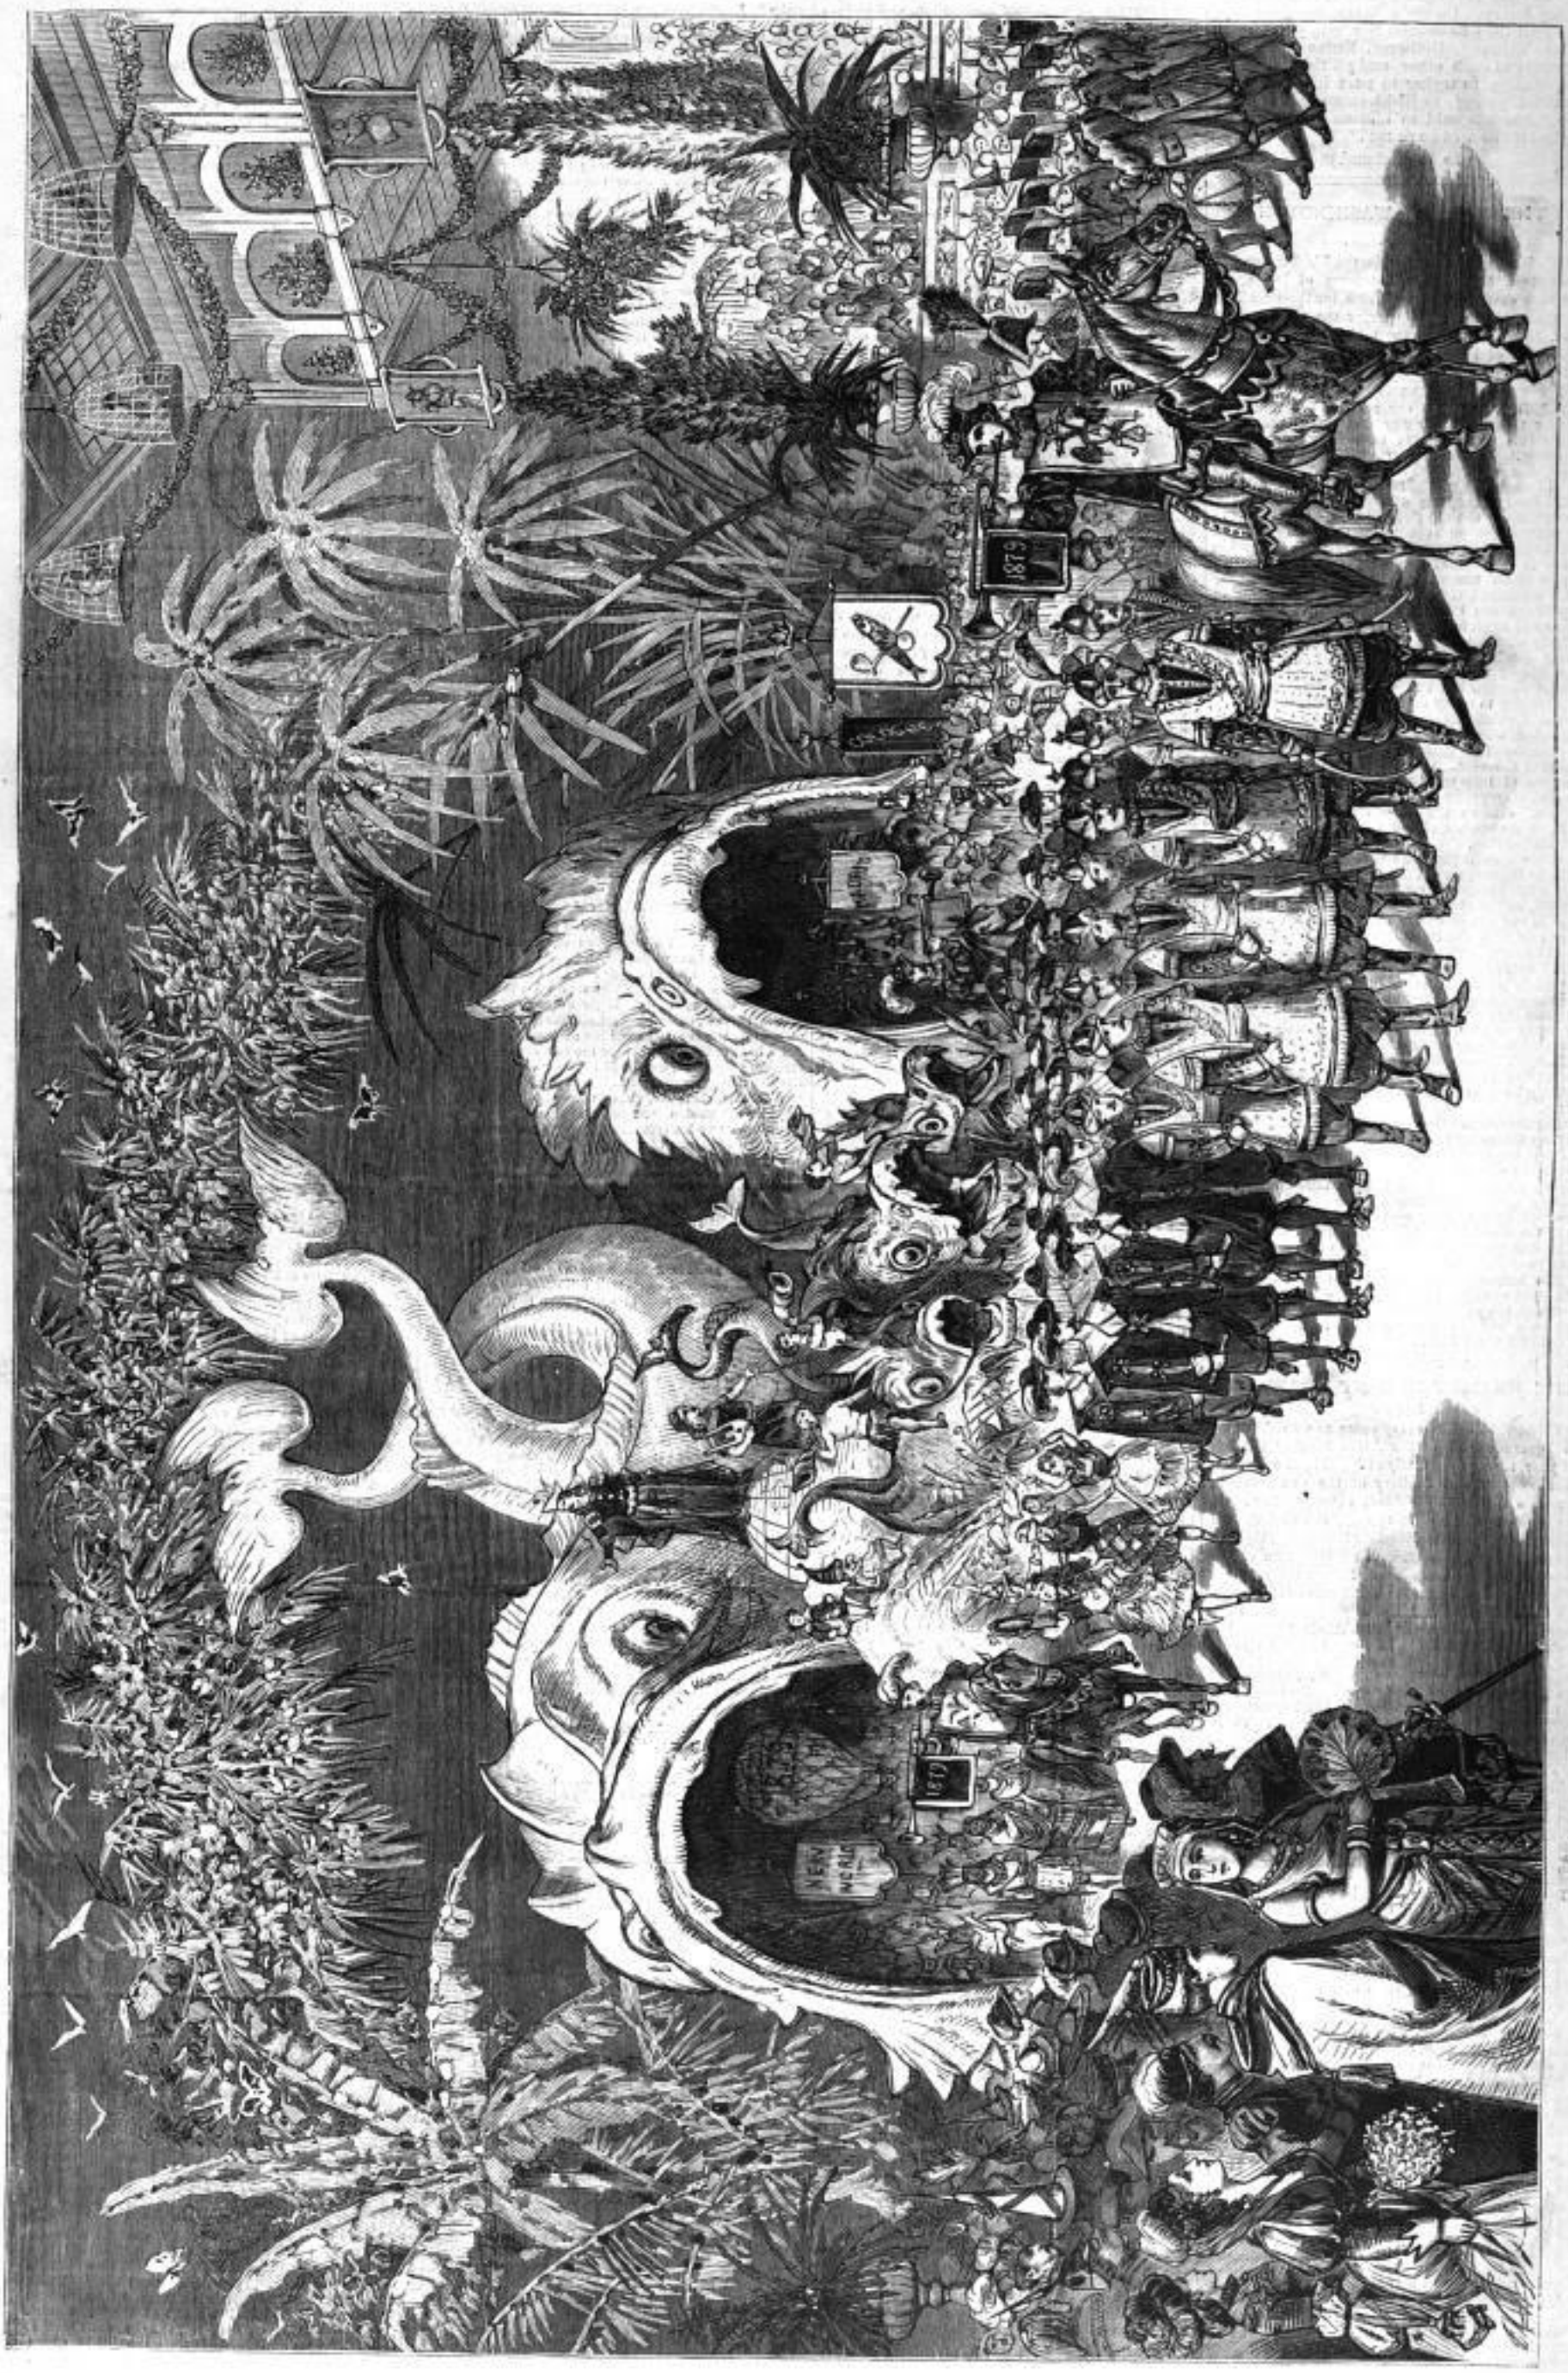
—THE relief fund, $26,464, which was garnisheed by the creditors of the City of Memphis, has been released, Judge Baxter holding that such fund is not subject to garnishment by the creditors of the City of Memphis.

—ON January 1st the new Act regulating the labor of children in factories came into operation in Berlin. All children employed in such places have, if under fourteen, to carry an official card, under a penalty of four dollars or three days' imprisonment. Children under twelve are not eligible for such employment.

—THE expenditures of the Dominion of Canada, last year, exceeded the income by $1,128,147. The total liabilities of the Dominion are $174,937,268. A proposition to increase the tariff will shortly be introduced in the Dominion Parliament, and business men are taking time by the forelock and making heavy purchases of goods. Over $342,744 have been paid in duties since February 1st.

—NUTMEGS grow on trees which look like pear-trees, and are generally over twenty feet high. The flowers are very much like the lily-of-the-valley. They are pale yellow, and very fragrant. The nutmeg is the seed of the fruit, and mace is the thin covering over the seed. The fruit is about as large as a peach. When ripe, it breaks open and shows the little nut inside. The trees grow on the islands of Asia and in tropical America. They bear fruit for seventy or eighty years, having ripe fruit upon them at all seasons.

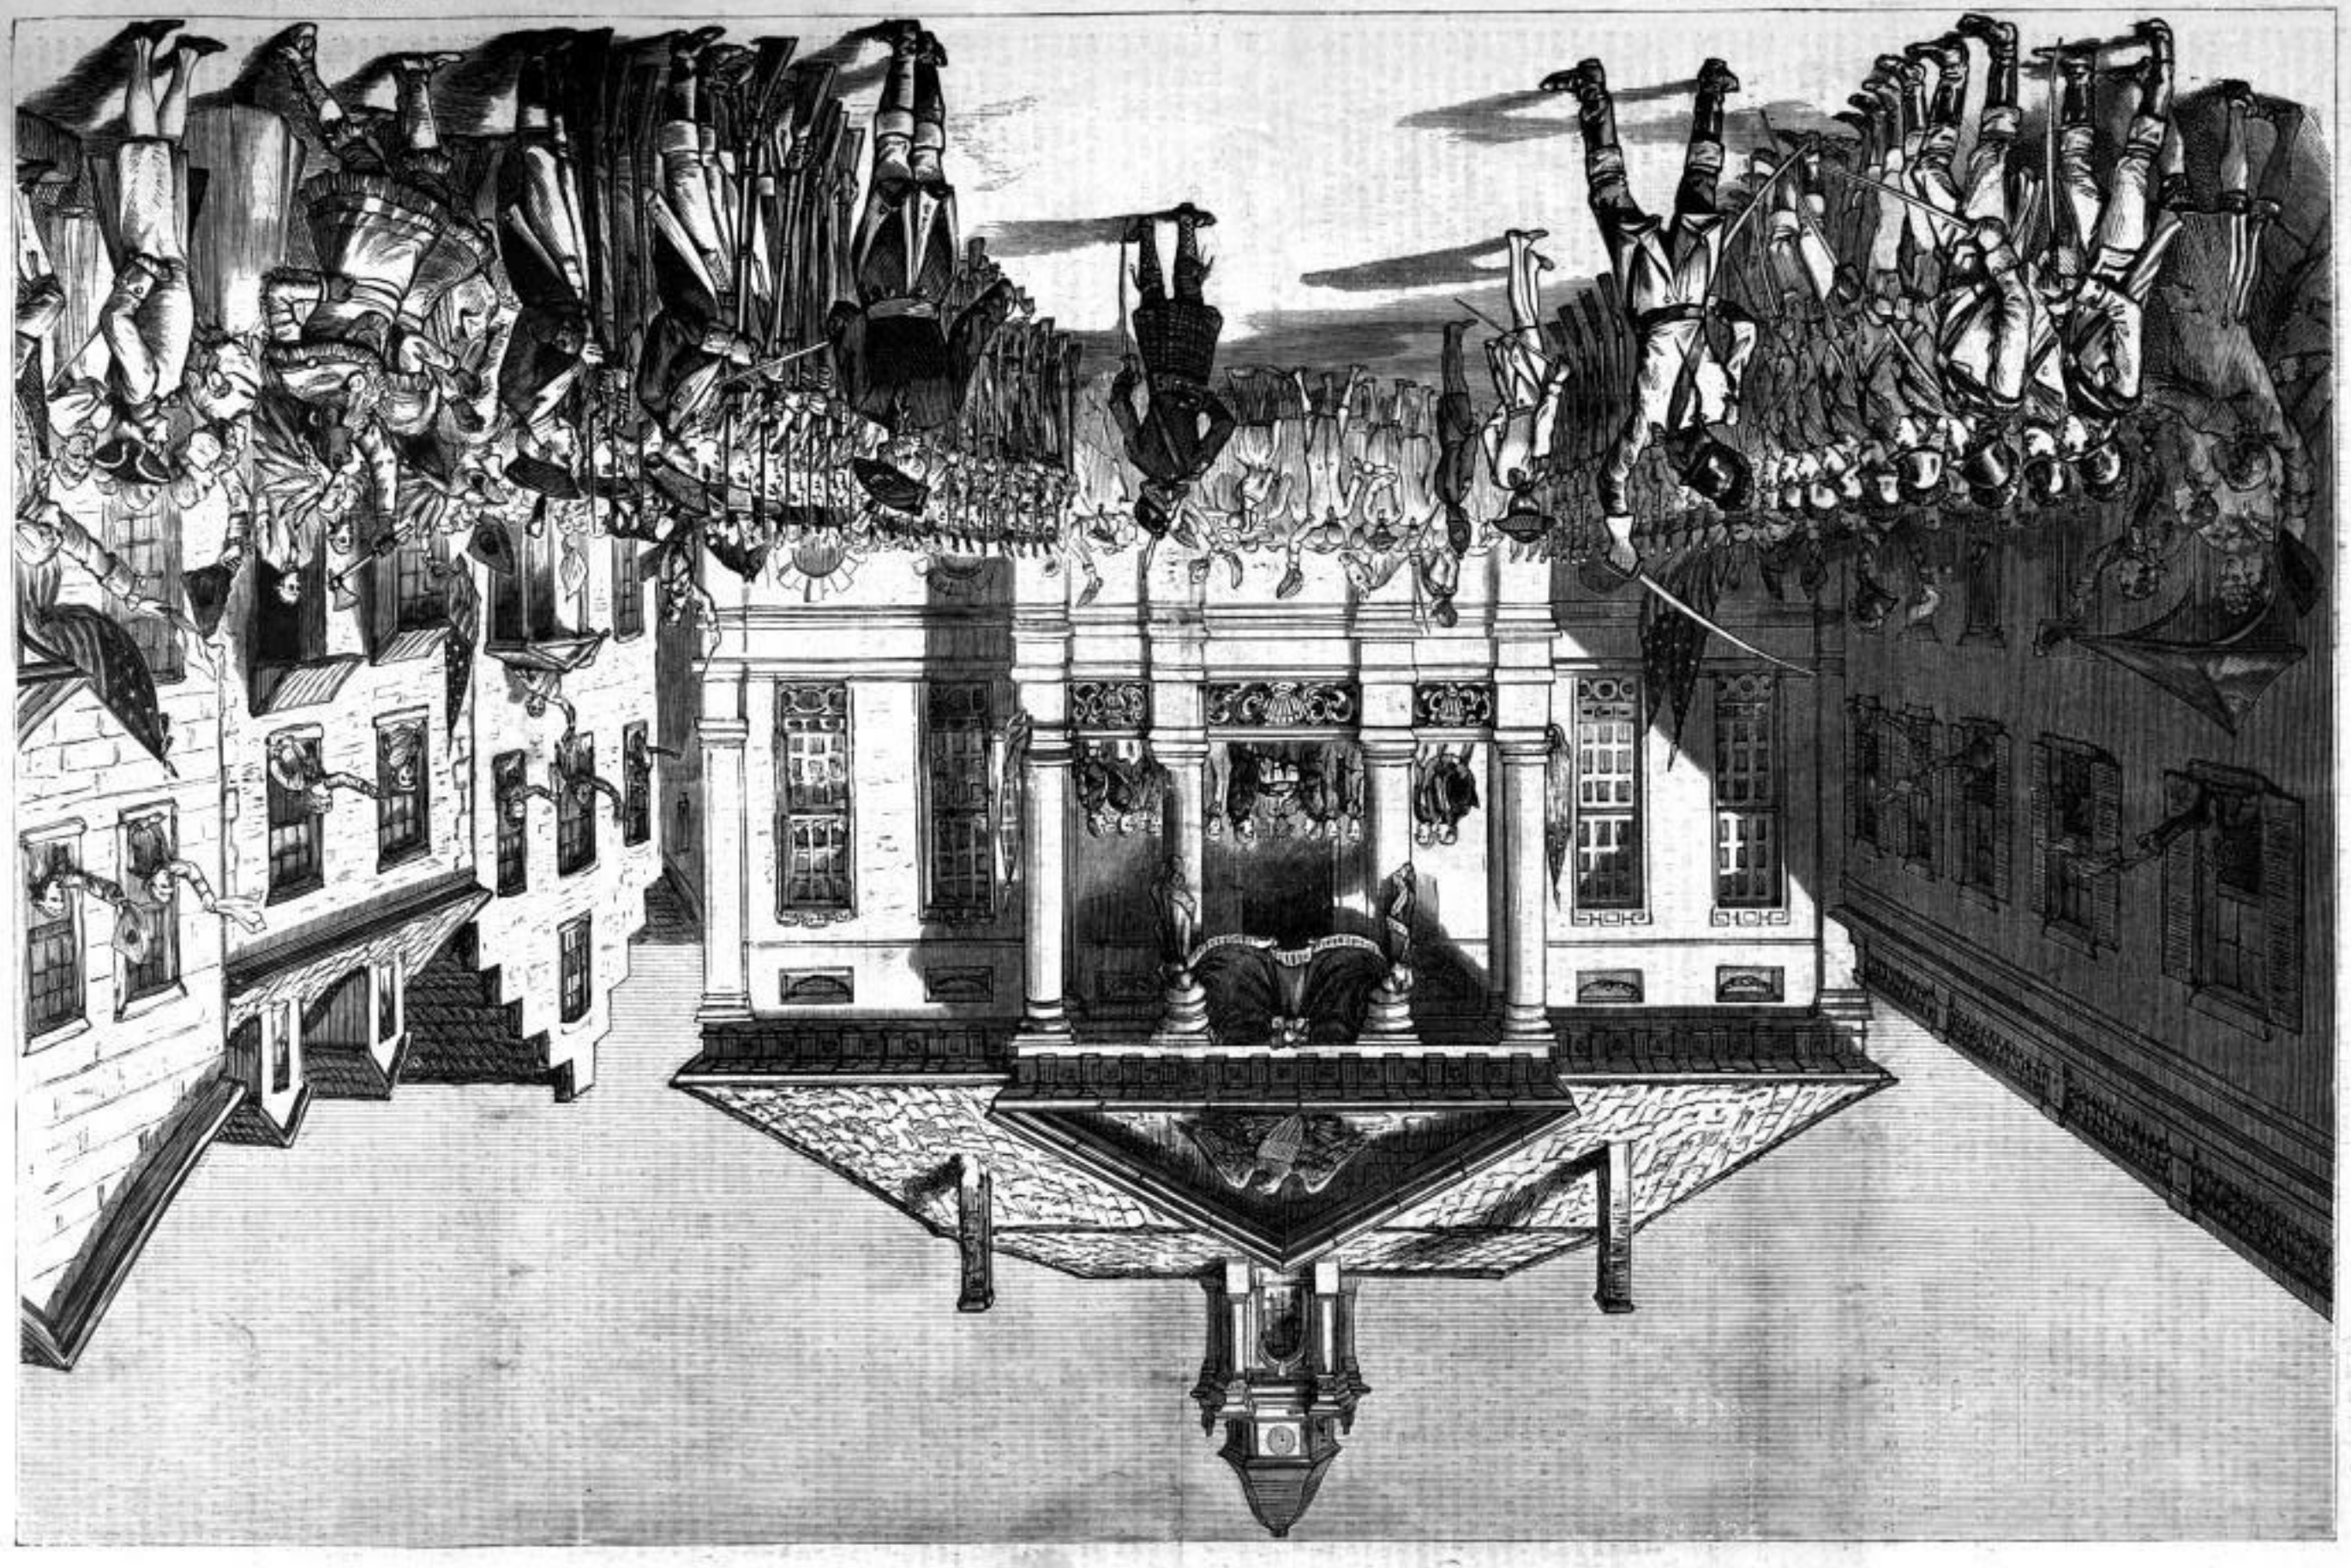
—PRESIDENT MCMILLEN, at the twenty-fourth annual convention of School Commissioners and City Superintendents at Syracuse, N. Y., on February 19th, said that there were 11,821 school-houses in the State, valued, with their sites, at $30,147,589; and 1,032,602 pupils. There was raised by taxation during the year $2,938,207.86, or about 2.84 per cent. for the year's tuition. President White of Cornell University, in a speech, compared America's school system with Europe's, and awarded the palm to America.



—ON December 30th a brilliant assemblage, which included the Crown Prince of Sweden and the diplomatic representatives of America, England, Germany, Holland, Bavaria, Switzerland and Japan, with notabilities of Rome, several ladies and gentlemen of the royal household, and the *élite* of the American and English colonies, assembled to hear a splendid recital of sacred music in the American Church of St. Paul at Rome, where the splendid new organ was erected on Christmas Day. This instrument is far the finest in Rome, and perhaps in Italy. Exclusive of erection, it cost $7,500.

—THE returns of French commerce for the year 1878 have just been published. The imports were: alimentary products, 1,543,308,000 francs; raw materials, 2,251,776,000 francs; manufactures, 447,133,000 francs; sundries, 218,757,000 francs; total, 4,460,974,000 francs, as compared with 3,669,845,000 francs for 1877. The exports were: manufactures, 1,867,142,000 francs; raw materials, 1,320,865,000 francs; sundries, 181,930,000 francs; total for 1878, 3,369,807,000 francs, as compared with 3,436,204,000 francs for 1877. It will be seen from the foregoing figures that the excess of merchandise exported over the quantity imported aggregated 420,609,000 francs.

—IF the Glasgow *News* has authority for the estimate it offers of the next call to be made upon the shareholders of the Glasgow Bank, there is scarcely a possibility that any of them can escape utter ruin. It calculates that at the outside the first call will not produce more than £1,500,000, and that consequently only three-eighths of the stock, or £300,000, responded to the call. After all the assets are realized, it adds that three and three-quarter millions will have to be made up by the shareholders, and it assumes that only three-sixteenths of those not raised by the first call will pay those succeeding—or, say, £56,000 stock. To produce the sum needed will require a call upon this stock of from £7,000 to £10,000 per share. It is scarcely probable that a single shareholder will pay such a call and remain solvent.



—PITTSBURG, Pa., produces more than half the glass made in the United States. Its factories number seventy-three, with 600 pots, and give employment to 5,248 hands, whose wages approach $3,000,000 a year. The materials employed in the manufacture were, the past year, 12,110 tons soda ash, 48,340 tons of sand, 152,000 bushels of lime, 1,218 tons nitrate soda, 793,500 bushels of coke, 4,525,760 bushels of coal, 4,025 cords of wood, 6,055 tons of straw, 2,760 barrels of salt, 250 tons pearl ash, 500 tons of lead, 150,000 fire brick, 2,955 tons of German clay. The packing boxes cost $484,250, and required 2,109 kegs of nails. Ninety-six wagons and 130 horses were employed in hauling. The space occupied by the buildings is equal to 208 acres, and the capital in buildings, machinery and grounds is, in round numbers, $3,500,000. The business produces about $7,000,000 a year.

CREDO.

(TO G. M. S.)

WHEN some old wound's malignant pain
Revives to rack each inmost sense;
When every heart-nerve feels the strain
Of loss that knows no recompense;

When, held in bonds, one cannot reach
The prize his yearning life desired,
And only utters one set speech:
"God rest me, for I am so tired!"

Then haply some sweet, pitying friend
May soothe with balm of tender words,
As lands where violent storms contend
Are later lulled by singing birds;

While grace from benedictional eyes
Nerving to patient, manlier mood
Bids him with loyalest reverence prize
Unfaltering faith in womanhood!

JOHN MORAN.

A SECRET MARRIAGE
AND
ITS CONSEQUENCES.

BY THE DUKE DE POMAR,

AUTHOR OF "THE HONEYMOON," "THROUGH THE AGES," "WHO IS SHE?" "FASHION AND FASHION," ETC.

BOOK FOURTH.

LADY ROLLINGFORD'S SECRET.

CHAPTER IX.—"PRIMAVERA, GIOVENTU DELL' ANNO!"

IT is a warm Spring day, and the suburbs of London seem transformed into one glorious fresh and laughing garden, in the centre of which the great city lies like an immense shapeless anthill.

The neighborhood of Hampstead, and Finchley especially, presents a truly delightful appearance on such a day as this. The gardens of Liberty Hall, so lovely in their luxuriant wildness, so picturesque in their natural charms, have never seemed so beautiful and delightful to our friend Inganess, who, on this lovely Spring day—having only the previous night crossed over from France—walks through them with an impatient step and a beating heart, expecting at every turn to find himself face to face with the bright girl whose merry brown eyes and ever-smiling little face he has found so impossible to drive from his memory and from his heart.

His first care on arriving in London was to find out if the Champions were still at Liberty Hall, and, having made sure that they are, he has hastened hither by the train, and is at once conducted to Mrs. Champion's boudoir.

Mrs. Champion is seated at her table arranging a large basket of flowers; she is dressed in brown silk, and has on a white-lace cap *à la* Marie Stuart. She does not rise to receive him, but by the expression of her face he is at once assured how welcome his visit is; and he thinks he perceives an amused smile playing round her mouth.

Their conversation is, of course, conventional enough—the weather, the events of day, and the places he had recently seen, being naturally the principal topics discussed. But at length, Inganess begins speaking of Bella.

"Ah, Mrs. Champion," he says, after a pause, "how happy you are to have such a daughter!"

"Happy? I do not precisely see that. You have no idea how wild and impertinent she is; but then, it is true, she is so coaxing that one cannot refuse her anything. You are right, Lord Inganess, however, in taking her part, for you are a great favorite of hers."

"Indeed!" he exclaims, his heart beating with joy; "you do not mean to say that she ever speaks of me?"

"Oh, yes, often," she replies, with a smile, and casting a side look towards the half-open door of the library. "This very afternoon she was speaking of you."

"Ah!"

"Yes; and in the most glowing terms, too. It seems that she saw your arrival announced in the *Post*, and—I do not know why—inferred that you would not be long in coming to see us."

The young man, almost beside himself with joy, is just on the point of replying with some flattering compliment, when the door of the library is suddenly thrown open, and Bella, herself, with a flushed face, compressed lips, and sparkling eyes, rushes into the room, to Mrs. Champion's great amusement, who, on seeing her, cannot refrain from laughing, much to Inganess's great discomfiture.

The truth of the matter is, that Bella had been talking about him the whole morning, and that not more than half an hour previously she was assuring her mother that it would not be long before he made his reappearance at Liberty Hall. Mrs. Champion had been greatly amused by all this, and had threatened to inform him, if he did come, of the great interest she seemed to take in his movements, when just at that moment the footman entered and announced his arrival, and she had given orders that he should be shown at once into her boudoir. Bella, frightened lest her mother should inform their visitor of what she had been saying, had rushed off into the next room, declaring that she did not want to see him; but once there she had not been able to resist the temptation of listening to what they said; and Mrs. Champion—desirous to correct her for this breach of good manners, and to afford a practical demonstration that people who listen at half-open doors never hear anything to their advantage—had taken the very first opportunity to inform Lord Inganess of what she had said about him.

Anxious to render the situation as natural as possible, and to make believe she has not heard what they have been saying—and at the same time to show him, if possible, that she does not care in the least for him—she stands for a moment looking at him in silence; then, as if remembering his name, she at last approaches and shakes hands with him in an off-hand manner, and begins talking without knowing exactly what she is saying.

To give herself the airs of a thoughtless and spoiled child, who says the first thing that comes into her head, in order that he might not take seriously the words which her mother has repeated to him, she informs him, all in one breath, that she hates men, that London bores her, that she finds the country dull, that she only loves her horses and her dogs, and her two ponies, Brandy and Soda, and a thousand other things in the same strain, to the poor fellow's great bewilderment, who scarcely knows what to make of it all; and at last, utterly put down and snubbed by her, shakes hands with this extraordinary girl and her mother, and leaves the house.

No sooner had he left the boudoir than Bella, almost as much bewildered by her conversation as he had been, rushes up-stairs to her own room, and, throwing herself upon her bed, bursts into a passionate fit of weeping.

"He knows now that I love him!" she mutters. "He knows it, and the conceited man has not even the good taste to pretend he doesn't!" To her it is now quite evident that he possesses her secret, and that in his heart he laughs at her—or, perhaps, pities her!

A sudden inspiration dawns upon her: only yesterday Lumley, a handsome cornet in the Guards, with whom she has often indulged in a mild flirtation, proposed to her; her sole answer had been "Shut up!"—not very polite, certainly; but then she does not care very much for him, and the thought of wounding *his* feelings had never entered her head. She does not care for him to-day any more than she had done yesterday, yet she will write to him at once and accept his offer—yes, she will, if it be only to prove to Lord Inganess how little she cares for him.

So, without weighing the dreadful consequences that may follow such a rash step, she rises from her bed, opens her desk, and in her bold, firm, free schoolgirl's hand she writes to Lumley, excusing herself for her rudeness toward him on the previous day, and formally accepting his offer.

She then rings the bell, and orders her maid to post her letter at once. "He will get it about mess-time," she thinks; "he will tell all his brother officers, and perhaps this very night Inganess will know how mistaken he has been in his suppositions about me."

She feels calmer, almost happy, after this; and in order not to awaken any suspicions in her mother's mind, she goes down-stairs again with as composed a countenance as she is able to command.

Her mother is in the drawing-room, and she learns from the footman that Colonel Howard is with her. Colonel Howard! oh, she must see him—she must hasten to him at once, and make herself very amiable and agreeable to him; perhaps that will convince her mother how greatly she has been mistaken about her feelings for Lord Inganess.

Jack Howard—for it is indeed he whom we now see once more before us—has worn well, thanks to his tailor, dentist, *perruquier*, admirable incapacity for strong deep feelings, and the serenity of conscience engendered by a fine digestion. His marriage with that rich heiress, Miss Brown, to whom he was hastening when he left us in Caithness, now more than twenty years ago, did not prove a very happy one. The young lady in question, like most "great heiresses," was neither young nor pretty; she was rather vulgar and awkward in her manners, and, to make matters worse, possessed a very hasty temper and a jealous disposition; but, fortunately for the handsome Guardsman, who had designed to marry her and give her his grand old name in exchange for her money, she did not live very long, and now the gallant officer, as elegant and fascinating as ever, is once more in the matrimonial market, a wealthy widower, ready to sacrifice his independence in order this time to obtain his *beau-ideal* of a wife. He dines with the Champions, and when the moon rises, he walks out to the lake with Bella, and there deliberately tells her he loves her.

"Have you not guessed before this the cause of my coming so often to Liberty Hall?"

"Your love for me!"

"Yes, my sweet, my beautiful Bella, I love you—I love you with all my heart and soul. I know that there is a great difference in our ages, and that I can scarcely expect a young girl like you to comprehend and share all that I feel; yet don't you think you will be able to love me—to love me enough to become my wife? I am sure you like me—now, you do like me, don't you?"

"Like you!—well, yes, I suppose I do like you—I can't deny that," Bella replies, rather bewildered by the sudden declaration.

"And you will become my wife? You will not scorn my suit?"

"What can I say, Colonel Howard? I am very much obliged to you; your offer is certainly most flattering, but—I don't know—I really don't know——"

"Oh, yes, you do—you love me; I know you love me, though your maidenly modesty will not allow you to confess it." Saying which the big Guardsman places his arm round her slender waist, and kisses her on the forehead.

"Say you will be mine—say you will not be so cruel as to scorn me?"

And the bewildered girl, utterly forgetful that only a few hours before she has written to another man promising to be his wife, agrees then and there to become Colonel Howard's bride; and all because she is so anxious to show the man she really loves that she can do without him, and that she is quite ready to accept the first offer that is made her rather than—now that he knows she loves him—wait until he has made up his mind whether he shall propose to her or not.

In the meanwhile Inganess, sorely perplexed by Bella's strange behaviour that afternoon, is trying to unravel the mystery, and wondering how she will receive the offer which he is now more convinced than ever he must make her as soon as he has mustered sufficient courage to do so.

"She is a child," he is saying to himself, as he reclines on a sofa in his room in Mayfair—"she is but a child—a spoilt child; and children must be won by appealing to their senses, rather than to their hearts. Those who have lived and suffered and known the world thoroughly can speak to each other through the medium of their souls; there is always sympathy between them, and *that* goes a long way."

Then, remembering her strange words to him that afternoon, and what Mrs. Champion had told him a moment before respecting their frequent conversations about him, and which she doubtless had heard before entering the boudoir:

"Can it be that she loves me, after all?" he murmurs, a sudden inspiration crossing his mind. "Ah, yes, I see it all, now—she loves me, and that is why she was so anxious to appear frivolous and light-hearted before me. Ah, what a fool I have been, to be sure!—of course, of course!"

And, going to the writing-table, he writes her a long letter, full of sentiment and pathos, in which he tells her of his love, and begs her permission to ask her hand from her father.

CHAPTER X.—"GIOVENTU, PRIMAVERA DELLA VITA!"

"MY own dearest Bella—for I have a right at last, have I not, to address you thus? I cannot tell you how happy your letter has made me. This very afternoon I shall go over to Liberty Hall to ask your father's consent to our marriage, which I feel sure he will not refuse when he hears you love me, and then we will have a long, long talk together. Believe me, dearest Bella, your own devoted lover, RONALD LUMLEY."

This is the note which is handed to Bella Champion the next morning at breakfast-time, and the perusal of which affects her so much that she is forced to quit the table and hasten to her room, to meditate alone on the awkward position in which her rashness has suddenly placed her.

So she is engaged to this Ronald Lumley! She can scarcely believe her senses. Engaged! She engaged! and to a man she does not care the least about; to a man whose suit she scorned two days ago—and all the time she is in love with another! No wonder, then, that she should be overcome, and that hysterical tears should force themselves from her eyes.

Suddenly she recollects that she has actually engaged herself to *face* men, and for the first time she realizes how foolishly and rashly she has acted.

But must she indeed abide by her decision, and marry one of these two men, who to her now seem the most hateful of all the men she knows? The thought turns her very blood cold. No; she will go to her father, who loves her so dearly, and who has her happiness so much at heart, and, confessing everything to him, beg of him to arrange all this for her.

Bella, like the spoilt child she is, rushes into her father's study, and, with flushed cheeks and tears in her eyes, relates to him with most bewildering rapidity the events of the previous day, and, ere he has half comprehended what she has said, places in his hands the letter she has just received from Ronald Lumley.

The general stares at it in mute astonishment; and, after reading it twice, says, turning round to his daughter, who, exhausted and overcome, has thrown herself into the nearest armchair:

"So you love this fellow—eh, Bella?"

"Love him! oh, no, no, no! I do not care a straw for him!" she cries, covering her face, which her excitement and confusion seem only to have rendered more beautiful.

Her father, who has not yet been able to understand the meaning of it all, looks at her in silence for a few seconds; then, noticing her prostration, he approaches her, and in a softer tone says:

"But you have written to him accepting his offer?"

"Yes," she stammers, raising her eyes and looking her tender-hearted father full in the face; "but I did not know what I was doing at the time. I was mad—I must have been mad."

"And you have engaged yourself to him without so much as asking my advice!"

"Oh, I know you wouldn't object," she replies, pertly; "but the worst of it all is that, forgetting that I had promised to marry Ronald Lumley, I have since then accepted another offer."

"The deuce, girl! you don't mean to say so?"

"Yes. Have I not been silly?"

"I guess you have; but I suppose now you want to break off with the first fellow in order to marry the second, and you want me to help you—now, come, isn't that it?"

"Oh, dear me, no! I hate the one as much as I do the other: I wouldn't marry either of them—oh, not if all the soldiers in this world forced me to do it!" she cries, giving way at last to her worst supposition—for she is a girl over whose mind soldiers have always exercised a great influence.

The general can scarcely refrain from smiling, yet he tries his very best to conceal it.

"And what is the name of the other fellow, Bella?" he asks, after another pause.

"Colonel Howard."

"Jack Howard! Why, you certainly must have taken leave of your senses altogether; he is old enough to be your father. Hang it, what am I saying? Why, he is older than I am!"

Further conversation ensues. Then the general says: "I'll tell you how we'll fix it—for you have placed yourself in a far more difficult position than you seem to realize—you must skedaddle at once; perhaps your mother will not mind taking you off to Paris, for instance, let us say for a few days; but it must be at once—to-day, if possible—so that when these men come to claim the hand you have been in such a devil of a hurry to bestow upon them, I may tell them that it has all been a mistake, and that you are in Paris with your mother."

"Oh, you darling! *that* will be jolly—quite too deliciously more than awfully jolly!" she exclaims, most characteristically, throwing her arms round his neck. "I'll go and get ready at once." That very night they cross the English Channel. Unfortunately for them all, Inganess's letter only reaches Liberty Hall after Mrs. and Miss Champion's departure, and thus a new impediment is thrown by the cruel fates in the course of their love.

* * * * * *

There is an instrument the manifold uses of which few of us, poor, ignorant, self-blinded children of earth, really know how to appreciate.

Sorrow is like a knife that pierces the heart, and which, though at times may kill, in most instances only penetrates it, though it be coolly and relentlessly, to operate some change, to work some good. But, alas, it takes years of many bitter trials to understand the manifold uses of this same keen knife, sorrow.

Louisa Reymond, at one time the spoiled child of fortune and the darling of society, cannot realize this, as she sits a helpless, lonely, blighted being, little more than a child in years, but far less than a woman in self-reliance, alone—vilely calumniated by the world, and deserted by her husband—in her little *appartement* in Paris.

Several months have now elapsed since those abominable paragraphs appeared in the *Tapage-rampy*, and set every one speaking against her; and the horrible comments to which it had given rise at the time—though the fickle world, which only cares for new scandals, may have ere this quite forgotten them—still trouble her husband's mind, and, thrusting themselves between them, continue to embitter her existence.

Having in the eyes of the whole world silently and submissively eaten his fill of the humblest of humble pies, Rupert Cassilis, being unable to find a reasonable pretext for taking offense at those who make open remarks upon his conduct, for the fact that he cannot digest it, brings the whole weight of his indignation to vent itself upon his wife, and though no angry words pass his lips, his manner to her of late has undergone a terrible change.

She is beginning to feel more and more uneasy about him. Can he be unfaithful to her? She fears she can scarcely be mistaken: her heart tells her it is possible; and so she decides on devoting all her energy to try and discover the truth, without betraying her motives for seeking it.

The opportunity presents itself only too soon.

Her husband's frequent visits to the green-room of the Folies Amoureuses are already beginning to awaken general suspicion, and it is not long before the well-known name of Madame de Fleurville is coupled with his. She can doubt no longer. She has always suspected him of having loved this woman before their marriage; indeed, has he not himself spoken of her, over and over again, even in her presence, in the most glowing terms? Yes; it is now evident to her that Rupert does love Madame de Fleurville, and that, tired of his wife and disappointed in her, he seeks to forget his troubles in the arms of that actress. Jealousy—and jealousy in its very worst form—is now mingled with the already bitter cup of her sad lot; and in the very lowest depths of despair, Louisa passes her days, alone and forgotten by all, in her little apartment in Paris—those days which, she cannot help thinking, should by right have been the happiest in her life.

CHAPTER XI.—ON REVIENT TOUJOURS.

AND where is the gay and brilliant Rupert all this time?

Ah, me! dear readers, if you indeed want to see him again, I fear I shall have to conduct you once more to that elegant apartment where the beautiful and fascinating Madame de Fleurville holds her little court, and into the mysteries of which I initiated you in the first chapter of this book.

Doubtless the young Englishman has been there a long time, for Zoé, generally so bright and sparkling, looks weary; and conversation does not flow with all the ease and fluency which he would probably have desired.

Does he indeed love this woman so dearly that no thoughts of his poor, neglected wife come to embitter his long interview with her? No; I do not wish to say that—the image of Louisa is always in his mind, though to all appearance he seems to trouble himself so little about her; and it is precisely because she occupies so much of his thoughts that he endeavors so hard to forget her.

Zoé de Fleurville used to be one of his most ardent admirations. Her beauty and her wit have often retained him spellbound at her feet during the happy days of old, when as a *gommeux* he searched the saloons of the Quartier Bréda for amusement and excitement. But it is time to allow my characters to speak a little for themselves.

"*Enfant, grand enfant,*" the beautiful woman says, as Rupert's hand, sliding over her silken robes, touches her arm, and, sending a thrill through her frame, awakes her from the half-sleepy reverie in which she was plunged when he first approached her.

"No, Zoé!—no, I am not a child, as you playfully put it," he says, passionately. "Can't you understand that I love you? Ah, heart of marble!—drops of rain may pierce a stone, but not even my tears seem to have any effect upon you!"

"Your tears! Bah! my friend; forgive me if I say that I do not believe in those tears of yours."

"You love me no longer, Zoé—I can see it!"

The actress bursts out into another merry peal of laughter.

"*Mon cher ami,*" she says, presently, "how can one cease to do a thing one has never begun to do? You are perfectly absurd this evening."

"You are right," he now says, resuming his seat beside her; "you have never loved me, you have always refused my offers—for, believe me, once, had you willed it, I would have made you my wife."

"So you loved me so well that you would have me—me, an actress?" she says, but no longer in her off-hand, laughing way.

"Yes—yes—beautiful Zoé; but you would never listen to me, and now, alas, it is too late. The fact that you are an actress would not have deterred me; for, after all, even though you are a public character, and your name is in every one's mouth, who ever dared to whisper a word against your honor?"

"Hush! remember that you are a married man. It is easy to say these things now that I can no longer force you to marry me. But I will believe you—yes, I will believe that you were really in earnest, and that, had I willed it, I might now have been your wife; but as I have not that honor, and as you are no longer free to confer it upon me, don't you think that it would be better for you to keep to the woman you have chosen to be your

Digitized by Google

companion through life, and to forget Zoé de Fleurville, who can never be anything more to you than a mere acquaintance?"

"I wish you would not talk of such things; can't you leave my private affairs alone?"

"No; not as long as you force yourself into my intimacy. I saw your wife the other day at the Opera—La Mazerolle pointed her out to me—and I have taken quite a fancy to her."

"Indeed!"

"Yes; and when I saw her pretty, innocent face, and noticed her large, honest eyes, in which I could even from that distance easily detect the traces of recent tears, the thought struck me that *I* might be the cause of them, and that it was for *me* that her husband deserted her. I promised to myself that I would not rest until I had made you sensible of your wrongs to her, and induced you to return all the love which by right belongs to her alone, and which you—heartless, selfish wretch of a man that you are—would fain force upon me."

"*Allons donc!* I didn't come here to listen to a sermon, nor to hear *you* enlarge upon the joys of connubial life. *Dame, ma chérie*, you are a good one to speak of virtue! How La Mazerolle—whose name you have just mentioned, though I have so often requested you never to pronounce it in my presence—would laugh if he heard you!"

"La Mazerolle is my friend, and nothing more; and even his friendship is more habit than aught else. Many years ago, when I first arrived in Paris, and I was about to make my first appearance on the stage, he proved himself a very true and useful friend, and I then loved him for the same reason that he now loves me—because he was necessary to me; now I am necessary to him. The poor old fellow has got so used to my society, that were I to refuse him the *entrée* to my saloon I really do not know where he would pass his evenings; and I cannot forget that, had it not been for him, most likely I should never have obtained an engagement, and might now be in a workhouse."

"Will you swear to me that the count has never been to you more than a friend?"

"Yes; at least, since my husband's death."

"Your husband! This is the first time that I have heard you speak of a husband. You do not mean to tell me that there has really existed a M. de Fleurville? I always believed that respectable gentleman to have been a myth."

"You are right; Fleurville is merely a *nom de théâtre*; yet I have been married for all that."

As she says this her handsome face becomes clouded, and her eyes seem to lose all their brilliancy; and, as if utterly unconscious of the present, she seems to be once more living in some ideal world of the past.

"Do you really mean that you will have nothing more to do with me—that you want me to return to my wife?"

"How can I say it more plainly? Yes, Rupert, return to her who loves you, and who will receive you with open arms, and give up this godless life, which can bring you nothing but sorrow; and then, only then, I may be inclined to think better of you. And now, adieu, for it is late. Adieu."

And as she says this her voice becomes inaudible, and a cough, which seems to tear her very frame asunder, prevents her from finishing the sentence.

This hollow cough comes as a revelation to him. He knows her secret now, and vague visions of the Traviata's melancholy death-struggle cross his mind. He knows that, beautiful as she is, and looking the very picture of youth and strength, her days are numbered; and though at this moment he would gladly have given every drop of his own blood to spare hers, that is fast rising to her throat and choking her, he has not the courage to disobey her; and, casting one long, lingering glance at her as she lies, white and motionless as a marble statue, upon that sofa on which, but a moment before, she reclined all life and sunshine, he leaves the room, and, calling her maid to attend her, quits the house of the famous actress, wondering if he will ever see her again.

* * * * * *

The sun is only just beginning to cast its golden reflections upon the streets of Paris, and gilding the waters of the Seine, while they glide peacefully past its already busy quays, as Mrs. Champion and her pretty daughter alight from the train which has just brought them from Boulogne, and drive off to their hotel.

The hotel Mrs. Champion has chosen for her abode during her short *séjour* in the gay capital is the Mirabeau, the same one in which, if our readers remember, our poor young friend, Lord Rollingford, came to spend his sad honeymoon, and where he finally died; and, by a strange coincidence, the woman he so admired and esteemed—the divine Dorothea, as he used to call her—is to-day shown into the very apartment in which his last moments were passed, and installed in the very rooms in which those harassing scenes narrated in the second book of this novel took place, now so many years ago.

Mrs. Champion, in spite of her strange manner, is not a woman to forget the past; indeed the image of poor dying Frank Reymond and all that passed at the time has often and often presented itself to her mind in all its harrowing pathos, which so strongly appeals to her highly sensitive nature. But this day, the sight of these rooms, which seem to have been altered so little since she saw them last, and which speak to her so eloquently of the past, and the sight of the bed with its well-remembered dark-green hangings, on which he who had exercised such a strange influence over the earlier part of her life had expired, almost under her very eyes, send a thrill of mingled pain and joy through her, and reawaken in her all the souvenirs connected with Frank Reymond's short but eventful career.

At last, during the course of the afternoon, unable to control herself any longer, she decides on going in search of Louisa Cassilis, whom she has not seen since her marriage, and whom she had determined in her mind to avoid if possible for the future; and, leaving her daughter in charge of some friends who have offered to drive her to the Bois in their carriage, she hurries to the Avenue de l'Impératrice, and before long is embracing the daughter of the unfortunate friend of her youth.

Their conversation at first is chiefly about Lady Rollingford, of whom Louisa has received no news for nearly three months, and of all their other London friends; but gradually it becomes more personal, until the poor girl, unable to control herself any longer, and aroused by the sight of this true friend, whom she has ever looked upon as a second mother, falls on her neck in a fit of hysterical weeping, and for the first time in her life pours out her whole soul into her pitying ears, and informs her of her terrible distress.

Hand-in-hand they sit for a long time—these two women whom sorrow has united at last—their tears flowing in silence, until Mrs. Champion, regaining all her old strength of will, which has ever come to her aid, even in the most trying circumstances of her eventful life, exclaims, embracing her unfortunate young friend:

"Your grief is natural—it cannot but awaken all my sympathies. The world has indeed behaved cruelly to you; and even Lady Rollingford, the woman who of all others should have been the first to come to your assistance, has deserted you in your distress. But yet you must surely experience a great consolation in the thought that you have married the man you loved, and that, come what may, he will ever be yours."

"Ah, Mrs. Champion," cries the unfortunate girl, burying her tearful face in her hands, "would that your words were true! Ah, yes! would to the Blessed Virgin that they were true! for had I Rupert's love I should feel myself strong enough to brave the whole world, and I might forget my shame. But, no; my husband loves me no longer."

"Your husband does not love you?"

When a little calmed by Mrs. Champion's kind sympathy, Louisa informs her of what we already know—of Rupert's strange conduct towards her, of his long and frequent absences from home, and finally of his strong *penchant* for Zoé de Fleurville, the famous actress of the Folies Amoureuses.

Mrs. Champion can scarcely believe it all.

"Listen, dear Mrs. Champion, to what I have been deliberating within my mind for the last four days whether to do or not. Tired of being alone in these desolate rooms, and anxious to forget Rupert's indifference to me, I went the other night with my maid—for, alas, I could not get no one else to accompany me—to the Théâtre du Gymnase. There I saw Victorien Sardou's new piece, 'Andrea'; I dare say you have heard of it. Strange to say, the plot of this piece greatly resembles my own history; like me, the heroine marries the man she loves, and like me she is soon abandoned and deceived by her husband. Well, do you know what she does? One day she learns that her husband loves a certain ballet-dancer, and that he is about to run away with her; and to this woman she goes, disguised as a dressmaker, and ready to brave anything in order to regain her husband's love, to save him from her grasp, to rescue him from her vile arts. *Stella*, the actress in question, turns out to be a true-hearted woman, and willingly lends her aid, though she is what men would call a Princess of Tulle; and at last poor *Andrea* succeeds in winning back her husband, and her courage and constancy are rewarded by the return of his love."

Exhausted by the rapidity with which she has uttered these words, Louisa, flushed with excitement, pauses for a moment; then, taking Mrs. Champion's hand in hers, she continues:

"What Sardou's heroine dared to do, I am also ready to undertake to regain Rupert's love. I hear that this Madame de Fleurville is a very excellent woman; that she bears an unsullied reputation, and that she is reputed by all to be a very superior person. This may be true, or it may not; yet I am convinced that were I to throw myself at her feet and entreat her to shut her doors to Rupert, to forbid him ever to speak to her again, that her heart would be moved, that she would have pity upon me, and that she would do what I ask of her."

A sad smile crosses Mrs. Champion's handsome, thoughtful face.

"My dear Louisa," she says, tenderly, "you do not know what these women are. Princesses of Tulle have neither hearts nor sex. Let me entreat you to give up your wild idea. Actresses, like the *Stella* of Sardou's play, are only to be found in comedies."

Later on in the afternoon Louisa induces Mrs. Champion to go out with her for a turn in the Bois: the poor girl has been so long forced to take her daily promenades alone, that the idea of parting again so soon from her old friend made her even more miserable than usual.

As they are walking up the stately avenue, towards the gates of the Bois de Boulogne, a couple of high-stepping thoroughbreds attract their attention, and they both turn round with an involuntary expression of admiration. The one nearer to them is ridden by a man; and the other, a spirited chestnut mare, doubtless of great value, bears upon her proud back a lady, attired in a tightly-fitting but very plain and simple riding-dress. A simultaneous cry is uttered by the two ladies as they recognize in this couple Rupert Cassilis and his famous *écuyère anale*.

"Great God! and he dares to appear in public with her?" the poor young woman exclaims, clinging to her friend's arm for support.

"Is that Madame de Fleurville?" Mrs. Champion says, her eyes still fixed upon the riders, who have now passed them, and are entering the gates of the Bois.

"Yes; and you will persuade me to do nothing to save him from her?"

"But are you quite sure that this woman is Madame de Fleurville?"

"Yes; quite sure. But tell me," she adds, giving way to an impulse of female vanity, "do you see any resemblance between her and me? Would you believe it, Rupert has often told me that we are very much alike!"

Mrs. Champion now looks at Louisa for a second or two in silence, and then, a ray of hope appearing in her expressive, gray eyes, she says:

"My dear Louisa, if you still think of going to see this woman, let me accompany you to her house; perhaps, after all, you are right, and your bravery and constancy may win you back your husband's love. I will go with you to-morrow to Madame de Fleurville's house."

(*To be continued.*)

SCIENTIFIC INTELLIGENCE.

Petermann's Journal.—Herr Justus Perthes, of Gotha, announces that the *Geographische Mittheilungen* will be published as before, with Dr. E. Behm as editor, and Dr. Lindemann, the Secretary of the Bremen Geographical Society, as assistant editor. The cartographical department has been intrusted to R. Hassenstein, one of Petermann's most successful pupils.

Field Telegraphy.—The success of the essays of field telegraphy made in the French regiments of cavalry has induced the Minister of War to order the experiments to be generalized, and military telegraphy will in future be a branch of the instruction given at the School of Saumur. A competition will in consequence be opened in the regiments of cavalry on the 6th of January, and the forty candidates found most qualified will be sent to that establishment to follow the studies in telegraphy.

The Geography of Sumatra.—The Journal of the Geographical Society of Amsterdam publishes a full account of the lowlands and hills of Padang, illustrated with a detailed map of a portion of Central Sumatra. A photolithographic *facsimile* of Barent's original map, published in 1598, appears in the same journal, and will, no doubt, prove welcome to students of Arctic geography. The sixth report on the Sumatra expedition contains a map of the Jambi River, from a survey made in July, 1878.

The Manufacture of Anhydrous Sulphuric Acid.—According to W. Wolters, anhydrous sulphuric acid can be manufactured in the following way: Anhydrous bisulphate of soda is carefully fused, and then an equivalent proportion of anhydrous sulphate of magnesia added, the whole further heated when anhydrous sulphuric acid goes over. The residual double sulphate of soda and magnesium can be regenerated and the salts be used again. The heat required is so small that the apparatus is not likely to be injured.

A Gas Clock.—A clock has been constructed for the London Museum which has for a motor hydrogen gas, produced by the action of dilute sulphuric acid upon a globe of zinc. The clock has the form of a cylinder, is made of colored glass, and is without cover. On the surface of the liquid contained in the cylinder is a glass bell, which is raised or lowered according as the gas is produced; the bell jar on rising moves a lever which in turn causes the hands to revolve on the disk. The invention attracts much attention.

The Milk-tree of Venezuela.—Near the close of the Paris Exhibition there was a special display of the products of the dairy from all parts of the world, and not the least interesting were specimens of milk, cheese, wax and butter made from the sap of the milk-tree of Venezuela. This tree, so curious and useful, is called by the inhabitants *cow-tree*, because it yields a liquid which, in color, taste, odor and nourishing properties, closely resembles the milk of the cow. It has been planted in Algiers, where the climate and soil are believed to be well adapted to its growth.

An American Geologist in China.—A letter from Peking states that the Viceroy Li Hungchang has entered into a contract with Mr. Arnold Hague, of New York, an able geologist and mining engineer, for the purpose of prospecting the gold, silver and other mines in the north of China. Mr. Hague is expected to start shortly from Tientsin for the mining regions. A late Consular report from Canton also states that General Fang has been instructed to arrange for an immediate supply of European machinery to be used in local mines. It appears to be thought that there is great likelihood of the early working of coal and other mines in the provinces of Chihli, Kiangsi, Kiangsu and Szechuen.

A New Measure of the Force of Light.—In their search for a practical actinometer, Bunsen and Roscoe made use of a mixture of chlorine and hydrogen, two gases which have a great affinity for each other under the influence of light. M. Marchand proposes a different system which furnishes him with more accurate results. He uses a mixture of sesqui-chloride of iron and oxalic acid. When that mixture is acted on by the luminous rays, the ferric salt is reduced to chloride of iron, the oxalic acid becomes oxidized and is transferred into carbonic acid. This latter is collected by syrupy glycerine, with which it combines and is insoluble, and its volume can then be measured with accuracy, and shows the amount of reaction caused by the light.

Artificial Meteoric Iron.—M. Stanislas Meunier has succeeded in producing at will a metal precisely similar to that which is found to be the composition of meteorites which fall upon the earth. He reduces at red heat a mixture of the chlorides of iron and nickel by a current of hydrogen, the result being alloys perfectly definite and sometimes admirably crystallized. These alloys can be regulated in such a manner as to exactly resemble the nature of what have received the name of *concretal aerolites*, the type of which is the iron of Pallas, Atacama, etc., that is to say, a combination of the nickeliron with fragments of stone. As meteoric iron is extremely hard and does not rust when exposed to moisture, it would seem to be desirable to be able to make a substance artificially which possesses so many useful properties. The researches of M. Meunier, although purely theoretical, are valuable as pointing out a way in which practical results may eventually be obtained.

A Siluroid Fish, which inhabits the neighborhood of Rio de Janeiro, is noted for its power of living a long time out of water. On examination the professor found that it swallows small portions of air, from which it partly absorbs the oxygen by the aid of the wall of the intestinal canal, the carbonic acid formed and the unabsorbed nitrogen being exhaled. A somewhat analogous habit was observed in several other fishes inhabiting the valley of the Amazon. These fish live in stagnant waters, the temperature of which often exceeds 104° Fahrenheit, but they do not appear to be able to obtain sufficient oxygen from that source, and they are obliged frequently to come to the surface for air. Sometimes, also, the water in which they have been living dries up, when they are seen making considerable journeys by land in search of more favorable localities, crawling on the ground by means of their pectoral fins. These observations are particularly interesting as establishing a gradation between the true fishes and the batrachians (frog tribe) which possess at the same time branchiæ and true lungs.

An Extensive Manufactory of Perfumery in Paris.—The house of M. T. Piver has been established one hundred and four years, and is now one of the most extensive in France. There are four factories, one at Aubervilliers, for the manufacture of soap and the distillation of aromatic spirits; one at Grasse, for the fabrication of pomades, perfumed oils, and the distillation of flowers and plants; finally, two at Paris, Faubourg St. Martin, where is the general laboratory, and Boulevard de Strasbourg, where toilet soaps are made; in the latter establishment alone, 260 workmen are constantly engaged, and the sales amount to $260,000 per annum. Connected with the works is a school for the children of the workmen, where twenty-eight apprentices are clothed, lodged, nourished and instructed during the whole time of their induction to service. The employés intermarry, and some of them have been in the service of the house for forty years. On the occasion of the 100th anniversary of the foundation of the house, there were great rejoicings, and the workmen presented to the firm a handsome gold medal, which they prize more highly than any testimonial they have received at the Exhibition.

PERSONAL GOSSIP.

MR. HERBERT SPENCER is wintering in Southern France.

PRINCESS ALICE was buried wrapped in an English flag.

MISS CLARA MORRIS is seeking health in Southern California.

SCHUYLER COLFAX is lying very ill at his home in Great Bend, of erysipelas, and his condition is said to be critical.

THE Right Rev. Thomas Foley, D.D., Catholic Bishop of Chicago, died at his episcopal residence, February 19th, aged 54 years.

A ROME dispatch says the resignation of Archbishop Purcell is accepted, and the Pope is considering the appointment of his successor.

MR. JOHN B. GOUGH has been laid up in England with a serious attack of bronchitis, which has compelled him to give over lecturing.

DUCHESSE DE GALLIERA has, it is said, bought M. Monteverde's fine statue of Jenner, and has presented it to the new hospital at Genoa.

DR. S. AUSTIN ALLIBONE will remove from Philadelphia to this city about the 1st of April, to take charge of the Lenox Library, of which he is the new custodian.

MR. SIDNEY BARTLETT, the Nestor of the Boston Bar, although in his eightieth year, has recently argued important causes before the Supreme Court of the United States in Washington.

PROFESSOR C. H. F. PETERS, Director of the Litchfield Observatory of Hamilton College, has been elected an associate member of the Royal Astronomical Society of Great Britain.

LORD HOUGHTON, who is coming over to America again next Summer, will bring a large party of distinguished Englishmen and their families along with him to visit "the States."

HON. HORACE MAYNARD, United States Minister to Turkey, arrived at this port February 18th, on a three months' leave of absence. His visit is occasioned chiefly by the state of his wife's health.

JOSEPH ARCH, the English agitator, is disgusted with the corruption which prevails among the officers of the Agricultural Laborers' Union. He says that it costs $35,000 to collect $50,000.

PRINCE LOUIS NAPOLEON has again drawn a number making him liable to service in the French army, but as he is the only son of his mother, and she is a widow, he is not obliged to enter the ranks.

MASTER ALFRED STANLEY BROWNING TENNYSON, grandson of the poets Tennyson and Lockyer, and godson of Dean Stanley and Robert Browning, has just been christened in Henry VII.'s Chapel, Westminster Abbey.

IN the House of Commons, Sir Stafford Northcote has declared he was not aware of any intention to establish a royal residence in Ireland, or to appoint the Duke of Connaught (Prince Arthur) Viceroy of that country.

SIR WILLIAM HARCOURT, now the husband of the eldest daughter of Mr. Motley, takes his son by his first wife, Louis Harcourt, an Etonian lad of fifteen, with him whenever he delivers a political speech, to put the youth in training.

CARDINAL MANNING, Archbishop of Westminster, has arrived in Rome. He has had a long and cordial interview with the Pope, who congratulated the Cardinal on the progress of Catholicism in Great Britain and discussed with him measures for its extension.

MRS. MARY A. HOLDEN, of Providence, R. I., has left $5,000 to the Hampton (Va.) Normal Institute, $1,000 to the Colored Orphan Shelter at Providence, $500 to the International Congress for the Prevention of Crime, and a portrait of Washington to the Brown University.

THE marriage of the Duke of Connaught and the Princess Louise Margaret of Prussia will take place at Windsor Castle on the 13th of March. About three weeks prior to the event the Queen and the court will take up their residence at the Castle, and preparations will be made for the ceremony.

R. H. CHILTON, Adjutant-General of General Robert E. Lee, fell dead of apoplexy while sitting alone at his desk in Columbus, Ga., February 18th. He was over sixty years of age. He was appointed to West Point from Virginia, graduated and was promoted to the rank of major in the Mexican War, and was paymaster in Texas prior to 1860.

MR. RUSKIN has been induced to withdraw his resignation of the Slade Chair of Fine Art at Oxford. It was said in Oxford that he had sent it in with the remark that if a jury of his countrymen had pronounced him unfit to be a critic, he could not consider himself fit to be a professor of the fine arts, which appears to show that he took that farthing verdict somewhat to heart.

ALANSON HASKELL, of Hanover, N. H., aged eighty years, was stricken with a paralytic shock soon after his return from church on February 16th, and his recovery is doubtful, as he is continually failing. He has been pastor of Dartmouth College for forty years, and will be remembered by graduates of half a century ago. He was industrious, upright and universally respected.

THE new singer, Bianca Bianchi, who has been styled "the Baden Nightingale," has made an immense success in Vienna. She is described as rivaling Sontag-Rossi in her best days, while many prefer her to Di Murska. As Amina in "Sonnambula" she had seven recalls in the closing aria. But her greatest triumph was in "La Figlia," for which the stalls went up to fabulous prices, while the applause amounted to a frenzy.

PROFESSOR MILTON W. HUMPHREYS, Professor of Greek at Vanderbilt University, has had tendered and has accepted the position of editor-general of North America of the *Revue des Revues*, a review of philology, of literature and of ancient history. His duty will be to review each year the reviews of the preceding year. This work he is to commence and conclude by May for the reviews of 1878. The United States have been only slightly represented in this review, and the editor seeks in the services of this ripe scholar, whose reputation is already widely extended, a representative worthy of the country.

PRESIDENT GRÉVY dresses very modestly, never having worn even the uniform of the National Guard. He is a man of republican simplicity in all his ways. In his everyday attire, even in Paris, he has always donned a wide-awake instead of a silk hat, and in Summer-time he may generally be seen sauntering about the Boulevards, clad all in gray, and crowned with a Panama. Though a man of considerable landed property, as estates go in France, he never set up a brougham till he became President of the Chamber, and he has always kept his modest one-horse vehicle, with a coachman out of livery, at Versailles. In Paris he uses cabs and omnibuses; but it must be a very muddy day which compels him to ride at all.

NEW YORK CITY.—FROEBEL'S POPULAR SYSTEM OF TUITION FOR CHILDREN—THE GRAND MARCH OF BOYS AND GIRLS IN THE FREE KINDERGARTEN ESTABLISHED BY THE SOCIETY FOR ETHICAL CULTURE.

Digitized by Google

IN A GARDEN OF CHILDREN.

IN a large, bright room, fronting on Forty-third Street, near the Eighth Avenue, the Society for Ethical Culture has established and conducts—with what success a visitor can readily see, even in one short call—a free Kindergarten for the children of the poor. Over a hundred little ones, all under six years old, and some mere babies, assemble here daily, and were the space so large as to warrant a more extended welcome it is certain that twice that number could be brought to fill it. It was on a wet, stormy day that we paid our visit; but though the rain might have kept many older scholars at home, it seemed to make no difference in the number of noisy little *protégés*, and the hundred and odd children let loose in the great uncarpeted room were making noise and fun enough for a thousand.

It is easy to see what an atmosphere of love and confidence their

EXERCISE ILLUSTRATING THE FLOW OF WATER.

teachers have brought around these little ones, to whom every stranger in the schoolroom seems to be at once a friend. A small crowd was around us in a moment as we came in—little heads of every color, little faces of every pattern, but all clean and all laughing, and as many little arms reached up, with a shrill chorus of "S'ake hands! s'ake hands!" and even one or two urgent proffers of kisses, not a little discomposing to the young gentleman of the party, whose knees were fettered with a pair of affectionate arms in little white muslin sleeves, before he had advanced further than the door.

There were children of every nationality—Swede and Irish, Spanish and French, white-headed Germans and tawny little Italians, Jew and Christian, all racing and running and romping together in happy confusion before the order of their daily exercises began.

The institution is wholly a charitable one, and is under the management of Felix Adler, Miss Fanny Schwedler acting as principal, assisted by eight teachers, whose services are purely voluntary. These young ladies aid in conducting the morning lessons and plays, and are relieved at noon by a fresh installment, who come to preside over the dinner, which is regularly served to all the little scholars, forming, one may suppose, a capital inducement for many of the hard-worked and perhaps hungry parents to send a superfluous little mouth or two to the Kindergarten.

The business of the day commences with a march, timed to the singing of the children, and the accompaniment of the piano. The little ones march in single file, following a line chalked on the floor, winding round and in and out, twisting and turning, while the teachers, marching and singing with them, keep the ranks steady and restrain the smallest and most exuberant stragglers. The ardent desire of every child born into the world to make as much noise as possible while in it is fully gratified here: for while each one shouts his or her part in the song with the utmost power of the lungs, every pair of hands is clapped in regular time, and every little right foot brought down with a stamp that threatens to go through plank and plaster below. Some of the more excitable—notably among the boys—perform ecstatic capers and leaps, and one infant in a white blouse executed such prodigies of gymnastics in his efforts to stamp harder than any of his neighbors, that it became necessary to lead him by the hand until the conclusion of the exercises.

Following this come the plays and the "occupations," which take the place of lessons. Down the length of the room are ranged broad, low tables, mapped out in blocks like great checker-boards, and at each one sit two rows of some half a dozen children. At one table are a dozen slates, where the youngest and the least skilled "classes" are busy marking and scrawling. Next to these, perhaps, a little group is busy with blocks, laying them in patterns on the squares of the table; then comes an object-lesson in color and motion, where each child, with a bright-colored ball on a string, is swinging it to and fro; here a table full of busy little workers bent over sections of a circle in curved wires, which they are piecing together, and there a whole class furnished with little pads and squares of paper, whereon they are picking out different patterns, following the pencil lines traced upon them. Later on comes the filling-in of these patterns with colored worsteds, and the weaving and plaiting together of bright-colored strips of paper.

The attention of the children is never allowed to concentrate too long upon any one of these occupations, though they soon become intensely absorbing; but by a constant diversion, and the rapid change from quiet to active employment, their minds and bodies are rested alike, and fretfulness and fatigue are unknown elements in this real child's paradise. There is no enforced quiet, even during the sedentary occupations, but a chatter and buzz of little voices, with a ripple of laughter or singing, goes on incessantly. The teachers, with quick eyes and active sympathies, are everywhere, and each child feels the influence of kindness and firmness, at once subduing and encouraging. Here and there a shy new-comer sits staring and half-frightened at the unwonted surroundings. But one need not be told it to understand how rapidly the shyness wears away, and how all the natural brightness and grace of childhood begin to blossom out in the sunshine of the Kindergarten, even when half crushed by darker influences outside.

And now come the plays, and a double circle is formed of all the children, and the piano strikes the opening notes of some simple, lively air, which the least one knows, and instantly joins in. There is the song of the "cooper" the "miller," the "sawyer," and half a dozen more, each illustrated by the action of the children as they sing; four, with hands interlocked in the middle, wheeling round and round for the "millwheel," or swinging their arms with hands clasped, to show how the stream flows, or playing at "little fishes," with hands paddling like fins, as they sing and march; or one child in the middle goes through a simple gymnastic exercise, which the rest imitate while they sing; and there is a pretty little game of "invitation," when the little one in the centre of the ring beckons out a companion to shake hands and courtesy to as they change places.

At noon there is a general scampering and uproar, while the tables are set with spoons, and knives and forks, and big slices of bread, and each child, girded with a rubber bib, is seated behind a tin basin of hot soup, liberally islanded with meat and potatoes. After the meal, which is marvelously orderly and well-conducted, under the quiet, gentle training of the ladies, there is another short session of romping and story-telling, before, with happy promptness and good humor, the children marshal themselves again in ranks for exercise prior to recommencing their occupations.

LEARNING HOW THE MILLWHEEL TURNS.

And now one may ask what end all this play and pastime are to serve? The children learn no A B C's or spelling, but their eyes are trained to observe and their minds to understand; they are taught gentleness, submission to discipline and ready obedience, perseverance and patience, and in character as well as brain, are thoroughly prepared for the system of study that comes after. And when, by the liberal encouragement that the plan deserves, the Society is enabled to enlarge its school, and provide for the wants of older children, we may see an establishment where education, beginning with the little Kindergarten class, will pass through natural and simple development up to the last stages of advancement in the course.

A LESSON IN COLOR AND MOTION.

A CLASS OF AMATEUR ARTISTS.

NEW YORK CITY.—SKETCHES IN THE FREE KINDERGARTEN OF THE SOCIETY FOR ETHICAL CULTURE.

THE RAVAGES OF THE PLAGUE.

IF we glance at the history of the frightful devastations that have marked the visits of the plague to the earth, mankind has reason to tremble before the dread spectre whose appearance the Russians evoked on their pleasure trip to Constantinople, and which now threatens all Europe. Plague epidemics are recorded of almost every century. In the first year of the Peloponnesian War the plague raged with terrible violence in Athens, and Greece's greatest statesman at that time, Pericles, was one of its victims.

But not until the fourteenth century did it become a scourge to the entire world, traveling as it did then, from the eastern boundaries of Asia through China, India and Russia, and punishing with equal severity the inhabitants of the Pyrenean peninsula and the hardened peoples of Scandinavia and Iceland. And if the western hemisphere had been discovered at that time, and active communication and traffic with it had existed, there can be no doubt that the grim destroyer would have visited America also. It is, indeed, by no means certain but that the plague did reach this continent, since there are Indian legends which speak of a time of great mortality long before the advent of Europeans.

It is estimated that not less than 52,000,000 persons fell victims to the black death in Asia and Europe toward the middle of the fourteenth century. Of these, 15,000,000 are supposed to have perished in Europe, 24,000,000 in Asia Minor, India and the adjacent countries, and 13,000,000 in China. One historian writes concerning the appearance of the plague in Europe: "Terrible omens in the heavens overwhelmed the nations with dread. In 1337, a large comet appeared: in following years came immense multitudes of locusts; but in 1348 the end of the world seemed at hand. An earthquake devastated Cyprus, Greece, Italy and the Alpine valleys. Mountains caved in. In the province of Carnthen, in Austria, thirty villages and a town were utterly destroyed. The atmosphere became thick, fetid and confusing. Wine became turbid in the barrels. Fiery meteors illuminated the sky. A pillar of flame was seen over the Papal palace at Avignon. These terrors were followed by a murderous plague. It originated in China, was carried through the

Digitized by Google

whole of Asia, and in Germany received the name of the "Black Death," because it covered its victims suddenly with black pustules, and often killed them instantaneously. It spread over the whole of Europe, and it is said that it did not rage most virulently in Germany. Nevertheless, 14,000 persons died in Basle, 16,000 in Strasburg and the same number in Erfurt, and they perished in all other places in similar proportions. In Osnabrück only seven families are said to have survived.

For twenty-five years the awful epidemic maintained its annihilating sway, while at the same time droughts, famines, floods and earthquakes destroyed city and country, and vast swarms of locusts everywhere inflicted the direst ravages. Meantime the whole order of nature seemed reversed. In midwinter the severest rains were experienced, and in Summer long-continued and severe frosts, and volcanoes that had been long thought extinct opened their craters anew. Some have attributed the origin of the epidemic to the atmospheric changes produced by the convulsions of the earth, combined with the decay of organic matter—the myriads of locusts and the unnumbered bodies of men and animals.

Some have also attributed that frightful epidemic to the then recorded approach of several planets to the sun. Inasmuch as four planets enter the perihelion in 1881, we have at least this similarity between the present time and that dreadful period; and this circumstance, combined with the sudden outbreak of the plague that is reported from Europe, may give rise to the fears that the coming planetary proximity to the sun is perhaps to have an evil import for poor humanity.

The Trade in French Parasols.

PARASOL-MAKING is a source of wealth to the French nation. The business embraces also umbrellas and walking-sticks, and realizes an annual sum of more than 6,000,000 of francs, the tenth part being derived from exports, principally to the United States. In this industry woman's work is predominant; thus the female staff numbers from 6,000 to 7,000, at a remuneration of two francs to three francs per day, while the male portion, numbering 4,500, receive from four to twelve francs. Provincial towns furnish the steel frames, and sticks of various woods from France, Africa, Guiana and India, as well as handles and knobs in horn, whalebone, ivory, tortoise-shell, china, glass and stones, real or artificial. The covering fabrics consist of cotton, alpaca, taffe, moire and satin, the best kinds being made up especially in Paris. A most elegant parasol exhibited at the Exposition was valued at $2,000, and had a covering of point à l'aiguille and a handle incrusted with gold, lapis lazuli and diamonds. The next in price was $575, and was made of yellow silk veiled with point d'Alençon; gold and coral ornamented the handle. Three others were valued at $400 each. One in flounced point à l'aiguille displayed a glittering decoration of jasper and gold; jade, gold and ruby were used in the embellishment of the second in delicate white silk and point d'Angleterre, while the third, of most lady-like simplicity, with a green covering lined and piped with white, derived all its costliness from three rings of diamonds and pearls encircling the ebony handle. A pretty parasol exhibited was of bronze silk, with a white lining and a cord edging, and a heap of diamonds and pearls sparkling on the handle. In fact, jewels, gold and lace seem to be the choice of nearly all manufacturers and, save a difference in color, very little variety is discernible. A white lace parasol had a plain ivory handle, finished with a coral knob and ring, both surrounded with brilliants. Another white one had a coral handle and the adornment diamond circles mounted in gold. Coral, gold and fringe impart a rich originality to some of the plainer sunshades, with quaint handles of Dresden and Gien china. These splendid exhibits were proofs of the height to which the trade has attained; but their fabulous price puts them beyond the reach of the general public. The same drawback attended one of the loveliest, but, alas! most ephemeral creations of the entire show—a covering of white marabout, with insects wings flashing from the downy bed, and shown with a bonnet to match. Italian open-work straw makes charming and uncommon sunshade coverings, mounted on white and black satin, many of which were seen at the Exposition.

Excavations in Assyria.

FAVORED by the authorities at Constantinople, Dr. Schliemann is again busily excavating at Troy, and Mr. Rassam has permission to dig anywhere in Mesopotamia. With such a comprehensive grant, districts will be opened that have not hitherto been searched, and we shall hear of fresh discoveries at Nineveh, of explorations in the long-hidden, ancient city of Assur, and of endeavors to find the famous royal "Record Office," or "Babylonian Bank," as some Assyriologists call it, in which were stored a large collection of mercantile tablets, representing the monetary transactions of a firm trading in the name of Egibi & Sons. It is curious to have bills for corn and fruits, and woven goods, and invoices and vouchers from the days of Nabupalasser and Artaxerxes in the form of baked clay, but they are to be seen at the British Museum. The Arabs and Jews from whom they were obtained have kept the secret so well that the place in which they were discovered is not yet known to Europeans.

Kutha, now a group of great mounds, was the sacred university city of Babylonia, and had an extensive library, which is frequently referred to in mythological tablets discovered in other parts of the kingdom. It was from that storehouse of learning that the tablets giving an account of the creation were originally taken; and it is hoped that discoveries of other documents not less interesting will there be made.

In the mound of Nebbi-Yunus, search will be made for the palace of Sennacherib, in the expectation that some records of the latter years of that monarch may be found, "and possibly some accounts, however meagre, of the second campaign against Hezekiah."

But besides all this, Mr. Rassam will make explorations in the country of that ancient people, often mentioned in Scripture, the Hittites. The existence of mounds along the bank of the Euphrates has long been known, and under a certain group known as the mounds of Jerabolus, it is supposed that Carchemish, the Hittite capital, lies hidden. Inscriptions in an unknown character were found in that neighborhood a few years ago, and it is hoped that some key thereto may be met with in the course of the excavations now to be undertaken, and furnish to scholars the link wanting to connect Assyria with Western Asia. As the firman granted to Mr. Rassam extends over a number of years, it is possible that the interesting enterprise will be carried to a successful issue.

NOTES OF THE DAY.

THE *furore* over the burlesque opera "H. M. S. Pinafore" is steadily increasing, and some two score companies are presenting it in various parts of the country. In New York City, where it first appeared, it is still handsomely patronized in the Standard and Fifth Avenue Theatres, while the San Francisco Minstrels have made the burlesque more ridiculous under the title of "Hie-Mud-Scow Pinafore," and Tony Pastor is giving still another version.

THE National Safety Paper is every day growing in favor among bankers and the public generally, affording, as it does, absolute protection against fraudulent alterations of checks. During the last five years it has been used for nearly 200,000,000 checks, drafts and bills of exchange. It has been subjected to the severest tests, with uniformly satisfactory results. It prevents changing of dates or names, and is far better than any combinations of words or figures, or stamps, or any other device. The manufacturers, Campbell, Hall & Co., of this city, are receiving orders from England, Sweden and other countries, and the more it is known the greater will be the demand for it among business men.

THE Almanac for 1879 issued by the *New York Evening Express*, a work of four hundred pages, is a remarkably complete and useful annual, one that a student, a politician, or a historian cannot do without. While devoting much space to the political history of the States, their votes and party platforms, it notes the progress of the principal countries of the globe, their commercial relations with the United States, their rulers and methods of government, and gives a comprehensive chronology of the past year.

FUN.

THE advance guard—A betrothal ring.

THE only thing which is constant—Change.

A DARK inheritance—An Ethiopian's complexion.

WHAT insect does the blacksmith manufacture? He makes the fire fly.

WHY not call a smart dog a clever man?—We call a smart man a clever dog, you know.

WE have known many a man to sit about waiting for something to turn up, until that something was his toes.

PARADOXICAL.—When can an actor speak while it is impossible for him to utter a word? When a gag is put into his mouth.

A PATENT-MEDICINE advertiser says that fat is not conducive to long life. That is true. A fat hog rarely lives through the Winter.

WHAT'S the difference between a sunbeam and a group of upturned feet? One's a solar ray and the other—well, the other's a sole-array, too.

"THE risin' ginerashun, is it, yo call 'em?" says Mrs. Moloney. "Begorra, the lazy young shpalpeens'll lay in bed till they wear through, so they will."

RESIDENT GENTLEMAN (to Town-Crier): "What a horrid sound that bell of yours has, Walter; you ought to have one with a better tone. *Waffle* (sarcastically): "Sir! It's *informative*! I give the people, *mae sucunk!*"

"NOW, JOHNNY," said a kind father, the other day, to his small son, "be a good boy for the next five months, and I will have that bad tooth of yours pulled out for a Christmas present." Johnny has since run away and joined the pirates.

DISCONTENTED PAUPER (on the Christmas dinner): "Well, this is the wust Chris'mas dinner as ever we 'ad since I've been in the 'ouse! I thinks as when we 'as a dinner-party the master ought to ax us whether we likes it. Well done and whether we takes fat, and not cut the vittles and shovel it on our plates anyhow!"

A GENTLEMAN, no longer young, goes to look at apartments in Paris. The *concierge* assures him earnestly that they won't suit him. Astonished, he asks, "Why not?" "Ah, monsieur, are not you more than sixty years old?" "But, yes." "Well, sir, the proprietor will never consent to let them to you. He hates funerals."

AT a recent swell dinner-party in town, an elderly cousin from beyond the Border was among the guests. On entering, his name was called out by Jeames No. 1, and then by Nos. 2 and 3, which seemed to exasperate the old gentleman, as he exclaimed, "Eh, mon, don't be in such a hurry! I am coming as fast as I can!"

AN aged deacon at Mamakating, N. Y., becoming wearied of the nocturnal visits of his neighbor's dog to his sheepfold, caught the animal, tied him to a tree and shot him. The owner of the dog asked the deacon why he had killed the animal, and the good man replied that he had mistaken it for a wild-cat, which indeed the dog resembled as closely as it did a rhinoceros. Then the owner said: "Why did you tie the supposititious wild-cat to a tree before shooting it?" and the deacon answered, meekly, "Because I was afraid of it."

Advertisements for any of Frank Leslie's Publications will be received, at regular rates, by Col. W. B. Crooks, 1309 Chestnut St., Philadelphia, Pa.

FASHIONABLE FOOLISHNESS.

THERE is no modern fashionable notion quite so absurd as the generally received idea that to be beautiful and attractive a woman must possess a wan, *spirituelle* face and a figure of sylph-like proportions—a fragility in nine cases out of ten the result of disease. By many fashionable belles it is considered a special compliment to be spoken of as frail and delicate. They forget that the naturally delicate face and *petite* figure are very different from the pale and disease-stricken faces that meet us in the city thoroughfares, look out from the luxuriant carriages of wealth, and glide languidly through our crowded drawing-rooms. If disease were unfashionable, as it ought to be, not a lady in the land but would take every possible precaution to secure the fresh, blooming face and well-rounded figure that only health can give. Ladies should remember that much as gentlemen may profess to admire the face and form paled and emaciated by disease, when they choose a wife they prefer a blooming, healthful, buoyant-spirited woman. Dr. Pierce's Favorite Prescription is the acknowledged standard remedy for female diseases and weaknesses. It has the two-fold advantage of curing the local disease and imparting a vigorous tone to the whole system. It is sold by druggists.

H. W. JOHNS' ASBESTOS LIQUID WHITE PAINT has been adopted for interior and exterior wood, iron, and stone work on the U. S. Capitol at Washington.

THURBER'S RELIABLE CANNED GOODS.

GREAT progress has been made within a few years in the art of Preserving Fruits, Vegetables, Fish and Meats in tins, and in consequence the consumption has largely increased. As yet, however, canned goods are not generally thought to be "fresh," and some brands are not, perhaps, entitled to be so considered. Those packed by us, however, are Hermetically Sealed at the sources of supply, when they are in the best possible condition, by a process which preserves the much-to-be-desired fresh, natural flavors; and they are really in better condition, fresher, more palatable and wholesome than many so-called "fresh" articles which are exposed for sale during considerable periods of time in city markets. All goods bearing our name are guaranteed to be of superior quality, and dealers are authorized to refund the purchase price in any case where consumers have cause for dissatisfaction. It is, therefore, to the interest of both dealers and consumers to use THURBER'S BRANDS.

H. K. & F. B. THURBER & CO.,
Manufacturers of and Dealers in Food Products, New York.

AMONG the old and favorite hotels none is worthy to be named with the ST. NICHOLAS, grateful and suggestive all over the land for splendid cheer and cordial, old-fashioned hospitality. The *cuisine* has always been celebrated, and retains all its pristine excellence, and the furnishing is the perfection of elegant good taste. The stranger cannot better serve his pocket and his ease than by making this his New York home.

THE IMPROVED HOLLY SAW, as offered to our readers by the TUCKER M'F'G CO., of Boston, is a rare and wonderful bargain. Made entirely of steel and iron, it rivals any $25 saw in beauty, construction and capability, doing light and heavy work with wonderful rapidity. Any boy can make excellent wages who owns one of these saws, amusing himself and learning a good trade at the same time. The holly is the only saw recommended by physicians for ladies' use, and for practical mechanics as well as boys and girls it is worth its weight in gold.

THE NORRIS SILVER MINING CO. of Kansas City, Mo. (whose advertisement appears in another column), is a *bona fide* enterprise managed by business men of that city. Only 250 unassessable shares of the par value of $100 each are now offered for sale at $5 per share, the proceeds of which will be expended in their mine. As the risk is small and the anticipated profits large, everybody can afford to buy a few shares.

Stuttering cured by BATES'S APPLIANCES. Send for description to SIMSON & Co., Box 2,256, New York.

Easy Shoes.—Superior quality for gentlemen at reduced prices. EUGENE FERRIS & Son, No. 81 Nassau Street, West Side.

Those desiring to procure a fine assortment of beautiful flowers will do well to address R. P. Critchell, before purchasing elsewhere. See advertisement in another column.

Itching Sores, Salt Rheum, Scurfy Eruptions of the Scalp, Kyelids, Arms, Hands, Body and Limbs, relieved at once and permanently cured by NORTON'S OINTMENT. Its first touch allays the agonizing and itching sensation. 50 cents, at the Drug-stores. Office, 499 Greenwich Street, N. Y.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—See article in the *Civil Service Gazette*.

Sold only in soldered tins, labeled

CONDENSED MILK
MILK-MAID BRAND.

Whence came this milk? The land of Tell,
The identical place where Gessler fell;
Great heroes are made from just such stuff,
When taken in time and oft enough.

ANGLO-SWISS
CONDENSED MILK COMPANY,
CHAM, Switzerland.
Established in 1866.

Working Capital 1.2 Millions of Francs.

Six factories in operation, employing 700 workmen, condensing the milk of 12,000 cows, and producing 18 millions of 1 lb cans per year; an amount equal to 900 car-loads, or to a loaded train five miles in length; and a sufficient number of cans, if placed side by side in a single line, to make a row of milk-cans over 1,000 miles long.

This Brand is sold by over 4,000 grocers in London alone, and is becoming favorably known in America.

Ask your Grocer for the

"Milk-Maid Brand."

WITH
FIVE DOLLARS
YOU CAN BUY A WHOLE
IMPERIAL AUSTRIAN
100 Florins Vienna City Government Bond,

Which bonds are issued and secured by the Government, and are redeemed in drawings

FOUR TIMES ANNUALLY

Until each and every bond is drawn, with a larger or smaller Premium. Every bond must draw a Prize, as there are no Blanks. The three highest Prizes amount to

200,000 FLORINS,
50,000 FLORINS,
30,000 FLORINS,

And bonds not drawing one of the above prizes must draw a premium of not less than 130 FLORINS.

The next drawing takes place on the

1st of APRIL, 1879,

And every bond bought of us on or before the 1st of April, is entitled to the whole premium that may be drawn thereon on that date.

Out of town orders sent in REGISTERED LETTERS and inclosing $5 will secure one of these bonds for the next drawing.

A BREECH-LOADING POCKET RIFLE FOR $3.00.—THE "EXPERT."

$3

Uses long or short Rifle cartridges, accurate and reliable.

For both Target and Sporting use; equal to any Rifle made, at short range. The "Expert" is the only reasonable-priced pocket Rifle in the market, all others costing from $10 to $35, and is as good as the best, being strongly and substantially made of the very best material, by skilled workmen. The barrel is steel, and the best of English steel at that, rifled on the most approved principles, and having the new movement sight on the muzzle—the best shaped sight out. The skeleton stock is STEEL, and the handle ROSEWOOD. The skeleton stock is instantly detachable, and it can be used with or without, as desired. It is a **breech-loader,** using regular metallic cartridges, 22 and 30 calibre. The manner of loading is extremely simple and secure. The **breech-block** moves to one side to insert the cartridge, and the barrel is always firm and stationary, a great improvement over the tip-up plan. The breech-block when in place forms a fine rear sight. The Expert has also a **safety-lock,** and any premature explosion is impossible. In design, make, and accuracy it is equal to any similar Rifle at any price. We give here cut of a Target showing the extreme accuracy of the 22 calibre at 100 feet. For squirrels, birds, and small game it is as good as any Rifle in existence, and for shooting galleries and home target use it is just what is wanted. In 22 calibre it is very inexpensive to use, and for practice alone it is worth double its price. It is far superior to any Air Rifle in every way, and in 30 calibre it is powerful enough for tolerable large game at medium range and breech-loading *Pocket Rifle* using metallic cartridges, *for* **$3,** is the **biggest bargain** ever offered in this country. The Expert is packed in a neat box with cleaning tools, etc., and sent by express to any address on receipt of price, $3; (either 22 or 30 calibre as ordered). **Two for $5.** When each express with order we will give a box of cartridges *free.* The Expert will be sent by registered mail to any address for 25 cents extra; cartridges cannot be sent by mail. **G. W. Turner & Sons, Mfrs, 93 Water Street, Boston, Mass., U. S. A.**

Frank Leslie's

CHIMNEY CORNER.

The Most Popular Illustrated Family Paper.

The SUCCESSFUL RIVAL of ALL THE WEEKLIES for THIRTEEN YEARS past.

The CHIMNEY CORNER presents a constant succession of brilliant attractions.

The Best Writers in the country contribute to its columns; and new serial stories of the most absorbing interest, of great power, true to life, and embracing a wide range of subjects, are constantly appearing.

The Continued Novels are by such eminent writers as John Habberton, author of "Helen's Babies"; N. Robinson, author of "That Husband of Mine"; Rita W. Pierce, Christian Reid, Mrs. Victoria Victor, M. T. Caldor, Frank Lee Benedict, J. W. De Forest, and others equally celebrated.

Short Stories are completed in each number; and the miscellaneous contents embrace Biographies, Adventures, Essays, Travels, Curiosities of Foreign Life, Marvels in Nature and Art, Legends, Anecdotes, Poetry, etc.

Beautiful Steel Engravings are frequently presented to the subscribers, far exceeding in value the price of a year's subscription.

Published every Monday, and for sale by all newsdealers, price 10 cents. Annual subscription, $4. Three months, $1. Sent postpaid.

Frank Leslie's Publishing House,
53, 55 & 57 Park Place, New York.

FLORILINE!

"FLORILINE"—FOR THE TEETH AND BREATH,

Is the best liquid dentifrice in the world. It thoroughly cleanses partially decayed teeth from all parasites or living "animalcule," leaving them pearly white, and imparting a delightful fragrance to the breath.

THE FRAGRANT "FLORILINE"

removes instantly all odors arising from a foul stomach or tobacco-smoke. Being partly composed of honey, soda, and extracts of sweet herbs and plants, it is perfectly harmless and delicious as sherry.

Prepared by **HENRY C. GALLUP, No. 493 Oxford Street, London, England,** and retailed everywhere.

40 MILES OF SILVER

From Salt Lake City and one mile from the Railroad, is located the noted **"ARGENT" Silver Bearing Lode,** the ore from which assays **from $3 to $5 in GOLD,** about fifty per cent. **Lead,** and **$30 to $135** per ton. *Directors are all solid business men.* Stock is unassessable. Send for prospectus.

NORRIS SILVER MINING CO., Kansas City, Mo.

New York Central and Hudson River R.R.

THE BEST ROUTE EAST OR WEST.

Through cars between New York or Boston and Chicago and St. Louis.

See Niagara Falls, Saratoga and the Hudson River.

C. B. MEEKER, Gen'l Passenger Agent.

ANTI-FAT

ALLAN'S ANTI-FAT is the great remedy for Corpulence. It is purely vegetable and perfectly harmless. It acts upon the food in the stomach, preventing its being converted into fat. Taken in accordance with directions, **it will reduce a fat person from two to five pounds per week.**

"Corpulence is not only a disease itself, but the harbinger of others." So wrote Hippocrates two thousand years ago, and what was true then is none the less so to-day. Sold by druggists, or sent, by express, for $1.50. Quarter-dozen $6.00. Address,

BOTANIC MEDICINE CO., Prop'rs, Buffalo, N.Y.

THE IMPROVED

HOLLY SAW

SHIPMAN'S PATENT.

The only perfect Scroll and Inlaying Saw in the world. *It will actually pay for itself in two days, and less. This last statement we can prove by over 1000 testimonials.*

TILTING TABLE.

Is the finest Jig, Fret, Scroll, and Inlaying Saw in the World for less than $25.

The frame is all **first quality** iron; bearings all **steel,** with **bright galvanized iron brasses,** and *extra heavy driving and fly wheels,* with EXTRA POWER at the crank, giving unequaled running. The whole Saw is handsomely painted a rich brown, decorated by hand, with holly leaves and beautiful scroll designs in **vermilion, green, and gold.** The Improved Holly Saw as we offer it, is the finest foot-power Saw in the world for less than $25. Its peculiar design and construction enables it to be put together as *firmly* as though it was cast in one piece. It will saw through inch and a half stuff with great rapidity, and swings 18 inches in the clear. **It sets as firm as a rock** when in motion, and for extra strength it can be instantly fastened to the floor.

THE IMPROVED TILTING TABLE

is a *marvel of ingenuity and simplicity.* It can be INSTANTLY adjusted to ANY angle for **inlaying or mosaic** work, and is maintained at any angle as firmly as though in a vice. We have the best arrangement in this respect in the world, **regardless of price.** The drilling attachment which goes with every machine, is powerful in the extreme. Runs true as a die, and will drill wood or iron. Our Improved Holly Saw is really the greatest mechanical invention in Bracket Saws ever produced. It runs as light again as a sewing machine, and is the ONLY Saw suitable for ladies, or that physicians recommend. In short, for beauty, durability, speed, power, workmanship, and design, the improved Holly *supersedes*; and while there are other good, low-priced Saws in the market, the Holly is beyond any comparison with them whatever; and the testimonials received from customers every day prove it the most practical and popular machine in the world. We have placed the price within the reach of every boy in America, and it is simply in order to do this that we make the price so low; and it is a fact, as we state elsewhere, a single Saw could not be made for $25; and that our Improved Holly Saw is **as good as any $25 Saw** in the world. Our price is **$3.00 apiece,** which includes boring by us; **it also includes extra saw blades and drill point,** a complete and exhaustive instruction book on the art of fret sawing and carving, prices and designs of tools of all kinds, etc., etc.; prices and descriptions of fancy woods, &c., and over 150 small designs of the choicest patterns in the world; brackets, card cases, clocks, &c., &c., &c.; and with each of our books goes a reduced design of the MOST ELEGANT PIECE OF SCROLL SAWING EVER ATTEMPTED—a perfect silhouette mosaic of the **Lord's Prayer,** Where cash accompanies the order, we send free one price design, the **Italian Clock,** the dial of which is inlaid in two beautiful woods with birds, flowers, &c. &c.

After a little practice this clock-case could be made in one day, and would sell for more than *the price of the Saw.* Remember, we send the IMPROVED Holly Saw, with drill point, extra saws, instruction book, wrench, designs, &c., &c., **all for $3.** Address all orders to **The Turner Manufacturing Co.,** SOLE AGENTS FOR THE ABOVE COMBINATION, **93 Water St., Boston, Mass., U. S. A.** The Saws are taken apart and packed in a small case, and sent by express or freight on receipt of price.

The above TESTIMONIALS are from actual letters rec'd.

Any energetic boy or girl can do the same and build up a good scroll sawing business; scroll sawing might be termed a new art, and but few, comparatively, have any of this beautiful work, and all are anxious to obtain it to decorate their homes, and the articles made *sell at sight.* Weight of Saw when packed about 30 lbs.

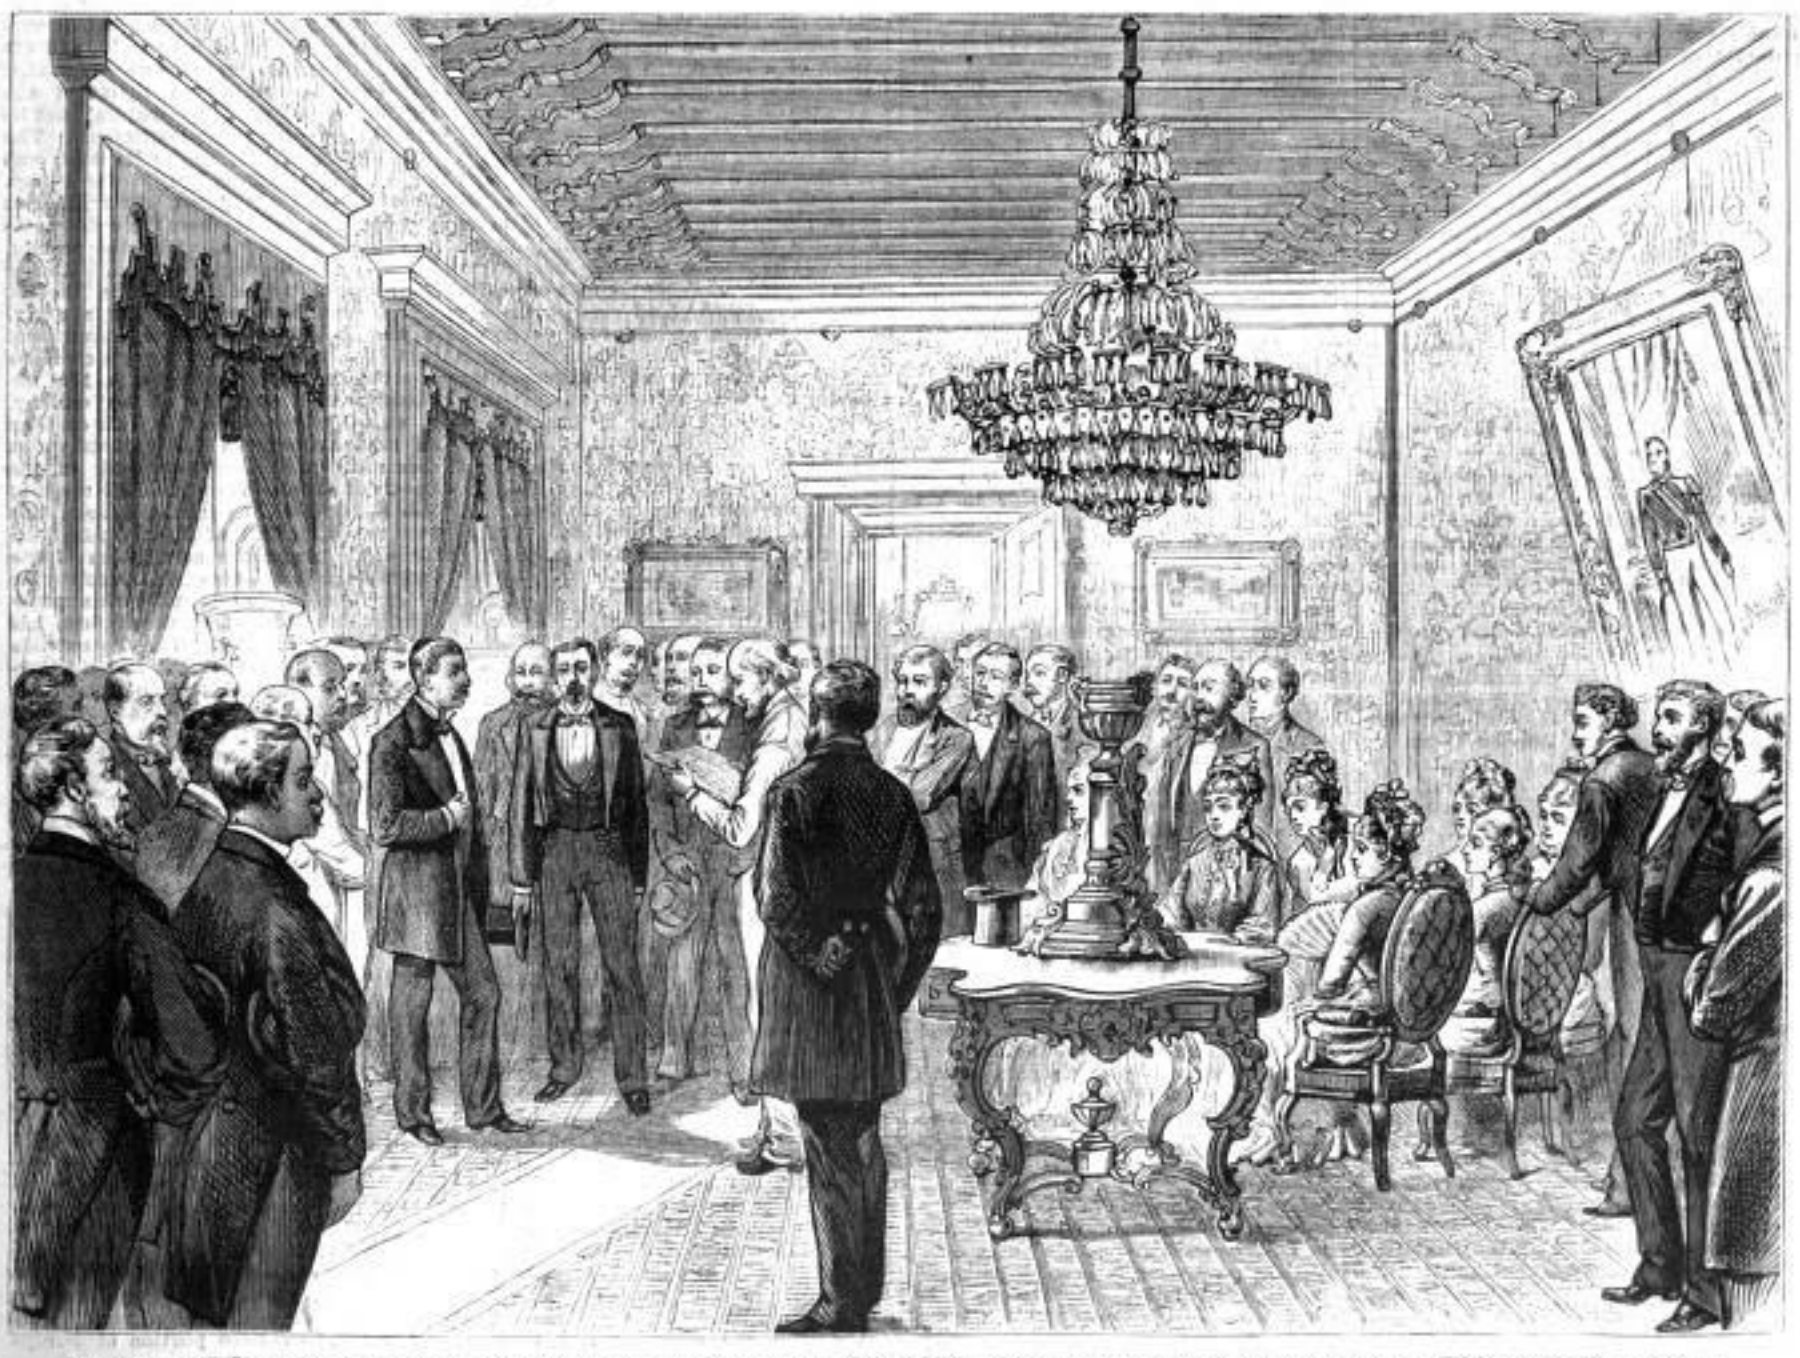
THE EXTENSION OF AMERICAN TRADE.



VISIT OF THE AMERICAN INDUSTRIAL DEPUTATION TO MEXICO.

BEFORE the curtain rings up upon the Mexico of Porfirio Diaz, I mean to take one little peep at the Mexitli of Montezuma. Mexico's historical interest belongs to the Montezumas. The Aztecs, or ancient Mexicans, after their migration from the north, wandered for a considerable time in the Mexican Valley, till in 1325 they halted in the southwest borders of the Lake of Tezcuco, and there beheld an eagle perched upon the stem of a nopal, engaged in devouring a serpent. The omen was pronounced auspicious, and here they forthwith founded the place called Tenochtitlan or "the nopal on a stone." Its name of Mexico was subsequently derived from that of their god Mexitli. Towards the middle of the fifteenth century a city of stone and lime had superseded reeds and rushes, and when on the evening of November 7th, 1519, its long lines of glittering edifices first met the eyes of Cortez and his followers, "it looked," says Prescott, "like a thing of fairy creation rather than the work of mortal hands." On their entry into Mexico, next day, the Spaniards found fresh cause for admiration in the grandeur of the city and the superior style of its architecture. The city was nine miles in circumference, the number of its houses was 60,000, and of its inhabitants probably 500,000. The large streets were intersected by canals crossed by bridges. The Palace of Montezuma, near the centre of the city, was a pile of low, irregular stone buildings of vast extent. Another palace, assigned to Cortez on his entrance into the city, was so large as to accommodate his whole army. But the most remarkable edifice of the city was the great *teocalli*, or temple, erected in 1486. It was encompassed by a stone wall about eight feet high, and pierced on its four sides by gateways opening upon the principal streets. Over each gate was an arsenal, and barracks near the temple were garrisoned by 10,000 soldiers. The temple itself was a solid pyramidal structure of earth and pebbles, coated externally with hewn stones. It was square, its sides facing the cardinal points, and was divided into five stories, each of which receded so as to be smaller than that below it. The ascent was by a flight of 114 steps on the outside, so contrived that to reach the top it was necessary to pass four times round the whole edifice; and the base of the temple is supposed to have been 300 feet square. The summit, whereon the sacrificial fires were kept perpetually burning, was a large area paved with broad, flat stones. The police of the city was efficient and vigilant, and a thousand men were daily employed in watering and sweeping the streets. As the waters of the lake that surrounded the city were extremely brackish, pure water for the supply of the people was brought by an aqueduct from the neighboring hill of Chapultepec, where Montezuma had a Summer palace, surrounded by vast and magnificent gardens.

NEW YORK, MARCH 15, 1879.

CAUTION.

Subscribers, in ordering our publications, should be careful to write the name of FRANK LESLIE *in full, and direct their letters to 53, 55 and 57 Park Place, New York, from which address all our publications are issued.*

A BAD RECORD.

IT is very apparent that the record made for itself by the Forty-fifth Congress is not destined to be a happy one in the memory of the nation. Indeed, it is safe to say that never before in the history of the country has the legislative department of the Government fallen so far below the measure of its duty and the height of its opportunities. At the very threshold of its career, when assembled by the Executive in extraordinary session, it was confronted by two great questions which called for the most dispassionate consideration to the end that the wisest practical conclusions might be reached in matters deeply concerning the stability of our institutions and the prosperity of the people. We refer, of course, to "the electoral problem," from the throes of which the nation had barely escaped in the Winter of 1876–7 without bloodshed, and the "money question" which imperatively called for a wise decision in the interest of national honesty and the public welfare.

Not only has the Forty-fifth Congress remitted the former of these vital concerns to the "limbo of the unfinished," but by a large majority of both Houses it has done its utmost to defeat the resumption of specie payments, by passing, over the Executive veto, "a Silver Bill," which stands to-day as a stone of stumbling and rock of offense in the future path of our financial progress. And in many other respects it has done the things which it ought not to have done, and left undone the things which it ought to have done. The "Potter Investigating Committee" had the sole justifiable reason for its creation in the allegation that its inquiries were a necessary condition precedent to the enactment of laws for the prevention of frauds in the counting of electoral ballots. In its practical operation the Committee has been little more than a "mud machine," with a reversible double-action attachment, which has been as damaging to its manipulators as to the persons against whom its primary force was directed. No laws have been passed to prevent the frauds alleged to have been committed by Returning Boards, and no laws have been passed to make the dicker for venal electoral ballots any less practicable than at the last Presidential election. And the "Teller Investigating Committee," raised by the Republicans of the Senate as a counter-check to the "mud machine" of the Democratic House, has not crowned its labors by even the suggestion of any new remedial statutes within the competency of the National Legislature. The time that might have been given to such a practical discussion was wasted in a fruitless debate on political and constitutional metaphysics, initiated at the instance of a party caucus, first of the Republicans, and then of the Democrats.

A pension law which adds untold millions to the public burdens has been enacted in the nominal interest of the soldiers "who helped to put down the Rebellion," but in the real interest of a partisan propagandism which does not scruple to set up the national credit and the general welfare at a public auction, in which Democratic and Republican bidders have competed with each other for the "sweet votes" of the soldier class. And, as if to "cap the climax" of this public defection from the rule of right, we have seen the Chinese Immigration Act pushed through the forms of legislation in a way equally discreditable to its supporters and offensive to the primary principles of national honor. For it is a matter of public notoriety that this disgraceful measure found its chief support in a vulgar competition for the vote of California, holding, as that State does, a pivotal position, perhaps, in the organization of the next House of Representatives, and wielding, as it may, a determinate balance in the next Presidential election. That the country should have been saved from the consummation of this wrong by the interposition of the Executive veto, is a matter of great congratulation to the friends of national honor and of international integrity, but the stigma placed upon both by the vote of both Houses of the last Congress rests none the less upon the annals of the National Legislature—a blotch of shame upon the Federal escutcheon.

That in all these its sins of commission and of omission the late Congress has not been a fair representative of the average mind and conscience of the American people we are as frank to admit as we are glad to believe. But we cannot find in this fact a healing salve for the wounded pride of the nation, remembering as we do the pithy aphorism that "every nation has the Government it deserves," an aphorism which is especially true of elective republics. The late Congress was, under our existing political methods, the choice of the people, and, as such, the people must accept their full share of the responsibility which attaches to it as the organized expression of the national will in the legislative branch of the Government. The national Congress is a mirror in which the whole people may see, not, as we have already said, a reflection of the national virtue and the national intelligence, but the very age and body of our current politics. If there is not virtue enough in the people, or intelligence enough in the people to bring their current politics into correspondence with the rules of morality and of right which are cordially recognized and practiced in other departments of our daily life, it argues some strange infirmity in the political methods and agencies under which the better thought and higher purpose of the people are doomed to be smothered and thwarted in a body that passes for "the assembled wisdom" of the land.

The people hoped that they had wrought a permanent purification in American politics when the "Nominating Convention" was substituted for the "Congressional Caucus" in the selection of Presidential candidates. But the Congress of the United States has once more become as obviously the vestibule to the political hustings as it ever was in the worst days of the old Federal and Republican Parties, when the Federal members of Congress did but organize at Washington the politics of the Essex Junto, and when the Republican members of Congress did but register at Washington the edicts of the Richmond Regency.

OUR TENEMENT-HOUSE SYSTEM.

THE agitation of the subject of the needs of our tenement-house population, recently initiated by prominent clergymen and laymen, was not started a moment too soon. There is no problem of social science which exceeds in urgency or importance that of the housing, under proper sanitary conditions, of the poor of our more populous cities. Not alone considerations of health and comfort, but of private and public morality as well, demand that the indiscriminate herding of masses of men, women and children in tenements which are nests of filth, disease and malaria, should be arrested. There can be no growth of the soul, no elevation of the intellect, no inspiration of the life with pure and lofty motives, where all the surrounding influences are debasing and brutalizing. It has been well said that "Satan has the church at a disadvantage when Sabbath influences are offset by six days of life in the squalor and confusion and poisonous air and demoralizing associations of the tenement-house."

Careful inquiry shows that fully 500,000 people, nearly one-half the population of New York, live in tenement-houses. These houses, of which there are now some 21,000, are generally from four to six stories high, frequently with a store on the first floor, which when used for the sale of liquor has a side-opening for the benefit of the inmates and to evade the Sunday law; four families occupy each floor, and a set of rooms consists of one or two dark closets used as bedrooms, with a living room 12 feet by 10. The staircase is too often a dark well in the centre of the house; and no direct through ventilation is possible, each family being separated by partitions. Frequently the rear of the lot is occupied by another building of three stories high, with two families on a floor. It therefore happens that on one lot 25 feet by 100, there may be from twenty to thirty families, with forty or fifty children, using one yard and the same hallways. Dr. Harris found ninety-six children in one such house. In another house visited by an inspector, thirty-two rooms were found to receive light and ventilation from other rooms. In another, but four closets were provided for 182 inmates, and the air was so vile the visitor could not remain.

The evils of this packing process are obvious. London is commonly supposed to be a densely peopled city, but its most populous district does not contain above 175,000 people to the square mile, and there is but one such case. The Fourth Ward of this city has a population of 290,000 to the square mile. There are several blocks with an average of 750 people to the acre, while the most densely peopled parts of London contain less than 300 to the acre. In one block in the Eleventh Ward there are fifty-two tenement-houses, occupied by 589 families, comprising 2,356 persons, and this ward has 64,000 inhabitants to 196 acres—an average of 326 to the acre. Dr. Stephen Smith, in his report to the Legislature, says: "In all the eastern quarter of our city, from Houston Street up to Fortieth, there is an overcrowding of human beings in comparison to the space covered beyond what has thus far ever been known in any civilized country." Disease and death are the necessary result of this overcrowding. Of the whole number of deaths last year, seventy per cent., or 18,867, occurred in or in connection with tenement-houses. The death rate of the Fourth, Sixth and Seventeenth Wards is double that of the up-town wards, and ninety per cent. of the children born in the tenement-houses die before reaching youth.

But the conspicuously alarming fact in connection with this whole subject is that the vice and crime which vex and defy restraint, have their origin largely in these tenement dens. A high authority declares that at least eighty per cent. of the crimes against person and property are perpetrated by persons who have either lost association with home life or never had any. Of the whole number of arrests for drunkenness, 30,373, last year, 12,000 were made in the three crowded tenement-house wards. Of the whole number of persons arrested for crimes other than drunkenness, sixty per cent. were absolutely in the habit of crime, and were shown by the records of prisons and reformatories to be graduates of tenements. The younger criminals are traced almost exclusively to these places.

How shall the evil be cured? That it is possible to provide a remedy, does not admit of doubt. There is no difficulty at all in constructing buildings which will combine all necessary sanitary conveniences. By proper legislation, over-crowding and over-building may be prevented, and the vilest of these dwellings, now inhabited, either demolished or remodeled. Existing laws and ordinances, the neglect of which results in disease and crime, must be vigorously enforced. Then the tenement-house population should be encouraged to avail themselves of rapid transit to live in the country. For, after all, all schemes of reform which shall fail to inspire the unfortunate victims of this system with some glimmer of self-respect, and some desire, however faint, to help themselves, must prove only partial remedies. But it is also true that, in the necessary work of reform, men of all classes and all parties must co-operate. It is an encouraging sign that the Christian capitalists in our churches are coming forward as leaders in the enterprise, and manifest a disposition to put their religion into bricks and mortar as well as into catechisms and tracts. As a recent sermon of a city divine pertinently says: "Infection and drainage and ventilation are not for the exclusive consideration of health boards. They are religious questions as well as sanitary ones. When Charles Kingsley, going into a sick peasant's house and finding the atmosphere of the room pestilential, procured an auger and bored holes above the bed's head for ventilation, the auger was as much a religious instrument as the prayer-book." If the men of wealth among us, and men of all classes who are concerned in the abatement of the evils we have outlined, will address themselves with the practical common sense displayed by Kingsley to the great work to which they are summoned, it will not be long before our experience will be that of Glasgow, in Scotland, where the property-owners, by expending $7,000,000 in destroying, cleaning and repairing tenement dwellings, effected a reduction of more than twenty-five per cent. in the amount of crime.

THE CRISIS IN EGYPT.

EGYPTIAN affairs again command attention. A *coup d'état* has been practically effected, and Ismail Pasha has again secured possession of the reins of power of which he was temporarily deprived. Opinions may differ as to the actual part played by the Khedive in the recent *émeute*; but there can be no doubt that the leaders in the demonstration had his sympathy, and that the result has been such as he himself most desired. Nubar Pasha has been compelled to retire, and the Khedive has assumed the powers which belong to the President of the Council. Mr. Wilson continues in office as Minister of Finance, and M. de Blignières retains his post as Minister of Public Works. Meanwhile, France and England have each sent ships-of-war into Egyptian waters.

Rightly to understand the present situation of affairs it is necessary to recall the arrangements which had been made with the Khedive on the one hand, and France and England on the other, and which had for their object the relief of the Egyptian treasury. For years past the finances of that country have been seriously embarrassed; in fact, the extravagance and mismanagement of the Khedive had brought the Government to the brink of ruin. Year after year, in spite of the productiveness of the land, the situation had become more desperate. Reckless and unheeding, Ismail Pasha proceeded in his career of extravagance; and it was only when he found that he could no longer borrow in the markets of Europe that he opened his eyes and realized his true position. In 1875 a joint French and English Commission examined his affairs, and the report showed that, in spite of his vast apparent wealth, he was practically bankrupt. While he realized from his private estates, which include about one-tenth of the cultivable soil of Egypt, some two millions of dollars a year, it appeared that he owed about twenty-five millions of dollars at ten per cent. per annum; and he had besides an immense floating debt at an enormous interest. Under advice of the commissioners, Messrs. Joubert and Wilson, he sold to England his shares in the Suez Canal for four millions of dollars, and an arrangement was come to by which it was believed the Khedive would get out of his difficulty. But the execution of the scheme was left in his own hands, and it came almost to immediate grief. The money received for his canal shares was soon spent, and he was in a worse plight than before. There was need for more money; but the bankers were obstinate. The result was the appointment of a new commission. Mr. Rivers Wilson, a financial expert, was sent out from England, and, after having fully examined the public and private affairs of the Khedive, was successful in inducing him to enter into a new arrangement. A new Government was formed—Nubar Pasha being President of the Council; Mr. Rivers Wilson Minister of Finance; and M. de Blignières, a prominent French engineer, Minister of Public Works. The Khedive, who was pledged to retire from all active participation in the management of affairs, handed over to the new Government all the national property, together with the properties of the Daïras Sanieh and Khassa, as well as all properties belonging to the Khedive himself, or to members of his family. Under this arrangement, the Rothschilds of London and Paris offered for public subscription $8,500,000 of five per cent. Egyptian bonds, at from 70 to 75. The British and French Governments, at the same time, came under obligations to see that the revenues derived from the Khedive's surrendered estates should be devoted to the payment of the interest on, and to provide a sinking fund for, the loan until its extinction.

It can readily be imagined that the new state of things was far from satisfactory to the Khedive. It was a necessity which had been laid upon him from without. He had been accustomed to absolute power, and to almost unlimited means. Now he was powerless in the presence of his people; and his public and private expenses were regulated and confined within the limits of the strictest economy. It was natural that he should chafe under such restrictions. The new Government, faithful to its trust, was pursuing vigorously a policy of economy. No department was spared. Retrenchment was the rule; and wherever there was waste or extravagance of any kind the pruning knife was unsparingly applied. Among the many costly hobbies of the Khedive was the maintenance of a large army. It was decided by the new Government that the army should be reduced to a strength corresponding with the necessities and resources of the country. It was the carrying out of this decision on the part of the Government which occasioned the recent outbreak in the streets of Cairo. The immediate result of this disturbance, as we have seen, has been the retirement of Nubar Pasha from the Cabinet, and the assumption of the duties of the Presidency of the Council by the Viceroy himself. In this action the arrangement which brought about the loan has been directly violated. The Rothschilds can scarcely be well pleased, and the Governments of both France and England are placed in an awkward predicament. The fact that Mr. Rivers Wilson and M. de Blignières have been instructed to remain at their posts, and that ships of war have been sent over by both the guaranteeing Powers, justify the belief that the Khedive's assumption of the Council Presidency will not be permitted to pass unchallenged. But whatever may come of the present rupture—whether the second financial scheme shall fail or succeed—the final adjustment of the Egyptian problem can scarcely admit of doubt. England needs, and must have, Egypt as the highway to India; and it almost seems as if the ripe fruit is about to fall into her lap.

THE EXPORT CATTLE TRADE.

THE embargo placed upon the importation of American live stock into the ports of the United Kingdom, viewed in the light of existing facts, appears to be without justification. That the British Government had good ground for prohibiting the entry of cattle from infected countries like Russia, Austro-Hungary, Turkey, Greece, Roumania and Montenegro, is undoubted. The eastern portion of Europe

Digitized by Google

has suffered greatly from the epidemic known as pleuro-pneumonia; but with the United States the case has been and is entirely different. That a few sporadic cases of pleuro-pneumonia have been found near Washington is true. That some cases have come to light in Pennsylvania, Connecticut, and among the swill-fed cows of Long Island, is also a fact. But these are all isolated cases and confined wholly to the localities where they happened. The supply of cattle for export comes mainly from the great West, a section to which the epidemic is altogether unknown. The Commissioner of Agriculture asserts that while the disease has occasionally appeared along the seaboard since 1856, it has never yet prevailed west of the Alleghany Mountains.

That the British Order in Council is unjust in its operation against American trade is quite as well known to the representatives of Her Majesty's Government in this country as to our own Government and people. Touching the magnitude of this trade, few outside of the exporters and Custom House officials know anything about it. It has all grown up within the past two or three years, and now involves millions of capital. Last year, according to official figures, the live-stock shipments from this port alone embraced 30,925 beeves, 19,724 sheep, and 1,662 hogs. The shipments of carcasses consisted of 72,409 beeves, 56,034 sheep, and 9,908 hogs. At a recent dinner given by the Glasgow butchers engaged in the American meat trade, it was stated that the entire quantity of meat imported into Great Britain in 1876 was 16,165,632 pounds, the money value of which was about $1,946,975. Last year the quantity increased to 53,661,216 pounds, valued at $6,323,820. It was further stated that the total value of live stock imported into the United Kingdom during 1868 was £7,454,482—about $37,272,410—of which sum America contributed in the neighborhood of $20,000,000. These facts and figures plainly indicate the advancing value of our meat and live-stock trade with Great Britain.

That there has been a growing jealousy of our exporters both in England and Canada cannot be doubted, and that cabals have been set on foot to check trade from the United States becomes only too apparent. It is an open secret that influential Englishmen interested in cattle-raising at home, such as the Duke of Richmond, have labored zealously to hinder the importation of American beef, and that English farmers generally are growing seriously anxious as to the future of the home cattle trade. As to the Canadians, when it is considered that the shippers of this country had completed contracts for an unusual heavy trade during the present year, and that our neighbors across the line are now stall-feeding 250,000 head of cattle and 500,000 sheep for export, it is easily to be seen where the *animus* of the Dominion comes in.

It is barely possible that the British Government might have withstood the "hue and cry" against American cattle but for the unfortunate shipment to Liverpool by the *Ontario*. When that vessel reached her port of destination it was discovered that several marked cases of pleuro-pneumonia existed among the cattle on board. Yet, strange to say, these cattle were shipped in an apparently healthful state—no evidences of infection being discoverable when they left our shores. Careful inquiry shows that no disease existed, or does exist, in the districts whence the cattle came, and that they were all right at the time of forwarding and embarkation. Subsequent shipments of healthy cattle from the same districts have given sure indication to the British authorities that pleuro-pneumonia does not prevail in the grazing portions of the United States. The British Government possessed a knowledge of these facts, and yet deemed it necessary to place this country in the same category with countries suffering largely from the epidemic. Canadian cattle are quite as likely to be affected as our own. In fact, a part of the *Ontario's* shipment belonged to the Dominion, and yet, curiously enough, Canada is not to be embargoed by the British Order in Council.

The indications now are that, thanks to active repressive measures, the few sporadic cases of pleuro-pneumonia will soon be stamped out. In this State, the vigorous policy of Governor Robinson is already achieving beneficent results. If the Privy Council is willing to be convinced that American cattle can safely enter British ports, then there need be but a temporary interference with our exportation of live stock.

IN THE OLD WORLD.

THE French Government has won a decisive victory on the amnesty question, the Bill presented by it having been adopted by the Chamber of Deputies by a vote of 163 to 86. This Bill grants complete amnesty to all persons who have been sentenced to transportation, or who have fled the country and been condemned in their absence, for offenses connected with the insurrection of 1871, and who have been, or within three months shall be, pardoned by the President. The total number of offenders excepted from pardon will be about 13,000. The Government, now that this question is out of the way, is said to be anxious to close the era of purely political discussions as soon as possible, to the end that the Chambers may take up practical business questions. M. Waddington has intimated to a deputation of Protectionists that the exclusion of English manufacturers from the American market, and the consequent concentration of their competition upon France, will make it necessary for the latter to protect herself by duties, especially on cotton, linen, velvet, and shipping industries.

A supplementary credit of $7,500,000 on account of the expenses of the Zulu War has been voted by the British House of Commons, but not without the declaration on the part of some of the Radicals and Home Rulers that they regarded the war as unjust and iniquitous. Sixteen steamers in all have been chartered to carry troops and war material to the scene of hostilities. It will be nearly five weeks before the reinforcements can be placed in the field. Meanwhile, many of the leading English journals continue to criticise the war as having been commenced without any reasonable cause. Thus the *Examiner* says:

"We have no right to ask the Zulu King to disband his army, and allow his young men to marry, unless we are prepared to defend and make new laws for his country. If we intend conquering Zululand we can understand such summary demands; but the country is of little value to us compared with the toll of holding it, and a war for its annexation, leaving any higher moral considerations out of account, will be an extremely costly, troublesome, and sanguinary one, which a little prudence, perseverance and statesmanship might have averted."

A movement looking to the extension of self-government to Alsace and Lorraine, and their definitive recognition as a Federal State, is gaining strength in the German Reichstag, having apparently the sanction of Bismarck himself. Such a concession would mark a new era in the relations of the Alsatians and the Prussian Government, and would certainly strengthen the hold of the latter upon these unfortunate provinces. Bismarck is represented also to show, in another matter, a more conciliatory temper. He has caused it to be understood that he might consent to the withdrawal of the Parliamentary Disciplinary Bill if the Reichstag will consent to the increase of the powers of the Speaker over the members of that body.

It is stated that the plague in Astrakhan has disappeared, but the alarm among the people of Russia has not subsided, it being generally believed that the pestilence is still making actual progress. The *Golos* recently published a letter from the infected districts from which it appeared that numbers of unburied corpses were lying strewn about the country, and that two thousand persons had perished in Zaritzyn. The sale of this paper in the streets has been prohibited in consequence of this publication. The burning of infected houses in the plague districts has been commenced by the Government Commission.

Contradictory rumors continue to prevail as to the whereabouts and condition of the Ameer of Afghanistan; it is much more likely that, after Oriental fashion, he is playing 'possum than that he is dead. The Shah of Persia doubtless wishes now, in the almost bankrupt state of his finances, that he had not capriciously broken his contract to farm out the revenues of his kingdom to Baron Reuter, who would have effected as wonderful a change in them as the Austrian Riedener has made in the Persian postal arrangements that had remained unimproved from the days of Xerxes until A. D. 1874. China manifestly means to be independent of Russian, English, and perhaps of American manufactures, for a number of cotton factories have been established in the Flowery Kingdom, and German operatives have been engaged to run them. The extraordinary friendship manifested at this moment by Russia towards Turkey may well excite redoubled vigilance at Vienna and at London.

The Czar of Russia has almost more than he can well do to energize his hereditary functions as an absolute monarch—what with the dread spectre of Nihilism, the threatened invasion of his empire by the Asiatic plague, the burden of national debt accumulated during the late Turco-Russian war, and the recent troubles, exaggerated as are certain accounts of the latter, among the disorderly students of his universities and high schools. Several remarkable criminal trials have lately aggravated the Czar's anxieties by revealing symptoms of extraordinary demoralization in the higher circles of Russian society. Among the more recent of these trials must be specified that of a widow lady, named Goulak-Artemovsky, accused and convicted of forgery, and now sentenced to banishment in Siberia; that of Gregory Besobrasoff, a member of the aristocracy and son to a highly honored senator, for the murder of Dr. Kovaltchoff, one of the best physicians of Kharkow; and that of Marguerite Jujean, a French governess, charged with having poisoned to death a youth of seventeen, Nicholas Posnansky, son of a colonel of *gendarmes*, in whose family she had been domiciled for years. In the latter case the jury did not find sufficient proof of the alleged motive of jealousy to warrant a verdict of guilty, but many sad and revolting features were brought to light. To a very different but a serious class of offenses belongs the imprudence of the Grand Duke Nicolas, son of the Grand Duke Constantine, in writing and publishing a pamphlet on a projected strategic railway in Asia. For this offense the high-born author has been exiled to Orenburg. The Grand Duke Wiatcheslav, youngest child of the Grand Duke Constantine and a nephew of the Czar, has just died, aged seventeen.

The last fortnight of the carnival at Paris was enlivened by one of the most brilliant diplomatic receptions of the season. It was given by Prince and Princess Hohenlohe at the German Embassy, and the company included President Grévy, M. Gambetta, the Duke d'Aumale (the representative of the Orleanist princes), General Fleury, and other eminent Bonapartists, ministers, foreign ambassadors, and senators and deputies of all shades of politics. The Duke of Cumberland and his bride, the Princess Thyra, will pass the rest of the season in Paris.

The rumor is revived that the Queen of England and Empress of India will travel on the Continent this Spring, going first to Italy and subsequently visiting Coburg and Darmstadt.

THE popular demand for the four per cents exceeds the printing capacity of the Treasury Department, which is now in arrears about $100,000,000 in the delivery of the bonds. The Engraving and Printing Bureau is working night and day, but will not be up with the demand for some time. The delay is in a large measure attributable to the printing of such large quantities of bonds of small denomination, for which there is a demand wholly unanticipated by the departments.

THE Secretary of the Interior has ordered the summary suspension of a number of pension claim agents who are charged with having organized a movement for "grabbing" a large slice of the arrears due pensioners under the Bill recently passed. There is little room for doubt that that measure was passed mainly through the efforts of claim agents, and if Secretary Schurz can baffle their plundering schemes he will establish fresh claims upon the public gratitude.

THE statement that 1,000 tons of coal are used monthly in heating the new Capitol at Albany appears to be a gross exaggeration. An Albany correspondent writes us on the subject as follows: "Five hundred tons of coal were contracted for by the commissioners in November last, at $4 per ton. This was at a time when the building was open on all sides, and great dampness existed in consequence. Four steam boilers were put in use (for heating purposes) and have been running day and night ever since, and this amount of coal has lasted for three months, under all the disadvantages of new machinery, etc."

THE Greenback Congressmen have issued an address "to the people of the United States" urging a general organization for the purpose of resisting "the gigantic money power" which "has plunged the masses of the people into a condition of poverty, want and misery." The address is characterized by the exaggeration of statement and violence of temper which marked the appeals of the ultra-inflationists in the last political canvas, and on that very account will fail to provoke any other feeling than derision among sober-minded men. It is understood that the Greenback members-elect of the next House will act independently of the old parties, and should they do so, they may be able to compel some concessions, in the way of office, in the organization of that body.

THE Bill to provide for taking the next Federal census, as passed by the House of Representatives, authorizes the President to appoint the necessary supervisors, and requires the enumerators to obtain complete and elaborate statistics of the business, debts, property, etc., of railroad, express, telegraph, and fire, life and marine insurance companies. Railroad companies must, in reporting their capital stock, also report to what extent the same has been watered, and how often corners have been made on such watered stock. It is also provided that the schedules shall contain inquiries relating to the public indebtedness of cities, counties and towns, and the ownership of the public debt of the United States, by whom owned, and the respective amounts. The principal credit for the passage of this Bill is due to Hon. S. S. Cox, of New York.

NEWS OF THE WEEK.

Domestic.

THE will of the late Mrs. Emma Strecker, of this city, bequeathes $250,000 for charitable objects.

O'KELLY, the last of the Fenians who were prisoners in England, arrived at this port February 27th.

THE Ohio State Republican Convention for the nomination of a Governor will be held at Cincinnati May 28th.

THE Minnesota Legislature has passed a Bill reducing the legal rate of interest from twelve per cent. to ten per cent.

THE liabilities of Archbishop Purcell of Cincinnati are now stated at $6,000,000—money deposited with him for investment.

THE business portion of Reno, Nevada, was destroyed by fire on March 2d, entailing a loss of $1,000,000 on property and of five lives.

THE rumored deficiency in the Missouri State Treasury has been found to amount to $343,000, and the Treasurer will be impeached.

THE Michigan Greenback and Democratic Conventions have united on a State ticket, and the Democrats adopted the Greenback platform.

COLLECTOR MERRITT, Surveyor Graham and Naval Officer Burt have agreed upon a code of civil service rules for the New York Custom House.

THE United States Grand Jury at Danville, Va., have indicted five County Judges for failing to allow negro jurors to serve. Great indignation prevails.

THE Connecticut Legislature has passed the Constitutional Amendment for biennial sessions of the Legislature. It now goes to the people for final action.

THE majority of the Potter Committee have agreed upon a report which claims that both Florida and Louisiana were carried for Mr. Tilden. The minority dissent entirely from this conclusion.

ONE hundred and sixty-five students were graduated from the Bellevue Hospital Medical College in this city on the 27th ultimo, and ninety-five from the Medical Department of Columbia College on the 28th.

CHIEF MOSES expresses great disappointment at the refusal of the Interior Department to give him the reservation he applied for, and says he cannot vouch for the manner in which his tribe will receive the bad news.

IT is believed that the officers of Harvard College have decided to allow young women to pass through the different stages of instruction under the professors, but with a distinct organization to be controlled by a board of Cambridge ladies.

MINISTER SEWARD was arraigned before the House on February 28th, to show cause why he should not be punished for contempt. He refused to produce the books asked for, and the case was referred to the Judiciary Committee.

THE President sent to the House of Representatives on Saturday, March 1st, a veto of the Bill to restrict Chinese immigration. The vote in the House on overruling the veto was 110 to 95, not two-thirds in favor of the Bill. So the Bill fails.

A MEETING of merchants and others, held at Cooper Institute, February 27th, for the purpose of discussing the means of increasing the trade between the United States and Mexico and South America, appointed a committee of nine to arrange a plan of action with that end in view.

DEPUTY UNITED STATES MARSHAL ROE on February 27th arrested, at Pekin and Peoria, Ill., some fifty persons under indictment at Springfield for complicity in whisky frauds. Some of them are among the most prominent and wealthiest citizens. The arrested men represent every branch of business, and startling developments are promised. No occurrence has produced so much excitement in that section for years.

THE Teller Committee presented a report to the Senate February 27th, reviewing the testimony of the ninety-one witnesses in Louisiana and the 107 in South Carolina. It states that the frauds in South Carolina by the use of tissue ballots extended to every county in that State except one, and that between thirty and forty murders were committed in Louisiana. The minority of the committee dissent from the conclusion that further legislation is needed for the protection of the rights of the blacks.

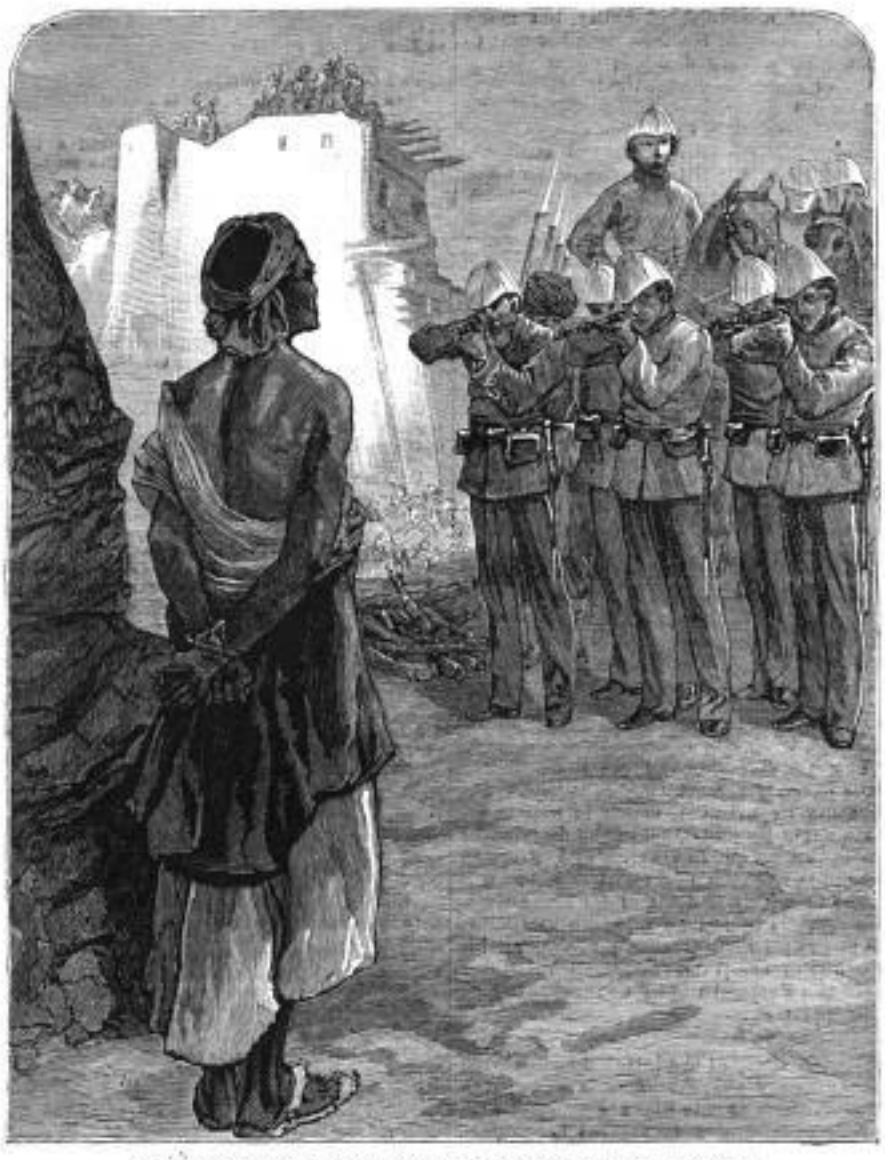
Foreign.

THERE will be a deficit of $2,750,000 in the German Budget this year.

WORK has been begun on the buildings for the International Exhibition of 1880 at Madrid, Spain.

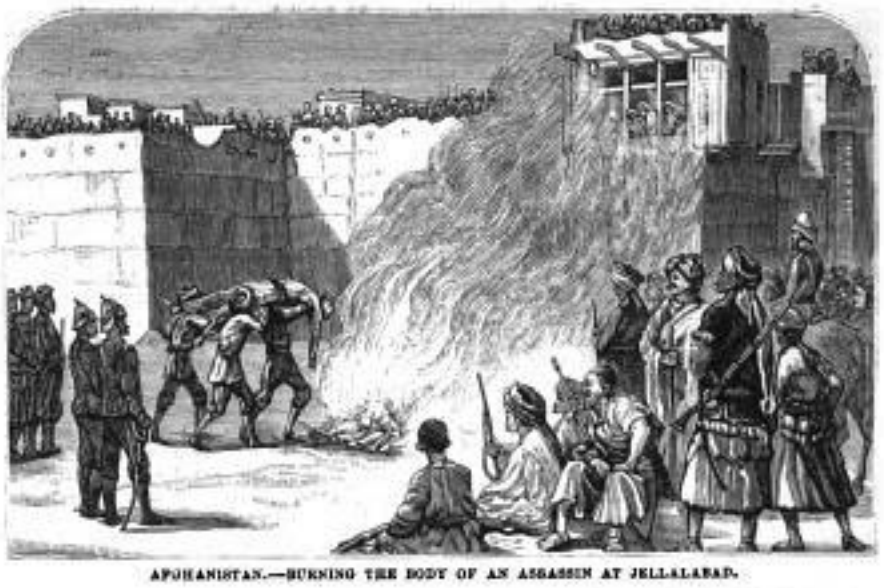
YAKOOB KHAN has announced the death of his father, Shere Ali, Ameer of Afghanistan, which occurred on February 21st, and made overtures for the renewal of friendly relations with the British Government.

THE Mexican Minister of Public Works has given orders for the erection of the building for the International Exposition to be held in Mexico next year. All the building material, it is said, will be purchased in the United States. Exhibits from this country are specially asked for.



THE United States Consul in Jerusalem writes that serious apprehensions prevail there as to the future harvests. Famine is imminent. Arrangements are being made to import flour and grain direct from New York to anticipate the wants of the people. Tunis and Tripoli are suffering more from drought than Palestine.

THE Pope, on February 26th, replying to an address from the Cardinals, emphasized his desire to reconcile princes and peoples to the Church, his readiness to extend his hand to all who repent and cease their persecutions, and his unflinching intention always to combat, but be defense of the rights and independence of the Church, those who make war against her.



TREMENDOUS storms have occurred in Italy and the South of France, where hundreds of people are thrown on public charity by the destruction and inundation of their houses. In Spain the tempest lasted four days, with much damage and loss of life, villages and farms being destroyed. The Italian coast from Genoa to Naples was strewn with wrecks, and Parma, Milan and Florence suffered serious loss to property, the latter city being inundated by the sea, and the water at some points reaching a depth of thirty inches. At Rome all the windows of the Monastery of Monte Alle Croci were destroyed, and a portion of the base of Michael Angelo's statue of "David" was swept off. At Fuzignano, near Sienna, the campanile of a church was blown down, while the people were at Mass, killing two priests officiating at the altar and three other persons, and wounding twenty-four persons. Further reports of the snow-storm in France say that it was the heaviest for years. Great damage has been done by floods.

NEW YORK CITY.—PROPOSED BARGE OFFICE TO BE ERECTED AT THE BATTERY.

THE NEW BARGE OFFICE AT THE BATTERY.

THE necessity for a better system of receiving and landing passengers arriving from foreign countries, of examining their baggage and facilitating their departure to their homes, and also for some improved means of collecting revenue and protecting the interests of the Government, has long been felt in New York and by New York merchants. More than twenty years ago travelers complained of the inconvenience they were put to, and the shameful extortions of hackmen, in being compelled to land almost anywhere but in the City of New York, for which point they purchased their tickets. The ships of one line landed in Jersey City, those of another line landed its passengers and freight in Hoboken, and those of another in Brooklyn, or somewhere far up the North River. It is very easy to see, not only the inconvenience, but the unreasonable charges of hackmen, this condition of things must have developed and encouraged. The Government, at the same time, was put to a very heavy expense in establishing miniature Custom Houses on the wharves of each of these lines of steamers; and yet, in the hurry and bustle, the noise and confusion incident to the arrival and landing of a steamer at her wharf, it was impossible that the revenue officers, no matter how keen and vigilant, could examine the baggage of passengers as carefully as the law required, compute correctly the amount on dutiable articles, or collect the amount with accuracy. Mr. Boutwell, while Secretary of the Treasury, reported that in consequence of this deficiency in the means of properly examining passengers' baggage, computing and collecting the revenue, the Government lost yearly from sixty to one hundred thousand dollars; this too, independent of the annoyance and extortion to which passengers were exposed for want of a proper system of landing, examination, and collecting the revenue.

It must be remembered, also, that this loose and very unsatisfactory manner of doing business was taken advantage of by a dishonest class of merchants, and the result was that smuggling was carried on to an alarming extent, sometimes with the knowledge and connivance of Government officials. The only complete remedy for this was the establishment of a central landing-place—a barge office where all passengers from abroad could be landed and their baggage properly examined. That the Battery was the proper place was very generally conceded. More than twenty years ago the Press of this city agitated the subject, and urged upon the Government the necessity of taking some action in the matter. In this way the matter dragged along from year to year, until the Hon. Nicholas Müller, Member of Congress for the Fifth District, took hold of the matter in earnest, drew up a Bill asking an appropriation of two hundred and ten thousand dollars ($210,000) for the purpose, and, with that persistency for which he is known, pressed it through Congress near the close of its last session.

That the work of erecting the building was not begun at once is entirely owing to the fact that the title to a very small piece of ground necessary to make the foundation complete had not been perfected until within a few days past. Now that the title to this piece of ground is completed, work on the building will be prosecuted promptly. The building of this barge office and the landing of this vast amount of passengers and their baggage and small freight at the Battery, it is confidently predicted, will work a great social and material revolution in that part of the city. Already a project is on foot to build a first-class hotel and restaurant at some convenient point, similar to the Adelphi and Waterloo Hotels in Liverpool.

The new building will be erected at Whitehall Slip, and the shed to be used for the landing of passengers and examination of baggage will be completed within a few months. The main or front building and sea-wall will not be finished for a year or eighteen months. The new Barge Office will be of brick, 108 feet front by 32 feet deep. It will be two stories high, with raised centre pavilion and a tower on the northwest corner about 75 feet high, which will be used as a lighthouse. In this building will be the offices, reception-rooms, closets, etc., and ample exits for the passengers. In the rear of and adjoining this building will be a large structure of iron and glass conforming to the shape of the lot, having a front of 176 feet on the adjoining slip and 168 feet on the river. The outer inclosure of this building will be of rolled beams filled in with corrugated sheet iron. The roof, supported by heavy wrought iron trusses and pillars, will be corrugated iron and glass, the centre portion being raised about eight feet above the other for purposes of light and ventilation. The foundation of the building will be of piles, with an intervening layer of concrete. Within the shed portion above described there will be every convenience for the examination of baggage and the comfort of passengers. On the river-front there will be a large entrance for passengers, and upon either side of this two smaller ones for baggage. A roadway extends around the structure, and upon either side of the building are numerous doors, through which the baggage will be passed to the wagons after its examination.

MISS LOUISE W. KING, FOUNDER OF THE GEORGIA SOCIETY FOR THE PREVENTION OF CRUELTY TO ANIMALS.

MISS LOUISE W. KING.

THIS exemplary lady, whose portrait we give on this page, was the daughter of ex-United States Senator John P. King, of Georgia. Her sudden decease in December last, at the residence of her father, in Augusta, came with crushing effect upon her relatives and friends. A happy home was blighted and bereft of its brightest treasure, and the city and State of her nativity loses a philanthropist and a woman whose bright example shone through her labors and precepts.

Miss King was the founder of the Georgia Society for the Prevention of Cruelty to Animals, and by her personal exertions and earnest advocacy obtained the passage of a charter and laws to sustain her noble undertaking. Several branches of the Society are now in operation in different parts of Georgia.

The influence of the good deeds of this excellent lady will survive when the generation to which she belonged has passed away, and serve as a beautiful model for all who appreciate the obligations of mercy and humanity towards the suffering, of whatever race or degree.

A ROMANTIC LAWSUIT.

A CURIOUS case has just been engaging the attention of the Paris tribunals. A young man, who lived in a small town in the wilds of the Russian Steppes many years ago, gradually improved in his business until he at length emerged on the Bourse as the great M. Meyer Garfunkel, the happy possessor of a fortune of several millions of francs. He had married a Muscovite of rare beauty—Mlle. Rosalie Loury—and he ended by adopting another Mlle. Loury, whom his wife gave out to be her sister. In 1876 M. Garfunkel died, leaving the bulk of his fortune to his wife and adopted daughter, but excepting therefrom the sum of 1,500,000 francs, which was bequeathed to a Mme. Rabinovitz, living at the town of Bodmiz, in Russia. Now, this Mme. Rabinovitz has a curious history, according to her own showing. She declares herself to be the only daughter of M. Garfunkel, by a widow named Taoule, whom he wedded in his poorer days, when he was known as Meyer. In support of her pretensions, Mme. Rabinovitz presents several letters written to herself by the millionaire, in which he addresses her as *ma chère unique et bien-aimée fille*, and on the strength of it she claims not merely the million and a half left her by M. Garfunkel, but also the money bequeathed to

Digitized by Google

the two Lourys. It appears that, according to the French law as well as the Russian, no one is allowed to adopt a child while he has one still living. Hence M. Gartenkel's act was utterly illegal, supposing Mme. Rabnovitz, or Rebecca, as she was called, to have been his child. A most romantic and sensational lawsuit has, therefore, originated out of this case.

THE FALLEN LEAVES.

BY WILKIE COLLINS.

CHAPTER XII.

IN an interval of no more than three weeks what events may not present themselves? what changes may not take place? Behold Amelius, on the first drizzling day of November, established in respectable lodgings, at a moderate weekly rent. He stands before his small fireside, and warms his back with an Englishman's severe sense of enjoyment. The cheap looking-glass on the mantel-piece reflects the head and shoulders of a new Amelius. His habits are changed; his social position is in course of development. Already he is a strict economist. Before long, he expects to become a married man.

It is good to be economical; it is (perhaps) better still to be the accepted husband of a handsome young woman. But, for all that, a man in a state of moral improvement, with prospects which his less favored fellow-creatures may reasonably envy, is still a man subject to the mischievous mercy of circumstances, and capable of feeling it keenly. The face of the new Amelius wore an expression of anxiety, and, more remarkable yet, the temper of the new Amelius was out of order.

For the first time in his life, he found himself considering trivial questions of sixpences, and small favors of discount for cash-payments—an irritating state of things in itself. There were more serious anxieties, however, to trouble him than these. He had no reason to complain of the beloved object herself. Not twelve hours since, he had said to Regina (with a voice that faltered, and a heart that beat wildly), "Are you fond enough of me to let me marry you?" And she had answered, placidly (with a heart that would have satisfied the most exacting stethoscope in the medical profession), "Yes, if you like." There was a moment of rapture, when she submitted for the first time to be kissed, and when she consented (on being gently reminded that it was expected of her) to return the kiss—once, and no more. But there was also an attendant train of serious considerations, which followed on the heels of Amelius when the kissing was over, and when he had said good-by for the day.

He had two women for enemies, both resolutely against him in the matter of his marriage.

Regina's correspondent and bosom-friend, Cecilia, who had begun by disliking him (without knowing why), persisted in maintaining her unfavorable opinion of the new friend of the Farnabys. She was a young married woman; and she had an influence over Regina which promised, when the fit opportunity came, to make itself felt. The second, and by far the more powerful hostile influence, was the influence of Mrs. Farnaby. Nothing could exceed the half-sisterly, half-motherly goodwill with which she received Amelius on those rare occasions when they happened to meet, unembarrassed by the presence of a third person in the room. Without actually reverting to what had passed between them during their memorable interview, Mrs. Farnaby asked questions, plainly showing that the forlorn hope which she had associated with Amelius was a hope still firmly rooted in her mind. "Have you been much about London lately?" "Have you met with any girls who have taken your fancy?" "Are you getting tired of staying in the same place, and are you going to travel soon?" Inquiries such as these she was, sooner or later, sure to make when they were alone. But, if Regina happened to enter the room, or if Amelius contrived to find his way to her in some other part of the house, Mrs. Farnaby deliberately shortened the interview and silenced the lovers—still as resolute as ever to keep Amelius exposed to the adventurous freedom of a bachelor's life. For the last week his only opportunities of speaking to Regina had been obtained for him secretly by the well-rewarded devotion of her maid. And he had now the prospect before him of asking Mr. Farnaby for the hand of his adopted daughter, with the certainty of the influence of two women being used against him, even if he succeeded in obtaining a favorable reception for his proposal from the master of the house.

Under such circumstances as these—alone, on a rainy November day, in a lodging on the dreary eastward side of the Tottenham-court-road—even Amelius bore the aspect of a melancholy man. He was angry with his cigar because it refused to light freely. He was angry with the poor deaf servant-of-all-work, who entered the room, after one thumping knock at the door, and made, in muffled tones, the barbarous announcement, "Here's somebody a-wantin' to see yer."

"Who the devil is Somebody?" Amelius shouted.

"Somebody is a citizen of the United States," answered Rufus, quietly entering the room. "And he is sorry to find Claude A. Goldenheart's temperature at boiling-point already."

He had not altered in the slightest degree since he had left the steamship at Queenstown. Irish hospitality had not fattened him; the change from sea to land had not suggested to him the slightest alteration in his dress. He still wore the huge felt hat in which he had first presented himself to notice on the deck of the vessel. The maid-of-all-work raised her eyes to the face of the long, lean stranger, overshadowed by the broad-brimmed hat, in reverent amazement. "My love to you, miss," said Rufus, with his customary grave cordiality; "I'll shut the door." Having dismissed the maid with that gentle hint, he shook hands heartily with Amelius. "Well, I call this a juicy morning," he said, just as if they had met at the cabin breakfast-table as usual.

For the moment, at least, Amelius brightened at the sight of his fellow-traveler. "I'm really glad to see you," he said. "It's lonely in these new quarters, before one gets used to them."

Rufus relieved himself of his hat and great-coat, and silently looked about the room. "I'm big in the bones," he remarked, surveying the rickety lodging-house furniture with some suspicion; "and I'm a trifle heavier than I look. I sha'n't break one of these chairs if I sit down on it, shall I?" Passing round the table (littered with books and letters) in search of the nearest chair, he accidentally brushed against a sheet of paper with writing on it. "Memorandum of friends in London to be informed of my change of address," he read, looking at the paper as he picked it up, with the friendly freedom that characterized him. "You have made pretty good use of your time, my son, since I took my leave of you in Queenstown Harbor. I call this a reasonable long list of acquaintances made by a young stranger in London."

"I met with an old friend of my family, at the hotel," Amelius explained. "He was a great loss to my poor father when he got an appointment in India; and now he has returned he has been equally kind to me. I am indebted to his introduction for most of the names on that list."

"Yes?" said Rufus, in the interrogative tone of a man who was waiting to hear more. "I'm listening, though I may not look like it. Git along."

Amelius looked at his visitor, wondering in what precise direction he was to "git along."

"I'm no friend to partial information," Rufus proceeded; "I like to round it off complete, as it were, in my own mind. There are names on this list that you haven't accounted for yet. Who provided you, sir, with the balance of your new friends?"

Amelius answered, not very willingly, "I met them at Mr. Farnaby's house."

Rufus looked up from the list with the air of a man surprised by disagreeable information and unwilling to receive it too readily. "How?" he exclaimed, using the old English equivalent (often heard in America) for the modern "What?"

"I met them at Mr. Farnaby's," Amelius repeated.

"Did you happen to receive a letter of my writing, dated Dublin?" Rufus asked.

"Yes."

"Do you set any particular value on my advice?"

"Certainly!"

"And you cultivate social relations with Farnaby and family, notwithstanding?"

"I have motives for being friendly with them, which—which I haven't had time to explain to you yet."

Rufus stretched out his long legs on the floor, and fixed his shrewd, grave eyes steadily on Amelius.

"My friend," he said, quietly, "in respect of personal appearance and pleasing elasticity of spirits, I find you altered for the worse—I do. It may be Liver or it may be Love. I reckon, now I think of it, you're too young yet for Liver. It's the brown Miss—that's what 'tis. I hate that girl, sir, by instinct."

"A nice way of talking of a young lady you never saw!" Amelius broke out.

Rufus smiled grimly. "Go ahead!" he said. "If you can get vent in quarreling with me—go ahead, my son."

He looked round the room again, with his hands in his pockets, whistling. Descending to the table in due course of time, his quick eye detected a photograph placed on the open writing-desk which Amelius had been using earlier in the day. Before it was possible to stop him, the photograph was in his hand. "I believe I've got her likeness," he announced. "I do assure you I take pleasure in making her acquaintance in this sort of way. Well, now, I declare she's a columnar creature! Yes, sir; I do justice to your native product—your fine, fleshy, beef-fed English girl. But I tell you this: after a child or two, that sort runs to fat, and you find you have married more of her than you bargained for. To what lengths may you have proceeded, Amelius, with this splendid and spanking person?"

Amelius was just on the verge of taking offense. "Speak of her respectfully," he said, "if you expect me to answer you."

Rufus stared in astonishment. "I'm paying her all manner of compliments," he protested, "and you're not satisfied yet. My friend, I still find something about you which reminds me of meat cut against the grain. You're almost nasty—you are! The air of London, I reckon, isn't at all the thing for you. Well, it don't matter to me; I like you. Afloat or ashore, I like you. Do you want to know what I should do, in your place, if I found myself getting a little too close to the brown Miss? I should—well, to put it in one word, I should scatter. Where's the harm, I'll ask you, if you try another girl or two, before you make your mind up? I shall be proud to introduce you to our slim and snaky sort at Coolspring. Yes. I mean what I say; and I'll go back with you across the pond." Referring in this disrespectful manner to the Atlantic Ocean, Rufus offered his hand in token of unalterable devotion and goodwill.

Who could resist such a man as this? Amelius (always in extremes) wrung his hand with an impetuous sense of shame. "I've been sulky," he said, "I've been rude. I ought to be ashamed of myself—and I am. There's only one excuse for me, Rufus. I love her with all my heart and soul; and I'm engaged to be married to her. And yet, if you understand my way of putting it, I'm—in short, I'm in a mess."

With this characteristic preface, he described his position as exactly as he could, having due regard to the necessary reserve on the subject of Mrs. Farnaby. Rufus listened, with the closest attention from beginning to end, making no attempt to disguise the unfavorable impression which the announcement of the marriage-engagement had made on him. When he spoke next, instead of looking at Amelius as usual, he held his head down, and looked gloomily at his boots.

"Well," he said, "you've gone ahead this time, and that's a fact. She didn't raise any difficulties that a man could ride off on—did she?"

"She was all that was sweet and kind!" Amelius answered, with enthusiasm.

"She was all that was sweet and kind," Rufus absently repeated, still intent on the solid spectacle of his own boots. "And how about Uncle Farnaby? Perhaps, he's sweet and kind likewise, or perhaps he cuts up rough? Possible—is it not, sir?"

"I don't know; I haven't spoken to him yet."

Rufus suddenly looked up. A faint gleam of hope irradiated his long, lank face. "Mercy be praised! there's a last chance for you," he remarked. "Uncle Farnaby may say No."

"It doesn't matter what he says," Amelius rejoined. "She's old enough to choose for herself; he can't stop the marriage."

Rufus lifted one wiry, yellow forefinger, in a state of perpendicular protest. "He cannot stop the marriage," the sagacious New Englander admitted; "but he can stop the money, my son. Find out how you stand with him before another day is over your head."

"I can't go to him this evening," said Amelius; "he dines out."

"Where is he now?"

"At his place of business."

"Fix him at his place of business. Right away!" cried Rufus, springing with sudden energy to his feet.

"I don't think he would like it," Amelius objected. "He's not a very pleasant fellow anywhere, but he's particularly disagreeable at his place of business."

Rufus walked to the window and looked out. The objections to Mr. Farnaby appeared to fail, so far, in interesting him.

"To put it plainly," Amelius went on, "there's something about him that I can't endure. And—though he's very civil to me, in his way—I don't think he has ever got over the discovery that I am a Christian Socialist."

Rufus abruptly turned round from the window, and became attentive again. "So you told him that—did you?" he said.

"Of course!" Amelius rejoined, sharply. "Do you suppose I am ashamed of the principles in which I have been brought up?"

"You don't care, I reckon, if all the world knows your principles," persisted Rufus, deliberately leading him on.

"Care!" Amelius reiterated. "I only wish I had all the world to listen to me. They should hear of my principles, with no bated breath, I promise you."

There was a pause. Rufus turned back again to the window. "When Farnaby's at home, where does he live?" he asked, suddenly, still keeping his face towards the street.

Amelius mentioned the address. "You don't mean that you are going to call there?" he inquired, with some anxiety.

"Well, I reckoned I might catch him before dinner-time. You seem to be sort of feared to speak to him yourself. I'm your friend, Amelius—and I'll speak for you."

The bare idea of an interview struck Amelius with terror. "No, no!" he said. "I'm much obliged to you, Rufus. But, in a matter of this sort, I shouldn't like to transfer the responsibility to my friend. I'll speak to Mr. Farnaby in a day or two."

Rufus was evidently not satisfied with this. "I do suppose, now," he suggested, "you're not the only man moving in this metropolis who fancies Miss Regina. Query, my son: If you put off Farnaby much longer——" He paused and looked at Amelius. "Ah," he said, "I reckon I needn't enlarge further; there *is* another man. Well, it's the same in my country; I don't know what he does, with You; he always turns up with Us, just at the time when you least want to see him."

There was another man—an older and a richer man than Amelius; equally assiduous in his attentions to the aunt and to the niece; submissively polite to his favored young rival. He was the sort of person, in age and in temperament, who would be perfectly capable of advancing his own interests, by means of the hostile influence of Mrs. Farnaby. Who could say what the result might be if, by some unlucky accident, he made the attempt before Amelius had secured for himself the support of the master of the house? In his present condition of nervous irritability he was ready to believe in any coincidence of the disastrous sort. The wealthy rival was a man of business, a near city neighbor of Mr. Farnaby. They might be together at that moment; and Regina's fidelity to her lover might be put to a harder test than she was prepared to endure. Amelius remembered the gentle, conciliatory smile (too gentle by half) with which his placid mistress had received his first kisses—and, without stopping to weigh conclusions, snatched up his hat. "Wait here for me, Rufus, like a good fellow. I'm off to the stationer's shop." With those parting words he hurried out of the room.

Left by himself, Rufus began to rummage the pockets of his frock-coat—a long, loose, and dingy garment which had become friendly and comfortable to him by dint of ancient use. Producing a handful of correspondence, he selected the largest envelope of all, shook out on the table several smaller letters inclosed, picked one out of the number, and read the concluding paragraph only, with the closest attention.

"I inclose letters of introduction to the secretaries of literary institutions in London and in some of the principal cities of England. If you feel disposed to lecture yourself, or if you can persuade friends and citizens known to you to do so, I believe it may be in your power to advance in this way the interests of our Bureau. Please take notice that the more advanced institutions, which are ready to countenance and welcome free thought in religion, politics and morals, are marked on the envelopes with a cross in red ink. The envelopes without a mark are addressed to platforms on which the customary British prejudices remain rampant, and in which the charge for places reaches a higher figure than can be as yet obtained in the sanctuaries of free thought."

Rufus laid down the letter, and, choosing one among the envelopes marked in red ink, looked at the introduction inclosed. "If the right sort of invitation reached Amelius from this institution," he thought, "the boy would lecture on Christian Socialism with all his heart and soul. I wonder what the brown Miss and her uncle would say to that?"

He smiled to himself, and put the letter back in the envelope, and considered the subject for a while. Below the odd rough surface, he was a man in ten thousand; no more single-hearted and more affectionate creature ever breathed the breath of life. He had not been understood in his own little circle; there had been a want of sympathy with him, and even a want of knowledge of him at home. Amelius, popular with everybody, had touched the great heart of this man. He perceived the peril that lay hidden under the strange and lonely position of his fellow-voyager—so innocent in the ways of the world, so young and so easily impressed. His fondness for Amelius, it is scarcely too much to say, was the fondness of a father for a son. With a sigh, he shook his head, and gathered up his letters, and put them back in his pockets. "No, not yet," he decided. "The poor boy really loves her; and the girl may be good enough to make the happiness of his life." He got up and walked about the room. Suddenly, he stopped, struck by a new idea, and looked at his watch. "It's still early in the day," he thought; "I have plenty of time before me. Sooner or later I'm bound to include myself in that family circle—why not do it now?"

He sat down at the desk, and wrote a line, in the event of Amelius being the first to return to the lodgings: "Dear Boy—I don't find her photograph tells me quite so much as I want to know. I have a mind to see the living original for myself. Expect my unbiassed opinion when I come back—Yours, RUFUS."

Having inclosed and addressed these lines, he took up his great-coat—and checked himself in the act of putting it on. The brown Miss was a British Miss. A strange New Englander had better be careful of his personal appearance before he ventured into her presence. Urged by this cautious motive, he approached the looking-glass, and surveyed himself critically.

"I doubt I might be the better," it occurred to him, "if I brush my hair, and smelt a little of perfume. Yes. I'll make a toilet. Where's the boy's bedroom, I wonder?"

He observed a second door in the sitting-room, and opened it at hazard. Fortune had befriended him so far; he found himself in his young friend's bedchamber.

The toilet-table of Amelius, simple as it was, had its mysteries for Rufus. He was at a loss among the perfumes. They were all contained in a modest little dressing-case, without labels of any sort to describe the contents of the pots and bottles. He examined them one after another, and stopped at some recently-invented French shaving-cream. "It smells lovely," he said, assuming it to be some rare pomatum. "Just what I want, it seems, for my head." He rubbed the shaving-cream into his bristly iron-gray hair, until his arms ached. When he had next sprinkled his handkerchief and himself profusely, first with rose-water, and then (to make quite sure) with eau-de-cologne used as a climax, he felt that he was in a position to appeal agreeably to the senses of the softer sex. In five minutes more, he was on his way to Mr. Farnaby's private residence.

(To be continued.)

THE EXTENSION OF AMERICAN TRADE.

VISIT OF THE AMERICAN INDUSTRIAL DEPUTATION TO MEXICO.

(Continued from front page.)

In the final siege by the Spaniards, Cortez, despairing of otherwise subduing a place where every house was a fortress and every street was cut up by canals, reluctantly determined to destroy the whole city which he calls "the most beautiful thing in the whole world." With the aid of his multitudinous Indian allies, whose hatred of the Aztecs led them to work with zeal, in a few weeks seven-eighths of the city was leveled to the ground, and the canals filled with rubbish. Soon after the siege Cortez began to rebuild the city on its present plan. During its occupation by the Spaniards, from 1521 to 1821, the most remarkable events in the local history of Mexico were five great inundations in 1553, 1580, 1604, 1607 and 1629, caused by the overflowing of the neighboring lakes. To prevent the recurrence of these inundations, a great drain was dug through the hill of Nochis-tango, by which the waters of the river Cuantitlan were led out of the valley instead of falling into Lake Texcuco. This work which was completed in 1789, after more than 100 years of labor, is about twelve miles long, from 100 to 130 feet deep, and between 200 and 300 feet wide. The last flooding of the capital occurred in 1865. At the corner of Callijon de Espiritu Santo and Segunda Calle de San Francisco, a grotesquely-carved animal's head marks the height attained by the flood in 1629.

The Mexico of to-day usurps the site of the Mexitli of Montezuma. Mexico ranks amongst the largest cities of the Western Hemisphere, and with its steeples, towers and domes, presents from what

Digitized by Google

ever direction approached, a magnificence unsurpassed in the world. The valley in which it stands is forty-five miles long, by thirty miles broad, and it contains 700,000 inhabitants. Its climate is temperate, never exceeding 70°, or going below 50° Fahrenheit. The longest day is thirteen hours and ten minutes, the shortest ten hours and fifty minutes. The population of the city is now about 250,000, but to question a Mexican on this subject involves a reply, or, rather a series of replies, akin to Sir John Falstaff's statements in reference to the men in buckram. The streets are at right angles from north to south and east to west. Each line of streets has the mountains that surround the valley for a background, and in the early morning, or just when the sun has set behind the western range, these giant warders seem in the clear atmosphere as though they were at the very gates. The city is divided into eight *cuarteles mayores*, or large wards, and thirty-two smaller, comprising 245 blocks or squares, 330 streets, and 130 *callejones* or lanes. The water supply is the same as that laid on by Montezuma; the *agua gorda* or thick water is conveyed by aqueduct from Chapultepec, and the *agua delgada*, or light potable water, from the southwest. The valley contains the lakes of Chalco, San Cristobal, Zumpango, Xaltocan and Xochimilco, six lakes covering an area of fifty miles. The Lake of Texcuco, nearest the city, is a mere marsh, and scarcely navigable for craft larger than the "dugouts" of the Indians. Mexico has been called "Anhuac"—By the Waters—from its topographical position. The buildings, which are of pink, yellow and green, are lofty and massive, and pervaded by a harmonious unity of conception seldom seen elsewhere. The streets are lighted by gas, but gas is an unknown quantity in stores, private houses, hotels and theatres. In the vast Iturbide, oil lamps and candles served but to render darkness visible. The atmosphere is light and of a rare transparency, and the sky of a blue, fuller and keener than that of Italy. The rarified atmosphere tells upon the new-comer, especially while ascending stairs. To behold the deputationists puffing and blowing as they toiled upwards seemed to afford exquisite and unbounded delight to the grinning *muchachos*. A young American lady, a resident, informed me that for several weeks after her arrival she could not waltz, owing to the difficulty experienced in breathing. Our physician, Dr. Rice, had his hands pretty full for the first few days with colds, coughs, catarrhs, headaches and low fevers. "Quinine to the rescue!" was his watchword, and quinine did effectually ward off the insidious advances of the enemy. I thought of Catherine of Russia and the dipt candle as I applied the friendly and old-fashioned grease to the bridge of my olfactory organ. This was my balm of Gilead. It was cold, yes, bitterly cold 'o nights, and an extra blanket—7,600 feet above the level of the sea—became an object of interest. One word more and I'll to my tale. Of the natives, the whites are the least numerous element in the city, the Mestijos and pure-blooded Indians teeming by far the largest proportion. The various public venders, molatoers, water-carriers and domestics, are commonly Indians or Mestijos. The *pordiosero*, or Mexican beggar, is not very strongly represented. He asks alms in the name of God—*por Dios*—hence his appellation; but the *lepero*, or ragged vagrant, is perpetually "on hand." He is cheerful and light-hearted, with the gayety of a son of Naples and the drollery of an Irish peasant. The foreign element is numerically of no account, but its influence is paramount. France comes first, then in order Germany, Italy, Spain, America, England, Switzerland and Austria. The English residents cling tenaciously to banking, and to the interests appertaining to the railway from the capital to the coast. With this brief resumé I shall hasten back to the doings of the American Industrial Deputation.

The Hotel Iturbide, at which "we lay"—to use an early English expression—was formerly the palace of the ill-fated Emperor of that name. Up to a certain point in his career he was a mild form of Washington, but the fiery curse of ambition led him to accept the imperial crown, and he fell, as angels do, never to rise again. On the 24th of August, 1821, he achieved the independence of his country, and entered Mexico at the head of a victorious army, the *Trigarante*—(green, red and white) the national colors—and on the 19th of July, 1824, he was shot as a traitor. I saw the old flint guns that did the bloody deed. They are gracefully hung against the wall in the armory of the Palacio del Gobierno, and on the same wall are the seven rifles whose deadly bullets chilled for ever the life-blood of the hapless and now regretted Maximilian. The remains of the latter were restored to "kin beyond the sea"; those of Iturbide lie encoffined in a crystal urn in the cathedral of Mexico. Iturbide's portrait adorns the tapestried walls of the palace and the adobe supports of the *hacienda*. The picture is the man. It represents a mild, meek, querulous, elderly gentlemen, with vacillating expression and Micawber mouth—an individual not fit to rule a puppy-dog. He is attired in a uniform gorgeous as the plumage of a Chiquihuita cockatoo, and his breast is adorned with orders that would cause tears of bitter envy to course down the cheeks of the Herzog of a fourth-rate German principality. Peace be to his ashes.

A large section of the deputation was lodged in the Iturbide, the remnant seeking shelter at the San Carlos, the Gillero, and the Comonfort. Somehow or other the residents at the ex-palace strode in and out of the princely portals with more or less of an imperial swagger; they lounged, too, about the entrance, and posed in the *patio*, while the minor hotels betrayed as much of bustle and animation as a Quaker meeting-house in the "wee sma' hours o' the night." In this *patio*, or courtyard, the members of the deputation most did congregate. Here were indignation-meetings held; here were appointments made—to be broken, for your Mexican is not always on time, and "*mañana*," or to-morrow, is his golden-sanded hour-glass; here were knicknacks purchased, and here was the notice board to inform us of the when, where and how.

The day subsequent to our arrival was devoted to unmitigated staring; 7 A. M. found us on the Calle Plateros staring at everything for the bare life, from a stunted policeman, still wrapped up to the eyes in his *rebozo*, to a *ranchero* in full *charro* emerging from some dingy, foul-smelling courtyard, for his morning ride to Chapultepec or Tacubaya. The Calle Plateros is the Broadway of Mexico. It is narrow, "cursed with a pavement," and each block possesses a distinct and separate nomenclature. It is the main artery from the Alameda to the Plaza Mayor, and from rosy morn to dewy eve it is full of light and life. Fancy a long, straight street, lined by irregular architecture, from the lordly mansion, blue-tiled, gold-balconied, scarlet-blinded, to the dingy, flat-roofed, two-storied stone, a strip of shade like a cooling bath upon one side, and liquid sunshine upon the other, with shafts of pale gold at the intersection of the cross streets, and at both ends the glories of tropical verdure, and you have the *calle* of a thousand-and-one names, but which I mean to designate as the Plateros all through the piece. Like crows in a garden of glorious color did the deputation appear, as in hats that had been "under the weather" in every State in the Union and solemn black frocks—the "correct thing" as a meeting or on 'Change—they wandered along this kaleidoscopic thoroughfare, staring their commercial eyes out at everybody and at everything, taking two hundred cents worth of gape-seed for each almighty dollar. The stores on the Plateros have a perky Parisian appearance, not that of the palatial establishments upon the boulevards, but rather of the third-class streets, where "'Arry," fresh from London, and cultivating a mustache, loves to lounge in search of *la bonne fortune*, while the goods exposed for sale bear the undeniable piquancy of French manufacture. The Café Concordia—the Delmonico's of Mexico—became pretty well known to the deputation. Hither they repaired for their morning coffee, and at night for their *tequila* punch. *Tequila* is distilled from the famous *pulque*, and a judiciously blended punch so closely resembles a "hot Scotch," that I mean to mystify a hard-headed son of the "Land 'o Cakes" residing in New York, through the medium of this enticing beverage, and to challenge him to say whether the spirit is that of Islay, Glenlivet or Farintosh. At the corners of the intersecting streets are to be found Indians in picturesque costumes and Japanese attitudes, squatted before immense bouquets, chiefly consisting of violets, "deeply, darkly, desperately blue." These violets are gathered on the *Chinampas* or floating gardens, and brought to the city at early morn along the Viga Canalin dugout canoes. I measured one of the floricultural mounds. It stood twenty-four inches high, its diameter being thirty inches. In faltering tones I demanded its price. Think of this, Mr. Lazarus of Covent Garden! Ponder well, Mademoiselle Fidne l.a Tour of the Marché aux Fleurs! Twenty-five cents—yes, twenty-five cents for about five thousand fragrant, delicious, appealing violets! What would such a bouquet cost in New York at this hour of writing? Unhappily the Indians are given to considering that violets are too simple, and consequently they spoil the perfect tone-poem by the introduction of some inharmonious, death-dealing color. How one swarthy, beady-eyed, *rebozo*-wrapped female gazed at me as I inserted a Lunch of my favorite flowers in my buttonhole. I was the only man in Mexico that day thus decorated.

The Plateros—I linger in this street, because along this causeway I shall presently lead the deputation into the presence of President Diaz, at the Palacio del Gobierno—the Plateros, I say, is thronged during the day, save at *siesta*, with carriages, and such carriages!—great, lumbering vehicles, a cross between a used-up diligence and a Dublin cab—drawn by horses compared with which Don Quixote's *Rosinante* might safely reckon upon carrying off the blue ribbon of the Derby—and in default of horses, mules with ears as long as the whips of their exasperated drivers. I speak of the public vehicles, for some of the private would stand the test of Fifth Avenue, Rotten Row or the Bois de Boulogne. As is usual with carriage-keeping people, the weak point is the raiment of the coachman. Here he wears what he likes, the *sombrero* being the only uniform article. He smokes, and crosses his legs in the box, and if the weather be oppressive, I doubt not but that he toils along in his shirt sleeves. I met one English coachman, and his straight back, his faultless collar and scarf, his coat fitting like a Jouvin glove, his hat on three particular hairs, and, above all, his mode of handling the ribbons ought to give the Mexicans a lead, but "they won't take it, sir," he said, "they likes their own ways and they will 'ave 'em."

The señoras and señoritas never go on foot; they drive to early Mass, they drive a-shopping. The Plateros is filled with carriages drawn up to the sidewalk, while obsequious clerks stand bare-headed, displaying such wares as may happen to tickle the fancy of their high mightinesses, their customers; and the great unwashed cast wistful glances at goods and equipages, as the tide rolls by. Carriage visits are paid in the afternoon, and then comes the crowning event of the day, the drive in the Paseo, of which more anon.

Strange sights are to be seen in the Plateros. *Hacendados* and *rancheros* in their broad-brimmed *sombreros* and leather *chaquetas*—jackets—and silver-frogged breeches, through the outside seam of which loosely roll white flowing drawers, swaggering along the sidewalk, their great spurs jingling, their silver ornaments dangling. Indios trotting onwards, the man bearing live stock and fruit in a wicker-frame case, attached to his back by means of a flat bandage adjusted to his forehead; the woman her child slung in the folds of her blue *rebozo*, both her arms engaged in carrying the day's, or mayhap the week's provisions. Water-carriers, fruit-sellers, tatterdemalion soldiers followed by their slatternly wives, munging *tortillas*; mules and asses driven by half-naked men and boys, their feet baked white in the hot dust, their limbs bronzed and seemingly cast in bronze; *muchachos* bearing furniture upon their heads—a piano will be carried twenty-five miles by four men in a day; a demure señorita, prayer-book in hand, and clad in the picturesque *mantilla*; swells, in short-tailed coats, and high-heeled boots, and narrow-rimmed hats, languidly smoking cigarettes through silver holders; *Chinos* with black and green patches on their temples, cures for the headache; *leperos* of half-breeds hawking toys or glazed crockeryware; companies of foot soldiers, attired in white, their uniforms sadly in need of the necessary offices of needle and thread, shuffling along on their *guaraches*, or sandals—they seldom wear shoes or stockings—shouldering the President's beloved Remingtons; civil guards, trotting on thoroughbreds, in buff and steel, with sword and matchlock, recalling the days of Cromwell's Ironsides, and occasionally a troop of cavalry, such as Bazaine loved to lead against the dusky sons of the Afric desert while Metz was still La Pucelle; small, lean, wiry, falcon-eyed dare-devils, every one of them. These were amongst the sights that met the gaze of the deputationists as they moved along the Plateros en route to the Palacio del Gobierno.

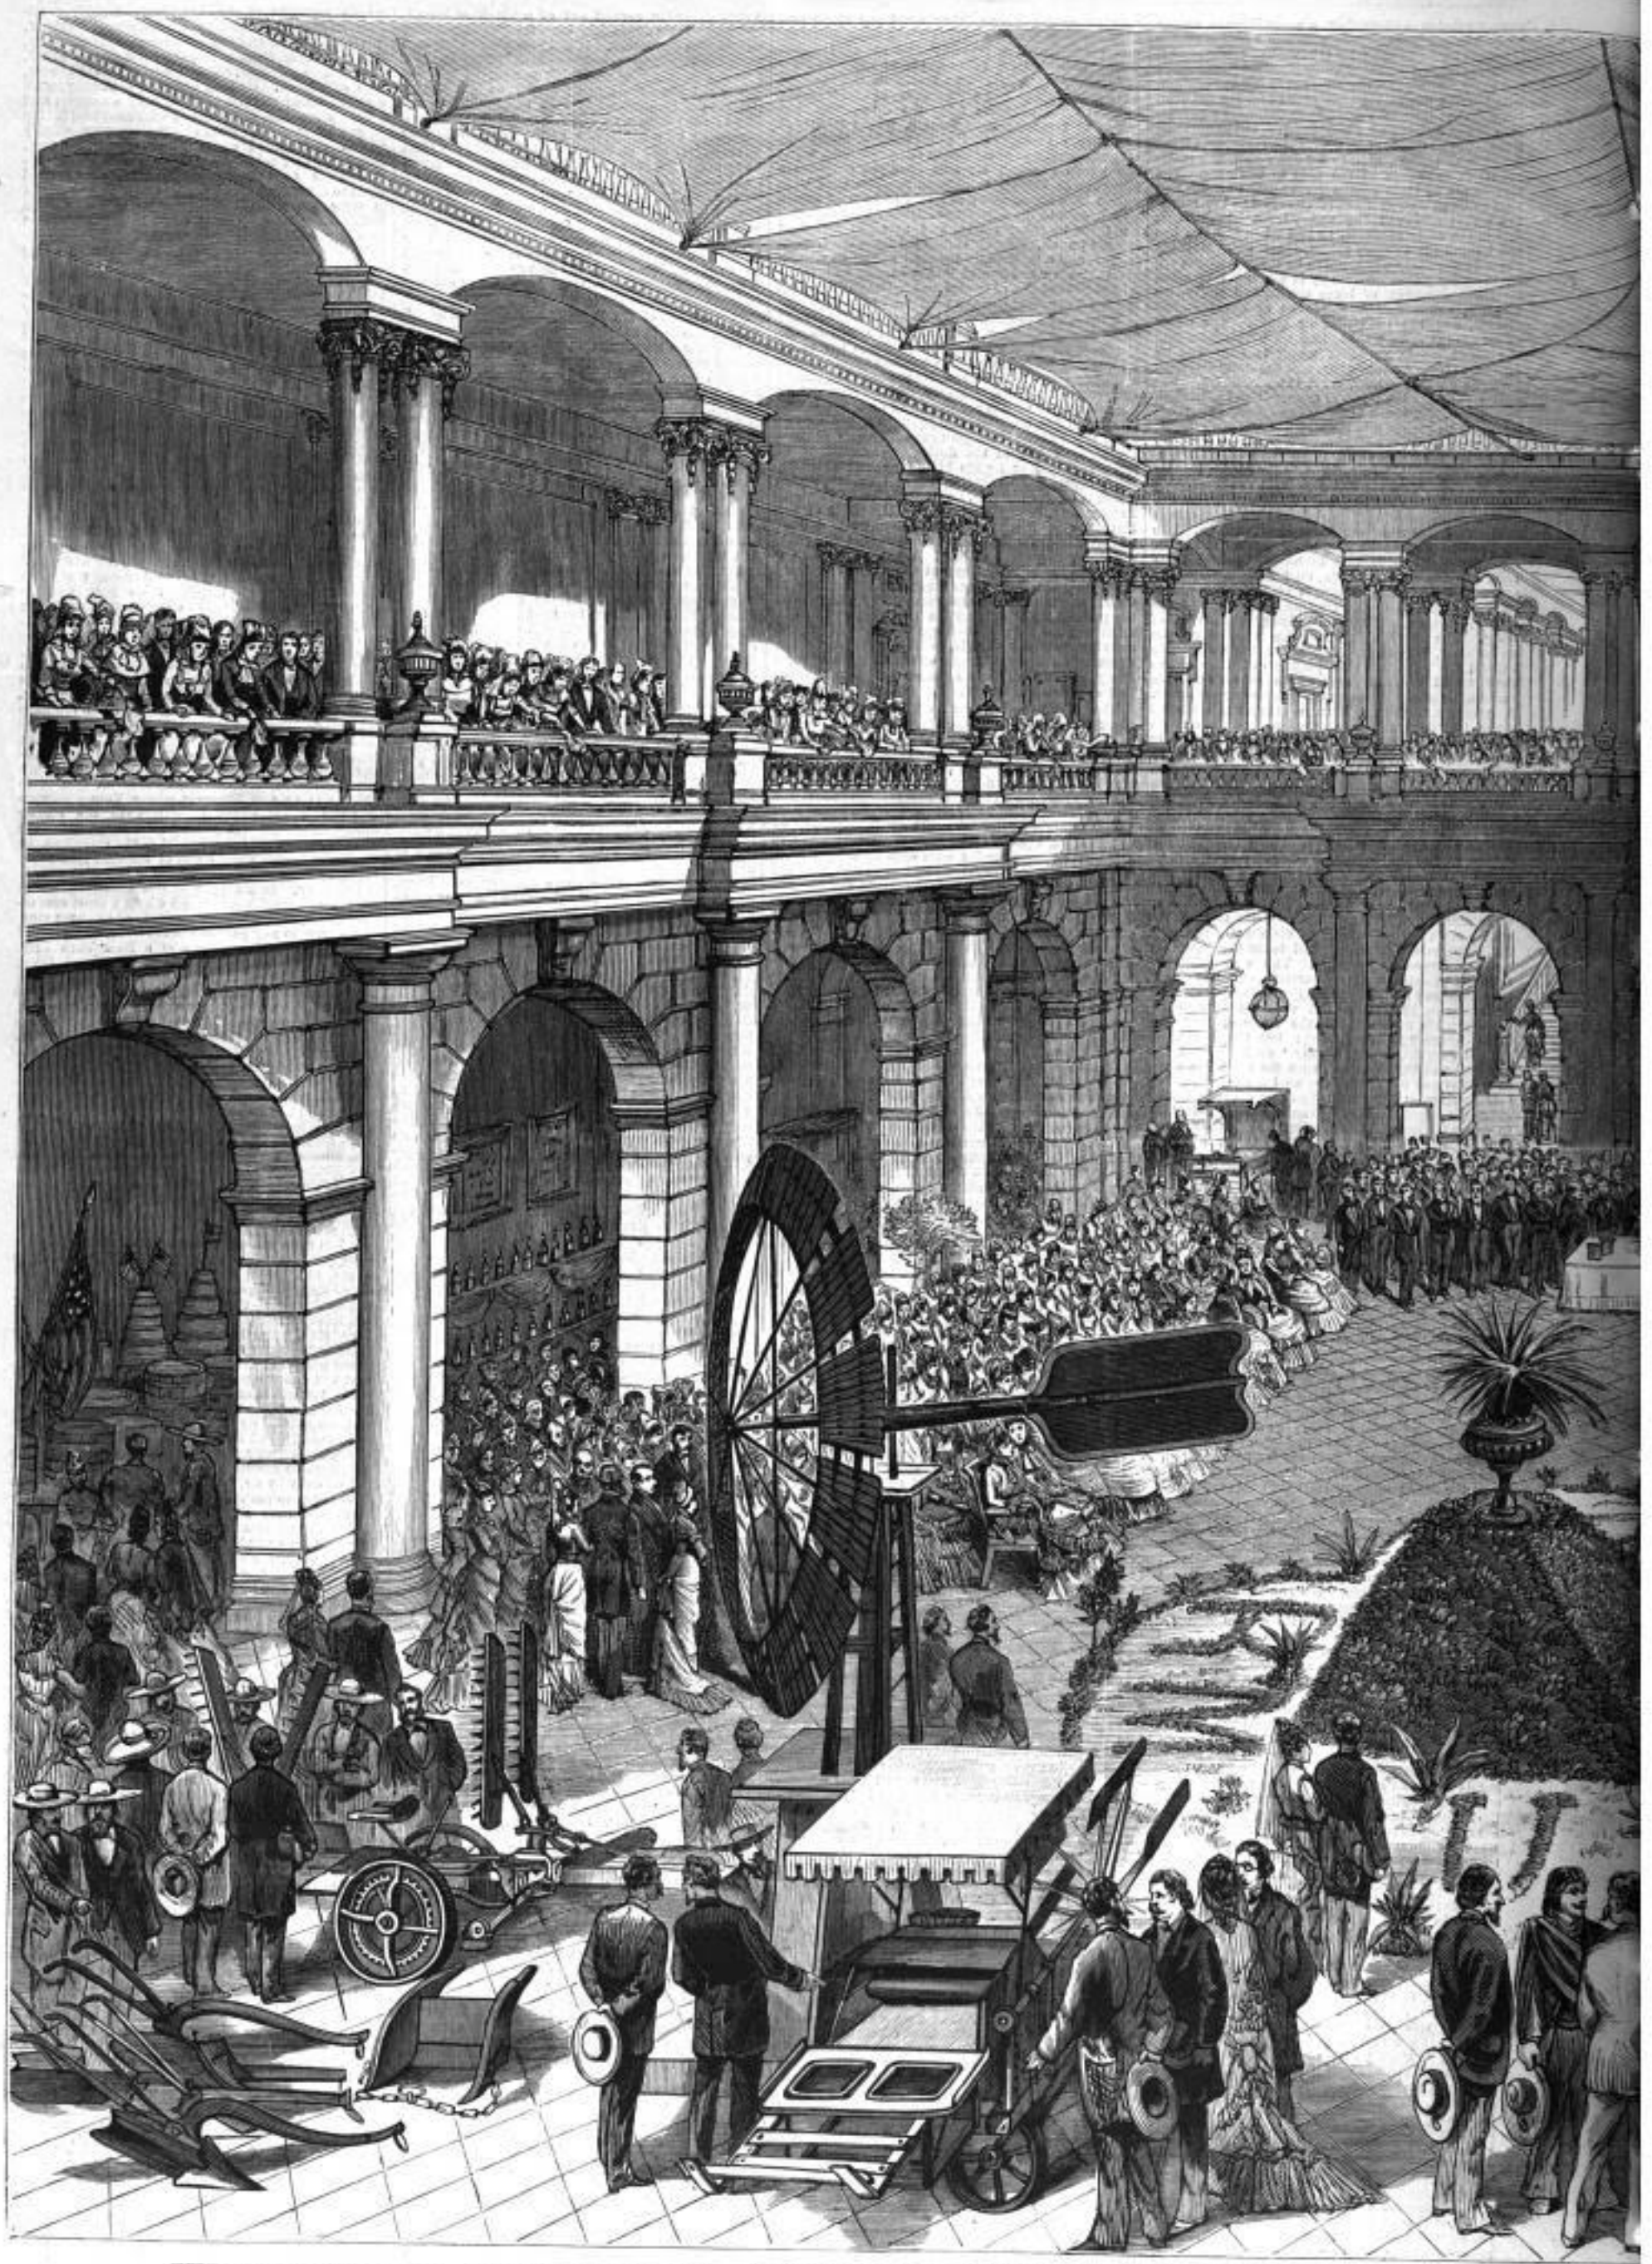
The Plateros leads to the Plaza Mayor, the grand square of the city. This square is of oblong shape, 270 yards long and 200 wide. Its northern side is entirely occupied by the cathedral and Sagrario. The cathedral is erected on the very spot where the conqueror found and destroyed the Aztec pyramid and temple dedicated to the Mexican god. Cortez gave this site to the Franciscan monks to build a church on. The first cathedral, built in 1530, was demolished. The construction of the body of the present edifice was commenced in 1573, and the building was completed in 1667, at a cost of $1,762,000, the Crown of Spain paying the little bill. The towers were completed in 1791 by Damian Ortiz, an American architect, at a cost of $194,000. The bases of its columns are cut out of the Aztec idols found in the *teocalli*. The cathedral measures from north to south 426 feet, and from east to west 200. The height of the roof is 175 feet, the height of the towers 200 feet, and their width (square) 32½ feet. The gates of the basilica are of the Ionic and Doric orders. The cathedral presents a very majestic appearance, crested as it is by a superb dome and elaborately wrought twin towers. The Sagrario is too florid to command more than artistic comment. Laid into the wall at a height of five feet nine inches from the pavement, on the west side of the cathedral, is the famous Aztec calendar, carved out of a block of basalt, and weighing twenty-five tons, its diameter being twelve feet six inches. It has occupied its present site since 1790, and is supposed to date back to 1779. From this calendar stone the system of ancient Toltec astronomy has been preserved to us. The Palacio del Gobierno stretches along the eastern side of the *plaza*, on the western a row of houses supported by a colonnade called Los Portales de Mercaderes, and on the south side stands the Casa de Cabildo, the seat of the *Ayuntamiento*, or municipal body. The centre of the *plaza*, thanks to illfated Carlotta, is planted with umbrageous trees, always in leaf, beneath which are beds of glittering flowers, marble seats and fountains. An elevated stand occupies a prominent position, and here bands, such as Theodore Thomas might fairly sigh to conduct, discourse Beethoven and Lecocq, Wagner and Offenbach—stepping from the sublime to the *bouffe*, from the sonata to the fandango.

In the *patio* of the Iturbide was a notice-board, and on this board the manager, from time to time, posted the programme of procedure. The first official announcement informed the deputation that a grand theatrical entertainment would be held in their honor upon the evening of Wednesday, the 15th of January, at the Teatro Principal, and the second, that the President would receive them at the palace upon Thursday, at 11 A. M. *Costume de rigueur* in broad daylight is very trying, and it tried and convicted us without leaving the box. Waiters know how to dispose of their hands and legs and feet, but an ordinary man suddenly impressed into a claw-hammer, tight boots and lighter kids, in a blaze of sunshine, becomes possessed of the feeling that his attire simply consists of the three articles just mentioned, and he suffers spasmodic awakenings accordingly. In ramshackle carriages we proceeded up the Plateros, across the Plaza Mayor, and entered the courtyard of the Palacio, built in 1693 on the spot where Cortez had constructed a palace for himself, and which served for a residence for the Spanish Viceroys to 1692, when it was destroyed by fire. It occupies the entire length of the eastern side of the plaza, and measures 2,867 feet of an architecture that, to say the least of it, is exceedingly tame. After the destruction of Mexico City, Charles V. placed this site at the disposal of Cortez, and in the lordly dwelling-house erected by the intrepid desperado was a single apartment capable of containing 3,000 persons. The palace contains the President's official apartments and offices, the cabinets of the ministers, the headquarters of the military commander, a barracks, the treasury, and archives of the nation, while the *patio* would seem to be the happy hunting-ground of those barr-like parasites known in other countries as "waiters on Providence."

We ascended a steep, stone stairway, very dingy, and very dilapidated, till we reached a long corridor, the walls simply whitewashed. At the extremity of this corridor we were received by an usher, who conducted us through a singularly unpretentious-looking, dismal anteroom, the furniture very old and very worn. A double door upon the right, through which a blaze of sunlight fiercely streamed, led into the Reception Room or Salon de Iturbide. This apartment is lofty and charmingly proportioned. It is lighted by three deeply-alcoved windows. The ceiling is of cedar, laid flat upon open oaken beams, richly gilt. The walls are hung in crimson damask, the Mexican imperial arms in relief on every panel, together with the motto, "Igualdad en la justicia." From the ceiling is suspended a Venetian mirror, worthy of the palace of Marino Faliero. The carpet is Aubusson, soft and caressing, and despite the vile, cheap, tawdry rugs, with which it is wantonly encumbered, it maintains the prestige of high caste. The mirrors are old, cheap-looking, and out of place. A very handsome marble mantelpiece supports a genuine Louis Quatorze clock, and one by which the Grand Monarque may have set his pocket timepiece, as it bears the genuine imprint of glittering Versailles ere Madame de Maintenon placed it in sackcloth and ashes. The furniture is of rosewood, upholstered in scarlet silk. A centre-table of rosewood with a marble slab is ornamented with an epergne of dead silver, the fruits and flowers exquisitely wrought. Around the walls hung proof-prints representing scenes in the life of Napoleon the First, and alone in its glory the portrait of Iturbide in kaleidoscopic uniform, surmounted by such a crop of decorations as would lead one to imagine that they had fairly coloized upon his manly breast. The apartment reminded me of the reception-room at Chiselhurst which "the man of Sedan," fallen Cæsar, had decorated somewhat after the same fashion—the Imperial cipher all over the walls, the gold beading all over the window-shutters and doors, and, above all, that carpet all over the room.

The President stood with his back to the light, and at a respectful distance his Cabinet. In complexion he is of a sunkissed brown, his eyes are large and dark, honest and fearless, with an inner softness that persistently creeps into them, especially when he smiles. His nose is straight, the nostrils expanded. His mouth is firmness itself—it means unconquerable resolution, and a tenacity of purpose that recognizes obstacles but for the purpose of overcoming them. The chin is hard and square. He shaves to his black, tufted mustache. His hair is close-cut, soldier fashion, and is crispy and grizzly. He is over the middle height, with broad shoulders, and a slim waist. His hands and feet are very small. He was attired in a black frock coat and vest, black pants, white shirt, with plain gold studs, and a black tie. His watchchain, his only ornament, was of turquoise and gold. The President of the Deputation having been duly introduced, the members of the deputation stood in a semi-circle while Mr. Fisk read an address prepared by our Executive Committee for the occasion. This was interpreted by Colonel Whiting, the manager of the excursion, who is thoroughly conversant with the Spanish tongue. President Diaz replied in what is conventionally styled "suitable terms." Then came more interpreting, and an American flag was handed to the hero of Puebla. After this expression of mutual good-will, the ladies were presented, and at their high heels the gentlemen of the party. The Press, at the desire of President Diaz, were made known to him separately and individually. On this occasion he was good enough to pay the proprietor of FRANK LESLIE'S ILLUSTRATED NEWSPAPER a very handsome compliment; but as I had the honor subsequently of being received by him at breakfast, I shall reserve his particular utterances until I come to his inner life. We now moved in a body into the Council Chamber. This apartment is imposing from its great length, since it runs one-half of one wing of the palace. At the southern end is a dais carpeted in claret-colored velvet. A golden canopy with draped curtains of claret velvet stands against the wall, beneath the canopy a throne and six chairs of state, crimson silk and gold. The Mexican arms, wrought in silk, hang over the throne in a glazed frame. Right and left, extending along the dais, are chairs of state to the number of twelve. In the corners are superb candelabra, fifteen feet high, composed of china and gilt bronze, and of great value. The ceiling is flat, with gilt cedar beams. Venetian mirrors hang along the walls, and at intervals full-length portraits of the Presidents, including Hidalgo, Juarez, Matamoras, Morellos, Iturbide, Guerero, Arista, and our own George Washington. The portrait of Diaz, painted by a Mexican artist, Sanchez, is admirable, both as regards likeness, tone and finish. He is in uniform, dark-gray, with a raised collar worked in gold, gray waistcoat and a blue waist-sash, ornamented with gold braid. He grasps a telescope. Near him is a mounted orderly and a dismounted cannon. Two lions, life-size, couchant, in Puebla marble, also ornament this tunnel-like apartment. The deputationists paid visits to the members of the Cabinet, who received in their respective bureaux—that of Señor Riva Palacio reminding me of Lord Beaconsfield's in Downing Street, the surroundings being costly, artistic and all-satisfying to the eye. Tancred holds that a thing of beauty is a joy for ever.

Such of the deputationists who had ventured upon bringing exhibits, with a view to developing the resources of the Mexicans, became considerably exercised as the day approached upon which the opening of the Exhibition was to take place, and when it was announced that the President with his Cabinet and all the *sociedades* of the city of Montezuma would attend the ceremony in state, the excitement gradually rose to something akin to fever heat. The Mineria, or School of Mines, the building allotted for the purposes of the Exposition, is externally a handsome stone structure of some pretensions, while internally its proportions are singularly striking and imposing. The large *patio*, or open court, is surrounded by a colonnade of arches, and these are surmounted by a gallery, the roof being supported by pillars. The gallery is approached by a massive and elegant double stairway. Over the *patio* was stretched a canvas awning which subdued the blazing sunlight to a muffled voluptuous haze. Beneath the arches, the American exhibits were displayed on long wooden counters, the Mexicans courteously exposing their wares in the upper portion of the building. The centre of the paved floorway was decorated with a bed of the greenest of moss, upon which, in glowing flowers, flamed the letters E. U. A. and E. U. M. lovingly entwined—*Estados Unidos Americanos* and *Estados Unidos Mexicanos*. I could gain no definite information as to the date of the erection of the Mineria. One gentleman informed me that it was four hundred years old; another that he recollected when the foundations were being laid; and it is thus that statistics are gleaned 7,600 feet above the level of the sea. The Mineria is an establishment where Young Mexico receives a gratuitous education in the higher branches, the mineral college from which it derives its name being part and parcel of the erection. In the lecture-room were busts of eminent Mexicans, together with specimens of the mineral wealth of the country. In a corner of this apartment stood a telegraph-machine, through which a most courteous and intelligent official was ready to convey messages free to any part of the republic, but beyond it—no. The representative of a New York firm, whose goods had been detained at Vera Cruz, worked this instrument to some purpose as he hurled anathemas at the heads of the Vera Cruzian authorities at intervals not exceeding ten minutes, and until he received a reply intimating that his exhibits had cleared the jaws of that shark-like port. Amongst those who exhibited at the Mineria were the Messrs. Rogers, of John Street, New York, who are under contract to supply Mexico with post-office boxes. Only fancy, there is not a single postman in the City of Mexico and no delivery! If a letter comes to you, your name is advertised in a large placard in a back yard. Opposite your name is a number. You return to the office and howl this number at a clerk, who stands behind a set of bars as though in a prison or a cage. He may utter the cabalistic word *Mañana*—to-morrow—or he may wag his head with the sagacity of a Lord Burleigh—in any case you must wait; and then if you hail from the other side of the Rio Grande, you must prepare your twenty-five cents per quarter ounce, this being the postage from greedy Vera Cruz. Messrs. Rogers have also contracted—the result of this visit—to supply water-pipes to the city. Mr. Henry Prouse Cooper, the merchant tailor of Broadway, exhibited a stock worthy of Poole or Smallpage, and succeeded in measuring the illustrious person of the President for a suit of clothes that will cause sighs of envy amongst the Cabinet when Porfirio Diaz attends a meeting in his new-fledged garments. Mr. Kelly, of Chicago, "a wild, mad wag Hal," rivaled the splendor of the sun that daily sets behind the Sierras, by the lustre of his chromos. The Anheuser Lager was displayed to considerable advantage, while Cincinnati hams were cut up daily by Mr. Davis for the delectation of those who chose to partake of free lunch. However, despite the beer and ham, the railroad supplies seemed to possess the stronger fascination, and the good citizens would hang over and fondle a driver, or a polished bolt, while the tea-services of the Granite Company of St. Louis and the prints exhibited by Mr. Bowen were viewed with scarcely so much as a passing regard. As I shall discuss the merits of the exhibits in detail further on, I shall proceed to the ceremony of the opening.



Porfirio Diaz is as punctual as Victoria Guelph, and at eleven o'clock precisely the guard of honor stationed at the gates of the Mineria presented arms and the band struck up the national anthem—which, *par parenthèse*, is not particularly melodious or yet forcible—as the President, accompanied by the members of his Cabinet, entered the *patio*. Here were assembled some four hundred ladies and gentlemen, the ladies all in feeble Parisan toilets, instead of the graceful *mantilla* or *rebo*, the *peinz* and the eloquent *abanico*. Everybody arose as the Presidential party approached, and everybody sat down when the Presidential party sat down. Diaz goes to business at once, and, without any preliminary whatever, intimated that he was prepared to hear Mr. Fisk's address. Mr. Fisk, who is a tolerably cool hand—a Kentucky lawyer—took the hint, and, adjusting his spectacles, delivered himself of the address with which the public is already familiar.

The allusion to cementing the alliance between the two republics by means of intermarriage was received with considerable favor and applause. The President replied, reading his reply, and then came a speech from Señor Ayeos, the Gambetta of Mexico, as full of rhetoric as a Home Ruler, and rich in trope, allegory and metaphors. The St. Louis Granite Company now came to the front, and presented Señor Diaz with a superb tea set of this celebrated ware; then the band played a fandango, and the President hastily quitting his chair of state, proceeded on a visit of inspection around the American exhibits.

Wheat Shipments to England.

From returns made up in England, it appears for the nine months of last year, ending October 1st, there were imported into England 42,182,102 cwt. of wheat, or about 78,000,000 bushels. The remarkable fact in the return is that nearly two-thirds came from the United States. Of the 42,182,102 cwt., 25,112,339 came from the United States, as we find by adding the shipments from the Pacific side to those from the Atlantic side.

THE SAFEGUARD.

A BABY crept to his father's knee,
And was lifted up and lulled to rest,
Till the blue eyes closed, so tired was he,
And his little head fell peacefully
At ease on the ready shoulder there,
While the baby hand, so soft and fair,
Lay like a shield on his father's breast.

Of old 'twas said that when men drew near
To fierce temptation or deadly strife,
And lost their way in a maze of fear,
Or perilled their souls for worldly gear,
By a way unknown an angel hand
Would lead them out of the dangerous land
Into the light of a noble life.

The story is true for the world to-day:
We see no white-robed angels mild;
But out of the dark and perilous way
Where men and women forget to pray,
Into the peace of a purer land
They are led by a gentle, shielding hand—
The hand of a little, helpless child.

A SECRET MARRIAGE
AND
ITS CONSEQUENCES.

BY THE DUKE DE POMAR,

AUTHOR OF "THE HONEYMOON," "THROUGH THE AGES," "WHO IS SHE?" "FASHION AND PASSION," ETC.

BOOK FOURTH.
LADY ROLLINGFORD'S SECRET.

CHAPTER XII.—MADAME DE FLEURVILLE.

THE room into which Mrs. Champion and her friend, Mrs. Cassilis are shown on the following day is not the elegant boudoir into which we have already twice penetrated, but a larger saloon, hung with black satin, and surrounded by Venetian mirrors framed in silver, which forms the first of her suite of apartments, and which, doubtless, Madame de Fleurville has so arranged, by its quaint style and solemn ornamentation, for the express purpose of awing her visitors, before giving them admittance into her especial sanctuary.

Soon the door leading into the inner rooms is thrown open, and Madame de Fleurville, attired in a loose but gorgeous wrapper of white cashmere, embroidered in gold, the long, flowing fringes of which sweep the ground as she advances, walks into the room.

When her deep black eyes rest upon her two visitors a cold shiver runs through her frame, and for a moment she is unable to utter a single word, but remains standing before them, silent and motionless, as if in a dream.

Mrs. Champion, perceiving her confusion, musters courage, and is the first to speak.

"Madame," she says, advancing two or three steps, "permit me to present myself and my friend; I am Mrs. Champion of Liberty Hall, and this lady is——"

"I know already—Mrs. Cassilis," the French-woman says, with the air of a woman who has suddenly made up her mind; "and I can guess the object of her coming to my house. Pray be seated, madame, and speak with entire confidence."

Saying which, she politely points to the sofa, and taking a chair seats herself close beside them.

"You say that you know me, Madame de Fleurville?" Louisa now begins, endeavoring to speak as calmly as her feelings will allow her, "and that you can guess the errand that has brought me to your house; perhaps you will be kind enough, then, to spare me the pain of being the first to approach the subject." She pauses for a moment as if to take breath, and then, lifting her eyes for the first time, and looking her rival full in the face, she adds, "You know my husband?"

"Yes, madame; Mr. Cassilis has been a friend of mine for the last ten years; and, believe me, I have not a truer or a more devoted one in this world."

"Ah!"

"Pardon me, madame, I meant not to give you pain. I have known your husband for many years, and I have always found him a true and worthy friend; but, by that heaven which we both expect one day to gain, I swear to you that he has never been anything more to me—and never will!"

There is so much feeling in these words, so much nobility and pathos, that Louisa cannot control a sigh of relief when she hears them.

"I believe you, madame," she says, breathing more freely, and as if a great weight had been removed from her heart. "I believe you; yet how is it that my husband is always to be found with you, and that he passes the greater part of his time in your house?"

"You speak, madame, as if you held me responsible for your husband's actions. If he choose to come to my house, and if he have the bad taste to prefer my society to yours, how can I prevent it?"

"But you encourage him, you invite him," Louisa now ventures to say, emboldened by the actress's mild words and pleasant smiles.

"I encourage him! Far from it; I never encourage any man. I despise them too much for that; they are, one and all, unworthy of our regard, and your husband, madame, allow me to say, is no better than the rest."

"You despise Rupert! You have the heart to speak like this of *him*, and he loves you; and it is for you that he abandons his wife and his home, for you that he would sacrifice his life and his honor?"

"You love your husband, though you know how unworthy he is of your love?"

"Yes; I love him."

"Alas, then it would be no use my trying to prove to you how unworthy he is even of your pity! My heart bleeds for you—I know what it is—I, too, have loved a man like that!"

"And *he* despised your love?"

"No—he loved me as much as I loved him."

"He was the husband, I suppose, of some one else?"

"No—he was my husband."

"He got tired of you, and left you, then, as mine has done?"

"Oh, no, madame; it was I who left him," Zoé exclaims, tears gathering in her eyes. "I left him, though I loved him better than life, better than paradise, and I left him, not to dishonor him—oh, no!—but to return to him that honor which he had but too readily sacrificed for my sake."

"But you say that he was your husband?"

"I will tell you all—yes, all. I will open my heart to you, and then you will see whether you ought not rather to pity than to despise me."

Resuming her seat, Madame de Fleurville, not noticing, or rather appearing not to see, the strange look of weary disdain which has spread itself over Louisa's face, speaks in a low but thrilling voice, and as if she intended every word that came from her lips to sink deep into the heart of her youthful listener.

"I am not so young as you doubtless take me to be. I was born many years ago. I was born in one of the southern provinces of France, and of very poor and illiterate parents. I will spare you the history of my childhood; it was one of sorrow and misery. I will commence the history of my life here, in Paris, where I was sent whilst yet a mere child. I have told you that I was poor and ignorant, and I was but a mere servant-girl; yet I was pretty, bright, and coquettish, and it was not long before my master noticed me and began to speak to me of love. I was very young, no one had ever addressed me thus before, and he was a *grand seigneur*, and very handsome—yes, very handsome, though he was no longer young—and then the thought that I, a mere peasant girl, could have inspired a proud aristocrat, a thorough man of the world, with love made me forget everything. I was so ignorant and so young! One day, seduced and deceived by his promises, for the wretch even swore that he would marry me, I yielded to him. It was not my fault, I scarcely knew what I was doing; his promises, his soft words, his looks of devotion, had turned my head; and yet how I have suffered for it since! Great God! I must not think about it."

Passing her hand over her eyes, as if she would fain banish from her the recollection of her past, Madame de Fleurville pauses for a moment in the narration of her story; and then fixing her large, black eyes upon the footstool at her feet, as if she would rather not meet her visitor's gaze at that moment, continues:

"Our *liaison* did not last very long; the count's mother, who was my mistress, soon discovered what was going on, and, acting on an impulse of rage, she ordered me out of her house, and closed her door upon me for ever. Her son, however, promised to take care of me, and I—fool that I was—believing still that he intended one day to marry me, submitted to everything, and even felt proud in my heart of all the miseries I had to undergo for his sake. He took a pretty, little apartment for me on the other side of the Seine, in a quiet and seldom-frequented neighborhood, and he engaged masters who came daily to instruct me and to teach me music, dancing, and other accomplishments. What pains I took to learn all these things! Oh, I was so anxious to become in every way worthy of being his wife! But, at last, one day I learnt the fatal truth—my base seducer had never intended to marry me, and I, my poor young heart torn with grief, and blinded by indignation and hatred for him—I left him. I ran away from the house he had taken for me in a feigned name—for that man did everything in an underhand way—and I have never seen him since. Blinded by despair, I forgot all my good resolutions, and threw myself headlong into the arms of my unlucky fate. Men were attracted by my accursed beauty, and the money which I found so difficult to obtain by the work of my hands was thrust upon me for one look of my eyes. You can imagine the rest—ah, madame, there are many losses that are bitter enough, but there is not one so bitter as the loss of the right to *respect!*—and you wonder that I despise mankind!

"In less than two years after this I became one of the most fashionable women in Paris. I led a gay and brilliant existence, I possessed carriages and horses and diamonds; and the proudest ladies of the imperial court imitated my dresses and my style. Yet I was not happy, my soul rose above all these frivolities; dearly as I loved show and comfort, I longed for peace and self-respect, and in the midst of all my triumphs I could not help feeling how lawless and despicable my life was. One day, at the Opera, my eyes rested upon a young fellow whose frank, honest eyes were turned towards me. It was a fair, noble face—a face such as I had seldom seen before—and the strange look in his eyes, as they met mine, seemed to condemn and pity me at one and the same time. That look was a revelation to me. Until then I had fascinated men, and ruined them, without feeling one pang of remorse, however slight. I hated them too much to trouble myself about them. They came to me, and they sacrificed everything for me of their own accord, and I felt a secret joy in the thought that that beauty which had lost me could, in its turn, scatter ruin and misery amongst them. But the face of that English boy was the first to awaken in me a sense of my wrong-doing, and after that I was always seeing that face in my dreams—that face with its clear, pure, blue eyes that seemed, as I said before, to condemn me and to pity me at one and the same time. One day I flung myself at the feet of a priest, and I confessed all my sins to him; and soon after this, acting upon his advice, I advertised in the papers for a situation, and, as I only asked for very moderate wages in exchange for the rudimentary instructions I could give in French, music and dancing, I soon obtained a situation which I believed in every way would suit me to perfection. It was in an island of the northern seas—an island which seemed to me almost out of the world; and I was to live with a noble and thoroughly respectable family as one of themselves; and so I went. But, alas, my cruel fate pursued me even there. The young fellow, whose handsome face I had remarked so often at the Opera in Paris, came to stay there as a visitor. He did not recognize me, fortunately, but he did worse—he fell in love with me; and I, for the first time in my life, knew that my heart no longer belonged to me. I loved that boy as I shall never be able to love again. I loved him with all my heart and soul, and I would have died rather than have caused him the smallest pang; and yet my unhappy fate ordained that I should be the cause of his ruin and death!"

As she says this, Zoé's eyes are filled with tears, and Mrs. Champion, who has been sitting at a little distance, now approaches, and takes a seat closer to her; her eyes, too, are beginning to fill with tears, and her breast rises and falls as if unable to conceal her emotion.

"Ignorant of my past—ignorant of who I was, and regardless of everything save his great love—he offered me his hand and his name, and I—blinded by love as I had before been by despair, and believing that my past would now be forgiven and forgotten, and that I could brave the whole world in his arms—I agreed to marry him. Yes, it was wrong—very wrong; I should never have married him! We were very happy for some months—indeed, I can say that those were the only happy days I have ever experienced; but one day some friends of his came to our island, and told him who I was. My dream was over. By the way he received the dreadful news I knew that all must be at an end between us—fortunately our marriage had been a secret one; no one knew that he was married, not even his father, for at my particular request he had agreed to keep it a secret until his father's death—so I determined to fly from him. I wrote a letter telling him all, and assuring him that our marriage was not a legal one, and at the time I firmly believed such was the case—for we had not been married in a church, and we were of different religions—but since then I have discovered that in Scotland even such a marriage as that is a binding one; and rushing to the village close by, I bribed two or three fishermen to convey me in their small fishing-boat across the sea to Holland; and without seeing him again, I left him, as I then thought, for ever.

"My first care on landing in Holland was to seek a convent. 'In the house of God alone,' I said to myself, 'is one's past entirely forgotten and all one's sins forgiven—there, before the Almighty, all are alike, and Christ does not scorn to take a bride even from the dregs of society. At last I did find a convent, though it was only a very poor one, where I could rest my weary frame. And now, from the extremes of luxury, indolence, indulgence, pleasure and extravagance, I found that I had come to the extremes of hardship, poverty, rigid discipline, suffering and toil. From a life where every wish was gratified, I came to a life where every privation had to be endured. Yet I would have undergone all this with patience and submission, for I was ready to do penance for my sin to the very last, and, if needs were, to starve myself to death to atone for it; but I had not been many months in this convent when the nuns discovered that I was about to become a mother. In vain did I tell them that I had been properly married, and that this child God had given me was no child of sin. The reputation of the convent, they told me, required that I should be expelled; and so, regardless of my miserable condition, and utterly careless of the great wrong they inflicted upon me, they publicly *expelled* me from their cloisters! Ah, am I not the most unhappy woman you ever knew?"

Mrs. Champion's keen gray eyes have been wandering from one to the other of these two women all this time; neither of them, however, seemed to pay any attention to her; but had they done so they would have seen an expression of agony in her handsome, classic face, such as no physical misery had ever brought there.

Zoé de Fleurville, too, seems unusually oppressed, a ghastly paleness has overspread her handsome face, and a cough, against which she has been vainly trying to struggle for some time, now interrupts her frequently; yet Louisa—though she has been listening with gradually increasing attention to this strange history, and something within her seems to draw her proud little patrician heart towards this poor woman—now raises her head, and forgetting everything but her own wrongs, and remembering that she is actually in the presence of the woman for whom Rupert has abandoned her, she gives way at last to her oppressed feelings, and exclaims in heartrending accents:

"You call yourself the most unhappy woman in the world! Ah, if you knew *my* history! What are your sufferings compared with mine?"

"Madame," Zoé says, rising from her chair and advancing a few steps towards Louisa, "I know your history, and though I feel for you from the bottom of my heart, yet I maintain that I am the most to be pitied, for, though the world has indeed treated you harshly, through all your sorrows you still have a husband who loves you."

"Loves me—when he spends his life in courting your favors!"

"Yes, madame, he loves you still; though, as you say, he passes his life courting my favors—and it is I, Zoé de Fleurville, who tell you so."

It is now Louisa's turn to rise and to confront Madame de Fleurville.

"What mean you, madame?"

"Listen. When I left my husband's side I swore never to love again. I have kept my promise for twenty years—I have never loved any other man. But a few months ago I saw Rupert Cassilis again, for the first time after many years; great changes had taken place in him, for when I had last seen him he was a mere boy; and directly I met him again I felt that I loved once more—all my old passion returned to me. I felt myself ready to do anything to win his love, but I knew that he was your husband, and so I tried to conquer my feelings. I smothered my passion as best I could, but not for his sake—no, for yours!"

"For mine?"

"Yes, listen. I know that he was your husband, and for this reason *only* I hid my love from him, and never permitted him to see it; yet I wanted to try him, to see whether he really was worthy of you, and so I endeavored to fascinate him without betraying myself, and I have found——"

"What?"

"That, though he evidently takes a pleasure in my society, and often comes to my house, his heart is all the time true to you—that he loves you, although he scarcely realizes it himself; and since then all my care has been to endeavor to show him the true state of his feelings, and to bring that reaction upon him that shall send him a truly penitent husband back to your feet."

"You have done this for me! For me—a woman you have never seen in your life! Why? Madame de Fleurville, why?"

Zoé de Fleurville, without taking her eyes off Louisa, throws herself at Mrs. Champion's feet, and, in a voice which no longer tries to conceal her emotion, cries:

"Shall I tell her, Mrs. Champion—shall I tell her?"

"Yes," the divine Dorothea answers, rising from her seat and lifting her from the ground. "Yes—the moment has come at last—it is better she should know all. She has suffered enough already on account of this horrible mystery, which until now has deprived her of a mother's heart and a mother's love. It is for this that I have brought her here, that you may yourself tell the secret which *I* have promised never to reveal; but which a thousand times already I have been on the very point of disclosing to her."

"Mrs. Champion, what means this? Who is this woman? For heaven's sake tell!"

"Can you not guess, Louisa?" Zoé exclaims, devouring her with her eyes. "Does not your heart tell you?"

"My heart—great God, can it be—no—oh, no!"

"Yes, Louisa, yes! You ask me why I have sacrificed myself for you—why I have endeavored so hard to make your husband love you while I myself loved him all the time; it is because—oh, Holy Virgin, assist me! Louisa, Louisa! turn not from me! have pity upon me! forgive me, Louisa—it is—because I am your mother?"

BOOK FIFTH.
FRANK'S TWO WIDOWS.

CHAPTER I.—HOW LOUISA FINDS HER MOTHER.

HER mother! So this is the end of all her ambitious dreams, of all her long-cherished visions of a palatial home and an illustrious birth. She, who believed herself the child of a royal princess, is but the daughter of a Princess of Tulle!

Poor Louisa has indeed suffered a mighty and crushing blow; yet at the sight of this beautiful woman, whose deep earnest eyes seem fixed upon her, as if her very life depended upon the way in which she may take the harrowing revelation she has just made, and whose heart-rending emotion is but too easily discernible in her handsome proud countenance, which so resembles her own in its unmistakable southern traits, Louisa cannot find it in her heart to scorn her.

For some time the three women are too greatly moved to utter a single word, for Mrs. Champion, whose noble heart is ever ready to sympathize with the sorrows and joys of others, shares their emotion; but presently thinking that perhaps both Louisa and her mother dread to be the first to speak, or that their hearts are too full for utterance, she, in a tender voice, says:

"I have kept my promise to both of you, though I have found it no easy matter to do so. To you, Marie—for you will allow me to address you by your real name now, will you not?—I promised to look after your daughter, and to watch over her, as you alone would have done could you have been near her. And to your dear child I promised to bring her one day into her mother's arms. Now my task is done; for, in spite of Lady Rollingford's precautions, and without breaking the promise which I once, many years ago, made her, of never revealing to any one the secret of your birth, which I alone knew, besides herself, I have succeeded in bringing you together."

Marie, whose greater experience of life has enabled her to conquer her emotion the soonest, is the first to break the long silence which follows Mrs. Champion's low-spoken sentences.

"What a wretch I must seem in your eyes! How you must despise and blame me—you who are so true, so innocent, so pure! Ah, Louisa, my own dear Louisa, never before have I realized so fully the depths into which I have fallen! Yet surely you will not disown your mother—you will have some pity for her? Oh, speak, dear child, speak?"

"Mother! mother!" is all poor Louisa can find in her heart to say; but that one cry is enough to reassure her mother, and to show her that there is still a heart in her child that can feel for her with a daughter's affection, and that will enable her to overlook her past.

"You are my mother—you!" she murmurs after a long pause. "Then my father was——"

"Francois Reymond, Lord Rollingford."

"Oh, thank God, it was not La Mazerolle!" Louisa cries, unable to repress a cry of relief, "but then you were——"

It is Marie who finishes the sentence for her:

"His wife—his lawful wife."

"Then Lady Rollingford——"

"Was never his wife; yet, to atone for the cruel wrong I did him and his family when I married him, I urged him to take to himself another wife, and I would be the very last person in the world to stand up and say she has no right to the title she bears."

"But does she know?"

"Yes; she knows everything. Do you think that your noble father would have been so base as to have deceived her?"

"Then she knows that she was never his lawful wife?"

"She was only Lord Rollingford's wife before the world. It was partly pity for him and partly ambition that caused her to lend herself to this deception."

"And she knows who I am?"

"Yes; and that is the reason why she adopted you and made you her heiress. The name you bear, and which you have doubtless until now thought you owed to her charity, is lawfully your own, and the estates which she intends leaving you should belong to you by right. Oh, why did I marry that boy? Why did I ever love him? But you forgive me, Louisa? You do not despise me too much to call me *mother?*"

"Oh, no—no! I see now how cruel I have been towards you. Forgive you! Ah, it is I who

Digitized by Google

should ask your forgiveness! *I*, who for so many years have lived enjoying every luxury of life, careless of my true history, and without ever thinking that perhaps while I was feasting in the sumptuous halls of a palace my poor mother was suffering and starving, uncared for and despised." As she says this Louisa lifts up her eyes and casts a rapid glance round the apartment, when the luxury and elegance which meet her gaze in every direction cause her to shudder and tremble from head to foot.

"You are astonished to see me in such a magnificent home, Louisa. But I have not told you yet the whole story of my life. Let me finish it now; so that in future such sad topics may never more arise between us.

"When I was sent away from the convent in Holland, once more a lonely wanderer, to tread my weary way uncared for and despised by all, my mind was made up at once. Convent life had become unbearable to me—I would no more expose myself to be publicly expelled from a house where, as a penitent sinner, I had gone to endeavor to atone for my past in the world; yes, even amongst the gayest idlers in the most frivolous capital in Europe, I felt that I could better expiate my past than within those narrow walls, and amongst those even narrower hearts. So I came direct to Paris, and feeling a confidence in myself, which until then I could never have believed myself capable of experiencing, I went to the Comte de la Mazerolle, a man in whom, in spite of the gay life he leads, and the reputation he has acquired in the world for heartlessness, I had before this found a true and trustworthy friend; and to him I related my history, without, however, mentioning any names.

"I was not mistaken in my hopes. La Mazerolle listened to me with a sympathetic ear, promised to keep my secret, and offered to aid me in whatever career I might finally adopt. He lent me money, and procured me the medical attendance which in my critical state I so greatly needed—for it was for *your* sake, my Louisa, that I now desired so ardently to live. At last you were born, and your sweet innocent smile, that reminded me of your father's frank, honest gaze, reawakened in my heart all the courage and powers of endurance which the thought of you had first developed there, and strengthened me in my intention of remaining pure and true to myself.

"I had always felt that I possessed an inborn taste for acting, and though my histrionic powers—as I was forced to confess even to myself—were but slight, I determined to go on the stage, and to adopt that, the only career now open to me, as a profession.

"However, before I could make my appearance, even in a third-rate provincial theatre, I had to go through a preliminary course of studies, and here again had it not been for La Mazerolle's noble generosity I could not have afforded it; but he was a father to me; and though his world already began to couple our names in the daily scandals which it seems a part of its constitution to promulgate, he continued to help me, regardless of their sneers, contented that I, on my side, rising above them, should place perfect confidence and trust in his honor.

"It was while I was studying for the stage that your father and his now wife visited Paris, and the news of their arrival was soon succeeded by that of his dangerous illness. One night I saw him at the opera. How changed he looked! Death seemed painted on every feature of his beautiful young face. At the sight of him, all my old love returned—I forgot everything for a moment but that I was his wife—his lawful wife—whilst the woman who sat beside him, and who looked so proud and stately, was a miserable impostor, who had robbed me of my place; and that he had once loved me with one of those true all-absorbing passions which may kill, but which can never die.

"Presently he raised his head and looked towards me—our eyes met, and in that one moment I saw plainly that his heart still yearned for me. But the sight of me was too much for him; he turned ghastly pale, and uttering a cry which made every one in the theatre turn round—and which made my heart stand still—he fell back in a swoon that seemed as horrible as death itself. I saw him taken out of the box by Lady Rollingford and Mrs. Champion, and I afterwards heard that he was lying as if dead in the corridor, and that the doctor who had been called to attend him gave no hopes of his recovery. I could not control myself. I could not let him die without seeing him once again. I felt that if I did not obtain his forgiveness ere he breathed his last, my whole life would have been henceforth unbearable to me. I also longed to place you in his arms, and to hear him, with his own lips, pronounce a father's blessing over your innocent little head; and so I mustered up all my courage and presented myself at his hotel.

"Mrs. Champion will tell you what took place there—I feel my strength failing me fast, and I must now be as brief as possible; I will only tell you that I obtained all I had come to beg from him; that he fully forgave me; and that he not only blessed you, my darling, but that he insisted on you bearing his name, and on making you heiress to all his wealth. Lady Rollingford—who is the most extraordinary compound of selfish pride and kindness of heart that I have ever met; and who, though she hated me with all the intensity of her peculiar nature, yet has ever been the first to render me all the services that were in her power—agreed, at his especial desire, to adopt you, and to bring you up as her daughter; and I, unable to resist his pleadings, submitted to be separated from you—as I thought, for ever—though the separation nearly broke my heart.

Here Marie is again forced to pause by the cough which her deep emotion seems to aggravate.

"You know the rest," she resumes, regaining her voice by a supreme effort over herself, though at what a cost is but too evident. "I came out as an actress in one of the provincial theatres with some success, and for some years I went from town to town, every day gaining larger and larger salaries. An engagement was offered me, after a few years, in St. Petersburg. I went; and the success I achieved there made my name famous. Still I persisted in refusing to appear either in Paris or London; but in the course of time, being thoroughly convinced that no one could possibly recognize me—for I had altered the color of my hair, and time had wrought great changes in my personal appearance, and, above all, every one believed me dead, for I had taken great pains to have my death announced in all the papers, I signed a contract, by which I could command half the receipts of one of the principal theatres in the capital, if I consented to appear in such parts as had made my name so famous in other countries.

"My career as an actress, though not altogether free from sorrows and dangers, has been, upon the whole, a very happy one. I was no longer an innocent, ignorant girl—the slave of a but too passionate nature—my heart was dead to all soft affections, and time and experience had taught me how to evade dishonor without, however, wounding the susceptible feelings of my numerous admirers. My life has been gay and bright—perhaps, alas, fatal to my constitution; for I have spared myself no exertion—no excitement; yet, in heart, I have managed to remain as pure as I was when I left François Raymond's side, and Rupert Castilla has been the only man for whom I have since felt anything like a tender feeling. One day—carried away by his feelings, and perhaps exasperated by my pretended coolness for him—he went so far as to make me an offer of marriage. Fortunately the thought of his inexperienced youth, and the dread of again sacrificing a noble life at the altar of my miserable fate, prevented me from accepting it. Disgusted with me, he went off to London, swearing never to see me again; and the next time I saw him he was your husband—your husband, my dearest child! and, though he once more threw himself at my feet, and swore he loved me as dearly as ever, I have exercised all my influence over him in trying to reawaken in his heart that love which prompted him to make you his wife—and I think I have succeeded."

"You think he loves me still?" Louisa cries, unable to resist this one impulse of selfishness, so natural in all who love intensely.

"Yes, my child; for last night, unable to resist his pleading voice, I confessed everything to him, and begged of him to love the daughter if it were only for the sake of her mother; when, swearing a mighty oath, he threw himself at my feet, and confessed that he loved you dearly, and that if he came to my house so often, it was only to endeavor to banish your image from his heart; for he believed that only misery could come of his marriage with you; but, now that he knew your sad story, and that he realized what your feelings would be when you learnt the truth respecting your birth, that all his days should henceforth be devoted to making us both forget the past, and in trying to render us happy."

For some moments Louisa and her mother remain in each other's arms, whilst Mrs. Champion, standing close beside them, looks down upon the ghastly countenance of the latter, and grows pale and sad, as she has never been, no, not even when she has heard the shots whizzing around her during a battle under the scorching rays of an Italian sun—or when, in a hospital, she has stood in the midst of wounded soldiers, surrounded on every side by that grim spectre, Death; for she, too, like Rupert Castilla, realizes at last that the days of this poor woman are fast drawing to a close.

(Concluded in our next.)

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

Sketches in Afghanistan.

On Monday, December 23d, two of the British guides, who, unarmed, were standing in the Jellalabad Bazaar, were suddenly attacked by a Ghazi, or fanatic, and one of them dangerously wounded. The assassin was seized, carried off to headquarters, and sentenced to be shot at once. The provost-marshal and Major Cavagnari, with other officers, went to see the sentence executed, which took place close to the Peshawur Durwaza. The Mussulman Judge or Cadi of the town was brought out, and on hearing the facts he at once confirmed the sentence. A very large crowd was collected, and saw the ceremony. A party of five soldiers of the Rifle Brigade were the shooting party. A supply of wood was brought, and a large fire was made, into which the corpse was thrown, and more wood piled over it, so as to consume the body. The purpose of this was to prevent the rite of sepulture being performed. Another sketch represents an incident in the first day's march of the Nineteenth Bombay N.I. from Hydrabad to Jacobabad. The camels are being packed, and the camp is a scene of great bustle and confusion, everybody getting ready for a start. One of the camels who is new to the work, and on whose back the officers' provisions for some days are packed, suddenly becomes frightened. Although one of his legs is tied to prevent his getting up, he manages to scramble on to the remaining three, sending bottles and plates, eatables and drinkables, in all directions, and gurgling in his throat, and crying out all the time in a way peculiar to camels, to the great consternation of everybody, the butler in particular, under whose especial care the commissariat arrangements are placed. Not much damage is done, however, and the camel is again made to lie down, and is ultimately more successfully packed.

Election of M. Grevy President of France.

The transmission, so simple and rapid, of the Presidential power from Marshal MacMahon to M. Jules Grévy, on the 30th of January last, was accomplished in two acts. Immediately after M. Grévy had read to the Senate the letter of resignation of the Marshal-President, both Houses were assembled together and proceeded to the election of a successor. But two formidable candidates allowed their names to be used, M. Jules Grévy, the staunch Republican President of the Senate, and General de Chanzy. The united vote of the Senate and National Assembly gave to the former 536 ballots, and to the latter 99. Proclamation of the event was speedily made; the Cabinet tendered their resignation to the new President, who urged them to remain in office, at least provisionally; and the ex-Presidents hastened to congratulate his successor. M. Leon Gambetta was elected President of the Chamber of Deputies, on January 31st, and on February 4th a new Cabinet was formed with M. Waddington as Premier. As yet there have been no demonstrations of disapproval, no bloodshed, no rioting. It is now claimed that France is in fact, as well as name, a Republic.

The Distress in Manchester.

We present another illustration of the unusual scenes which have been witnessed during the past month or two in several towns of the manufacturing districts in the North of England, where the severe distress prevailing amongst the laboring classes has rendered it necessary to organize special agencies for the distribution of charitable relief. The warehouse in Windmill Street, Manchester, which had been appropriated to this service, was occupied by the committee a week before Christmas Day, and no time was lost in fitting up the interior of the premises, under the superintendence of Mr. George Jackson, an active member of the District Provident Society. Hundreds of applications for soup-tickets were received within the first few days. The soup-kitchens, with three boilers, each containing 150 gallons, were soon in full operation. The business of dispensing relief here was intrusted to Mr. James Smith, who had had much experience of similar work upon the occasion of the Lancashire Cotton Famine some fifteen or sixteen years ago. Our illustration shows the scene of almost daily occurrence at the table of this establishment in Windmill Street at the hour of applying for relief.

Sketches in South Africa.

The usual signs of festivity in a Caffre kraal is the slaughter of several sheep, which, when the members of the tribe and their friends are collected together, are cooked in their large iron pot, and eaten with great relish and appetite. The women sit apart from the men and elder boys and cook separately, and all await, silent and dignified, the commencement of the first course, when for a couple of hours it is a continuous eating and cooking. Having consumed a few pounds each, a party of men advance on a small slightly raised circle of the ground. Holding the assegai in the right hand, blanket or sheepskin carcase thrown over the left, they commence going round in a circle, chanting and marking time, the emphasis on the right foot. They strain all the muscles of the body in so doing, and contort the features of the face as they shake their assegais. At times one will leap into the centre of the circle, shooting and going through warlike motions; then, retiring to his former place, the whole party resumes the monotonous circular motion. When they are tired, a fresh lot takes their places, and so on. The women have their dance apart, and the girls also, apart from the married women, at the same time. British authorities give as the real cause of hostilities in Zululand the fear long entertained in Natal of the large military force maintained by Cetewayo. Sir Bartle Frere, as Governor-General of the British provinces and High Commissioner for all dealings with the native African races, therefore sent an ultimatum to King Cetewayo, the terms of which embraced a partial disarmament, a rectification of the frontier, the appointment of a British Resident (with a voice in the great council of the Zulu nation), and the cession of St. Lucia Bay, on the ground that it is used as a landing-place for arms and ammunition. The ultimatum limited the time for a submissive response to the 11th of last January, and no notice having been taken of the document, Sir Bartle Frere instructed Lord Chelmsford the disposition of the British troops. The ultimatum was read to a number of Zulu chiefs assembled on the banks of the Tugela River near Fort Pearson, after a lengthy and fruitless conference with the Governor-General's commissioners.

SCIENTIFIC INTELLIGENCE.

The Aurora Borealis.—Professor Edlund, of the Swedish Royal Academy of Sciences, has recently published an exhaustive memoir on the Aurora Borealis. This is a more complete examination of the most striking phenomena of atmospheric electricity in the northern regions than any previously published. The paper has been translated and published in the *Philosophical Magazine*.

Is Consumption Contagious?—While waiting for the doctors to agree, Professor Gide, of Marseilles, has been trying some experiments on rabbits. He collected every day several litres of air expired by phthisic patients, and in this artificial atmosphere the rabbits were left to their own devices. They did not enjoy it, but on the contrary were evidently ill at ease. How about the good people who ate the rabbits afterwards? The learned doctor forgot to report to the Academy before whom his memoir was read.

Sebastine — A New Explosive. — M. Falmejelm, of Stockholm, has invented a new explosive, to which he has given the name Sebastine. It is composed as follows:

Nitro-glycerine	78 parts.
Wood charcoal	14 "
Nitrate of Potash	8 "
Total	100

The explosive force of the powder can be varied by changing the proportion of the constituents.

Important Geographical Survey.—At a late meeting of the Imperial Russian Geographical Society an interesting account was read of the recent explorations of M. Sievertsof and M. Mushketof, a geologist, in the Pamir plateau, in Eastern Ferghana and the Tsian-Shan Mountains. The observations of the latter traveler appear to have been both careful and valuable, especially as by visiting the Chatyr Kul Lake, M. Mushketof was enabled to effect a junction of his work with that of the late Dr. Stolickzka, of the Indian Geographical Survey, who did such useful work in that region when attached to Sir Douglas Forsyth's mission to Kashgar.

Survey of Upper Assam.—Captain R. G. Woodthorpe and Lieutenant Harman have lately completed some useful trans-frontier exploring work in the independent territory north of Upper Assam. A two inch survey was extended over 1,500 square miles of country, and about 400 square miles were reconnoitred in the Dhai Hills north of Lakhimpur, and an exploration made of the course of the Dibong and Subansiri Rivers. Lieutenant Harman's chief work has been the measurement of the discharges of these streams, as well as of those of the Dibong and Brahmaputra, a survey which will go far to settle the question of the true lower course of the Sanpo or great river of Thibet.

The Inhabitants of Kaffristan.—Kaffristan is a large mountainous tract of country north of Laghman, and above Jellalabad, which stretches into the very centre of the Hindoo Koosh, bounded on all sides by hills so high that it is almost inaccessible. Its inhabitants were formerly supposed to be descended from some Greek followers of Alexander the Great; but they are now believed to be the descendants of the original inhabitants of the plains, who were gradually pushed forward into the hills. In person they are fair, and their beautiful women are found as slaves in most parts of Afghanistan. In their native country they are described as wild and barbarous in the extreme.

A New Manganese Mineral.—The curious mineral, called manganosite, first described by Blomstrand, of Lund, has recently been subjected to a closer examination by Klein. It occurs in dark colored irregular grains inclosed in granular calcite; and, according to Blomstrand, they have a dark emerald green hue, while by transmitted light they appear to have a ruby-red color. The new mineral species is of interest from its consisting of manganese protoxide; the occurrence of so unstable a compound is remarkable. A freshly-fractured surface after exposure to the air for a few weeks becomes covered with a brown layer of oxide. Klein states that the mineral is cubic, and exhibits a fine dark-green color, both by reflected and by transmitted light, and arrives at the conclusion that the red color observed by Blomstrand was an effect of oxidation. The granules of manganosite, sometimes one centimetre in diameter, are imperfectly formed octahedra. The forms produced by etching the crystals are four-sided pyramids with quadratic bases.

AT HOME AND ABROAD.

—THE Tennessee Legislature has passed a law giving the laborer a lien on the crop.

—THE Legislature of Alabama has appropriated money to buy legs for all her citizens who lost them for the Lost Cause.

—FROM 50,000 to 60,000 camels are used in the transportation of 10,000 troops in Northern India, and the service has occasioned great mortality among the animals.

—THE Russian Government has offered special privileges to such among the medical students as will volunteer to offer their services to the medical men in the localities where the plague prevails.

—A BOTANICAL society is in course of formation at Strassburg. Its object, apart from a special study of the botany of the Reichsland, is to provide all the higher schools of the country with complete herbaria.

—THE International Fine Art Exhibition at Munich is to open on July 20th, the date having been postponed from July 1st to admit of French artists sending works from the Paris Salon, which does not close till June 15th.

—THE Chinese Government have purchased machinery and engaged experienced engineers and spinners in Germany to establish cotton mills in China, so as to free that country from dependence upon English and Russian imports.

—THERE are iron and coal veins, as well as marble quarries, in the Balkans, and it is said that traces of gold have also been found in Bulgarian streams. There is, therefore, a wide field for exercise of the energy of the new Government.

—THE census returns of Germany show that out of 1,667,104 industrial establishments, only 42,513 were in the hands of persons employing more than five workmen, leaving 1,623,591 industries in the hands of individual workmen or very small capitalists.

—THE Swedish Government intends to request the Washington Cabinet to order all vessels proceeding to the Aleutian Islands to search for the Leonard Pops, of the Nordenskjold exploring expedition, which may appear at the straits early in the Summer.

—THE Municipal Council of Paris appears to have refused to allow the grand equestrian statue of Charlemagne, which was recently seen at the exhibition, to be erected in one of the public places, the reason being that the hero in question was a "tamer of people."

—A COMPANY of enterprising Northern men are engaged on the Edisto River, South Carolina, in the business of catching sturgeon, the flesh of which is sent North and converted into canned salmon, while the spawn is sent to the same place, and, after being prepared and canned, returns South with a foreign trade-mark, and is sold as Russian caviare.

—THE design for the monument to Liebig, the German chemist, has been chosen, the first prize falling to Professor Wagmuller, of Munich. It is a sitting portrait statue upon a pedestal which will contain bas-reliefs representing scenes from the working life of the great chemist. The statue will be in marble from the Tyrol. It will be erected at Munich, while Giessen will have an exact copy in bronze.

PERSONAL GOSSIP.

MR. RICHARD M. MCSHERRY, of Baltimore, has received from King Humbert the Order of the Royal Crown of Italy, in recognition of his eminent legal services in breaking up the padrone system in that city.

LORD DUFFERIN has not been allowed to remain long without occupation. He is to take the place of Lord Lofton, who becomes Governor of the Colony of New South Wales, as British Ambassador at St. Petersburg.

ALL costly pomp is to be avoided in the approaching celebration of the silver wedding of the Emperor of Austria and his wife. They desire it on account of the severe depression from which the country is suffering.

THE Rev. William Stubbs, M.A., Regius Professor of Modern History at Oxford and author of the well-known "Constitutional History of England," has been appointed Canon of St. Paul's, in place of Dr. Lightfoot, elevated to the episcopacy.

DON MARCO A. SOTO, President of the Honduras Republic, is a miracle of patriotism. Upon his election he found the country bankrupt, and used a great deal of his own large fortune in improving its condition. He moreover refuses to receive any salary for his services.

MADAME GRÉVY, the wife of the French President, has for many years been an invalid, and has therefore lived in the closest seclusion. She very reluctantly quitted her own home to go to the Elysée, the rooms of which appear to her uncomfortably large and stately. She is the daughter of M. Fraisse, one of the richest merchants of Nancy, and at the time of her marriage, it is said, her relations thought she might have done better than to marry the man who is now the ruler of a great country.

AMONG recent deaths is that of Mr. A. Anthony Guiman, of Pittsburgh, Pa., brother of Mr. Joseph Guiman, of New York. Mr. Guiman's attainments were of no ordinary sort, and for a time enabled him to fill a position of great trust, that of private secretary to Secretary of State Seward, which he held during the war. He accompanied Mr. Seward in a voyage around the world, and subsequently traveled in South America and Europe. In these wanderings, and during his secretaryship, he mastered, it is said, nine languages.

THE death is noted of Hon. Abraham B. Hasbrouck, an ex-Member of Congress, and ex-President of Rutgers College, at Rondout, N. Y., on February 23d, aged 87; Colonel Bruin Mayer, a well-known traveler and author, at Baltimore, aged 79; General Alonzo Jackman, a professor at the Norwich University, at Northfield, Vt., February 24th, aged 70; Dr. Horatio B. Sheppard, who started the first one-cent paper in the United States, at New York, February 24th, aged 70; the Rev. Enos A. Osborne, a well-known Presbyterian city missionary, at Newark, N. J., February 25th, aged 87; René Gaspard Ernest Taillandier, a noted French author and Professor of Foreign Literature at Strasbourg, Montpelier and Sorbonne, aged 61.

PRINCE LOUIS NAPOLEON and retinue sailed in the steamer *Danube* from Southampton on February 27th, for the Cape, to join the British military forces in South Africa, as a volunteer. The Prince has written a letter to M. Rouher announcing his intention to join the British forces at the Cape. He says: "For the last eight years I have been the guest of England. My education was completed in the English Military School. I have strengthened my ties of friendship with the English army by taking part in its annual manœuvres. The war at the Cape having assumed a more serious character, I have wished to follow the campaign. I could not refrain from sharing the dangers and fatigues of the troops, among whom I have so many friends. Moreover, the time spent in witnessing the struggle of civilization against barbarism will not be wasted for me."

THE EXTENSION OF AMERICAN TRADE.—VISIT OF THE UNITED STATES INDUSTRIAL EXPEDITION TO MEXICO.—THE AMERICAN VISITORS BEING SHOWN THROUGH THE COUNCIL CHAMBER, AFTER THE PRESIDENT'S RECEPTION.
FROM SKETCHES BY H. A. OGDEN.—SEE FRONT PAGE.

Digitized by Google

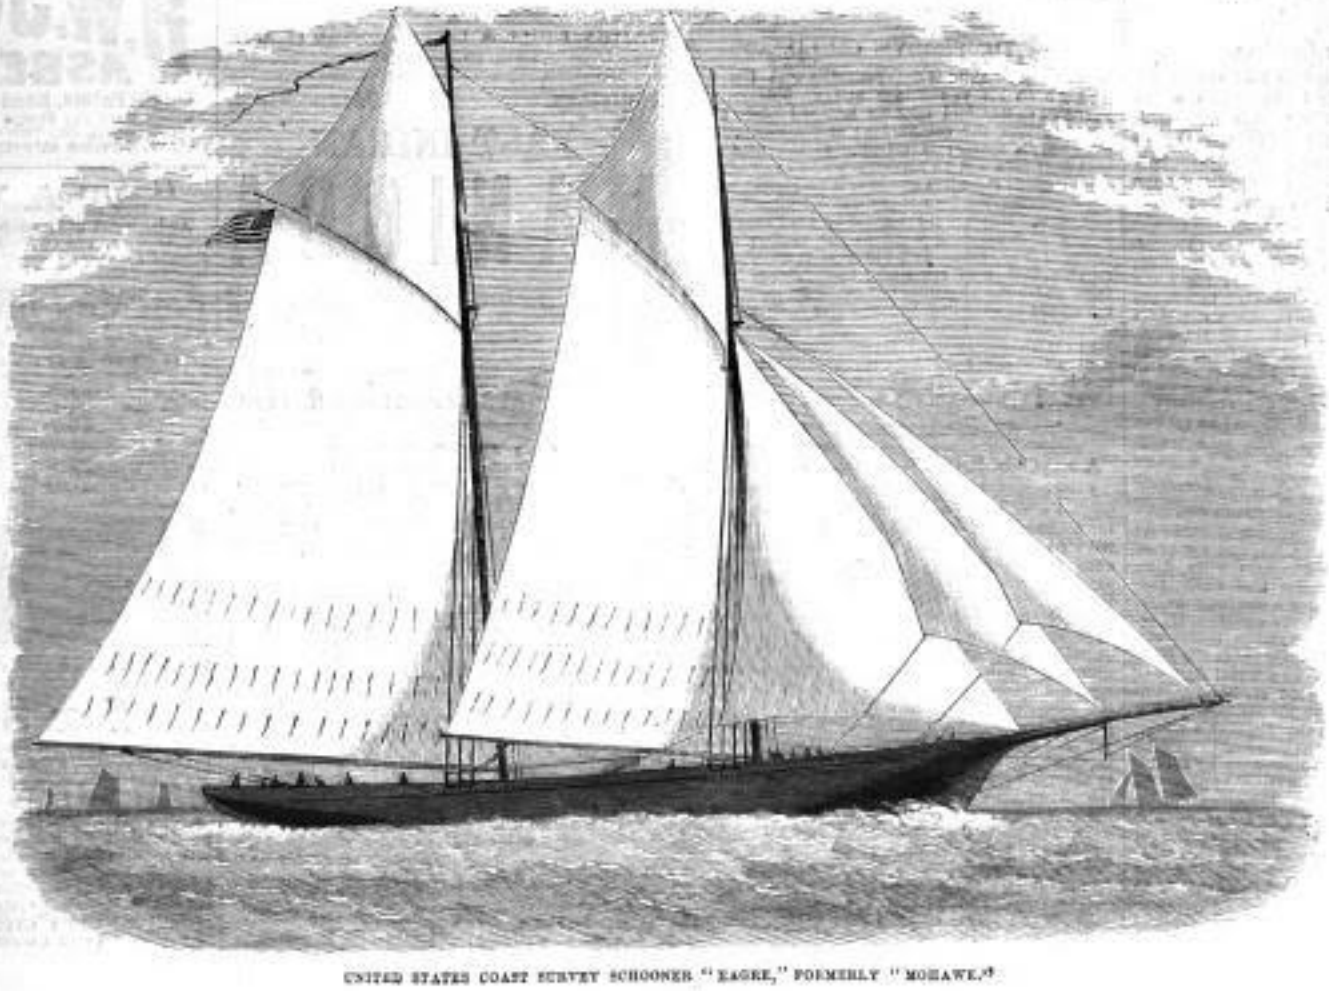
HON. JAMES SHIELDS,

U. S. SENATOR FROM MISSOURI.

GENERAL JAMES SHIELDS, who was elected United States Senator from Missouri for the short term on January 21st, is one of the most remarkable men of the time. He was born in County Tyrone, Ireland, in 1810, and came to this country when about sixteen years of age. After receiving a good education he settled at Kaskaskia, Ill., where he opened a law office. Since then he has been a member of the Illinois Legislature (1836), Auditor of the State (1839), a Judge of the State Supreme Court (1843), Commissioner of the General Land Office (1845-47), a United States Senator from Illinois (1849 to 1855), and from Minnesota (1858 to 1859), and Adjutant-General of Missouri (1877). In 1846 General Shields was appointed by President Polk as a brigadier-general of volunteers, and served with distinction through the Mexican War, receiving severe wounds at Cerro Gordo and Chapultepec. He received the rank of brevet major-general in 1848, when he was mustered out of service. He removed to Minnesota after his term as Senator from Illinois, and after serving Minnesota in the Senate he went to California. He entered the Union Army in 1861 as a brigadier-general, and commanded a division in Banks's army in the Shenandoah Valley, where he gained the battle of Winchester, March 23d, 1862. On the previous day he received a severe wound in a skirmish. During the past few years General Shields has been a resident of Missouri. Efforts to elect him as Doorkeeper of the House, in Washington, in 1878, and to have him placed on the retired list of the army, failed, but his pension was increased to $100 a month. The vacancy to which he has been elected was caused by the death of Lewis V. Bogy (Democrat), in 1877, and was filled up to the time of his election by David H. Armstrong (Democrat), who was appointed by the Governor.

On Thursday, February 20th, Senator Voorhees called up the resolution instructing the Committee on Pensions to report a Bill making provision for the surviving soldiers of the Mexican War, in order that Senator Shields might address the Senate on that subject.

The veteran of two wars said he thanked the Senate for giving him an opportunity to speak a few words for his old comrades of the Mexican War. The soldiers of the last war had been treated with just and very commendable liberality. The Pension Bureau had reported to Congress a larger army of Mexican veterans alive today than ever stood on Mexican soil at one time with arms in their hands. The wonder was that any intelligent Congress could place confidence in such a report. Throughout the whole Union today there were not over 11,000 Mexican veterans alive. There was one regiment from South Carolina which reached Mexico with 1,100 men. At the close of the war it numbered 220 men, and there were only eight members of that regiment living today. He spoke of the bravery of the American Army in Mexico and gave personal reminiscences of the war, and in conclusion appealed to Congress to give the Mexican survivors the pittance they asked for to help them along in the down-hill of life. "Give them the pittance to help them on that last march to that field from which no warrior ever returns."



HON. JAMES SHIELDS, UNITED STATES SENATOR FROM MISSOURI.—FROM A PHOTOGRAPH BY BRADY.

THE UNITED STATES COAST SURVEY SCHOONER "EAGRE."

WE present on this page a sketch of the Coast Survey schooner *Eagre*, formerly the yacht *Mohawk*, of the New York Yacht Club, now on duty on the South Atlantic coast. After the terrible accident which occurred in New York Harbor during the Summer of 1876, the *Mohawk* was not again used for pleasuring; but some time early in 1878 she was sold at public auction, and bought by the United States Coast Survey Service for the small sum of $18,000. She was bought with all the furniture and equipments, just as found when the yacht was raised. The saloon is furnished and fitted in the same manner, excepting the bulkhead mirrors, as when owned by Commodore Garner. The internal arrangements have not been changed. Twenty-four feet have been cut off her main boom, nine feet off her mast heads, and fourteen feet off her head booms.

The Coast Survey Service is under the direction of the Treasury Department, and the Coast Survey vessels are officered by Naval Officers detailed by the Navy Department for that duty, and manned by men shipped for that purpose. Three officers and fourteen men compose the entire crew.

The *Eagre* has been fitted out to make extensive observations on the magnetic influences on the compass. The Winter and Spring will be spent in collecting data to that end in the West Indies. Twenty-six ports situated in Florida, the islands near our coast, and Mexico, will be visited before the vessel returns to New York in July next, when, after repairing, she will pursue the same work on the coasts of New Jersey, Long Island and the New England States.

UNITED STATES COAST SURVEY SCHOONER "EAGRE," FORMERLY "MOHAWK."

HIGH-TONED HOSIERY.

IN view of the belief that short dresses will ultimately be worn, English manufacturers have produced marvels in the shape of stockings. Indeed, many are quite works of art. But the embroidery on some of them is far more elaborate than beautiful, while others are just as tasteful and pretty. In fact, stockings now form a most important item in the toilet. The old design of a spear head is considered too simple-looking for the present style. Hose of black silk or Lisle thread, embroidered with white or colored floss silk, are always in good taste. The new kinds are embroidered up the front, and not at the ankles, as before. Very small flowers, such as forget-me-nots, look far prettier for the instep and leg of a stocking than roses almost as big as sunflowers, which are not at all uncommon. Spun silk and cashmere silk hose can now be brought in every new and delicate shade, to match the costumes with which they are to be worn. Pale pink, blue, beige and carousbier are the most popular colors.

Fashion, like history, constantly repeats itself, and, as regards the wearing of flesh-colored stockings, the author of "Ella," written in 1819, says: "A fashion of pink-colored hose for ladies comes up at this juncture. Oh! the conceits which we varied upon red in all its prismatic differences. And the collateral topic of ankles. What an occasion for a truly chaste writer, like ourself, of touching that nice brink, and yet not tumbling over it." "I pronounced," says Charles Lamb, in reference to these stockings, "that modesty, taking her final leave of mortals, was visible in her ascent to the heavens by the track of her glowing instep; but fashion is transient, and so is the mode which has favored us. The ankles of our fair friends in a few weeks began to reassume their pristine whiteness."

That is not the least likely in our time, 1879, for white stockings are rarely ever seen indoors, far less in the streets; and the fashion of wearing shoes which display so much of the stockings makes it almost certain that the taste for colored hose will be more enduring than that Charles Lamb calls "the transient mode of a few weeks."

Then what dainty shoes there are. Almost extravagant, and quite indescribable in their elegance. They are made in every possible color, with gold or silver heels and embroidered in all styles with gold and silver thread, or beads and pearls, likewise trimmed with ruches of lace, silk and what not.

The instep is held in place by embroidered bands of gold and silver clasps, or by ornamental knots of bright ribbons, made up in imitation of gay birds; lizards, butterflies and flowers are used to decorate the toes.

Cardinal silk stockings look extremely well worn under a pair of black velvet or satin slippers trimmed with white lace, and clasped with buckles to imitate diamonds.

MR. GLADSTONE.

GLADSTONE has a very winning voice, soft and grave. He expresses himself with perfect fluency, and in the finest English, never halting for a word; for even when he spins out an elaborate series of phrases intended to obscure his meaning he speaks straight on, fast or slow, according to his temper. A facetious M. P., describing the difference between Palmerston and Gladstone, as leaders of the House, remarked that when the former was asked on what day Parliament would be prorogued, he answered by naming the date straightforwardly; whereas Gladstone's style was to observe "that the prorogation of Parliament was a prerogative of the Crown, and that her Majesty had it within her discretion, subject to the advice of her Ministers, to prorogue Parliament when she pleased; nevertheless (here a cough), that it was not improbable, unless unforseen circumstances arose, that Parliament might be prorogued on or about such and such a day." This queer method of answering, which smacks of Mr. Pecksniff, has often given Mr. Gladstone's detractors occasion to sneer at his "oiliness," and to set him down as a hypocrite. Nothing can be less merited, for a man who was not thoroughly sincere in his convictions could never have taken such liberties with his country and party as Mr. Gladstone has done. He would have been exposed long ago. Ambitious Mr. Gladstone certainly is, and he is not proof against a petty spitefulness which he has wreaked at times in no very dignified way against his great rival who supplanted him in the good graces of the constituencies in 1874; but it must be remembered that the ex-Premier feels no belief in Lord Beaconsfield. He regards him as a clever but unprincipled opponent, who is never actuated by any lofty ideal of patriotism or duty, but solely by the wish to obtain power; and in proportion as Lord Beaconsfield's phantasmagoric policy dazzles the public eye, Mr. Gladstone grows more and more impatient and ashamed at its delusiveness.

Mr. Gladstone listens on all occasions to what he thinks to be the voice of his conscience. Mrs. Gladstone told an acquaintance that during the progress of the Irish Church resolutions in 1868 her husband used to pace about his dining-room at Carlton House Terrace until far into the night, in a state of the most nervous irritability because he had been assailed by old friends who impugned his motives and warned him that he would repent of what he was doing. Having overcome all his own doubts, he could not conceive that others should be troubled by any; and as he paced about he recited fragments of speeches in a sort of adjuring voice, as if he were beseeching Heaven to send him fiery arguments wherewith to blast the stubborn. At the height of the Tichborne agitation, again, Mr. Gladstone sent for Sir John Coleridge, and implored him to state on his honor whether he believed the man to be an impostor, "because," said he, "I cannot make up my mind about it, and I dread to see any wrong done."

On saying that Mr. Gladstone is apt to lose his temper about little things, one must make a distinction. If Lord Beaconsfield had ordered a new hat for a certain hour and it did not come, he would get cross. Mr. Gladstone, in such a case, would be likely to put on his valet's head-dress if he found it hanging up in the hall. He never worries about domestic trifles. He is a tender father, a devoted husband, a true and good friend. His disinterest-

Digitized by Google

edness about money matters is so great that he refused an augmentation of his salary whilst Prime Minister, and left office impoverished. He had to sell a goodly collection of china which he had amassed (for he is a connoisseur), and soon afterwards his library of books, which was bought back for him by Lord Wolverton. His readiness to succor all who appeal to his charity is only limited by his means, and he frequently returns from a country walk with his pockets cleaned out, thanks to his distributions of gold and silver among the sick or needy villagers. Some months ago he went out for a walk of about twelve miles, intending to return to Hawarden by train; but in the evening he found he had given away everything, and had not money left to pay for his ticket, so he trudged home on foot, arriving so late that his family had become uneasy. Mr. Gladstone does more than give money away, for he has often been known to go and read the Bible to tenants who were bedridden; and this mission of charity he has always discharged in the most natural, unostentatious fashion, even when he was Prime Minister, and had work enough to occupy all the moments of such a sturdy toiler as himself. He is, in truth, a most fervent Christian; and the explanation of much of what is wayward in his character may be found in his deep religiousness.

The Condition of Southern Russia.

A LIGHT is thrown upon the ruinous condition of Southern Russia by the arrival at St. Petersburg of delegates from the landowners of the provinces of Kharkoff, Toula and Koursk to interview the Minister of the Interior with respect to the issue of an order to prohibit the banks from putting up mortgaged estates for sale. One of the members of the delegation states that two St. Petersburg banking houses sold up no less than 1,200 large estates in December, and 700 more during the first half of January. Some of these consisted of 200,000 acres, and scarcely any were under 1,500 in extent. The emancipation of the serfs, bad harvests, the cattle disease and the heavy taxation are the chief causes of the bankruptcy of the landowners, and the evil at present is so widespread that seventy per cent. of them are on the mortgage lists of the banks, and estates can be picked up in South Russia for a mere song—a shilling or eighteen pence the acre!—with the family mansion thrown in.

Where Limes are Grown.

THE little island of Montserrat, one of the most charming and salubrious of the British West Indian Colonies, with an area of but forty-seven square miles, or considerably less than that of London, contains the most extensive and best cultivated plantations of the lime-fruit tree in the world. These "orchards" are the development of a small plantation established but a quarter of a century ago, when the virtues of the juice of the lime-fruit were not so universally recognized as they are now, when for the captain of a ship to neglect to distribute among his crew their daily dose of lime-juice is to run the risk of heavy pecuniary penalties, to say nothing of serious outbreaks of scurvy. The cultivation of the plant, which involves a large outlay of capital, with no immediate return, was not at first attended with any commercial success, but the Montserrat Company now owns 600 acres of land, bearing 120,000 trees, from which a crop is gathered nearly all the year round, the heaviest harvest extending for three months, from September to January. The appearance of the trees—with their dark-green leaves growing thick and bushy, and relieved at one and the same time by the bright fruit in different stages of ripeness, from green to a rich, ruddy yellow, and by the fragrant white flowers, resembling orange-blossoms—is one of extreme beauty, and a lime-tree orchard is perhaps unequaled by any other similar plantation. The very leaves of the tree emit a delicious perfume, and are largely used in the West Indies for the purpose of scenting water for toilet and other purposes. The trees do not bear fruit till they are seven years old, and during that period they require careful attention and pruning; they are otherwise easy of cultivation, flourishing best in light soils near the sea. The production of fruit is very large; and the process of extracting the juice is easy, the fruit being simply sliced and pressed, and the juice at once placed in casks ready for exportation. A secondary product is citric acid, which is procured from the interior fruit, and by a subsequent manipulation of the refuse from the first process of squeezing.

The Milk of the Cow-tree.

ALEXANDER HUMBOLDT remarks that among the many very wonderful natural phenomena which he had during his extensive travels witnessed, none impressed him in a more remarkable degree than the sight of a tree yielding an abundant supply of milk, the properties of which seemed to be the same as the milk of a cow. The adult Indians would go each morning with their slaves from the village or station on the slope of the mountain chain bordering on Venezuela, where Humboldt was stopping, to a forest where they grew, and, making some deep incisions into the trees, in less than two hours their vessels, placed under these incisions, would be full. All present would then partake of the milk, on which the slaves grew fat, and a quantity would be carried home to be given to the children and to be mixed with cassava and maize. The tree itself attains a height of from forty-five to sixty feet, has long alternate leaves, and was described by Linden as *Brosimum galactodendron*. The milk which flows from any wound made in the trunk is white and somewhat viscid; the flavor is very agreeable. Some time ago, on the occasion of M. Boussingault going to South America, he was requested to take every opportunity of investigating this subject. At Maracay the tree was first met with, and for more than a month its excellent qualities were daily tested in connection with coffee and chocolate; but there was no opportunity for a chemical analysis. Nor does such appear to have occurred till recently, when, amid the many curious things exhibited by the Venezuelan Government at the Paris Exhibition, there happened to be several flasks of this milk, and after a long period M. Boussingault has been enabled to complete his analysis of this substance, which is unique in the vegetable world. In a memoir laid before the Academy of France he gives a detailed analysis, and concludes by stating that this vegetable milk most certainly approaches in its composition to the milk of the cow; it contains not only fatty matter, but also sugar, caseine and phosphates. But the relative proportion of these substances is greatly in favor of the vegetable milk, and brings it up to the richness of cream, the amount of butter in cream being about the same proportion as the peculiar waxy material found in the vegetable milk, a fact that will readily account for its great nutritive powers.

FUN.

A NARROW escape—A fire ladder.

COINS of vantage—Gold for paper.

"THAT'S a nice new suit you have on; what did you have to pay for it?" "Sixty dollars—and costs."

PEDESTRIAN (who has dropped half-a-crown in front of "the Blind"): "Why, you confounded humbug, you're not blind!" *Beggar*: "Not I, sir! If the card says I am, they must have given me a wrong one. I'm deaf and dumb!"

A LADY belonging to the Diet Mission recently visited a needy woman and found her sick. "What is it?" she kindly asked. Placing her hand on her heart, the woman said, "It's repudiation." "What?" queried the visitor. "Re-pu-di-ation," pronounced the afflicted woman, "that's what the doctor said." And noticing the play of expression on her visitor's face, she hastened to add, "Tain't ketchin!"

A FASHIONABLE COMPLAINT.—*Mamma*: "Papa dear, the children have been asked to the Willoughby Robinsons' on the 11th, the Howard Jones' on the 15th, and the Talbot Brownes' on the 21st. They'll be dreadfully disappointed if you don't let them go! May I write and accept, dear papa?" *Dear Papa* (savagely): "Oh, just as you please! But, as juvenile parties should always be taken in time, you had better write to Dr. Squills, too, and tell him to call on the 12th, 16th and 22d."

A FRUGAL lady up-town lately employed a washerwoman to come and do her washing. Hours passed, and the woman grew faint, but saw no sign of lunch. Finally she suggested that she could work with more spirit if she had something to eat. "You can have lunch by-and-by," replied her employer, "there's no hurry. Eating is only a practice, any way." "But," remonstrated the hungry washerwoman, "it is a practice that I've indulged in for upwards of fifty years, and I am too old to give it up now!"

A GENTLEMAN has a little boy who, on account of his mother being an invalid, has been under the especial care of his nurse. During the Summer, however, his mother went away for the season, taking the little boy and his grandmother. Being unused to receiving orders from his mother, he at one time rebelled, and she was obliged to punish him. To this he demurred, affirming that only the nurse had a right to punish him; and, going to his grandmother, he complained that his mother had struck him. "That was right," said she, "if you were naughty; she is your mother, and has a right to whip you if you don't behave well." The little fellow, sobbing, asked, "Have mothers a right to strike their children?" "Certainly," she replied. "Are you her mother?" he asked. "To be sure I am." "Well, then," cried he, "hit her!"

FLAVORING WHISKY.—An Irishman visiting Dublin for the first time went into a tavern and called for a glass of whisky. It was brought to him with a slice of lemon in it. Pat surveyed it for some minutes in wondering silence, and then, calling the waiter, said in a half-whisper, "What's that?" "Lemon, your honor," was the reply. "Sure, I know that," said Pat, who had never seen a lemon before in his life, "but what's it there for?" "To give it a flavor," answered the other. This was a wrinkle for Pat, who returned to his bog, and on the first occasion of entertaining his friends slipped a slice of potato into each man's whisky. "What's the meaning of that, at all?" inquired one of the company. "Don't you know it's to give it a flavor?" replied the host, affecting supreme contempt of the other's ignorance.

THE annual statement of the Mutual Life Insurance Company of New York, presented herewith, shows a highly solvent and satisfactory condition of affairs. This corporation, the largest and soundest in the world, has grown to its present colossal proportions through a system of honest administrations founded upon correct business principles. The net assets of the Mutual show an increase during the last year of $1,818,338, while the gross assets on the 1st of January of the current year amount to the enormous aggregate of $37,127,614.52. The amount at risk has diminished slightly during the last year, while the surplus and guarantee fund now amount to almost four and a quarter million dollars, all of which is invested in the safest and most prudent investments. The company concedes to the general demand for lower prices, by leading the way in the reduction of premiums on all policies, both old and new, of fifteen per cent., a step which can not fail to increase its strength and business and enlarge its already ample security to its patrons.

Advertisements for any of Frank Leslie's Publications will be received, at regular rates, by Col. W. B. Crooks, 1,309 Chestnut St.; Philadelphia.

SOMEBODY'S CHILD.

SOMEBODY'S child is dying—dying with the flush of hope on his young face and an indescribable yearning to live and take an honored place in the world beside the companions of his youth. And somebody's mother is thinking of the time when that dear face will be hidden where no ray of hope can brighten it—when her hearth and home will be left desolate—because there was no cure for consumption. Reader, if the child be your neighbor's take this comforting word to the mother's heart, *before it is too late*. Tell her that consumption is curable, that men are living to-day, aged, robust men, whom the physicians pronounced incurable at the age of twenty-five, because *one lung had been almost destroyed by the disease*. Dr. Pierce's Golden Medical Discovery is a most efficient alterative for separating the scrofulous matter from the blood and lungs, and imparting strength to the system. It has cured hundreds of consumptives.

A NOTABLE OPERATION IN STOCKS.

LAST month, twenty-five prominent business men formed a mutual capital of fifty thousand dollars for Stock operations in New York. Each one contributed two thousand dollars, and operations were conducted thirty days, at which time they were promptly closed, according to first agreement. Each gentleman received $25,650.85 for his share, while the brokers who manipulated the pool made over $20,000 for buying and selling the stocks, showing that every one connected with the operation was mutually benefited by being associated with the others. The Bankers and Brokers who did this business were Messrs. ADAMS, BROWN & Co., Nos. 26 and 28 Broad Street, New York. By the Mutual Capitalization system of stock operations, they receive investments as low as $50 or $100, up to $15,000 or $25,000, thus securing to all patrons the advantages of largest capital and best skill. $50 makes $350 profit; $250 returns $2,500, and so on, as the market moves. Their new circular has the unfailing "Rules for Success" in stock operations, which are absolutely of first importance to all operators. They are large dealers in all classes of securities, and especially Government Bonds. Address, ADAMS, BROWN & Co., Bankers, 26 and 28 Broad Street, New York.

THURBER'S RELIABLE CANNED GOODS.

GREAT progress has been made within a few years in the art of Preserving Fruits, Vegetables, Fish and Meats in tins, and in consequence the consumption has largely increased. As yet, however, canned goods are not generally thought to be "fresh," and some brands are not, perhaps, entitled to be so considered. Those packed by us, however, are Hermetically Sealed at the sources of supply, when they are in the best possible condition, by a process which preserves the much-to-be-desired fresh, natural flavors; and they are really in better condition, fresher, more palatable and wholesome than many so-called "fresh" articles which are exposed for sale during considerable periods of time in city markets. All goods bearing our name are guaranteed to be of superior quality, and dealers are authorized to refund the purchase price in any case where consumers have cause for dissatisfaction. It is, therefore, to the interest of both dealers and consumers to use THURBER'S BRANDS.

H. K. & F. B. THURBER & CO.,

Manufacturers of and Dealers in Food Products, New York.

THE Kentucky Commonwealth Distribution Company announces its eighth regular allotment of prizes on the 31st inst. The regularity and success of the award of prizes is the most satisfactory evidence of the correct business principles on which the company is managed.

PARTIES arriving at the Grand Central Depot in New York City will find a stage awaiting them on their arrival to convey them direct to the ST. NICHOLAS HOTEL; Mr. Welch, the energetic proprietor of that popular house, having made arrangements with the Madison Avenue stage line to have omnibuses ready at the depot on arrival of all trains for direct transfer to the ST. NICHOLAS. The fare is only five cents.

INDIGESTION, DYSPEPSIA, nervous prostration, and all forms of general debility relieved by taking MENSMAN'S PEPTONIZED BEEF TONIC, the only preparation of beef containing its *entire nutritious properties*. It is not a mere stimulant like the extracts of beef, but contains blood-making, force-generating and life-sustaining properties; is invaluable in all enfeebled conditions, whether the result of exhaustion, nervous prostration, overwork, or acute disease; particularly is resulting from pulmonary complaints. CASWELL, HAZARD & Co., Proprietors, New York.

TO THOSE out of employment and to agents, Sherman & Co., Marshall, Mich., offer great inducements. Read their advertisement.

NEARLY five acres of woodwork in the two immense drygoods stores of Messrs. A. T. Stewart & Co. of this city are protected with H. W. Johns's Asbestos Fire-Proof Paint. H. W. Johns Mfg. Co., 87 Maiden Lane, are sole manufacturers of genuine Asbestos Paints, Roofing, Boiler Coverings, etc.

Easy Shoes.—Superior quality for gentlemen at reduced prices. EGBERT FERRIS & SON, No. 61 NASSAU Street, West Side.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

"BY a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast-tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—See article in the *Civil Service Gazette*.

Number of Policies in force Jan. 1, 1879 91,858
Sum Insured thereby $200,774,315.00

NOTE.—If the New York Standard of four and a half per cent. Interest be used, the Surplus is **$11,395,553.30.**
From the Surplus, as appears in the Balance Sheet, a Dividend will be apportioned to each policy which shall be in force at its anniversary in 1879.

By the unanimous action of the Board of Trustees another important step in advance has been taken in the interest of all Policy-holders and the public, by directing that the premium rates on old and new Policies shall be reduced fifteen per cent. from present tabular rates for Whole Life Annual Premium Policies, with a correspondingly equitable reduction on the other forms.
The option is given to present members to accept this reduction in cash or to pay full rates on the old plan, and receive equitable additions of insurance payable with the policy; the reductions to be made on the anniversaries of the policies. All dividends are allotted in proportion to the actual contributions of each class to the surplus of the Company.

NEW YORK, February 19, 1879.

ANTI-FAT

ALLAN'S ANTI-FAT is the great remedy for Corpulence. It is purely vegetable and perfectly harmless. It acts upon the food in the stomach, preventing its being converted into fat. Taken in accordance with directions, **it will reduce a fat person from two to five pounds per week.**

FRANK LESLIE'S
ILLUSTRATED NEWSPAPER

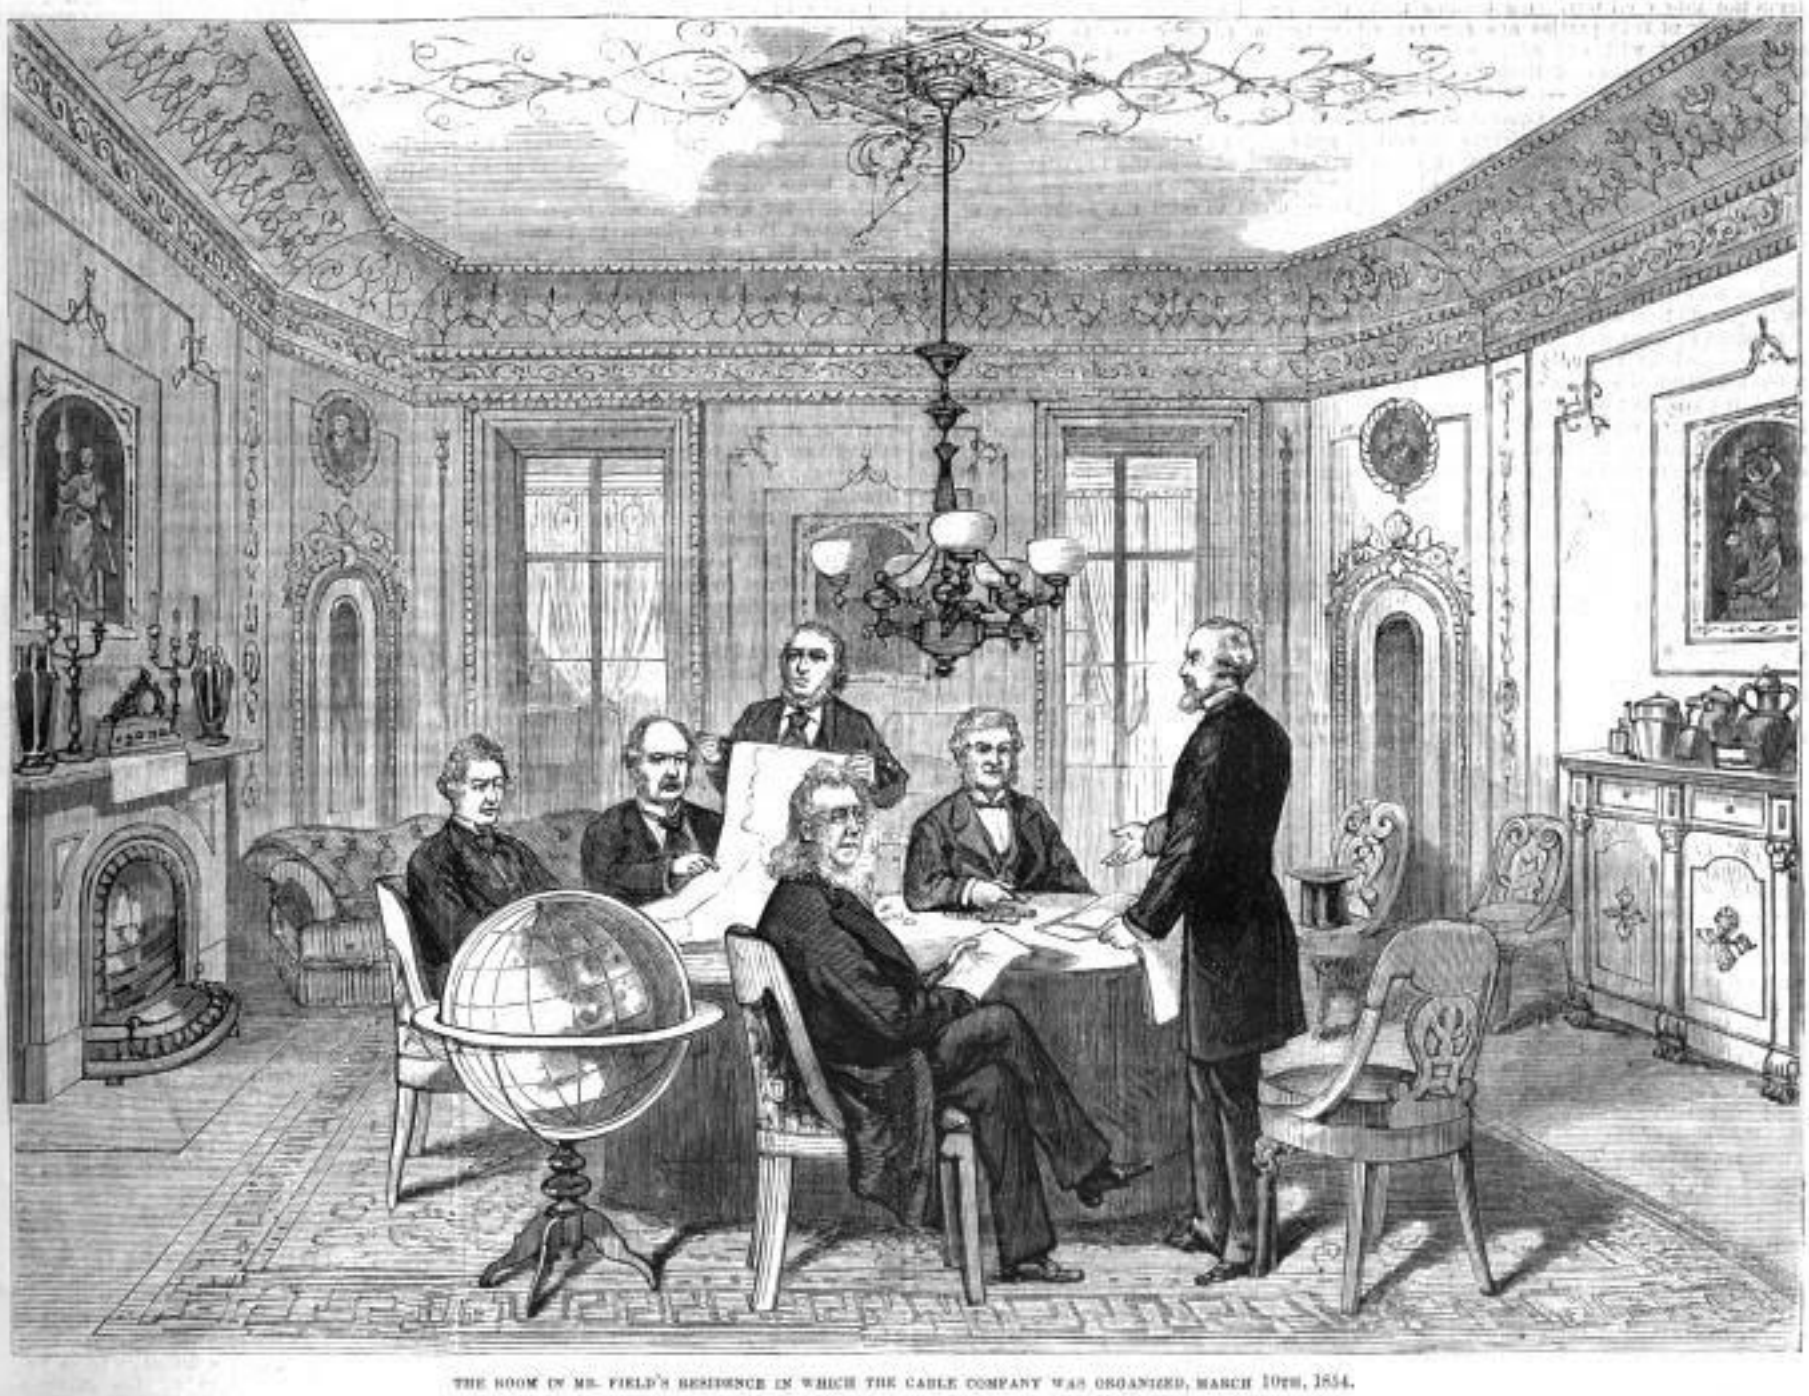
Entered according to the act of Congress, in the year 1879, by FRANK LESLIE, in the Office of the Librarian of Congress at Washington.

No. 1,225—Vol. XLVIII.] NEW YORK, MARCH 22, 1879. [Price 10 Cents. $4.00 Yearly. 13 Weeks, $1.00.

THE ATLANTIC CABLE.

A Commemorative Reception.

CONSIDERING how rapidly events of engrossing interest crowd upon each other in these busy days, it will scarcely appear possible to many of our readers that twenty-five years have elapsed since Cyrus W. Field organized in the City of New York that company which, after trying disappointments and costly failures, connected the Old World with the New by a strand of wire 2,000 miles in length.



On the 10th of March, 1854, an agreement was signed in Mr. Field's dwelling to organize the New York, Newfoundland and London Telegraph Company, the object of which was stated in the very first sentence of its charter to be "to establish a line of telegraphic communication between America and Europe by way of Newfoundland." The company was composed of but five individuals—Peter Cooper, Moses Taylor, Cyrus W. Field, Marshall O. Roberts and Chandler White. Mr. David Dudley Field was present as the legal adviser of the company. Mr. White soon after died, and was succeeded by Mr. Wilson G. Hunt. These five gentlemen are all still living to see the great results of the experiment then first made to carry the telegraph across the ocean.

Their first proceeding was to obtain charters from the British Colonial Governments, granting monopolies of the line of telegraph between Newfoundland and the American continent. Mr. Cyrus W. Field, with his brother, David Dudley Field, and Chandler White, went to Newfoundland and secured from the Legislature of St. John's a charter granting the company an exclusive right for fifty years to establish the line. Among the earliest and most constant advocates of the enterprise was the Hon. E. M. Archibald, Attorney-General of Newfoundland in 1854, and since then the British Consul at New York, to whose exertions the Atlantic Telegraph Company owes some of the most important advantages it has obtained.

NEW YORK, MARCH 22, 1879.

CAUTION.

Subscribers, in ordering our publications, should be careful to write the name of FRANK LESLIE *in full, and direct their letters to 53, 55 and 57 Park Place, New York, from which address all our publications are issued.*

THE CONGRESSIONAL DEAD-LOCK.

THE disagreement between the two branches of the late Congress on two important Appropriation Bills is very deplorable, whether regard be had to its origin, its occasion, its object, or its probable consequences. Its origin is to be found in the proceedings of a Democratic Congressional caucus instructing the adherents of that party to insist upon three leading measures as the condition precedent to voting the necessary supplies for carrying on the Government and maintaining the army. These three desiderata of the Democrats were as follows: a repeal of the laws requiring a test-oath as the condition of serving on juries in the Federal Courts at the South; a repeal of the laws admitting the presence of United States troops at polling-places; and a repeal of the laws authorizing the appointment of supervisors and deputy marshals whose duty it is, in the larger cities of the country, to watch against the violation of the elective franchise whenever a Federal election is held.

With regard to these three objects it is natural that the opinions of men should differ, in a measure, according to their political predilections. The three enactments assailed by the Democrats were passed by a Republican majority in the days of its undisputed supremacy in both Houses of Congress, and the first two of them were undoubtedly addressed to meet certain extraordinary emergencies supposed to result from the late civil war. We believe that candid men of both parties are now ready to admit that, with Confederate generals sitting in the Senate and House of Representatives, with a Confederate general occupying a place in the Cabinet of President Hayes, and with a Confederate general, like Mosby, holding a high consular office abroad, it is quite puerile and absurd to exclude from juries at the South any and all persons who cannot take the "Ironclad oath." So, too, the presence of troops at the polls is a most unwelcome intrusion on all the hereditary ideas upheld by the Anglo-Saxon race with regard to the "freedom of elections," and this intrusion has always been resented as only less intolerable than the mob violence against which it purports to guard. As the apprehension of such mob violence becomes less and less prevalent, it is natural that there should be a growing demand for the withdrawal of all military surveillance in the conduct of elections.

But with regard to the third of these demands the same justification can scarcely be pleaded by the Democratic leaders. The whole country is deeply interested in the purity of all Federal elections, and the law regulating the appointment of supervisors and deputy marshals may be said to have its root in a permanent ground of the public welfare. Originally passed to meet and check certain abuses in this city, it may have been itself sometimes abused by some of its agents; but this is a consideration which should work rather to the modification than the abolition of the protective statute.

But whatever may be the difference of men's opinions with regard to the comparative legitimacy of these three objects of the Democratic and Republican contention, we think there can be no difference of opinion with regard to the inopportuneness of the occasion selected by the Democrats for joining this serious issue in the presence of the country. No important measure of legislation should be forced through Congress as a mere "rider" to an appropriation Bill. No existing abuse can be more intolerable than such an abuse of legislative power. The fact that the Republican Party has sinned in this way, and the old Whigs once defeated an Army Bill, in the days of President Pierce, by attaching a "rider" to it, is no justification for Democratic persistency in such a course of wrong-doing. And the persistency of the Democrats in the present case is rendered the more inexcusable by the fact that their Republican opponents were ready and willing to yield the first two points of difference, if the Supervisors Law should be allowed to stand as it is. When we remember that in the next Congress the Democrats will have a working majority in both Houses, and that in the meantime no Federal elections are to be held except in California, it would seem that they (the Democrats) are wholly without excuse in blocking the wheels of Government for a mere punctilio of partisan predominance, and that, too, a punctilio of very questionable rightfulness in point of substance, and of most unquestionable wrongfulness in point of form.

And who shall tell what may be the issue of the conflict that has now been joined? The venue of the issue will be changed in the next Congress from a dispute between the two Houses of Congress to a probable dispute between the Legislative and Executive branches of the Government. If President Hayes shall refuse to sign the Army and Legislative Bills with these "riders annexed" (supposing them to be so passed by the next Congress), are the Democrats prepared to coerce the Executive into compliance with their wishes under a threat of "stopping the Government" and "disbanding the army"? It will behoove them to think twice before placing themselves in that indefensible attitude, for President Hayes has recently shown that the veto power, with which he is clothed by the Constitution, is something more than a *brutum fulmen*.

THE LIFE INSURANCE INTEREST.

THE life insurance business of the country has attained a magnitude and importance which are commanding for it more and more the attention of legislators and publicists. Recent inquiries develop the fact that during the past twenty-eight years the enormous sum of $1,238,056,891 has been paid by the people to the life insurance companies of this State alone. During the same period of time there has been paid for death claims the sum of $608,950,453. The present assets of these companies being stated at $396,420,591, the amount to be accounted for is $232,685,847. If, as is supposed, this sum has been eaten up in expenses and cost of management, it is obvious that there must have been a great deal of extravagance, and it is not surprising that policy-holders are beginning to demand "retrenchment and reform." There is naturally, too, a good deal of solicitude as to the investments of the companies. Most of them loan their funds on the security of real estate mortgages, and in the shrinkage and depreciation of property it may well be questioned whether the security in many cases is sufficient to cover the amount loaned. This is a matter which should receive the close and earnest attention of the Insurance Department, and should inefficiency or infidelity be shown by the superintendent in dealing with this great interest, then the Legislature should promptly institute such safeguards as may be required to meet the exigencies of the case. The *Herald* has done the 600,000 policy-holders and public generally a valuable service by publishing lists of the mortgages held by many of the companies, with their amounts, and a description of the property on which the loans are made, from which persons in interest can determine for themselves whether the valuations at which the properties are held are excessive. If they would not sell now for the amounts named in the mortgages, then the security of the companies is not what it should be, and the demand for prudence and economy in their management becomes all the more urgent.

THE ELEVATED RAILROAD.

A BILL to prevent elevated railways from crossing each other on grade in any city, and to prohibit one company from using the tracks of another, has been introduced in the Assembly at Albany. There should be no doubt as to the passage of this wholesome measure. The proposed use of the same track by the New York and Metropolitan Elevated lines, by a junction at Beaver and Pearl Streets, and thence northward to Chatham Square, has already provoked protest and apprehension, and if permitted to be carried out will result inevitably in serious peril to the traveling public. Under the proposed arrangement, every train of the Metropolitan Railway going north will be compelled to cross the track of the south-going trains on the New York Elevated, and enter upon the track of the trains on the same road going northward. There are thus two possibilities of collision to every Metropolitan Elevated train at this point, the one arising from the absolute necessity of crossing the western track occupied by trains going south, and the other from converging towards a common point on the eastern track with the trains going north. With trains running once in half an hour on all these tracks the danger of collision would be sufficient to deter passengers from venturing their lives upon the road; with trains running once every three minutes on the two roads, the average interval between their passage will be only forty-five seconds, and the risk simply inconceivable. In England, surface railroads are never permitted to cross each other or a public highway on a level, and the exceptional safety of travel on roads in that country is largely due to this fact. In the case under consideration, much of the difficulty could be avoided by elevating and depressing the tracks of the two roads so as to make collisions at the junctions impossible. If the companies shall refuse to do this, or to adopt other necessary precautions, then, by all means, let the Legislature arrest at once a scheme which embodies so many possibilities of danger to life and limb.

WORK OF THE SESSION.

NO recent Congress has come so near being a total failure as the Congress just dissolved. Ever since the first day of the session there has been a contest between the Republicans, naturally reluctant to surrender the power they have wielded so many years, and the Democrats, whom the probability of a clear majority in both Houses of the next Congress has rendered uncommonly impudent and aggressive. The result has been reckless forays on the part of the latter and filibustering on the part of the former, and the net outcome of it is much bad legislation, very little good, and an adjournment with hundreds of important Bills on the Speaker's table dead of inaction.

One hundred and eight public Acts were passed, and about as many private Bills and joint resolutions to authorize various things and to relieve numerous persons. Among the public Acts, one was very important—the Arrears Pension Bill—and it will probably prove to be the most pernicious law that has been enacted in this country during this decade. It provides that all pensioners shall receive pensions from the date of discharge from service, and that those who have not yet applied for pensions may still apply if they are able to discover that they received personal injuries during the war which closed fourteen years ago. The effect of this Bill will inevitably be to take a very large amount of money from the national treasury, variously estimated at from $40,000,000 to $150,000,000, in behalf of men whose services have once been paid for and whose wounds and disabilities have already been recognized whenever they were able to discover them. The new law offers a definite premium for dishonesty. It makes distinct provision for fraud, and shows swindlers how to attain their object. A fall from a horse in 1862 may be made the basis of a successful application for a pension now. A cold caught on picket fifteen years ago may be the means now of putting $1,000 into the pocket of a claim-agent, who paid $10 to the soldier years ago for his quit-claim. All that is needed to enable an ex-soldier to get a pension now is for his amiable neighbors to remember when he came home on furlough not feeling very well, and for a complaisant physician to swear that in his opinion that was the origin of his present illness. It is said that 40,000 applications for pensions per annum are now coming in. In short, the Arrears Pension Bill was the joint work of demagogues and swindlers. There was no general demand for it from honest ex-soldiers, but claim-agents who will chiefly profit by it worked it through. And the worst of it is that Congress made no appropriation for paying the debt thus authorized, but left Secretary Sherman to draw from his coin reserves the immense sums required, at the imminent risk of imperiling the great work of resumption.

Another Bill, even more dishonorable than this, if not so expensive, was the anti-Chinese Bill, happily killed by the Presidential veto. Surely the constitutional negative of the President was never interposed more justly or more opportunely. With a country so large that there is a farm of two hundred and fifty acres for the head of every family, it is not at all necessary for us to exhibit a brutal and churlish inhospitality towards the poorest, most industrious, most frugal and most peaceful of the human race.

The amendment to the Post Office Appropriation Bill, providing a new classification of mail matter, became a law. This does not change ordinary postage rates, but reclassifies bulky matter, so as to bring to the Government a larger revenue, or, rather, so as to come a little nearer to making the receipts of the Department pay its expenses. Under the old classification, newspaper carriage cost the Government $16,000,000 a year, and paid it $8,000,000—that is, it imposed a net annual loss of $8,000,000.

Among the Bills which failed were those to transfer the control of the Indians to the War Department; to devote the proceeds of sales of public lands to educational purposes; to reorganize the army; to authorize railroad companies to maintain lines of telegraph for commercial purposes, and to regulate inter-State commerce. Among other measures which became laws, in addition to the Appropriation Bills, were those providing for the census, reducing the tax on tobacco and otherwise amending the Internal Revenue laws; to aid the refunding of the national debt by authorizing the issue of small Treasury certificates; and to prevent the introduction of infectious or contagious diseases. The total number of Bills and joint resolutions introduced in the House during the session was 6,826, and in the Senate 1,536.

The Forty-sixth Congress has the floor.

THE NEXT HOUSE.

THE new House of Representatives, which will convene on March 18th, consists of 287 members. This is six less than the full membership, there being two vacancies from death, and four from California, whose Congressional election does not take place until September. Of the members elect, 146 are Democrats, 128 Republicans, and 13 Greenbackers, of whom seven are said to have Democratic and six Republican proclivities. A quorum of the whole membership is 147, but should the quorum be construed to mean a majority only of the members actually elected, then 144 votes will be competent for the organization of the House and the transaction of business. There are said to be several rulings in favor of the latter interpretation of the Constitution, and they will probably be held as sufficient precedents for the present occasion. The Democrats, at any rate, will insist upon this view, since with their meagre majority they might encounter difficulty in organizing the House should a majority of the possible total membership be held to be necessary to elect a Speaker or other officers. In that event, indeed, should the Greenbackers act independently, or combine with the Republicans, the Democrats would be one vote short of a majority, and there could be no election by either party. The difficulty of the situation is increased by the fact that four Democratic members are seriously ill, and may be unable to appear in their seats on the 18th.

The new House will contain an exceptionally large number—133 in all—of new men. Of these, sixty-one are Democrats and seventy-two Republicans. Among the more prominent and influential Republicans who will be missed from the new body are Messrs. Banks, Butler, Foster, Wade, Jacob D. Cox, and Burchard. The Democrats lose the services of Messrs. Hewitt, Swann, Potter, Lynde, Schleicher and Williams. Of the new members, such Republicans as General Joseph R. Hawley, of Connecticut, ex-Governor Thomas L. Young, of Ohio, and Levi P. Morton, of this city, will no doubt be conspicuous as practical workers, no less than as earnest supporters of the wisely conservative policy of the present Administration. General Garfield will no doubt be the Republican candidate for the Speakership, and the indications are that Mr. Randall, who has filled the position with great dignity and ability, will again be the choice of the Democracy. His principal competitors are Messrs. Blackburn of Kentucky and Cox of this city.

THE VANDERBILT WILL CASE.

THE sudden closing, on March 4th, of the Vanderbilt will case has occasioned wide speculation and remark. The first statement was that the unexpected suspension of hostilities was the result of a compromise between the principals, but this was subsequently denied. The truth probably is that the contestants felt that their case was rendered hopeless by the introduction of several former wills of Commodore Vanderbilt, made as far back as 1868, when he was in full health and strength, making the same discriminations and in favor of the same heir as in his last will of 1875. Even were the will now resisted to be set aside, the contestants would not be the gainers—some of them, indeed, would be losers, and it was probably thought, therefore, the part of wisdom to abandon the struggle. The counsel of the contesting heirs, however, state that should Mr. William H. Vanderbilt refuse to fulfill promises he is said to have made a year or so ago, the litigation will be renewed; but this may, perhaps, be regarded as doubtful. It is certainly to be hoped that we have heard the last of the case, and that no other like it may for a long time be obtruded by family contentions and jealousies upon the public attention. It is high time that the washing of dirty family linen by quarreling heirs should be done outside of the courts and the public prints; and if there are any who persist in violating the decencies and proprieties of life by holding up to the view of the world the infirmities and faults of dead and buried kinsmen, let them be condemned as they deserve by a pitiless public opprobrium.

IN THE OLD WORLD.

THE Viceroy of India has lately sent to the Home Government of the British Empire two very important telegrams. One of these confirmed, by a message from Yakoob Khan, the rumors of his father's death, an event that will probably hasten

Digitized by Google

the end of the war in Afghanistan, but which has meanwhile, it is said, started a bloody quarrel between the numerous claimants of the throne of the late Ameer. The other telegram announces that famine is no longer apprehended in India. How dreadful an Eastern famine is may be inferred from the fact that Dr. Henry Blodgett, a missionary in China, estimates the number of deaths by the recent famine in the northern provinces of that Empire at ten millions. The Chinese Government has completely crushed the rebellion in Kashgar. The spectral Eastern Question, that has so long haunted Europe, is moving towards the remotest shores of Eastern Asia, and diplomacy is already discussing rumors of approaching war between China and Russia. Russia is still disturbed by the Nihilist agitation. This is even reported to have provoked serious dissensions between the Czar and the Czarewitch. It was doubtless the cause of the assassination of Prince Krapokine, the late Governor of Charkoff. A murderous fight followed the discovery by the police of a secret press in Kieff for spreading the doctrines of the Nihilists, who have grown very bold and violent. They are even charged with using the prevalent dread of the plague for advancing their cause. The Grand Duke Nicholas is dangerously sick. In Southern Russia diphtheria occasions almost as much excitement as the plague.

Germany is unwilling to believe that the plague has ceased in Russia. But the Germans have been chiefly occupied with the struggle in the Reichstag for parliamentary rights and freedom of speech. Bismarck, in the discussion of the Disciplinary Bill on March 6th, had the audacity to justify his despotic project by pointing to the rules for securing propriety of debate in the American Congress. Nevertheless, his Parliamentary Discipline Bill has been rejected. Oscar, King of Sweden, is about to put in circulation a reply to the numerous attacks of the late Pope Pius IX. on Freemasonry. Pope Leo XIII. has named among the new cardinals to be created at the next consistory several Italian prelates, the Papal Nuncios at Paris and London, the Bishop of Poictiers, the Archbishop of Toulouse, Dr. Hergenwether, the erudite Professor of Ecclesiastical History at Warzburg, in Bavaria, and Dr. John Henry Newman, of England. The act of conferring the purple on Dr. Newman is universally regarded as a graceful if tardy recognition of the high personal worth and services of one whose piety, genius and learning have made him revered throughout the world.

The crisis in Spain has been ended by the formation of a new Ministry, headed by General Martinez Campos as Minister of War. One result of the Cabinet change will probably be the consummation of the reforms in Cuba, which General Campos has for some time so stoutly urged. General Blanco will probably be made Governor-General of that island.

In France the chief political events of the week have been the resignation of M. de Marcère, as Minister of the Interior, who has been succeeded by M. Lepère, in his turn succeeded as Minister of Commerce by M. Tirard, a free-trader and an advanced Gambettist; the discussion as to the alleged malpractice of the Paris police; the furious onslaught upon M. Léon Say, Minister of Finance, as well as on M. de Marcère, with charges of scandalous financial jobbery; the looming up of Clemenceau a Paris deputy, as a new and powerful leader of the Left (Clemenceau is well remembered in New York, where he long resided); and the decision of the Committee of Inquiry in favor of the proposed impeachment of the De Broglie Ministry. If the present Ministry should be wholly remodeled, it is likely that Gambetta would become President of the Council and Minister of Foreign Affairs. Renan, the famous savant, was received into the French Academy on March 5th.

The election of a Prince of Bulgaria will probably be postponed. Passananto has been tried at Naples and convicted for his attempt to assassinate King Humbert of Italy. The river Theiss, in Hungary, is still rising, and over 200,000 acres of land are threatened with total submersion. Troops and pontoons have been sent to save lives—a far better employment than destroying lives in battle. The damage caused by the recent storms in the Canton of Vaud is estimated at 4,000,000 francs. In view of the alarming increase of small-pox, typhoid fever and other contagious maladies in Switzerland, the Federal Council has appointed a commission to consider the best preventive measures to be adopted. The most thrilling episode of Continental life for a long while has been the escape of the insane ex-Empress Carlotta—"Poor Carlotta"—from being burned to death in the fire that consumed the royal chateau of Tervuerin. There is nothing more pathetic in old Greek tragedy than the fate of Emperor Maximilian's widow.

Trade in the British manufacturing districts has not improved, but the national revenue promises to show a better result at the close of the financial year than many people have ventured to anticipate. There is not unlikely even to be a small surplus. The floating debt of Great Britain is now £24,704,800. The growth of the debt is due partly to the purchase of the Suez Canal shares, and partly to the recent naval and military preparations, but chiefly to the system of advances to local authorities. But in spite of striken and depression of business, it is noteworthy that savings banks' deposits increased from £73,534,000 in January, 1878, to £74,657,000 in January, 1879. The Empress of Austria, although uninvited, and, indeed, almost warned off, by the Queen of England and Empress of India, has persisted in going fox-hunting in Ireland. The people of the whole United Kingdom are excited over the preparations for celebrating at Windsor Castle, in St. George's Chapel, on Thursday, March 13th, with royal magnificence, the wedding of the Duke of Connaught and Princess Louisa Margaret of Prussia. In the midst of all this excitement, the Isandula disaster in Zululand is almost forgotten for the moment. If remembered, it only provokes denunciation of unlucky Lord Chelmsford and curses on insolent and wily King Cetawayo. Queen Victoria will leave Portsmouth for her continental trip of a month on the 25th instant. In the House of Commons a motion in favor of women suffrage has been rejected by a vote of 217 to 103.

THE State Senate has passed the Bill reducing the rate of interest in New York from seven to six per cent. It is believed that it will also pass the Assembly. The tendency of legislation everywhere throughout the country is in the direction of a reduction of interest rates.

CONNECTICUT is taking the lead in remedying serious defects in the methods of taxation. The Legislature has passed a Bill taxing property of educational, religious, and benevolent organizations which is not used for the purpose of such organizations. All property of such bodies has heretofore been exempt. If such a law could be made universally applicable, millions of dollars would be added to the public revenues, derived from property which now escapes all taxation.

THE Health Board Inspector of the public school-houses in this city reports that there is but one of these buildings which has adequate means of ventilation. So remarkable a statement would seem to demand the prompt and vigorous attention of our sanitary authorities. If our school-houses cannot be provided with an ample supply of pure and wholesome air, we must not be surprised if sickness and disease fasten upon their occupants and run their course with fatal effects.

A VOLUME entitled "Yellow Fever Heroes, Honors and Horrors of 1878," gives a graphic and interesting history of the pestilential visitation which last Fall scourged the Southern States. It appears from this valuable work that the total contributions for the relief of the stricken communities amounted to $4,548,703, of which New York furnished the magnificent sum of $679,340; Pennsylvania, $248,090; Ohio, $196,298; Missouri, $199,353; and Illinois, $192,845. The roll of heroes who perished in battling the fever includes men and women from nearly every State, who, as nurses or in other capacities, cheerfully gave their lives for the suffering and dying. The book also gives a list of all the victims of the pestilence—over 10,000 in number—whose names were furnished for publication.

THE development of the cotton manufacture at the South is one of the most encouraging signs of the times. One cotton mill at Columbus, Ga., which now employs 1,600 hands and uses 260 bales of cotton every week, shows a surplus on its business of $1,581,000, its expenditure for wages alone amounting to $400,000 per annum. Several cotton factories are to be erected at Mobile, in Alabama, and the advantages afforded by the South for this particular branch of industry will, no doubt, result in its establishment at many other points. These advantages consist in the facts that cotton is two cents per pound cheaper than at Northern factories; that production is also cheaper to the extent of the saving on the transportation of raw material, and that cotton goods can be shipped just as conveniently from contiguous Southern ports as from those at the North.

IN June and July next a great agricultural show is to be held in London by the Royal Agricultural Society of England. It is to have in part an international character, and it is strongly urged that American producers and exporters should avail themselves of the opportunity to make an exhibit of their farm productions. Among the classes in which Americans will be permitted to compete are those including riding and carriage horses, sheep and wool, fresh meat, beef and mutton, cured hams and bacon, butter, cheese, etc. While our exports to Great Britain are already large, many American products still rest under the disadvantage of a more or less pronounced prejudice against them, and it would seem that the opportunity which this exhibition will offer for the removal of this prejudice, as to some articles at least, should by all means be improved.

THE River and Harbor Bill, as passed by Congress in its closing hours, proposes an expenditure of nine millions of dollars. Much of the money will go for the "improvement" of creeks and streams which can never be made available for commercial purposes, and Senators Edmunds, Conkling and others, who protested against the expenditure as a shameless waste of the public money, fairly represented the popular feeling as to the enormous steal. Senator Saulsbury of Delaware did not speak extravagantly when he said that if "the policy embodied in this Bill should be followed for years, the people would call Congress to an account, and Senators would be hearing of schemes for a readjustment of the national debt similar to the schemes which are now agitating certain States." The whole system of appropriations for internal improvements is pernicious and faulty, and unless it can be made something better than a vehicle of all sorts of "grabs" and jobs, some constitutional prohibition should be imposed upon the power of Congress over the subject.

A GOOD deal of surprise has been expressed that Senator Don Cameron should have voted to retain Senator Butler of South Carolina in his seat, as against his Republican contestant. But it appears that there was a reason for his course which was altogether outside of political considerations, and which strikingly illustrates the trait of never forgetting a friendly act for which the Cameron family has become conspicuous. The story is that years ago, before the war, when Simon Cameron was in the Senate, old Senator Butler of South Carolina, an uncle of the present member, who for eighteen years was Chairman of the Judiciary Committee, rendered the Pennsylvanian a very signal service which he declared he would never forget. When the present case, involving the political fortunes of one of the old Senator's descendants, was originally presented to the Senate, Cameron announced that he would pay the long-standing debt of gratitude by voting for General Butler's admission. Having meanwhile retired to make way for his son, the latter, when the critical moment came, at the father's request, squared the account by casting his vote in favor of the "rebel" South Carolinian; and we suspect that the country will think none the less of him on this account.

THE statement that the people of the Pacific States are a unit in support of the Anti-Chinese Bill is not justified by the facts. The San Francisco *News-Letter* says, emphatically: "The thinking, substantial citizens of California have not so far forgotten themselves as to ignore the self-evident facts that to the steady, earnest labor of the Chinese they can clearly trace a large share of their material improvement and prosperity. The reclamation of swamp and tide lands, the building of railroads, the development of placer claims, and various other enterprises, all bear abundant evidence that the Chinese *have done* and *are doing* California a great deal of material benefit." The same paper adds these significant figures:

"The steamer *Gaelic* left for China on the 22d with a full cargo of merchandise, leaving on the wharf some 300 tons of freight. She carried away 550 Chinese passengers. The steamer *City of Tokio* arrived from Hong Kong a day or two ago, bringing a full cargo of teas and other merchandise and 84 Chinese passengers. During the past two years the excess of Chinese departures over arrivals is upwards of 6,000—2,400 to China, the balance to the Sandwich Islands and other foreign countries. The imports from China during the years 1877 and 1878 are valued at $14,770,461; the exports for the same period are $6,091,710, showing the balance of trade in favor of the City of San Francisco alone of $8,678,751. Oregon exports about $1,000,000 during the same period, and her imports are about the same. San Francisco exports to Japan are but $366,000 for 1878, and the imports are $6,158,392."

"THE action taken by the State Legislature in regard to diseased cattle in Bloomville recalls the great campaign of twenty years ago by FRANK LESLIE'S ILLUSTRATED NEWSPAPER against the strongly intrenched swill-milk corporation in New York, which resulted in the punishment of the criminals and the breakup of their nefarious traffic. Excitement ran so high that Mr. Leslie was threatened with assassination. The prominent and representative citizens of New York testified their appreciation of Frank Leslie's achievement by presenting him with a magnificent watch and chain. This was one of the greatest successes yet reached in the interest of public welfare by a newspaper."—*American Art Journal*, February 22d.

NEWS OF THE WEEK.

Domestic.

FRIDAY, April 11th, has been appointed as "fast day" in Connecticut.

THE Rev. Dr. Sanford Hunt has succeeded the late Dr. Nelson as agent of the Methodist Book Concern.

THE New York Assembly has passed a Bill reducing one-third the pay of members of the next Legislature.

REV. JOHN WEISS, the essayist and lecturer, and a leader among the Boston school of Radicals, died March 9th.

THE authorities of South Carolina have granted amnesty to Senator Paterson, and he will go to Arizona to engage in business.

O'LEARY, Ennis, Rowell and Harriman began the six days' walk for the Astley Belt in Gilmore's Garden, in this city, on the morning of March 10th.

THE Lower House of the Connecticut Legislature has passed an Act providing for the imprisonment of old tramps for a maximum period of one year.

THE Union Pacific Railroad Company has obtained possession of the Kansas Pacific road by purchase, and hereafter the two roads will be operated as one.

ALL the Republican members of the Forty-fifth Congress recommended ex-Congressman Rainey of South Carolina to the President for an official appointment.

THE Hon. Elihu Burritt, the distinguished philanthropist, reformer and philologist, died at New Britain, Conn., on March 6th, aged about seventy years.

THREE Western Democratic Congressmen, who are seriously ill, are to be brought to Washington on a special car, in order to be present at the organization of the new House on the 18th.

CONGRESSMEN CHITTENDEN and Butler have agreed to make up a friendly case and have the validity of an issue of legal-tenders in time of peace tested in the United States Supreme Court.

HON. HENRY W. BLODGETT, United States District Judge for the Northern District of Illinois, has been vindicated by the Congressional Investigating Committee on the charges of official corruption.

GOVERNOR ROBINSON has presented charges against Insurance Superintendent Smyth to the New York Legislature and recommended his removal. The Superintendent has made a formal reply, denying all the charges.

IT is stated positively that the President will veto any Bill which may be passed by Congress for the repeal of the Acts relating to the United States Supervisors at elections and the arrest and prosecution of fraudulent voters.

ARCHBISHOP PURCELL and his brother, Father Edward Purcell, his financial manager, have made an assignment for the benefit of their creditors. It is thought that Cardinal McCloskey will sanction a general contribution for the Archbishop's relief in all the Catholic dioceses after Lent.

A BREAK in the Chicago wheat market, resulting in the sale of 2,500,000 bushels by the agents of Mr. James R. Keene, was occasioned on the 7th instant by a bogus telegram sent from New York in the name of Mr. Keene, directing the sale to be made. The author of the fraud has not been discovered.

THE Treasury Department has already sold since January 1st four per cent. bonds to the amount of $225,000,000, and the demand continues to exceed the productive capacity of the Bureau of Engraving and Printing. There is every reason to believe that the bonds sold during the current year will amount to $300,000,000.

DURING the calendar year 1878 there arrived at the several ports of the United States 209,254 passengers, of whom 153,207 were immigrants. During the calendar year 1877 the total arrival of passengers was 190,361, of whom 130,503 were immigrants, showing an increase of 22,704 in the number of immigrants, or about seventeen per cent.

THE Cabinet has decided, as to the organization of the National Board of Health, that Surgeon-General Woodward, of the Marine Hospital Service, shall be the representative of the Treasury Department; Medical Director Francis M. Gunnell, of the Navy Department; Solicitor-General Phillips, of the Department of Justice, and Assistant-Surgeon John S. Billings, of the War Department. Seven members of the Board are yet to be appointed by the President.

Foreign.

THE Chinese have crushed the Kashgar rebellion.

IN the House of Commons, March 7th, a motion in favor of female suffrage was rejected by a vote of 217 to 103.

THE French Chamber of Deputies has voted 225,000 francs for participation in the Australian International Exhibition.

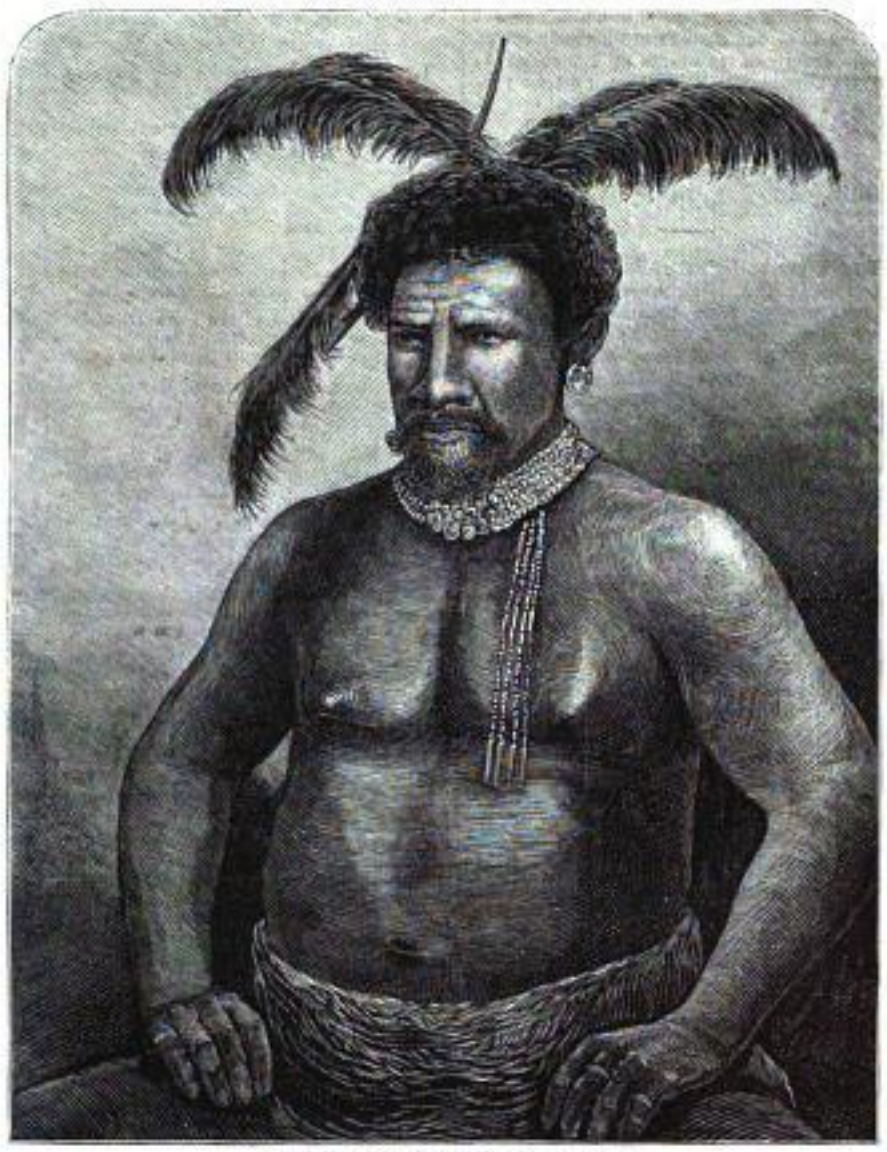
A DIFFICULTY has broken out between Chili and Peru, and a squadron of the former is blockading three ports of the latter.

M. DE MARCÈRE, the French Minister of the Interior, resigned in consequence of the attacks on the Prefecture of Police, and was succeeded by M. Lepère.

A DENIAL that France is about to occupy the island of Rhodes is published, though the seat of the Government of the Archipelago is to be removed therefrom.

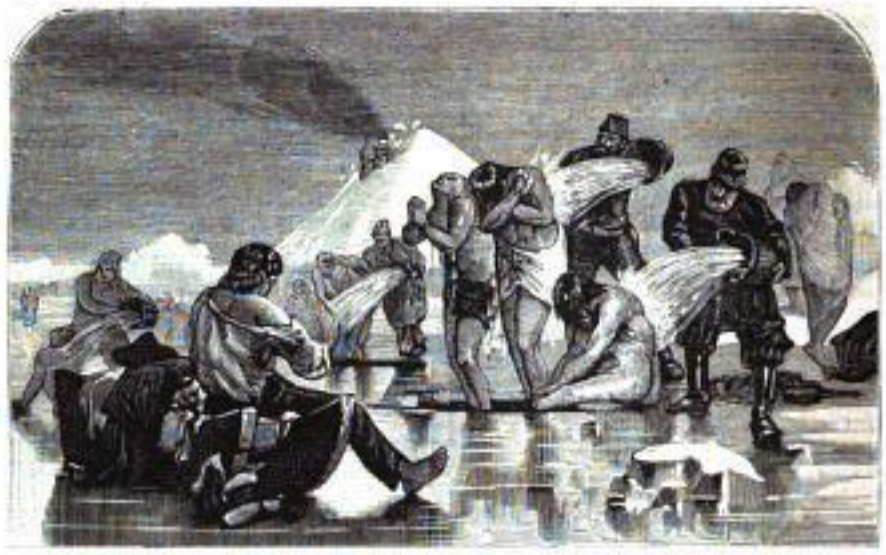
A BRITISH force in Zululand, repulsed an attack of Zulus, February 12th, with enormous loss to the latter, and subsequently burned one of their military kraals.

IT is believed in St. Petersburg that opposition to the Treaty of Berlin will be made in the Bulgarian Assembly of Notables that is to elect a king for the country.



THE majority of the sailors who went on strike at Liverpool still hold out for higher wages. One thousand striking tin-plate workers at Cardiff have resumed work on the masters' terms—a reduction of ten per cent. Three thousand ironworkers at Bradford have resolved to strike.

AFFAIRS in Bolivia are in a very unsatisfactory condition. A famine is raging in the most fertile portion of the country—the district of Cochabamba. In different localities of the department from eight to ten persons die daily of starvation. In one small town 206 persons died from want of food in twenty days.



THE new Spanish Cabinet is constituted as follows: General Martinez Campos, Minister of War and President of the Council; Señor Molano, Minister of Foreign Affairs, Señor Silvela, Minister of the Interior; Señor Ayala, Minister of the Colonies; Admiral Pavia, Minister of Marine; Count de Toreno, Minister of Works; Marquis de Orovio, Minister of Finance; and Señor Arrieles, Minister of Justice.

THE FALLEN LEAVES.

BY WILKIE COLLINS.

CHAPTER XIII.

THE rain that had begun with the morning still poured on steadily in the afternoon. After one look out of the window, Regina decided on passing the rest of the day luxuriously, in the company of a novel, by her own fireside. With her feet on the fender and her head on the soft cushion of her favorite easy-chair, she opened the book. Having read the first chapter and part of the second, she was just lazily turning over the leaves in search of a love-scene, when her languid interest in the novel was suddenly diverted to an incident in real life. The sitting-room door was gently opened, and her maid appeared in a state of modest confusion.

"If you please, miss, here's a strange gentleman who comes from Mr. Goldenheart; he wishes particularly to say——" She paused, and looked behind her. A faint and curious smell of mingled soap and scent entered the room, followed closely by a tall, calm, shabbily-dressed man, who laid a wiry, yellow hand on the maid's shoulder, and stopped her effectually before she could say a word more.

"Don't think of troubling yourself to git through with it, my dear; I'm here, and I'll finish for you." Addressing the maid in these encouraging terms, the stranger advanced to Regina, and actually attempted to shake hands with her! Regina rose and looked at him. It was a look that ought to have daunted the boldest man living; it produced no sort of effect on *this* man. He still held out his hand; his lean face broadened with a pleasant smile. "My name is Rufus Dingwell," he said. "I come from Coolspring, Mass.; and Amelius is my introduction to yourself and family." Regina silently acknowledged this information by a frigid bow, and addressed herself to the maid, waiting at the door: "Don't leave the room, Phœbe." Rufus, inwardly wondering what Phœbe was wanted for, proceeded to express the cordial sentiments proper to the occasion. "I have heard about you, miss, and I take pleasure in making your acquaintance." The unwritten laws of politeness obliged Regina to say something. "I have not heard Mr. Goldenheart mention your name," she remarked. "Are you an old friend of his?" Rufus explained with genial alacrity. "We crossed the Pond together, miss. I like the boy; he's bright and spry; he refreshes me—he does. We go ahead with most things in my country, and friendship's one of them. How do you find yourself? Won't you shake hands?" He took her hand, without waiting to be repelled this time, and shook it with the heartiest goodwill. Regina shuddered faintly; she summoned assistance in case of further familiarity. "Phœbe, tell my aunt."

Rufus added a message on his own account. "And say this, my dear. I sincerely desire to make the acquaintance of Miss Regina's aunt, and of any other members of the family circle."

Phœbe left the room, smiling. Such an amusing visitor as this was a rare person in Mr. Farnaby's house. Rufus looked after her with unconcealed approval. The maid appeared to be more to his taste than the mistress. "Well, that's a pretty creature, I do declare," he said to Regina. "Reminds me of our American girls—slim in the waist, and carries her head nicely. How old may she be, now?"

Regina expressed her opinion of this familiar question by pointing, with silent dignity, to a chair.

"Thank you, miss; not that one," said Rufus. "You see I am long in the legs, and if I once got down as low as that, I reckon I should have to restore the balance by putting my feet upon the grate. And that's not manners in Great Britain—and quite right, too."

He picked out the highest chair he could find, and admired the workmanship as he drew it up to the fireplace. "Most sumptuous and elegant," he said. "The style of the Renaissance, as they call it." Regina observed with dismay that he had not got his hat in his hand like other visitors. He had left it, no doubt, in the hall; he looked as if he had dropped in to spend the day, and stay to dinner.

"Well, miss, I've seen your photograph," he resumed, "and I don't much approve of it now I see you. My sentiments are not altogether favorable to that art. I delivered a lecture on photographic portraiture at Coolspring, and I described it briefly as justice without mercy. The audience took the idea; they larfed, they did. Larfin' reminds me of Amelius. Do you object to his being a Christian Socialist, miss?"

The young lady's look, when she answered the question, was not lost on Rufus. He registered it, mentally, in case of need. "Amelius will soon get over all that nonsense," she said, "when he has been a little longer in London."

"Possible," Rufus admitted. "The boy is fond of you. Yes; he loves you. I have noticed him, and I can certify to that. I may also remark that he wants a deal of love in return. No doubt, miss, you have observed that circumstance yourself?"

Regina resented this last inquiry as an outrage on propriety. "What next will he say?" she thought to herself. "I must put this presuming man in his proper place." She darted another annihilating look at him, as she spoke in her turn. "May I ask, Mr.——Mr.——?"

"Dingwell," said Rufus, prompting her.

"May I ask, Mr. Dingwell, if you have favored me by calling here at the request of Mr. Goldenheart?"

Genial and simple-minded as he was, eagerly as he desired to appreciate at her full value the young lady who was one day to be the wife of Amelius, Rufus felt the tone in which those words were spoken. It was not easy to stimulate his modest sense of what was fairly due to him into asserting itself; but the cold distrust, the deliberate distance of Regina's manner, exhausted the long-suffering indulgence of this singularly patient man. "The Lord, in his mercy, preserve Amelius from marrying you," he thought, as he rose from his chair, and advanced with a certain simple dignity to take leave of her.

"It did not occur to me, miss, to pay my respects to you, till Amelius and I had parted company," he said. "Please to excuse me. I should have been welcome, in my country, with no better introduction than being (as I may say) his friend and well-wisher. If I have made a mistake——"

He stopped. Regina had suddenly changed color. Instead of looking at him, she was looking over his shoulder, apparently at something behind him. He turned to see what it was. A lady, short and stout, with strange, wild, sorrowful eyes, had noiselessly entered the room while he was speaking; she was waiting, as it seemed, until he had finished what he had to say. When they confronted each other, she moved to meet him, with a firm, heavy step, and with her hand held out in token of welcome.

"You may feel equally sure, sir, of a friendly reception here," she said, in her steady, self-possessed way. "I am this young lady's aunt; and I am glad to see the friend of Amelius in my house." Before Rufus could answer, she turned to Regina. "I waited," she went on, "to give you an opportunity of explaining yourself to this gentleman. I am afraid he has mistaken your coldness of manner for intentional rudeness."

The color rushed back into Regina's face—she vibrated for a moment between anger and tears. But the better nature in her broke its way through the constitutional shyness and restraint which habitually kept it down. "I meant no harm, sir," she said, raising her large, beautiful eyes submissively to Rufus; "I am not used to receiving strangers. And you did ask me some very strange questions!" she added, with a sudden burst of self-assertion. "Strangers are not in the habit of saying such things in England." She looked at Mrs. Farnaby, listening with impenetrable composure, and stopped in confusion. Her aunt would not scruple to speak to the stranger about Amelius in her presence—there was no knowing what she might not have to endure. She turned again to Rufus. "Excuse me," she said, "if I leave you with my aunt—I have an engagement." With that trivial apology, she made her escape from the room.

"She has no engagement," Mrs. Farnaby briefly remarked, as the door closed. "Sit down, sir."

For once, even Rufus was not at his ease. "I can hit it off, ma'am, with most people," he said. "I wonder what I've done to offend your niece?"

"My niece (with many good qualities) is a narrow-minded young woman," Mrs. Farnaby explained. "You are not like the men she is accustomed to see. She doesn't understand you—you are not a commonplace gentleman. For instance," Mrs. Farnaby continued, with the matter-of-fact gravity of a woman innately inaccessible to a sense of humor, "you have got something strange on your hair. It seems to be melting, and it smells like soap. No; it's no use taking out your handkerchief—your handkerchief won't mop it up. I'll get a towel." She opened an inner door, which disclosed a little passage, and a bath-room beyond it. "I'm the strongest person in the house," she resumed, returning with a towel in her hand, as gravely as ever. "Sit still, and don't make apologies. If any of us can rub you dry, I'm the woman." She set to work with the towel, as if she had been Rufus's mother, making him presentable in the days of his boyhood. Giddy under the violence of the rubbing; staggered by the contrast between the cold reception accorded to him by the niece, and the more than friendly welcome offered by the aunt, Rufus submitted to circumstances in docile and silent bewilderment. "There; you'll do till you get home—nobody can laugh at you now," Mrs. Farnaby announced. "You're an absent-minded man, I suppose? You wanted to wash your head, and you forgot the warm water and the towel. Was that how it happened, sir?"

"I thank you with all my heart, ma'am—I took it for pomatum," Rufus answered. "Would you object to shaking hands again? This hearty welcome of yours reminds me, I do assure you, of home. Since I left New England, I've never met with the like of you. I do suppose now it was my hair that set Miss Regina's back up? I'm not quite easy in my mind, ma'am, about your niece. I'm sort of feared of what she may say of me to Amelius—I meant no harm, Lord knows."

The secret of Mrs. Farnaby's extraordinary alacrity in the use of the towel began slowly to show itself now. The tone of her American guest had already become the friendly and familiar tone which it had been her object to establish. With a little management, he might be made an invaluable ally in the great work of hindering the marriage of Amelius.

"You are very fond of your young friend?" she began, quietly.

"That is so, ma'am."

"And he has told you that he has taken a liking to my niece?"

"And shown me her likeness," Rufus added.

"And shown you her likeness. And you thought you would come here, and see for yourself what sort of a girl she was?"

"Naturally," Rufus admitted.

Mrs. Farnaby revealed, without further hesitation, the object that she had in view. "Amelius is little more than a lad, still," she said. "He has got all his life before him. It would be a sad thing if he married a girl who didn't make him happy." She turned in her chair, and pointed to the door by which Regina had left them. "Between ourselves," she resumed, dropping her voice to a whisper, "do you believe my niece will make him happy?"

Rufus hesitated.

"I'm above family prejudices," Mrs. Farnaby proceeded. "You needn't be afraid of offending me. Speak out."

Rufus would have spoken to any other woman in the universe. *This* woman had preserved him from ridicule—*this* woman had rubbed him dry. He prevaricated.

"I don't suppose I understand the ladies in this country," he said.

But Mrs. Farnaby was not to be trifled with. "If Amelius was your son, and if he asked you to consent to his marriage with my niece," she rejoined, "would you say Yes?"

This was too much for Rufus. "Not if he went down on both his knees to ask me," he answered.

Mrs. Farnaby was satisfied at last, and owned it without reserve. "My own opinion," she said, "exactly expressed! Don't be surprised. Didn't I tell you I have no family prejudices? Do you know if he has spoken to my husband, yet?"

Rufus looked at his watch. "I reckon he's just about done it by this time."

Mrs. Farnaby paused, and reflected for a moment. She had already attempted to prejudice her husband against Amelius, and had received an answer which Mr. Farnaby considered to be final. "Mr. Goldenheart honors us if he seeks our alliance; he is the representative of an old English family!" Under these circumstances, it was quite possible that the proposals of Amelius had been accepted. Mrs. Farnaby was not the less determined that the marriage should never take place, and not the less eager to secure the assistance of her new ally. "When will Amelius tell you about it?" she asked.

"When I go back to his lodgings, ma'am."

"Go back at once—and bear this in mind as you go. If you can find out any likely way of parting these two young people (in their own best interests), depend on one thing—if I can help you, I will. I'm as fond of Amelius as you are. Ask him if I haven't done my best to keep him away from my niece. Ask him if I haven't expressed my opinion that she's not the right wife for him. Come and see me again as soon as you like. I'm fond of Americans. Good-morning."

Rufus attempted to express his sense of gratitude, in his own briefly eloquent way. He was not allowed a hearing. With one and the same action, Mrs. Farnaby patted him on the shoulder and pushed him out of the room.

"If that woman was an American citizen," Rufus reflected, on his way through the streets, "she'd be the first female President of the United States!" His admiration of Mrs. Farnaby's energy and resolution, expressed in these strong terms, acknowledged but one limit. Highly as he approved of her, there was, nevertheless, an unfathomable something in the woman's eyes that disturbed and daunted him.

CHAPTER XIV.

RUFUS found his friend at the lodgings, prostrate on the sofa, smoking furiously. Before a word had passed between them, it was plain to the New Englander that something had gone wrong.

"Well," he asked; "and what does Farnaby say?"

"Damn Farnaby!"

Rufus was secretly conscious of an immense sense of relief. "I call that a stiff way of putting it," he quietly remarked; "but the meaning's clear. Farnaby has said No."

Amelius jumped off the sofa, and planted himself defiantly on the hearth-rug.

"You're wrong for once," he said, with a bitter laugh. "The exasperating part of it is that Farnaby has said neither Yes nor No. The oily-whiskered brute—you haven't seen him yet, have you?—began by saying Yes. 'A man like me, the heir of a fine old English family, honored him by making proposals; he could wish no more brilliant prospect for his dear adopted child. She would fill the high position that was offered her, and fill it worthily.' That was the fawning way in which he talked to me at first! He squeezed my hand in his horrid, cold, slimy paw till, I give you my word of honor, I felt as if I was going to be sick. Wait a little; you haven't heard the worst of it yet. He soon altered his tone—it began with his asking me, if I had 'considered the question of settlements.' I didn't know what he meant. He had to put it in plain English; he wanted to hear what my property was. 'Oh, that's soon settled,' I said. 'I've got five hundred a year; and Regina is welcome to every farthing of it.' He fell back in his chair as if I had shot him; he turned—it was worse than pale, he positively turned green. At first he wouldn't believe me; he declared I must be joking. I set him right about that immediately. His next change was a change to impudence, purse-proud impudence. 'Have you not observed, sir, in what style Regina is accustomed to live in my house? Five hundred a year! Good heavens! With strict economy, five hundred a year might pay her milliner's bill and the keep of her horse and carriage. Who is to pay for everything else—the establishment, the dinner-parties and balls, the tour abroad, the children, the nurses, the doctor? I tell you this, Mr. Goldenheart. I'm willing to make a sacrifice to you, as a born gentleman, which I would certainly not consent to in the case of any self-made man. Enlarge your income, sir, to no more than four times five hundred pounds; and I guarantee a yearly allowance to Regina of half as much again, besides the fortune which she will inherit at my death. That will make your income three thousand a year to start with. I know something of domestic expenses, and I tell you positively you can't do it on a farthing less.' This was his language, Rufus. The insolence of his tone I can't attempt to describe. If I hadn't thought of Regina, I should have behaved in a manner unworthy of a Christian—I believe I should have taken my walking cane and given him a sound thrashing."

Rufus neither expressed surprise nor offered advice. He was lost in meditation on the wealth of Mr. Farnaby. "A stationer's business seems to eventuate in a lively profit in this country," he said.

"A stationer's business!" Amelius repeated, disdainfully. "Farnaby has half a dozen irons in the fire besides that. He's got a newspaper, and a patent medicine, and a new bank, and I don't know what else. One of his own friends said to me, 'Nobody knows whether Farnaby is rich or poor; he is going to do one of two things—he is going to die worth millions, or to die bankrupt.' Oh, if I can only live to see the day when Socialism will put that sort of a man in his right place!"

"Try a republic, on our model, first," said Rufus. "When Farnaby talks of the style his young woman is accustomed to live in, what does he mean?"

"He means," Amelius answered, smartly, "a carriage to drive out in, champagne on the table, and a footman to answer the door."

"Farnaby's ideas, sir, have crossed the water, and landed in New York," Rufus remarked. "Well, and what did you say to him on your side?"

"I gave it to him, I can tell you! 'That's all ostentation,' I said. 'Why can't Regina and I begin life modestly? What do we want with a carriage to drive out in, and champagne on the table, and a footman to answer the door? We want to love each other and be happy. There are thousands of as good gentlemen as I am in England, with wives and families, who would ask for nothing better than an income of five hundred a year. The fact is, Mr. Farnaby, you're positively saturated with the love of money. Get your New Testament and read what Christ says of rich people.' What do you think he did, when I put it in that unanswerable way? He held up his hand, and looked horrified. 'I can't allow profanity in my office,' says he. 'I have my New Testament read to me in church, sir, every Sunday.' That's the sort of a Christian, Rufus, who is the average product of modern times! He was as obstinate as a mule; he wouldn't give way a single inch. His adopted daughter, he said, was accustomed to live in a certain style. In that same style she should live when she was married, so long as he had a voice in the matter. Of course, if she chose to set his wishes and feelings at defiance, in return for all that he had done for her, she was old enough to take her own way. In that case, he would tell me as plainly as he meant to tell her, that she must not look to a single farthing of his money to help her, and not expect to find her name down in his will. He felt the honor of a family alliance with me as sincerely as ever. But he must abide by the conditions that he had stated. On those terms, he would be proud to give me the hand of Regina at the altar, and proud to feel that he had done his duty by his adopted child. I let him go on till he had run himself out—and then I asked quietly, if he could tell me the way to increase my income to two thousand a year. How do you think he answered me?"

"Perhaps he offered to utilize your capital in his business," Rufus guessed.

"Not he! He considered business quite beneath me; my duty to myself, as a gentleman, was to adopt a profession. On reflection, it turned out that there was but one likely profession to try, in my case—the Law. I might be called to the Bar, and (with luck) I might get remunerative work to do in eight or ten years' time. That, I declare to you, was the prospect he set before me, if I chose to take his advice. I asked if he was joking. Certainly not! I was only one-and-twenty years old (he reminded me); I had plenty of time to spare—I should still marry young if I married at thirty. I took up my hat, and gave him a bit of my mind at parting. 'If you really mean anything,' I said, 'you mean that Regina is to pine and fade and be a middle-aged woman, and that I am to resist the temptations that beset a young man in London, and lead the life of a monk for the next ten years—and all for what? For a carriage to ride out in, champagne on the table, and a footman to answer the door! Keep your money, Mr. Farnaby; Regina and I will do without it.' What are you laughing at? I don't think you could have put it more strongly yourself."

Rufus suddenly recovered his gravity. "I tell you this, Amelius," he replied; "you afford (as we say in my country) meaty fruit for reflection—you do."

"What do you mean by that?"

"Well, I reckon you remember when we were aboard the boat. You gave us a narrative of what happened in that Community of yours, which I can truly characterize as a combination of native eloquence and chastening good sense. I put the question to myself, sir, what has become of that well-informed and discreet young Christian, now he has changed the sphere to England and mixed with the Farnabys? It's not to be denied that I see him before me in the flesh when I look across the table here; but it's equally certain that I miss him altogether, in the spirit."

Amelius sat down again on the sofa. "In plain words," he said, "you think I behaved like a fool in this matter?"

Rufus crossed his long legs, and nodded his head in silent approval. Instead of taking offense, Amelius considered a little.

"It didn't strike me before," he said. "But, now you mention it, I can understand that I appear to be a simple sort of fellow in what is called society here; and the reason, I suspect, is that it's not the society in which I have been accustomed to mix. The Farnabys are new to me, Rufus. When it comes to a question of my life at Tadmor, of what I saw and learnt and felt in the Community—then, I can think and speak like a reasonable being,

Digitized by Google

because I am thinking and speaking of what I know thoroughly well. Hang it, make some allowance for the difference of circumstances! Besides, I'm in love, and that alters a man—and, I have heard some people say, not always for the better. Anyhow, I've done it with Farnaby, and it can't be undone. There will be no peace for me now, till I have spoken to Regina. I have read the note you left for me. Did you see her, when you called at the house?"

The quiet tone in which the question was put surprised Rufus. He had fully expected, after Regina's reception of him, to be called to account for the liberty that he had taken. Amelius was too completely absorbed by his present anxieties to consider trivial questions of etiquette. Hearing that Rufus had seen Regina, he never even asked for his friend's opinion of her. His mind was full of the obstacles that might be interposed to his seeing her again.

"Farnaby is sure, after what has passed between us, to keep her out of my way if he can," Amelius said. "And Mrs. Farnaby, to my certain knowledge, will help him. They don't suspect you. Couldn't you call again—you're old enough to be her father—and make some excuse to take her out with you for a walk?"

The answer of Rufus to this was Roman in its brevity. He pointed to the window, and said: "Look at the rain!"

"Then I must try her maid once more," said Amelius, resignedly. He took his hat and umbrella. "Don't leave me, old fellow," he resumed, as he opened the door. "This is the turning-point of my life. I sadly want a friend."

"Do you think she will marry you against the will of her uncle and aunt?" Rufus asked.

"I am certain of it," Amelius answered. With that he left the room.

Rufus looked after him sadly. Sympathy and sorrow were expressed in every line of his rugged face. "My poor boy! how will he bear it, if she says No? What will become of him if she says Yes?" He rubbed his hands irritably across his forehead, like a man whose own thoughts were repellent to him. In a moment more he plunged into his pockets, and drew out again the letters introducing him to the secretaries of public institutions. "If there's salvation for Amelius," he said, "I reckon I shall find it here."

(*To be continued.*)

THE ATLANTIC CABLE.

A COMMEMORATIVE RECEPTION.

(*Continued from front page.*)

More than two years were occupied in building the line across Newfoundland and Cape Breton Island. During the progress of the work Mr. Cyrus W. Field went to Europe and had a submarine cable made with which he intended to connect Cape Ray and Cape Breton. In 1855 an attempt was made to lay this line across the Gulf of St. Lawrence, but during the operation a gale sprang up and the cable was lost. In the following year the attempt was repeated and with success. Communication having been established between Newfoundland and the United States, Mr. Field went to Europe in 1856, when the project for the main line was brought before the Governments of Great Britain and the United States, and the "Atlantic Telegraph Company" organized, Mr. Field manifesting his faith in the success of the enterprise by subscribing for one-fourth of the entire capital called for. Bills which insured Government assistance in laying the wire were adopted by the Governments of both countries, and men-of-war were detailed for the work. Each Government agreed to pay $70,000 annually for the use of the line, and, in consideration of an additional subsidy of the British Government, all messages emanating from that source were to have priority over private ones.

On the part of the United States the steam frigate *Niagara*, attended by the *Susquehanna*, was detailed to lay one-half of the wire, and the frigate *Agamemnon*, with four other men-of-war, was named by the British Admiralty to lay the other half. The manufacture of the cable was commenced in 1856, and in the Spring of 1857 both vessels took on board their allotted quantity. The first attempt at laying it was made by commencing to submerge it in one stretch from land to land, and the *Niagara*, having landed her end at Valentia Bay on August 5th, set sail two days later to complete her work. It was agreed that the splice should be made in mid-ocean, and that the *Agamemnon* should carry her half of the cable towards Newfoundland. On the 11th of August, while the *Niagara* was in 2,000 fathoms of water, an engineer suddenly checked the cable while the vessel was rising on a heavy swell, and the wire parted and some 400 miles' length of it was lost. The vessel put back at once to Ireland, and the *Niagara*, after repairing, returned to the United States. Work on a second cable was immediately commenced in England, and by the end of May, 1858, it had been safely coiled on the two men-of-war. On June 10th, the squadron sailed from Plymouth Sound for the rendezvous in mid-ocean. They met with very heavy weather, but succeeded in making the splice on the 26th. It parted, however, in the depth of the sea, and a second attempt, commenced on the 28th, met with no better success. After making the splice the vessels separated, but the cable parted twice while being paid out from the *Niagara*, and on the night of the 29th it broke as it was being submerged from the *Agamemnon*. Both vessels put back to Queenstown. It was during this expedition—on the 20th and 21st of June—that the vessels encountered the frightful storm which delayed the laying of the cable, and compelled the *Niagara* to separate from the *Agamemnon*.

Wise heads who had all along doubted the practicability of the enterprise now felt sure of the ough failure, and even some members of the company began to feel alarm. But Mr. Field was more sanguine than ever, and at once made preparations for another attempt. Each vessel had still 1,100 miles of cable on board, and on Saturday, July 17th, the men-of-war comprising the squadron sailed from Queenstown. On the following Thursday the splice was effected, and then the vessels separated, the *Agamemnon* and *Valorous* heading for Ireland, the *Niagara* and *Gorgon* for the coast of Newfoundland. As on they slowly sped, signals were exchanged between the vessels through the ever-lengthening trail of wire, announcing the speed, condition of the cable, and state of the weather. Then, as far as the public was concerned, a tedious silence ensued. The vessels kept on their way, the officers of one being informed at regular intervals of the safety of the others. The public awaited with great anxiety the anticipated announcement of the failure of the fourth attempt.

On the afternoon of Thursday, August 5th, a dispatch from Newfoundland was published in the New York papers to the effect that the wire had been successfully submerged the entire distance. While people were debating the probability of the report being a hoax, further dispatches came to hand on the following morning, and it became known beyond a doubt that the *Niagara* had safely reached Trinity Bay, and the *Agamemnon* Valentia, in the night of August 4th-5th. Several days were necessary to effect connections at both ends of the line, and on the 16th the inaugural messages were exchanged. The first was from Queen Victoria, and in these words:

"*To the President of the United States, Washington:*

"The Queen desires to congratulate the President upon the successful completion of this great international work, in which the Queen has taken the deepest interest. The Queen is convinced that the President will join with her in fervently hoping that the electric cable which now connects Great Britain with the United States will prove an additional link between the nations, whose friendship is founded upon their common interest and reciprocal esteem. The Queen has much pleasure in thus communicating with the President, and renewing to him her wishes for the prosperity of the United States."

To which President Buchanan replied:

"WASHINGTON CITY, August 16th, 1858.

"*To Her Majesty Victoria, the Queen of Great Britain:*

"The President cordially reciprocates the congratulations of Her Majesty the Queen on the success of the great international enterprise accomplished by the science, skill and indomitable energy of the two countries. It is a triumph more glorious, because far more useful to mankind, than was ever won by conqueror on the field of battle. May the Atlantic Telegraph, under the blessing of Heaven, prove to be a bond of perpetual peace and friendship between the kindred nations, and an instrument destined by Divine Providence to diffuse religion, civilization, liberty and law throughout the world.

"In that view, will not all nations of Christendom spontaneously unite in the declaration that it shall be for ever neutral, and that its communications shall be held sacred in passing to their places of destination, even in the midst of hostilities?"

On the 17th there were great rejoicings in both countries, but on Wednesday, September 1st, there was an Atlantic Telegraph Celebration in New York City, which, as a popular demonstration, has never been surpassed in any country. The city was most elaborately illuminated, special services were held in Trinity Church and in the Crystal Palace, and there were parades of the militia, firemen, civic societies and citizens generally. This cable worked, however, but a short time, and when it had become entirely silent, Mr. Field again set about to complete the great work. But the Civil War opened, and throughout its duration little attention was given the enterprise. In 1865, when the strife had ended, another expedition was prepared, a new and superior cable was made, and the *Great Eastern*, reconstructed for the purpose, took it on board and began laying it. When some 1,200 miles had been laid the cable was snapped by a sudden lurch of the ship and lost. In 1866 still another expedition was fitted out, and the *Great Eastern* successfully laid 2,000 miles of wire, and communication between the two countries was re-established. Subsequently the *Great Eastern* picked up the end of the lost cable and, joining it to the remainder on board, carried it safely to the western shore. The Congress of the United States awarded Mr. Field a gold medal and the thanks of the nation. England would have bestowed high honors upon him had he not been a citizen of the United States, and the great Exposition in Paris of 1867 gave him the grand medal, its highest prize. No greater illustration of indomitable energy and heroic courage in prosecuting a great idea to its full consummation, in the interest of civilization and humanity, is presented either in ancient or modern annals, in the accomplishment of his great work Mr. Field had crossed the ocean fifty times—having come at last to regard a trip across the Atlantic as no more of an undertaking than a flitting across a Hudson River ferry.

By way of commemorating the great event whose history is here outlined, Mr. Field, on the 10th instant—the twenty-fifth anniversary of the organization of the first cable company—gave a reception at his residence in this city, which was remarkable no less for the representative character of those in attendance than for the extent and elegance of the festival itself. In order to accommodate the great number of guests, Mr. Field had erected, in the rear of his residence, an extension, which was used as a supper-room, and the house of a relative, adjoining his own, was also thrown open for the occasion. British and American flags were displayed here and there, and in the richly-furnished parlor, with its wealth of paintings and frescoes, there was no attempt at decoration beyond a liberal supply of flowers.

The scene of the organization of the company twenty-five years ago, in the dining-room, is described by Mr. Field with much enthusiasm. When the idea first took form in his brain, from hints here and suggestions there, that the telegraph might be made to span the Atlantic, his earliest thought was to apply to his public-spirited neighbor, Peter Cooper. He appealed not to his pocket, but to his heart. He appealed so effectively that Mr. Cooper became the President. Moses Taylor was then in the West Indian trade. He heard Mr. Field through for nearly an hour without a word. Then he rose, not less calmly, and agreed to join the party. Mr. Marshall O. Roberts was the first to project the floating palaces which now ply the waters of the Hudson and the great Lakes. He was one of the early promoters of the Erie Railroad. When gold was discovered in California he started the line of steamers running to the Isthmus of Panama and controlled largely the commerce with the Pacific. He joined the company readily. Mr. Chandler White, then living at Fort Hamilton, was slow to yield to argument, but Mr. Field's enthusiasm was magnetic, and his glowing descriptions at last carried Mr. White away. It was at first thought of enlisting ten capitalists, but Mr. Cooper asked whether five would not do as well. No sooner asked than answered. Five the company was then, and five it is to-day; for, when Mr. Chandler fell at his post, another eminent merchant, Mr. Wilson G. Hunt, stepped into line immediately.

The only addresses delivered during the evening were by Cyrus W. Field, who, at the hour and minute at which the agreement was signed twenty-five years ago, repeated the story of the inception and progress of the great enterprise; David Dudley Field, and the Rev. Dr. William Adams.

The telegraphic instrument in the small anteroom, just off Mr. Field's dining-room, recorded messages from different parts of Europe and America. From Mr. Graves, at Valentia, Ireland, came a message saying that the anniversary witnessed a duplex working across the Atlantic as an accomplished fact." Dean Stanley telegraphed from Westminster Abbey: "Blessings from Westminster Abbey in the silver wedding of England and America. What God hath joined together let no man put asunder." Sir William Thompson, of Glasgow University, Sir Samuel Canning, Sir James Anderson, Sir Daniel Gooch, and many others, telegraphed congratulations from England, and Dr. Stephan, Postmaster-General of Germany; Dr. Lasard, Manager and Director of the German Union Telegraph Company; Sir Hugh Allan, President of the Montreal Telegraph Company; Sir Anthony Musgrave, Governor of Jamaica, and a host of others sent words of greeting from all those distant quarters of the globe straight into Mr. Field's historical dining-room.

The reception lasted from nine o'clock until twelve, and was attended by over one thousand persons of the highest public and social eminence.

THE NEW COTTON EXCHANGE, GALVESTON, TEXAS.

GALVESTON has been considerably exercised for weeks, nay, months, over the opening of her handsome and stately Cotton Exchange. The wife of a leading cotton broker having suggested to her *cara sposo* that the floor of the hall in which the brokers "most do congregate" should be consecrated, at least for one night, to Pompadour heels and the caresses of billowy trains, the gentle hint was acted upon, and Friday, the 21st of February, named for the coming-off of this highly sensational and important event in the annals of the Island City. Not only has Galveston, but all Texas, if not the entire of the United States, just reason to be proud of the Exchange so brilliantly inaugurated. The Exchange is a three-storied edifice of the modern elaborate style so destined to puzzle the antiquarian of the future, built of Philadelphia pressed brick and Austin limestone. The exterior is lavishly ornamented with carved stone, the ornamentation simple, distinct and expressive, consisting solely of the cotton leaf, flower and boll. A belt-course is around the front and sides, and the spring of the first-story arches is carved with the cotton boll open and shut, the white on the red standing forth in impressive relief; in the second story the cotton flower is open, and in the third the blossom is "i' the bud." There are two main entrances, the front (on Mechanic Street) is protected by a stone porch, in the spandrels of which the Horn of Plenty is tastefully and delicately elaborated. On the top of the porch stands a cotton bale, and surmounting the bursting bale the crown of "Cotton, the King." On the pilaster through which the corner room is entered, is carved a composition representing cotton in marine commerce—the rudder, the anchor, the pulleys and ropes, the cotton plant creeping in and out, round and about, holding ropes, rudders, pulleys and anchors as did the tangled briers the palace of the Sleeping Beauty in the Wood. The cornice of the entire building is of galvanized iron. In front is a cotton bale, also surmounted by a crown, indicating his most potent majesty of Cotton. Over the entrance at either side are two shields, upon which are carved, respectively, a bull's and a bear's head—a jocose indication of the "bulls" and "bears," *alias* the buyers and sellers. The halls and lobbies are floored with Minton's colored English tiling at a cost of $2,000. The main staircase is of oak and walnut, very wide, the steps being low, after the Mexican fashion. The Exchange Hall, the scene of the "cotton hall," is 38 feet high, 82 feet long, and 63 feet wide, with a gallery running all round it on a level with the third floor. The floor is inlaid walnut and oak. There are four mantelpieces in the hall, two supported on bears', two on bulls' heads. The ceiling is semi-arched and elegantly relieved by brackets representing the cotton plant in its various stages. The carvings and inside woodwork are of oak and walnut; the lustres, gilt. The total cost of the building has been $80,000. Its dimensions are 120 by 67 feet from outside to outside. The corner-stone was laid by Mr. M. F. Moti, Grand Master of the Masonic Fraternity of the State of Texas, July 7th, 1877, and the building was completed in December last. The present organization, known as the Cotton Exchange, is the legitimate successor of the Factors Association, which was organized in 1872. The lot upon which the edifice stands was purchased by subscription and presented to the Exchange. The bonds outstanding amount to $50,000; real estate $20,750; the balance is made up of dues from members.

At 9:30 on the evening of the grand inaugural ball, we—the artist and myself—found ourselves in a throng of highly-expectant guests, winding our way along the sandy sidewalk to the scene of action. At the entrance we were confronted by a portrait of George Washington enfolded by the national flag, and by the flag of the Lone Star State. The hall presented that brilliant appearance begotten of spick-and-span newness, of lights, of flowers, and of the toilets of fair women. *Apropos* of the latter, not a few of the Texan belles displayed costumes in which M. Worth would have experienced a justifiable pride. Two bands, one composed of colored performers, discoursed Lecocq, Offenbach, *et id genus omne*, to the "wee sma' hours," and until a "Virginny" reel closed an entertainment that will be spoken of when Galveston has reached three times three of her present dimensions.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

The Plague in Astrakhan.

At the medical council held at St. Petersburg on the 24th of January, Professor Eschondtoski was the only doctor who was of opinion that the disease could be staid by external remedies. He recommended pure air, baths, immersions in iced water, in fact hydropathic treatment. It is also said that General Souvaroff ordered iced baths for his soldiers, who were attacked by the plague after their campaign in Turkey. Certain it is that the fishermen of the Volga and the Cossacks of Azoff break the ice of the rivers and indulge in douche baths whenever they apprehend that the plague has broken out amongst them.

The War in Zululand.

When the Dutch War ended with the death of King Dingaan, his brother Panda, the ally of the Boers, succeeded to the throne. Cetewayo, the king's eldest son, and the bravest and most capable, naturally looked forward to be his father's successor. But for that very reason he was the object of Panda's particular jealousy. Some of his younger brothers, fearing that he might make a clean sweep of his rivals, collected their adherents, and made off for Natal, with the intention of invoking British protection, but Cetewayo at once gave chase, and in a sanguinary battle five of his brothers were slain, thus leaving his path to the throne comparatively clear. But Panda had still two sons left alive, and these he placed under the protection of the authorities at Natal. The upshot of the civil war was, that in a council of Zulu chiefs in 1856 it was decided that, though Panda the Fat was a very good "head" for the Zulu State, it also needed "hands" and "feet," and that while Panda remained King, Cetewayo should be appointed Prime Minister. On the death of Panda in 1872, Cetewayo was installed King of the Zulus, when he made many solemn promises and engagements, which were formally published to his people, and accepted by the British Government as guarantees for the better and more humane government of Zululand, and for the greater security of peace. The military kraals of the Zulus are in point of fact fortified depots where the various regiments assemble for their annual training, or mobilize in time of war. The kraal is usually about 500 yards in diameter and fenced round with a dry stake and wattled fence, about five feet in height, difficult to breach and still harder to storm, as it is closely hedged by an abattis of prickly pear, bush-thorns and other formidable obstacles; inside this fence are thrown up the men's huts, and a smaller ring is generally erected in the centre, in which the cattle are kept. The arms and ammunition are stored in huts elevated upon rude posts, some twelve feet in height, as shown in one of our smaller engravings, and a portion of the kraal is partitioned off for the royal household and harem. In the present War, a strong detachment of seamen were formed into a regiment entitled the Naval Brigade for land service with the military against the enemy. Shortly before Sir Bartle Frere's ultimatum was handed to the delegates of Cetewayo, at Tugela Drift, a body of some 170 blue-jackets and marines were landed from H.M.S. *Active*, and, under the command of Captain Fletcher Campbell, R.N., were appointed the guard to the meeting at which the ultimatum was delivered on December 11th, 1878.

Sketches from Afghanistan.

General Sir Samuel Browne and staff made their formal entry into Jellalabad on December 20th, and on New Year's Day there was a parade of the troops, including the British and native Indian soldiers, and a durbar, or official reception, was held. The Tenth Hussars and Manderson's Battery of Royal Horse Artillery led the column. After that General Macpherson entered with his staff, followed by the fourth battalion of the Rifle Brigade, with their band playing. The rear was brought up by the Frontier Brigade, containing the Guides, the Mule Mountain Battery, and the Sikhs with their bagpipes playing. The column entered by the Peshawur gate of the town and passed out by the Cabul Durwaza, and marched direct to the camp. Our second sketch shows a sowar or trooper of the Fifth Punjab Cavalry (one of the frontier force regiments) scouting for the enemy, and halting suddenly before an ambuscaded and hostile lookout.

AT HOME AND ABROAD.

—THE British Government has decided to call upon all members of the consular body who have attained the age of seventy to resign.

—A NEW electoral law, more restrictive of the right of suffrage than the late Ministry's, and containing no provision for the army to vote, has been agreed to by the Parliament of Italy.

—THE principal centres for the manufacture of coral ornaments are Naples, Genoa, Leghorn and Marseilles. At Leghorn more than a thousand women are employed in the manufacture of coral beads for necklaces, etc.

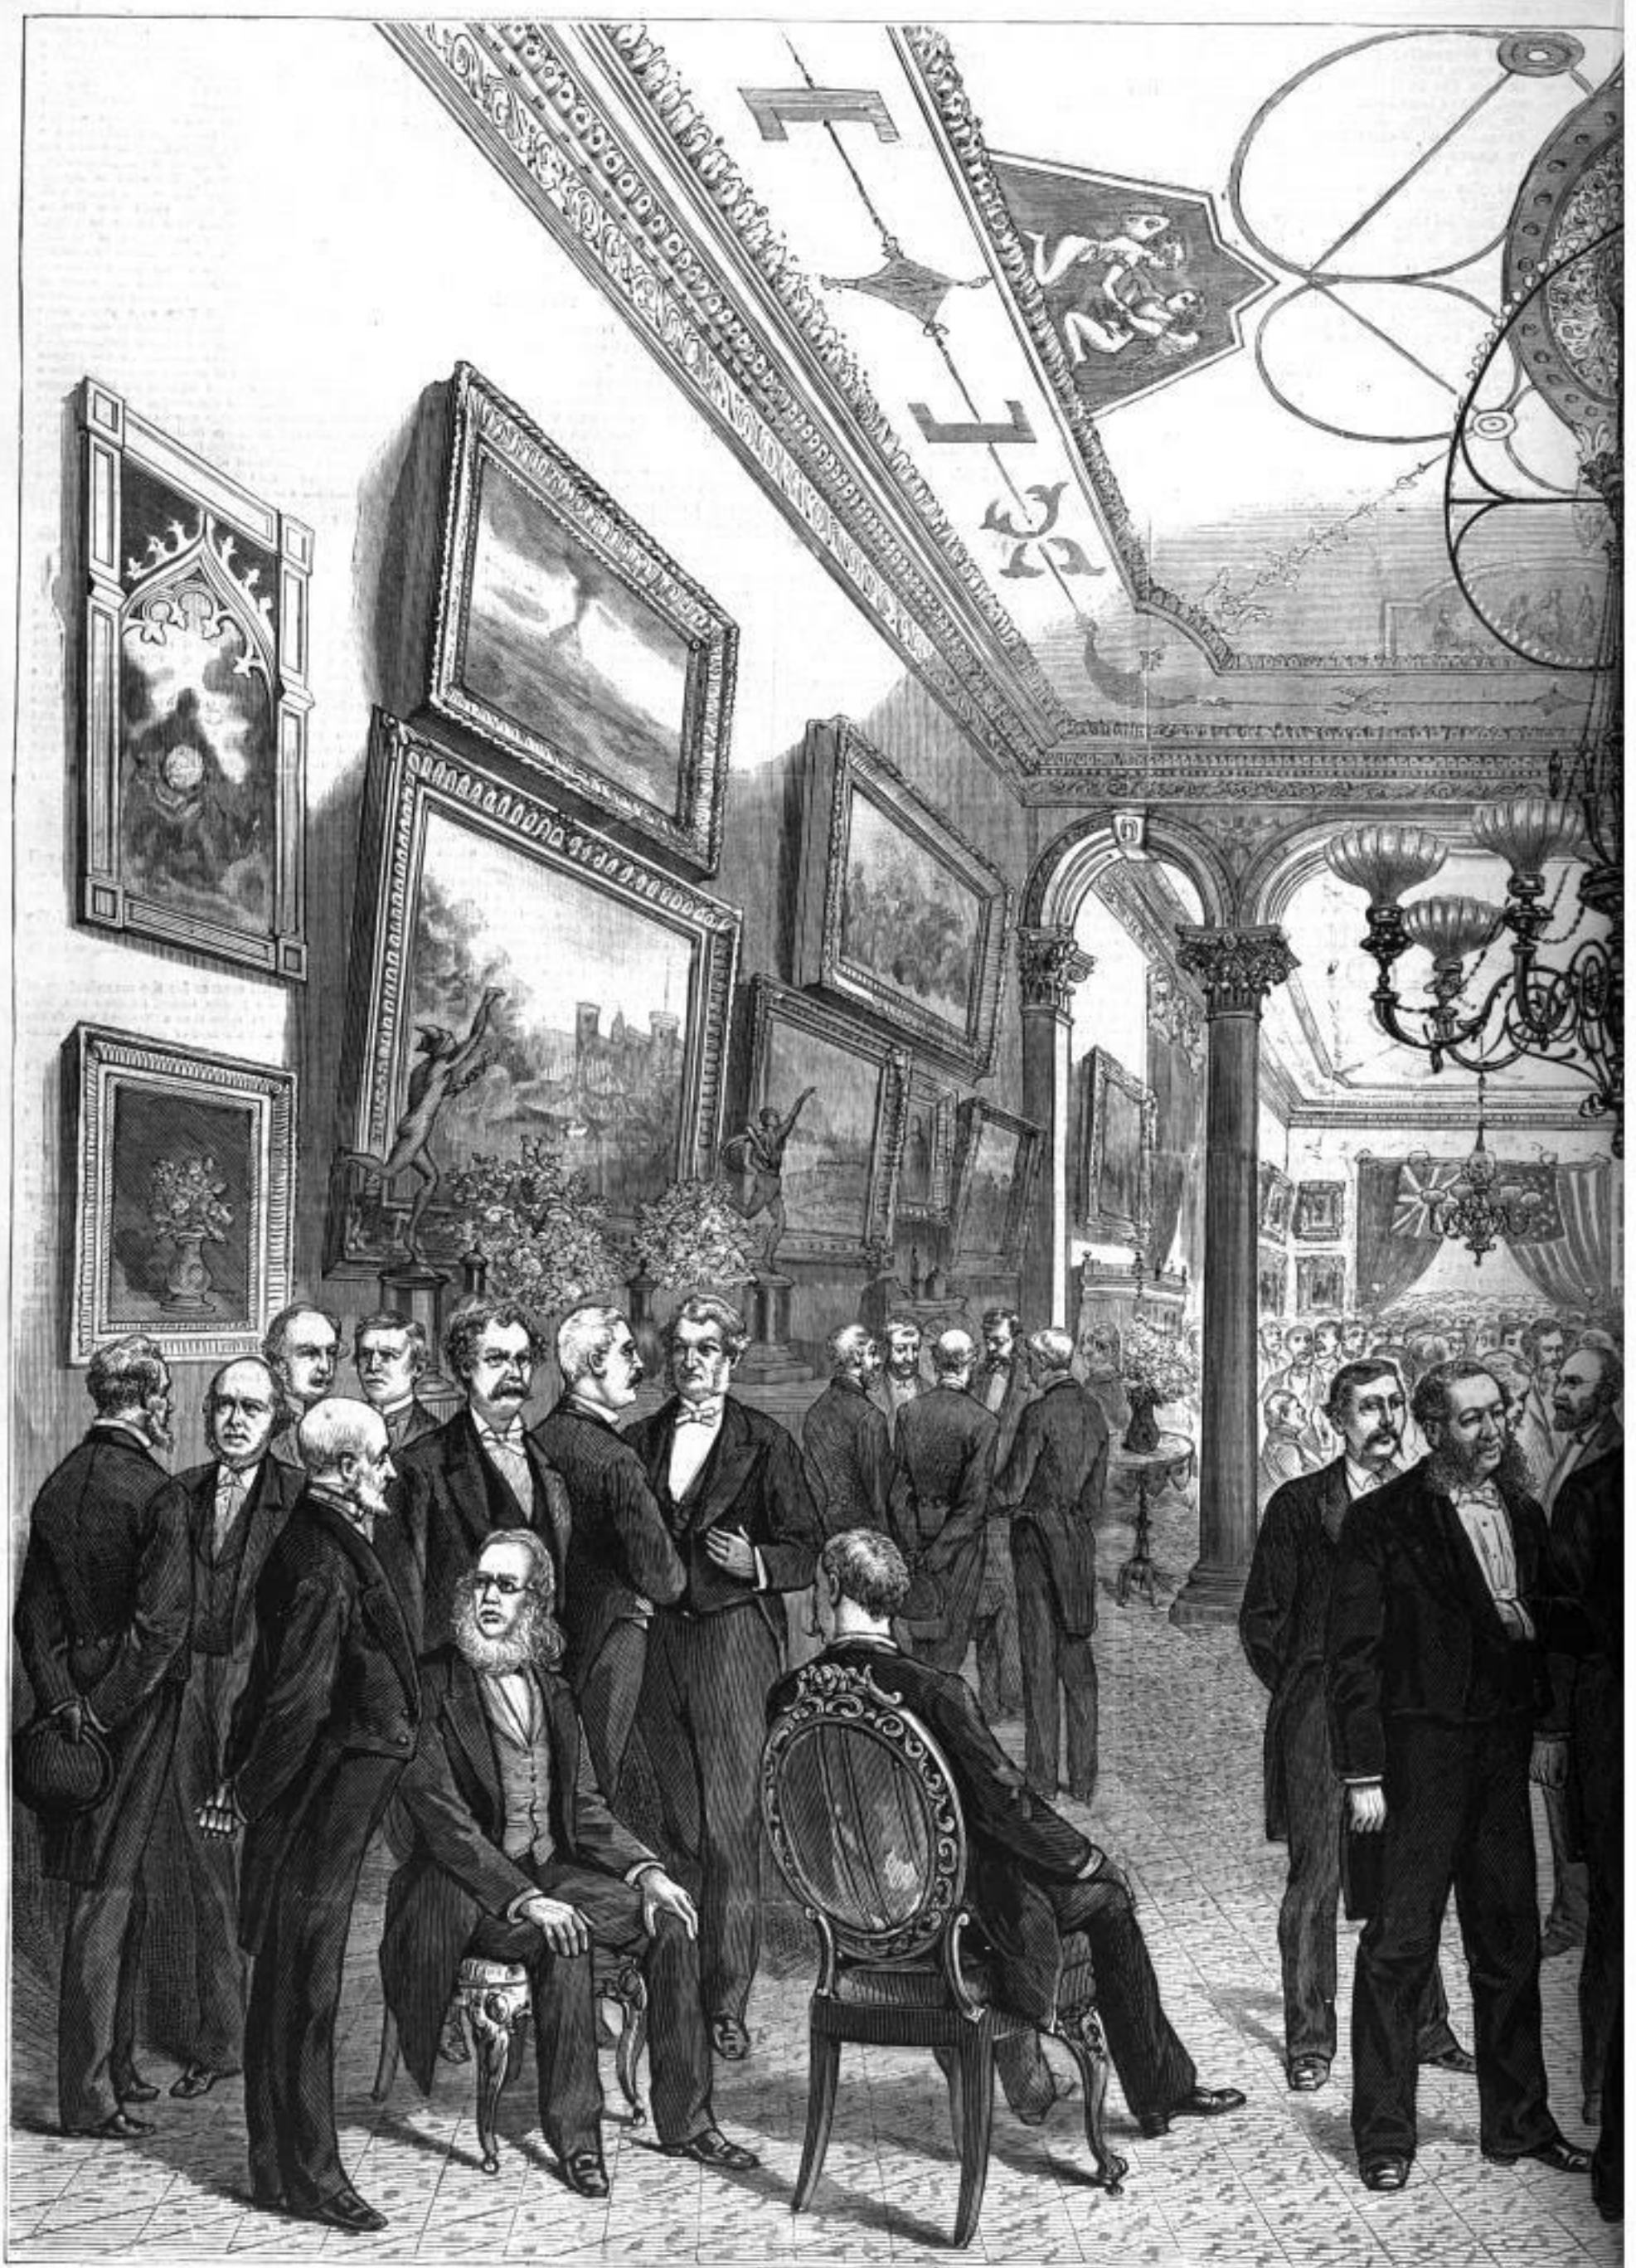
—THE Exhibition in Sydney, New South Wales, to be held next year, has assumed such proportions as to be far beyond the present means of the Committee. The German Empire, Austria and Holland have applied for exhibiting space.

—THE French custom receipts for the year 1878 reached the total of 209,478,000 francs, while the budget estimate for the year was only 184,684,000 francs. The Paris Exhibition was estimated to cause an increase on the receipts of 1877 of over a million francs, but the increase amounted to nearly twenty times that.

—THE project of a canal between the Rhine and the Maas seems at last to approach realization. The City of Crefeld has declared its readiness to pay the sum of 500,000 marks ($125,000) towards it, and it is confidently hoped that now both the Prussian as well as the Dutch Government will grant the necessary additional funds.

—AT a recent meeting of the French Academy of Sciences, M. de Lesseps declared, from his experience of the plague in Egypt in 1834, that it is not contagious. The patients may be waited on without danger. All the precautions he then took were to burn the clothing and insure a taste diet, for the pest appeared only where distress and famine prevailed.

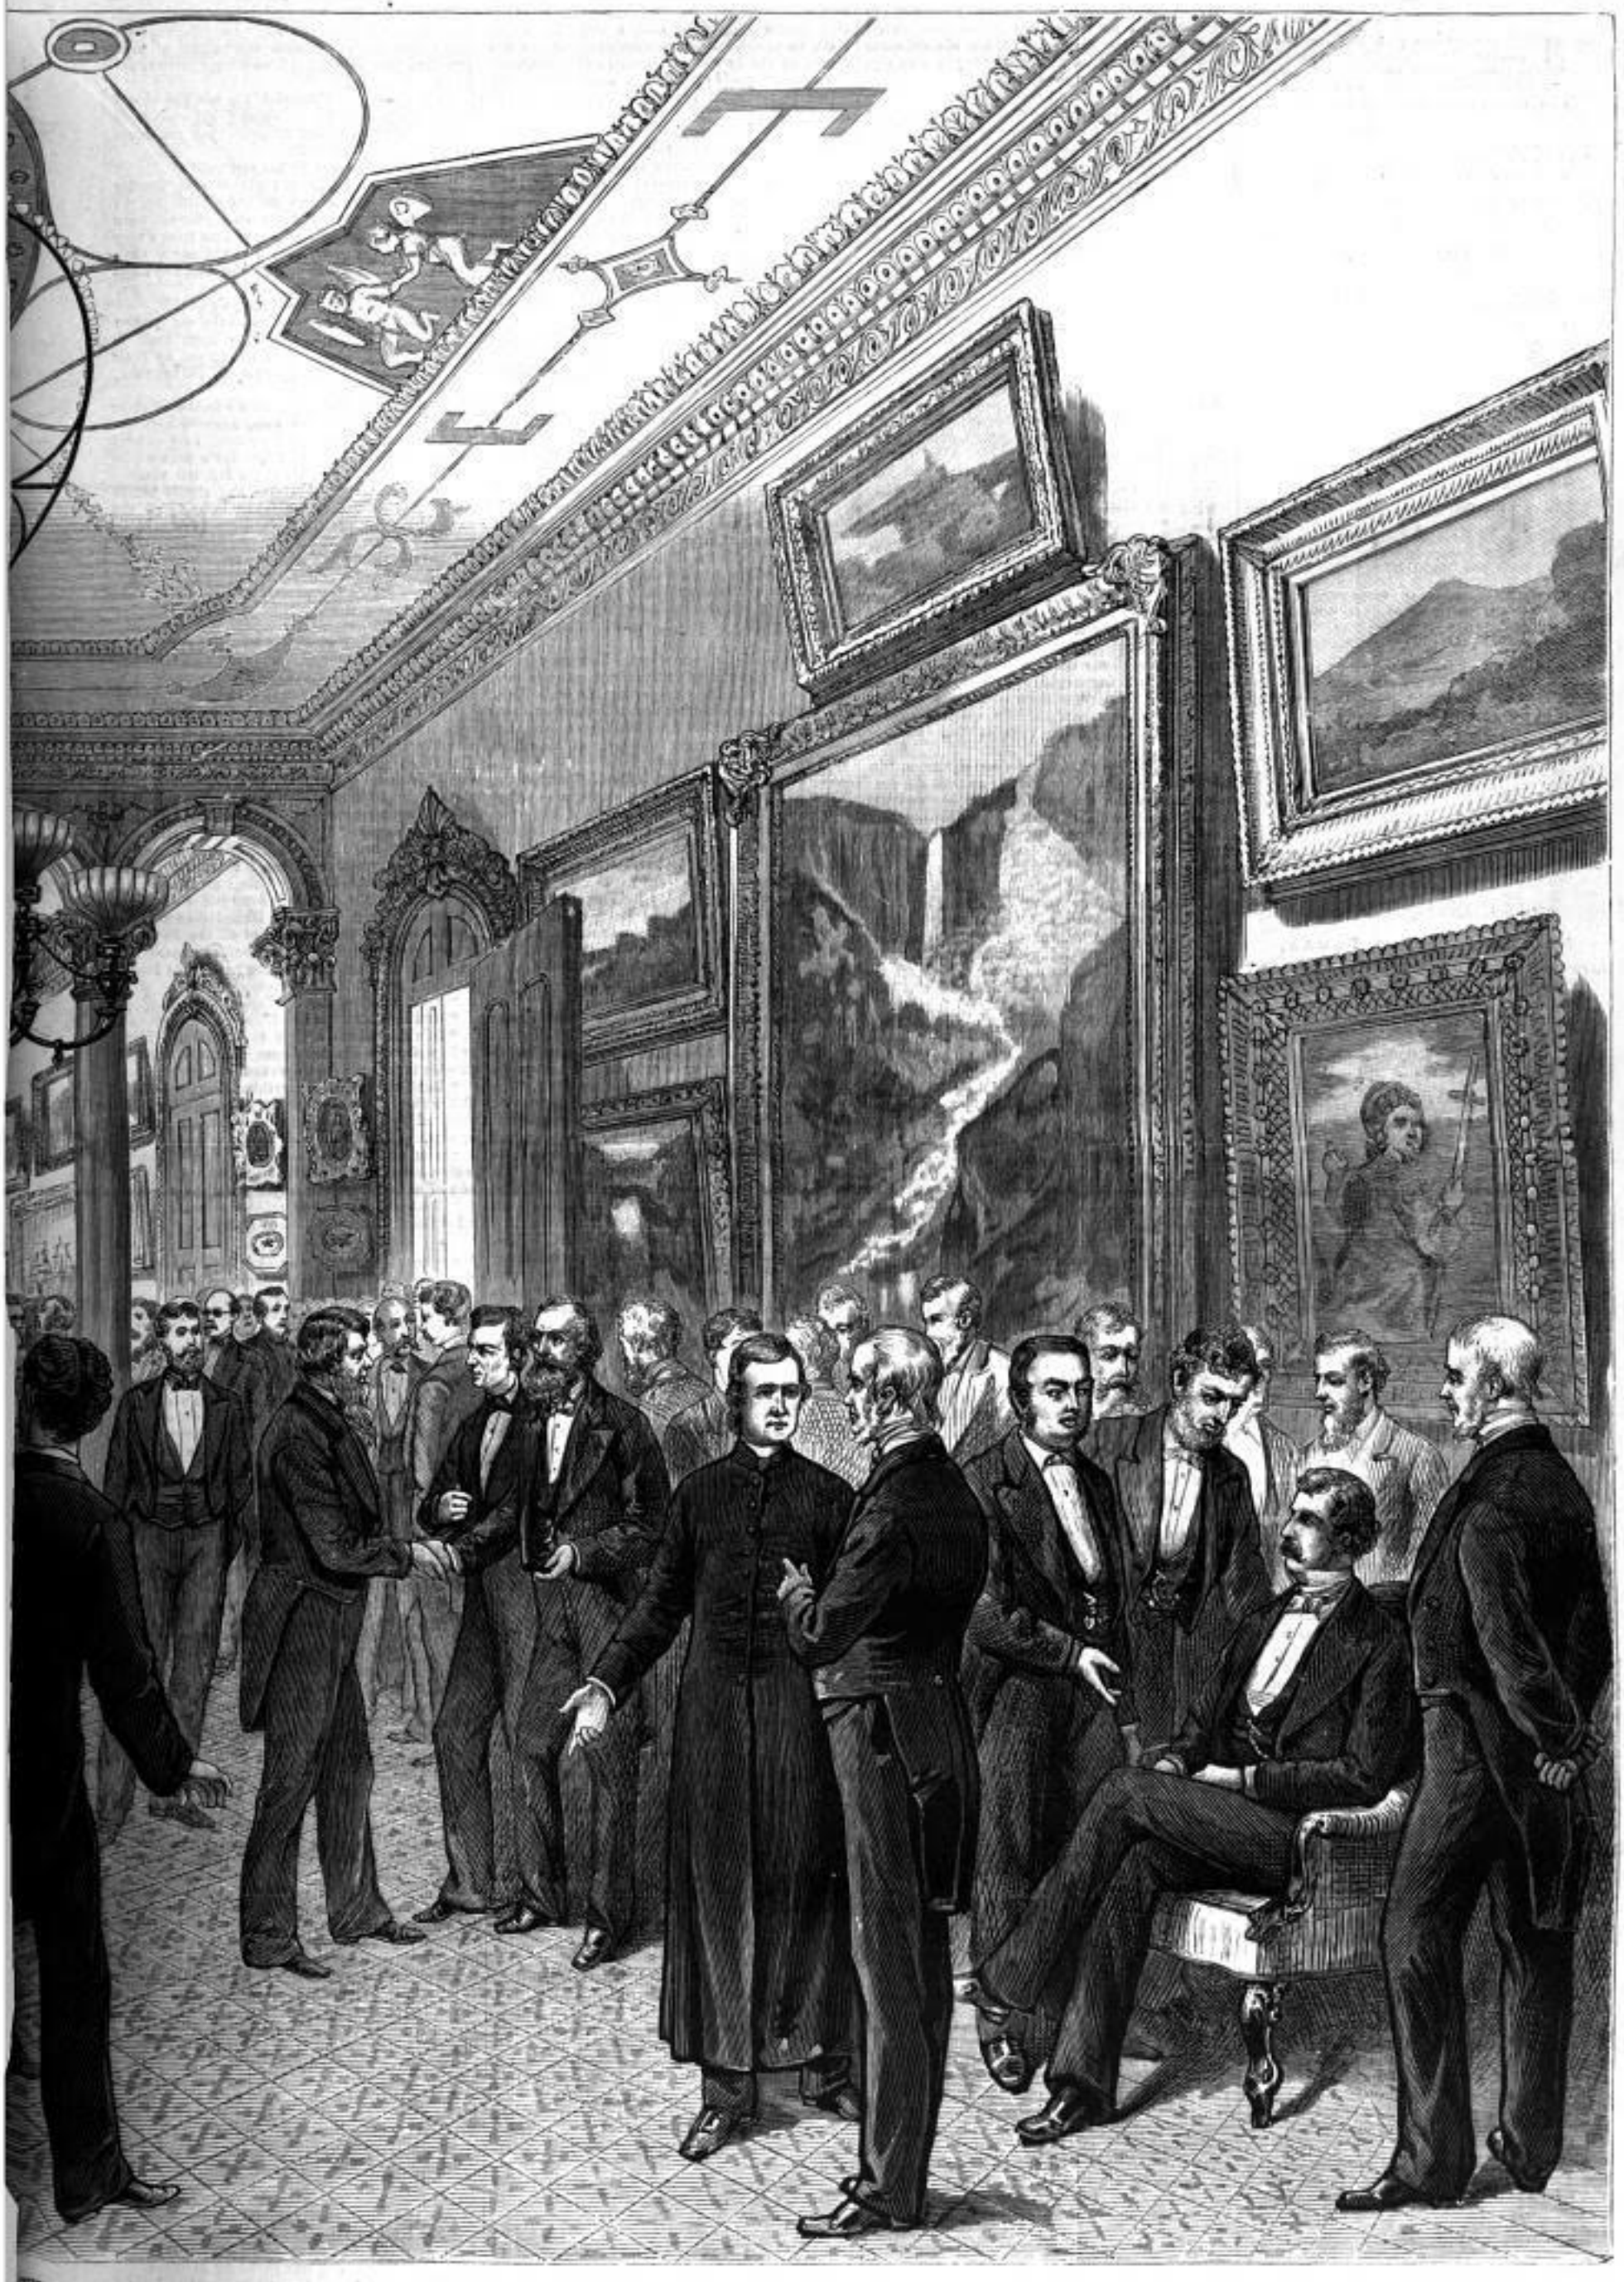
—SOME excavations made at Merten, near Bolchen, in German Lorraine, have given remarkable results. The remains of a gigantic equestrian statue were found, of which the figure of the rider is particularly well preserved. Investigation of other remains tend to show that the origin of the statue is Roman; parts of mosaic floors, etc., have also been discovered.



—THE severity of the industrial crisis in Germany is shown by the fact that of 5,074 individuals arrested last year in Basle, chiefly for mendicancy and vagabondage, 4,251 were Germans, while many more of the same nation were turned back at the frontier. During the same time the police at Berne arrested and turned back to their own countries no fewer than 22,218 vagrants and paperless persons, nearly all Germans.

—OF the total of 178,660 men in the British army, nearly 40,000 are Irish—that is to say, about twenty-two per cent. The proportion, according to the ratio of the population of Ireland to that of the whole empire, would be about seventeen per cent. Scotland contributes 14,000 men to the total, or about seven per cent., while her proportion would be nearly ten. England contributes the remaining seventy per cent., which is not far from her ratable allowance.

—THE sales of one of the largest firms of hair merchants in Germany have fallen off twenty-five per cent. in bulk, and forty to fifty per cent. in value, within the last three years, entirely through the increased demand for Chinese, Japanese, and other cheap hairs. In 1871 the exports of hair from the treaty ports were 286 tons; in 1874, 330; and in 1876, 670. This serves in some degree to explain the pigtail, rubbing which has been rife, and which is also said to have been prevalent at the perruke period, 150 years ago.



—THE last moments of the Forty-fifth Congress were rendered memorable by the extraordinary scenes in the House of Representatives. The galleries were crowded, the ladies' gallery being noticeable for its brilliant audience of beauty and fashion. Mrs. Hayes and her guests occupied front seats, and about her were crowded many other distinguished ladies. So great was the pressure, indeed, that by resolution wives of members were admitted to the floor, where their toilets, gay in fashionable red, lent an unaccustomed attraction to the hall. Bouquets rested on the desks of many members, a superb basket of flowers adorning the Speaker's desk. Little children in dainty costumes flitted through the aisles or nestled in their fathers' or uncles' arms, while neat pages ran to and fro on the last hurried errands. Members gathered in groups, exchanging greetings or debating the fatal disagreement on which Congress had split.

VOX CLAMANS IN DESERTO.

"MAKE straight the path of Love, His way preparing,
Who bringeth peace on earth and not a sword;
Who, His divine decrees at length declaring,
Shall make you free according to His word."

Ah, sanguine poet of the radiant morning
Whose vast infinitudes with hope burn red,
We hear thy herald voice, but its forewarning
Can wake not dreams that are already dead.

Others before have preached this glad evangel,
And men in faith have hearkened and believed,
Till Love came, sword-girt—a destroying angel—
And few were left unwounded, unbereaved.

We hold this truth 'mid all despite and treason,
We still must hold and hallow it till we die—
That Love alone involves His final reason,
Alone reveals its wherefore, whence and why.

Yet, born of light, this power for man's redeeming
Is wrought to black, intolerable shame;
And, through all lands, his bleeding slaves blaspheming,
In death are tempted to abjure his name.

Life is, at best, for king, or bard, or lover,
A flash that breaks the moanings of night,
In the brief span whereof we yet discover
The passionate plenitudes of utter light.

"Make straight the path of Love, His way preparing,
Who bringeth peace on earth and not a sword;
Who, His divine decrees at length declaring,
Shall make you free according to His word!"

In this world's wilderness, oh, vague voice crying!
Thy words prophetic are as empty breath;
Man still endures the strong desire undying,
While men, the saints, swell the sum of death.

What mortal knows the end from the beginning?
The old, old question meets the old reply;
What cards in this grim game insure the winning?
What heaven holds no mirage to lure the eye?

Still, though Love slay us, we are ever loyal,
And know His many mansions teem with grace;
While Death—the accolade that makes us royal—
May bring us with His glory face to face.

JOHN MORAN.

A SECRET MARRIAGE
AND
ITS CONSEQUENCES.

BY THE DUKE DE POMAR,

AUTHOR OF "THE HONEYMOON," "THROUGH THE AGES," "WHO IS SHE?" "FASHION AND PASSION," ETC.

BOOK FIFTH.
FRANK'S TWO WIDOWS.

CHAPTER II.

"For he is a jolly good fellow!
For he is a jolly good fellow!
For he is a jolly good fellow!
And that—no one can deny."

BELLA CHAMPION sings, in a sweet, silvery voice that resounds through the passages of the hotel, infusing mirth into every breast, as, holding Inganess's letter high in the air, and dancing like a little fairy, unable to control her overpowering joy, she rushes the next morning into her mother's room, looking, perhaps, more lovely and brighter than she has ever done in her life.

The ways of Providence are dark, yet they somehow or other invariably lead to the light. Had this letter reached its destination at its proper time Mrs. Champion and her daughter would never have come to Paris at all, and the bright child would have been spared many a long hour of bitter grief; but then Mrs. Champion would not have seen Louisa Cassilis, and this unfortunate girl would, perhaps, never have discovered her mother.

By an unaccountable mistake, Lord Inganess's valet forgot to post his master's letter until the following day; the consequence was that, instead of being delivered by the early post at Liberty Hall, it only arrived there in the evening, when Mrs. Champion and her daughter had already left for London, to catch that night's tidal-boat for Paris. The precious letter, however, with the welcome news it contained, had followed them in due course, and now Bella, forgetting all her sorrows, and living already in the brilliant future which it has opened out to her, hastens to communicate the good news to her mother, and to make her a participator in the joy.

To Bella's discomfiture, however, Mrs. Champion not only does not seem quite as surprised at Lord Inganess's proposal as she had expected, but even receives the news with but little apparent pleasure, and seems altogether as if her thoughts were fixed on other things. The spoilt child is a trifle put out, and a cloud overshadows her face.

"We must return to England at once, you know, mother," she says, in rather a dictatorial way, and pouting her pretty coral lips.

To her astonishment, her mother raises not the smallest objection to her suggestion, but agrees with her at once.

Presently the conversation turns on Colonel Howard and his probable marriage with Lady Rollingford.

"Lady Rollingford! Ah, *la belle dédaigneuse!*" Bella mutters, shrugging her shoulders. "Perhaps the next best thing Howard can do to shooting himself is to marry her. I hate that woman!"

"You hate Lady Rollingford! Why, child? She has always been very kind to you, I am sure; and you know how you enjoy her parties."

"Yes; but I think that she has behaved very unkindly to poor Louisa; after adopting her, too, and forcing her to take her name! No—I can never forgive Lady Rollingford for discarding her so completely. I only hope Colonel Howard will make her very miserable!"

"You like Louisa Cassilis?"

"Very much; and as for her husband, why, I think him just perfection, and I would not exchange him for that silent, gloomy, too-clever-by-half Glamour, though he *is* a duke; no, not if you were to offer me double his income, and all his hunters into the bargain. I think she did quite right in marrying Cassilis, whatever you may say. I know you always disliked him."

"I have greatly altered my opinion about him lately," Mrs. Champion says, after a pause; "and to show you that I bear him no ill-will, I will tell you at once that I have invited them to come and stay with us at the Hall."

"Have you really? Oh, how nice! And when will they come?"

"At once; I have promised Louisa to let her know what day we return to England."

"Then let us wait until to-morrow, and ask them to go with us; and to-night, why, we will just go to the Opera."

So it is all settled; and Mrs. Champion, having written to her young friend to arrange about the journey, went to the Opera. They all start on the following morning for London, and that very evening sees them comfortably settled at Liberty Hall; and the ever-shy Lord Inganess is permitted to clasp the lady of his love to his warm heart, after having duly obtained the sanction of her parents to their marriage, and after having, by one look from his handsome, clear blue eyes, put to flight all Bella's wicked thoughts of revenging herself upon him before consenting to be embraced as his plighted wife.

* * * * *

Mrs. Champion, having once more espoused the cause of Louisa and her husband, and identified herself with their wrongs, is not a woman, as my readers will readily believe, to content herself with simply offering to them hospitality in her magnificent suburban residence; and one of the first things she does on arriving in England, after having duly given her consent to her daughter's marriage with Lord Inganess, is to drive to Rollingford House, and there expostulate with Lady Rollingford, with all her characteristic courage, on her unaccountable behavior towards her adopted daughter.

Lady Rollingford receives her visitor in the small drawing-room down-stairs, in which she generally sits in the afternoon when alone; and her handsome and still comparatively youthly countenance expresses anything but pleasure or gratification when she learns the object of Mrs. Champion's visit.

"When am I to hear the last of that ungrateful, heartless and perverse girl?" she exclaims, throwing herself into one of the armchairs nearest the fire. "I have done more for that girl than any woman in England would have done; and what have I obtained as a recompense for all my troubles?—nothing but the most heartless and base ingratitude!"

"Lady Laura," Mrs. Champion replies, addressing her by her maiden name, as she generally does now when alone with her, partly to remind her that she never was Lord Rollingford's lawful wife, partly, perhaps, as a little satire, because she has so often told her that, instead of gaining anything by her supposed marriage to that unfortunate nobleman, she has in reality lost rank—"Lady Laura," she repeats, laying a still stronger emphasis on the name, "you know perfectly well that all you have done for Louisa you did simply because it was your duty, and that in your heart, even at this very moment, you recognize how cruelly you have lately acted towards her."

A ghastly paleness overspreads Lady Rollingford's countenance as she hears this just but most unwelcome reproach.

"Why do you always insist on calling me Lady Laura, Mrs. Champion?"

"Because you have no right to the title of Baroness Rollingford," that lady answers with great firmness.

"Ah, it is cruel of you to speak thus to me—most cruel. It is true that I greatly lowered myself when, taking pity on Frank Reymond's distress, I consented to become his wife; knowing all I did respecting his past life, and that I exposed myself to the risk of being called an impostor; yet you know how unable I was at the time to comprehend all the misery which such a step would involve, and how greatly I have since suffered for it."

Mrs. Champion, in spite of her strong determination to remain unmoved by anything Lady Rollingford might say during their interview, cannot help feeling some pity for her when she hears these words.

"Forgive me, Lady Rollingford," she says, speaking now in a kinder tone. "Your unfortunate position would certainly have commanded me to respect your feelings. Your secret is safe in my possession, yet I love Louisa; I promised both her father and her mother to look after her welfare, and I cannot find it in my heart—knowing all I do—quietly to see her thus cruelly and unkindly treated by you."

"You are, then, sure that she is Lord Rollingford's daughter?"

"Sure! A father's heart could not have been mistaken; and even you entertained no doubt on that score when you agreed to adopt her and make her your heiress."

Lady Rollingford remains silent for some moments, as if lost in deep thought.

"I do not hate Louisa—I bear her no ill-will; but you can understand, I suppose, that after what has been said about her in the papers it is only natural that I should decline to have anything more to say to her?"

"Lady Rollingford, you have no right to discard her thus, and your own noble heart tells you so."

"It was for her husband to defend her, not me, Mrs. Champion! I see it is no use arguing with you. My mind is made up, quite made up now, and I shall not alter it to please any one. Lord Rollingford left me, by his will, sole mistress of his entire fortune, to do with it as I chose. After what has happened I could not possibly think of leaving it to a girl who has behaved to me as Louisa has done, and who has placed me in such a very disagreeable position before the eyes of the world; so I have made a new will, leaving all my estates, this house, and everything I possess, to my eldest brother, Lord Inganess. If I acted foolishly and madly in marrying Lord Rollingford—for even you must agree that it was, after all, more foolish than wicked on my part, considering that I was the only person injured by such a step—let me, at least, be enabled by that alliance to revive the glories of the Londesdale family, and to bequeath to the future Earls of Westra a large fortune with which to revive all the ancient splendors of our noble race."

"To Lord Inganess!"

"Yes—you would not rob your own daughter in order to gratify this strange infatuation of yours?"

"When I gave my consent to Bella's marriage to your brother, Lady Rollingford, I knew exactly what his allowance was, and its insignificance did not frighten me, for I am fully convinced that money cannot of itself render any one happy; but as I could not fail to perceive that it would be ridiculous for a viscount to marry on five hundred a year—which he assures me is all your father allows him at present—I have consented to give them at once the three thousand a year which I intended Bella to have had at my death."

"You have acted very generously, certainly, Mrs. Champion—and permit me to thank you in the name of my father for what you have done for Inganess. I shall not be less generous, but will also make them a handsome allowance."

Mrs. Champion changes color when she hears this, and rising from her chair, she confronts Lady Rollingford.

"And you would leave poor Louisa to starve!" she says, fixing her large eyes upon her with menacing fierceness. "You have no right to do this, Louisa, as Lord Rollingford's lawful daughter, is by law heir to all his estates, and if you persist in thus overlooking her, I shall be forced to publish the truth, and let the world judge which is the more worthy of pity in this sad affair—you or she."

"Very well—do your worst. You may break your word of honor, you may inform every one you meet of all you know respecting Louisa's birth, you may go to my brother and tell him that I was never really married to Lord Rollingford, and that therefore I have no right to dispose of his estates—but who will believe you?"

Mrs. Champion listens with dignified composure, and not a muscle of her face seems in the least affected by it; when Lady Rollingford had done speaking, she simply draws from her pocket a crumpled up letter, written evidently many years ago, and she shows it to her—without, however, permitting her to touch it.

It is the letter which Lady Rollingford wrote, informing her of her husband's death, and in which, in a moment of excitement, she so far forgot herself as to confess plainly enough that Frank Reymond was already married when he married her; and that Louisa, the little girl she had just adopted, was his lawful child.

Laura glances over the long-forgotten letter; for one moment she is utterly unable to understand its contents, but suddenly its importance flashes upon her, and, uttering a wild cry of agony, she falls, half-fainting into the nearest armchair.

"This letter, Lady Laura, will prove my words; but remember, if I break my word to you it will only be to punish you for breaking the solemn promise you made to one on his deathbed, who from heaven will one day judge between us two."

"I am in your power! Oh, great God, that letter! how could I ever have written it! I must have been mad at the time—mad!"

"Lady Rollingford, Lady Rollingford," Mrs. Champion says, folding up her letter and replacing it in her pocket, "you have a good heart; why can you not rise superior for once above the opinion of the world, and, regardless of what it may say, do what you *know* to be right?"

"I will try, I will try."

CHAPTER III.—LADY ROLLINGFORD RECOVERS HER HEAR" AND LOUISA HER PATRIMONY.

LADY ROLLINGFORD is still lying on the sofa where Mrs. Champion left her; but when her ear catches the sound of a well-known footstep she rises as if impelled by a force she is utterly unable to control; and taking both Howard's hands in hers, she says, fixing her eyes on him, as if she would fain read with one look all the secrets of his heart.

"You have often told me that you still love me, cousin," she says, speaking hurriedly, yet with great earnestness.

"Yes, Laura; I love you, really, truly—with all my heart and soul."

"Are you quite sure, Jack, that what you love is not my money?"

"Your money! Would to God you were still poor, that I might have the opportunity of proving to you how little I am influenced by your thousands!"

Lady Laura looks at him for a moment in silence; then, as if she had suddenly made up her mind to do something desperate, she utters a cry of supreme joy, and, throwing herself into her cousin's arms, she burst into tears.

On the following day a coroneted carriage is seen driving up the approach to Liberty Hall; a powdered footman in silk stockings gives a thundering knock at the ancient door of the old mansion, which is immediately opened by a couple of foreign servants in plain but neat liveries, and my Lady Rollingford is ushered into Mrs. Champion's private sitting-room.

Exclamations of unmistakable joy are heard in the little apartment; and that great lady is seen by Mrs. Champion, on entering the room, tightly clasped in the arms of her adopted daughter.

"I knew that your noble heart would triumph at last over the commonplace prejudices of society, and would assert its empire over you," Mrs. Champion says, holding out her hand.

"Do you forgive me for all I have made you suffer, Louisa?" Lady Rollingford asks, addressing that young lady, and apparently totally unconscious of Mrs. Champion's presence.

"Oh, yes! and so does my husband!" Louisa exclaims, with great warmth.

"Is he here?"

"Yes," Mrs. Champion says, opening the door leading to the drawing-room, and beckoning to Inganess and Cassilis, who have been sitting there for some time, evidently waiting for this summons to enter the apartment.

After the ordinary ceremony of shaking hands and saying "How do you do?" Lady Rollingford, who evidently does not seem too pleased at their presence, says, addressing herself once more to her adopted daughter:

"I suppose Mrs. Champion has told you that I have destroyed the will in which I left everything to my brother here, and therefore you are again my sole heiress, Louisa?"

"Yes; Mrs. Champion has told me."

"And I, sister," Lord Inganess says, coming towards her with a face beaming with joy, "I thank you in the name of our family, for you have done what is right, and thus saved me from a very painful duty, for believe me I would never have touched a single penny of a fortune which by right belongs to another."

Lady Rollingford's face turns pale at this.

"Surely, Mrs. Champion, you have not broken your word?" she says, trembling from head to foot. "You have not told them; yet by their looks I can see that they know all. Who, then, has told them?"

"I have told them," answers a feeble yet clear voice; and Marie, with a pale, haggard countenance and sunken eyes, with golden hair instead of black, yet Marie for all that—the woman whom she has believed dead for these last ten years—enters the room by a side door, and stands before her almost as beautiful as ever, in spite of the deadly pallor of her cheeks, and the unmistakable traces of approaching death upon her brow, looking her full in the face with her large black eyes.

"You—you?" Lady Rollingford exclaims, staggering back a few paces.

"Yes, Marie Gautier herself," Mrs. Champion says.

"I thought you were dead long ago!"

"No, Lady Rollingford," says the unfortunate woman, a sad smile playing upon her beautifully shaped but now almost colorless lips.

"Louisa knows all, then?" Lady Rollingford asks, looking from one to the other, not knowing whether to pity or congratulate her.

"Yes, I know all," Louisa replies, without lowering her proud eyes, that so resemble those of her mother. "I know all, and you need not look at me with such compassion, Lady Rollingford, for I am not ashamed of my mother."

"I must leave you now," Lady Rollingford says, rising; "but ere I go, I must tell you all how I have fulfilled the promise I made to Frank Reymond on his deathbed before this—lady; I have this morning signed a formal document by which I make a free transfer of all the Reymond family estates, including Rollingford House and every source of revenue I now possess, to Louisa and her husband."

"You have done this?"

"And how will you live?"

"In a few weeks I hope to be Colonel Howard's wife, and his handsome income will amply provide for all my future wants."

"But I cannot take everything from you, Lady Rollingford—I really cannot," Louisa cries, overpowered by her adopted mother's unexpected generosity.

"You may take it, as I give it to you, Louisa, with a light heart and without regret. I only beg of you to keep my secret—you understand."

"That secret is locked up in our hearts," they all exclaim, with more or less emotion.

* * * * * * *

Six months after the event I have narrated in the foregoing pages, most of our friends find themselves once more together in Liberty Hall, enjoying the kind hospitality of General and Mrs. Champion.

The most conspicuous amongst them is, of course, Lady Inganess, who, in her character of a lovely bride, is the very life and soul of the whole party; but, even in spite of all Bella's superior attractions, the charming manners and sweet young face of Louisa Cassilis attract general attention.

Both their husbands are, of course, with them, for Cassilis has now become quite a model husband, and but seldom spends an evening away from his wife; while Inganess, of course, is still Bella's devoted slave.

The other persons who help to make up the magic number of eight, at this charming little family party, are Lady Rollingford and her cousin Colonel Howard, who have been for the last two months husband and wife, and who have but recently returned from their honeymoon trip in Italy; and I may add that it is not every day that one is favored with the sight of three such devoted and affectionate couples.

What Jack Howard's feelings must have been when he discovered that his cousin really intended to take him at his word, and to give up at once all her wealth in order to afford him a better opportunity of proving his devotion to her, I shall not attempt to say. It is only necessary to state that he felt himself bound to marry his cousin, and as yet he has found no cause to regret having for once in his life done his duty; for Laura, as every one can see who is half an hour in their society, makes him the most devoted and considerate of wives.

On this peaceful moonlight October evening, Colonel Howard and his wife have come to dine with the Champions for the last time before departing for Inganess Castle, in the island of Westra, where they are going to pay a long visit to the old earl, whose health of late years has been very feeble; and to arrange for the reception of the other happy couple, who are to follow them there in a short time, as Lord Inganess is anxious to present his youthful bride to his father. I need not state that Bella and her husband are staying at Liberty Hall, and General Champion is almost broken-hearted at the idea that he is about to see his beloved daughter depart for good. Louisa and her husband, the handsome Rupert, are also still staying in this old mansion.

It is during that half-hour immediately after dinner in which, while the men still remain in the dining-room over their wine, the ladies best love to discuss their little secrets, that I shall venture for the last time to introduce my readers, who have been so condescending as to follow me thus far, into the society of my four charming heroines.

Let us take a hasty glance over the old-fashioned drawing-room, in which we find them assembled.

Digitized by Google

The conversation, which at first was only between the ladies, soon becomes general. It originated doubtless in a discussion between them as to what novels Lady Laura should take to while away the long evening hours in the lonely castle of her forefathers; and the younger ladies, as being better acquainted with the peculiar qualities of modern light literature, are after a time naturally drawn into the discussion.

Mrs. Champion took the leading part, speaking specially of love as the sublimest thing in life, and of those books which have it as their key as the greatest.

Presently a servant enters the drawing-room and whispers something in Mrs. Champion's ear, which suddenly changes the almost divine glow which had spread itself over her countenance into a deadly pallor. She rises, and beckoning to Louisa, who also seems greatly agitated, they leave the room.

The gentlemen make their appearance soon after this; but on being informed by Lady Rollingford that evidently a change has come over the poor sick lady up-stairs, Cassilis hastens to join his wife in the sick-room, and Inganess—who for a moment has been conversing with his wife and laughing at her jokes—approaches his sister and begs of her to go with him to Marie's chamber.

Bella, who, together with her father and Colonel Howard, has been kept in total ignorance of that lady's relationship to Louisa and Lady Rollingford, and who believes her to be merely one of her mother's numerous foreign friends, who, in her kindness of heart, she has invited to come and stay at Liberty Hall, perhaps on account of her delicate state of health, cannot understand why her husband should take so much interest in her, and calling him back to her side, she begs of him not to leave her again so soon; but Inganess has made up his mind to accompany his sister to the dying woman's bedside; and braving his youthful bride's oft-repeated threats, hastens out of the drawing-room.

FINALE.

IN an old-fashioned apartment, the walls of which are hung with antique tapestry—which at times reminds one of the queer old chambers of Inganess Castle—and the windows of which overlook the green fields and beautifully wooded parks of one of England's loveliest counties, far away from the rest of the house, from which it is divided by long galleries with oak-paneled walls, along which even the servants scarcely ever go, as they have an idea amongst themselves that they are haunted, Zoé de Fleurville, the popular French actress who for so many years was the idol of the Parisian youth, and of whom it is reported that she has amassed untold wealth, and married a prince with whom she has gone to live somewhere in Central Russia, after having given up the stage and changed her personal appearance so that no one may be able to recognize her in future—the world-famed La Fleurville is dying in the arms of her beloved daughter, the young Mrs. Cassilis, whose history no one has ever been able to find out; and to whom, after having neglected her for nearly a year, the proud Lady Rollingford has lately, to the astonishment of society at large, made over all her property, even to Rollingford House itself.

Lady Rollingford, her brother, Lord Inganess, and Mrs. Champion are also in the room, and the good priest who has just received the poor sinner's last confession, and who has been preparing her for death, is kneeling in a corner near the bed praying fervently for her.

On either side of the bed stand Louisa and her husband Rupert Cassilis, and the dying woman, whose wondrous black eyes seem yet to burn with an almost superhuman fire as they look with an anxious expression from one to the other, holds a hand of each.

"I have been a great sinner, my child," she says, speaking in a whisper, and with some difficulty, for her articulation has become most painful. "Perhaps I have never realized so fully as I do at this moment how weak and wicked I have been; though God knows how I have suffered in my heart for many years for the mistakes of my unguided, untaught and vilely-corrupted youth. But at this supreme moment you will not curse me, my Louisa!—you will forgive me, will you not?—and you too, Rupert—you will not let me die unforgiven?"

Both Louisa and her husband are too greatly moved to make any reply, but by their faces the dying woman sees that in their hearts she is forgiven; and, joining their hands, she makes a last effort to raise herself on the bed.

"Love each other always, and trust in one another implicitly," she murmurs; and then looking towards Lady Rollingford, who with a quick step now approaches her, she craves her forgiveness also.

An hour later Marie, reconciled with God, and after having received the last consolations of the Church, with a fervent prayer that in that world where her soul is about to enter she may find forgiveness for her many sins, leaves that little group of loving friends and crosses the broad river which is to separate them for a time, but which will bear her to join Frank Reymond for ever.

MARDI-GRAS AT NEW ORLEANS.

A MAGNIFICENT AND ARTISTIC PAGEANT.

MARDI-GRAS has come and gone, and the Crescent City is in sackcloth and ashes. The mad, merry jest has been played out; caps and bells have been laid aside, and Tom Fool relegated to the regions of oblivion for 361 days. In good sooth there has been exquisite fooling, albeit the shadow of the gruesome past hung like a pall over as gallant a *cortége* as ever rode through town or hamlet in medieval times. The one fatal remembrance asserted itself through the black crape that mutely appealed to the eye upon every side, till instinctively the mind vibrated between tinsel and tomb.

The New Orleans Mardi-Gras differs from all others in the world. Neither in Rome, Naples, Venice, nor Paris, are its peculiar features to be seen. Here the whole occasion has taken a new and distinctive character of its own—here, grand and royal pageantry has usurped the grotesqueness of Italian cities, while year after year the display is becoming more artistic, more esthetic. It is accepted with a pleased gravity, and people gaze upon the procession with the gratified earnestness of grown-up schoolchildren. Monday, February 24th, was a bright, warm day, the mercury standing at 68° in the shade. Everybody was in the streets—everybody on the tiptoe of expectation, for His Most Gracious Majesty, the King, was announced to arrive by water at 3:30 o'clock and take possession of the city according to time-honored custom. Canal Street was lined from Rampart to the Levee by a curious, eager and excited crowd, the dark element being very much in front, while the wharves and gigantic river steamers were literally packed.

At the time appointed a lily-white tug, blowing a whistle much too big for her, came plunging round the bend in the river, followed by a leviathan steamer "bearing Cæsar and his fortunes," flying the royal standard and decked with bunting that for variety and color fairly vied with the headdresses of the colored ladies assembled to greet the King. Cannon began to boom, bells to ring, thousand of voices to huzza, while every whistle on every steamer exerted itself to the utmost limits of its capacity, becoming hoarse in its anxiety to exhibit a profound and enthusiastic loyalty. In a few minutes the King's trumpeters appeared on the gangway, followed by the dukes of the realm, gorgeous in blue and green and purple velvet, broidered in gold, buff boots to the hips, flowing perukes, and cocked hats richly laced. Then at a little distance came His Most Gracious Majesty, attired in a magnificent costume, copied after the Versailles portrait of Louis XIV., *Le Grand Monarque*—to wit, snuff-colored velvet tunic, laced cravat, star and ribbon, scarlet morocco boots reaching above the knee, velvet breeches laced, jeweled sword. His Majesty's curls fell in profusion over his shoulders from beneath his plumed hat. His reception was such as any potentate might feel fairly proud of, and his gracious affability in bowing responsive to the hearty *vivas* that rent the air bore ample testimony of how deeply the loyal welcome had touched his royal heart.

Mounting gayly-caparisoned steeds, a cavalcade composed of fifty of the royal household was formed, and amid the booming of guns His Majesty rode upon his way, a guard of honor selected from the following distinguished regiments bringing up the rear—the Thirteenth Infantry, Washington Artillery, German regiment, Cazadores, Orleans Artillery, Louisiana Field Artillery and Continental Guards. After the escort appeared the royal baggage-wagon, laden with largesse for the populace. The *cortége* proceeded to the City Hall, on the steps of which the Mayor, bare-headed, received his Majesty, and presented him with the keys of the city, together with a loyal and dutiful address of welcome. From the City Hall the cavalcade moved to the Royal Palace San Carlos (the St. Charles Hotel), and here his Most Gracious Majesty alighted. An address levée was immediately held, at which many presentations of distinguished personages took place, including several ladies of high degree. The Duke of Lochryan was admitted to the honor of kissing hands and of addressing the throne, the Earl of Warwick replying on behalf of His Majesty. In the evening His Majesty, accompanied by several members of the court, attended the theatre. Thus passed the eve of Mardi-Gras.

From cockcrow to curfew on Tuesday, the 25th, New Orleans was *en fête*. Balconies were draped, flagstaffs floated pennants and streamers, the streets literally swarmed with people, a goodly number masked and arrayed in masquerade attire. The uttermost good humor prevailed, but the license, the abandon, the *chic*, the uncontrolled gayety which I have seen in Italy was entirely absent; a little badinage, an odd kissing of hands, an occasional whoop, and this was Carnival in the Crescent City. It is needless to say that the barrooms were crowded three deep, and that the elbows of compounders of cunning cocktails ached again. From an early hour Canal Street was a dense mass of expectant humanity, the statue of Henry Clay being a sort of island in the sea of human faces. The day was a perfect glory, a dazzling sunshine, a caressing breeze, a Summer heat.

Punctually at the hour appointed, amid the booming of cannon and the strains of martial music, the procession started. Firstly came the military force of the King, represented by three herculean knights in full panoply of battle, and mounted upon steeds fit for the lists at which Ivanhoe so fairly distinguished himself. Next came two Templars, and between them the Lord Almoner. The Lord Chancellor and Lord High Constable rode together, and following them the Royal Standard Bearer. Close to his standard rode King Richard, surnamed Cœur de Lion, in martial and kingly apparel, looking every "inch a king." Upon his shoulder he bore the famous battle-ax which caused so many unbelieving and infidel Saracens to bite the dust. Richard wore the suit in which he appeared in Cyprus. His helmet was of gold, surmounted by a lion, that bravely glittered in the sunlight. His armor was of gold chain, every link flashing like a rose-diamond. His surcoat was cloth-of-gold; the tunic light-blue, broidered in the same precious metal. His breastplate shone like a mirror. His shield was blazoned with three lions rampant. The housings of his horse were of gold. This was a living page of Froissart. I was flung back into the days of the Crusaders—the days of tilt and tourney, of minstrelsy and mummery, in merrie England. Following His Majesty appeared the Lord High Treasurer, the Lord High Admiral, the Lord High Chamberlain and a score of others of great rank and dignity, including the King's jester, bestriding a mule whose ears stuck out like the sails of a windmill. Then followed the grand scenic display which the King had ordered for the enjoyment of his loyal and devoted subjects, and which represented the "History of the World," from the Creation to the present day. We had the Garden of Eden with Adam and Eve, the latter very *décolletée*, and the serpent, and the apple, and the tree of knowledge, by-the-way, was laden down with fruit; then came Noah's Ark with a select few of the animals on the roof. The Tower of Babel followed, and close to it a float containing Assyria, Babylonia, Media and Persia. India, ancient and modern, made a goodly show, as did Phœnicia, B. C. 1085, while China, B. C. 1600, provoked hearty approval. Arabia and Africa, with Europe, B. C. 2000, appeared next in order, followed by Greece, Rome and Scandinavia. Britain's Good Queen Bess occupied a chariot all to herself, and her traditional ruff lost nothing of its starchiness in 1579. France caused intense excitement in the French quarter; Clovis, Louis XIV., the two Napoleons and a Communist occupied this float. I remarked that cries of "Vive Napoleon!" greeted the emperors as they webbed past—Napoleon the First, in the uniform of the Old Guard, after Delaroche's portrait; Napoleon the Third, attired as a Field Marshal of France. Spain was fitly represented by Don Quixote de la Mancha, borne in a wooden cage, Sancho Panza riding Dapple in front. A more rueful countenance never greeted a grinning multitude than that of the devoted lover of the peerless Lady Dulcinea del Toboso. Turkey caused considerable laughter. The "sick man" lay on a couch, Britannia feeding him with "bitter pills." Germany, as far as likenesses and general get-up, was the most successful float of the entire. The Emperor "William" sat on a gilded throne, supported at either side by Bismarck and Von Moltke—both represented in their grotesque masks to the very life. "Fritz" was admirably done. At the back of the throne was a triumphal arch composed of beer and Rhine wine barrels. Russia's Emperor was supported by his Pope, or head of the Greek Church, and preceded by a company of the dreaded Cossacks of the Don. The sides of the float were devoted to Siberia, and the sufferings of political prisoners thither relegated. America was represented from the Aztecs to Ponce de Leon, from De Soto to John Smith, and with J. S. the never-to-be-forgotten Pocahontas. Again we had an illustration of that little affair between "mother and son" in 1776. Winding up the process on were a regiment of Opera Bouffe Guards with umbrellas, the artillery wagons being laden with codfish-balls. I timed the "passage of the act" at fifty-seven minutes. As a pageant this procession would have been creditable even to the Theatre Chatelet, in Paris, and this is no stinted praise. The costumes were new, rich, elegant and correct, the masks intensely expressive, the grouping artistic, the *mise en scene* simply admirable. There was a sound of revelry by night, not in Belgium's capital, but Louisiana's. Finally I had to attend the ceremonial of conferring the high and mighty title of Duc de Brabant upon M. Louis Saveur, the representative and partner in the world-famous wine house of G. H. Mumm & Co. General Sherman was also present, and the ceremony was one in which the sparkling vintage of champagne glittered as did the decorations which were placed upon the manly breast of the newest addition to the House of Lords. The Rex Ball, like O'Rorke's noble feast,

——"will ne'er be forgot
By those who were there, and by those who were not."

At ten o'clock the grand procession moved along the splendid Hall of the Exposition building into an antechamber literally a carpet of natural flowers imbedded in green grass after the fashion of a *parterre*, and in the best "ribbon border" form. The King took his seat upon the throne, and beside him, upon a second throne, his Royal Consort, a very beautiful blonde, with apple-blossoms on her cheeks. Twelve thousand people paid homage to their Majesties, some of them as reverentially as though at the Court of St. James.

At twelve o'clock a flourish of trumpets announced the royal supper. A procession was formed, and the august party proceeded on their solemn and all-important mission. The representatives of FRANK LESLIE'S ILLUSTRATED NEWSPAPER were not only invited to supper, but to sup at the royal table, and His Most Gracious Majesty did us the high honor to pledge us in a bumper of G. H. Mumm's extra dry. As a whole the *fête* of Mardi-Gras was a supreme success. True the "Mystik Crewe" did not turn out, true the shadow of an awful desolation was upon the city. Nevertheless, the cordiality to make the honest effort to bridge over the chasm, and the true and earnest endeavor to score a victory, carried it to a triumphant issue. *Vivat Rex!*

SCIENTIFIC INTELLIGENCE.

A Belgian School of Fine Arts is to be founded in Rome, under the management of M. Portaels.

The Berlin Humboldt Academy, founded by the Scientific Central Union of that city, was inaugurated on January 13th last.

It is Maintained by Dr. H. F. Braun that heat can only be converted into electricity in the same degree as it can be converted into work.

It has Lately been ascertained that the Missouri River is navigable to within twelve miles of Helena, Montana, fifty miles above Fort Benton.

The Russian Imperial Entomological Society is making arrangements to dispatch a scientific expedition to the newly annexed Transcaucasian provinces early next Spring.

The Tercentenary of the introduction of printing into Warsaw is to be celebrated this year by an exhibition of all the remarkable books printed in the Polish capital during the last 300 years.

Several Parisian Photographers have tried to use electric light for obtaining *clichés*, and have been wonderfully successful. MM. Pierre Petit and Lebert are the most prominent amongst them.

The Finnish Historical Society, which was established four years ago to collect information respecting the origin and history of the Finnish people, has just received an anonymous gift from a person at Helsingfors of 15,000 roubles.

The Estimated Cost of the proposed interoceanic canal across the American Isthmus, Nicaragua route, is $33,000,000; but it is considered wise to regard the actual cost, including the interest on dormant capital, at twice that sum.

Much of the Biliousness and Gout which come under the notice of the medical profession is due to the close and stifling condition of our indoor atmosphere—in other words, to the want of proper ventilation, and chiefly to an insufficiency of air inlets.

The Johns Hopkins University has established a Summer laboratory for the study of zoology. The laboratory is situated on the Chesapeake Bay, and is under the charge of W. K. Brooks, who has already shown the value of the laboratory in the study of marine fauna of that location.

Western Australia.—We learn from the Australian papers that Mr. John Forrest, the well-known explorer, has just completed the survey of the country between the De Grey and Ashburton Rivers, and for a considerable distance inland; and that he is of opinion that that part of Western Australia is well suited for settlement.

The International Art Exhibition at Munich will open on July 20th instead of July 1st, as originally proposed. This is done to secure the most recent French and Belgian works which will have been exhibited at the Salon. That closes on June 22d, and exhibitors there can send in works at Munich until July 15th. Other contributors must keep to March 31st and May 31st, the dates already announced.

The British Museum is now open free to the public on every week day—Monday till Friday from ten o'clock, and on Saturday from twelve o'clock till the ordinary hour of closure. Special arrangements have been made to enable students to carry on their work without interruption. Students of natural history will have Tuesday and Thursday reserved for their studies, students of archæology Wednesday and Friday. On Mondays and Saturdays the public will be able to view the whole of the collections; on Tuesday and Thursday, all except the natural history specimens; and on Wednesday and Friday, all except the Greek and Roman sculptures, and antiquities in the upper gallery.

PERSONAL GOSSIP.

COLONEL THOMAS A. SCOTT, of the Pennsylvania Railroad, is pleasuring on the Nile, and will remain abroad until October.

THE President of the State National Bank of Raleigh, N. C., recently died. A few days ago his wife, Mrs. M. C. Williams, was elected to the directory and became president of the institution.

MR. HARRISON WEIR, so well known as a painter of animals, has, we regret to state, broken down from overwork, and has been compelled to leave for the Mediterranean, where he proposes to rest for some time.

PROFESSOR KAZANSKY, of the Moscow University, who died a few weeks ago, has left his library, consisting of a large number of valuable ecclesiastical works, to the Moscow Estabhment for the Training of Priests.

IT is stated at Berlin that negotiations are pending for a compromise between Prussia and the Duke of Cumberland. If it is arranged, it is believed that the Duke will take up his residence in Brunswick, with a view to succeeding to the Duchy.

THE death is announced of Mrs. Cohen, mother of Baroness Meyer de Rothschild, and consequently grandmother of the Countess of Rosebery. By this event a further sum of a quarter of a million sterling falls to the share of the Countess of Rosebery.

GENERAL GROTENGELM, the Russian commandant of Fort Petro-Alexandrovsk, near Khiva, has received instructions to institute a census of the Khanate, with a view to the introduction of compulsory military service, based upon the Russian model, into the Khan of Khiva's dominions.

THE Medical Faculty of the University of Zurich have conferred the degree of doctor on Fraulein Draya Sjocia, a young lady from Servia, and Countess Vilma Rugonai of Hungary, both of whom passed successful examinations and delivered inaugural dissertations of exceptional merit.

THE marriage of the son of Jules Simon to Sarah Soussis, in Paris, was a most brilliant affair. The bride, being a Hebrew, the ceremony was entirely civil. All the prominent men and women of the day were present, and it was especially noticed that the bride, who is immensely rich, did not wear a single jewel.

AN attempt will be made at the coming session of Congress to secure the impeachment of United States District Judge Alexander Rives of the Western District of Virginia. He is a Virginian, born of an aristocratic family, but he has ruled that when colored people are to be tried there must be colored men on the jury.

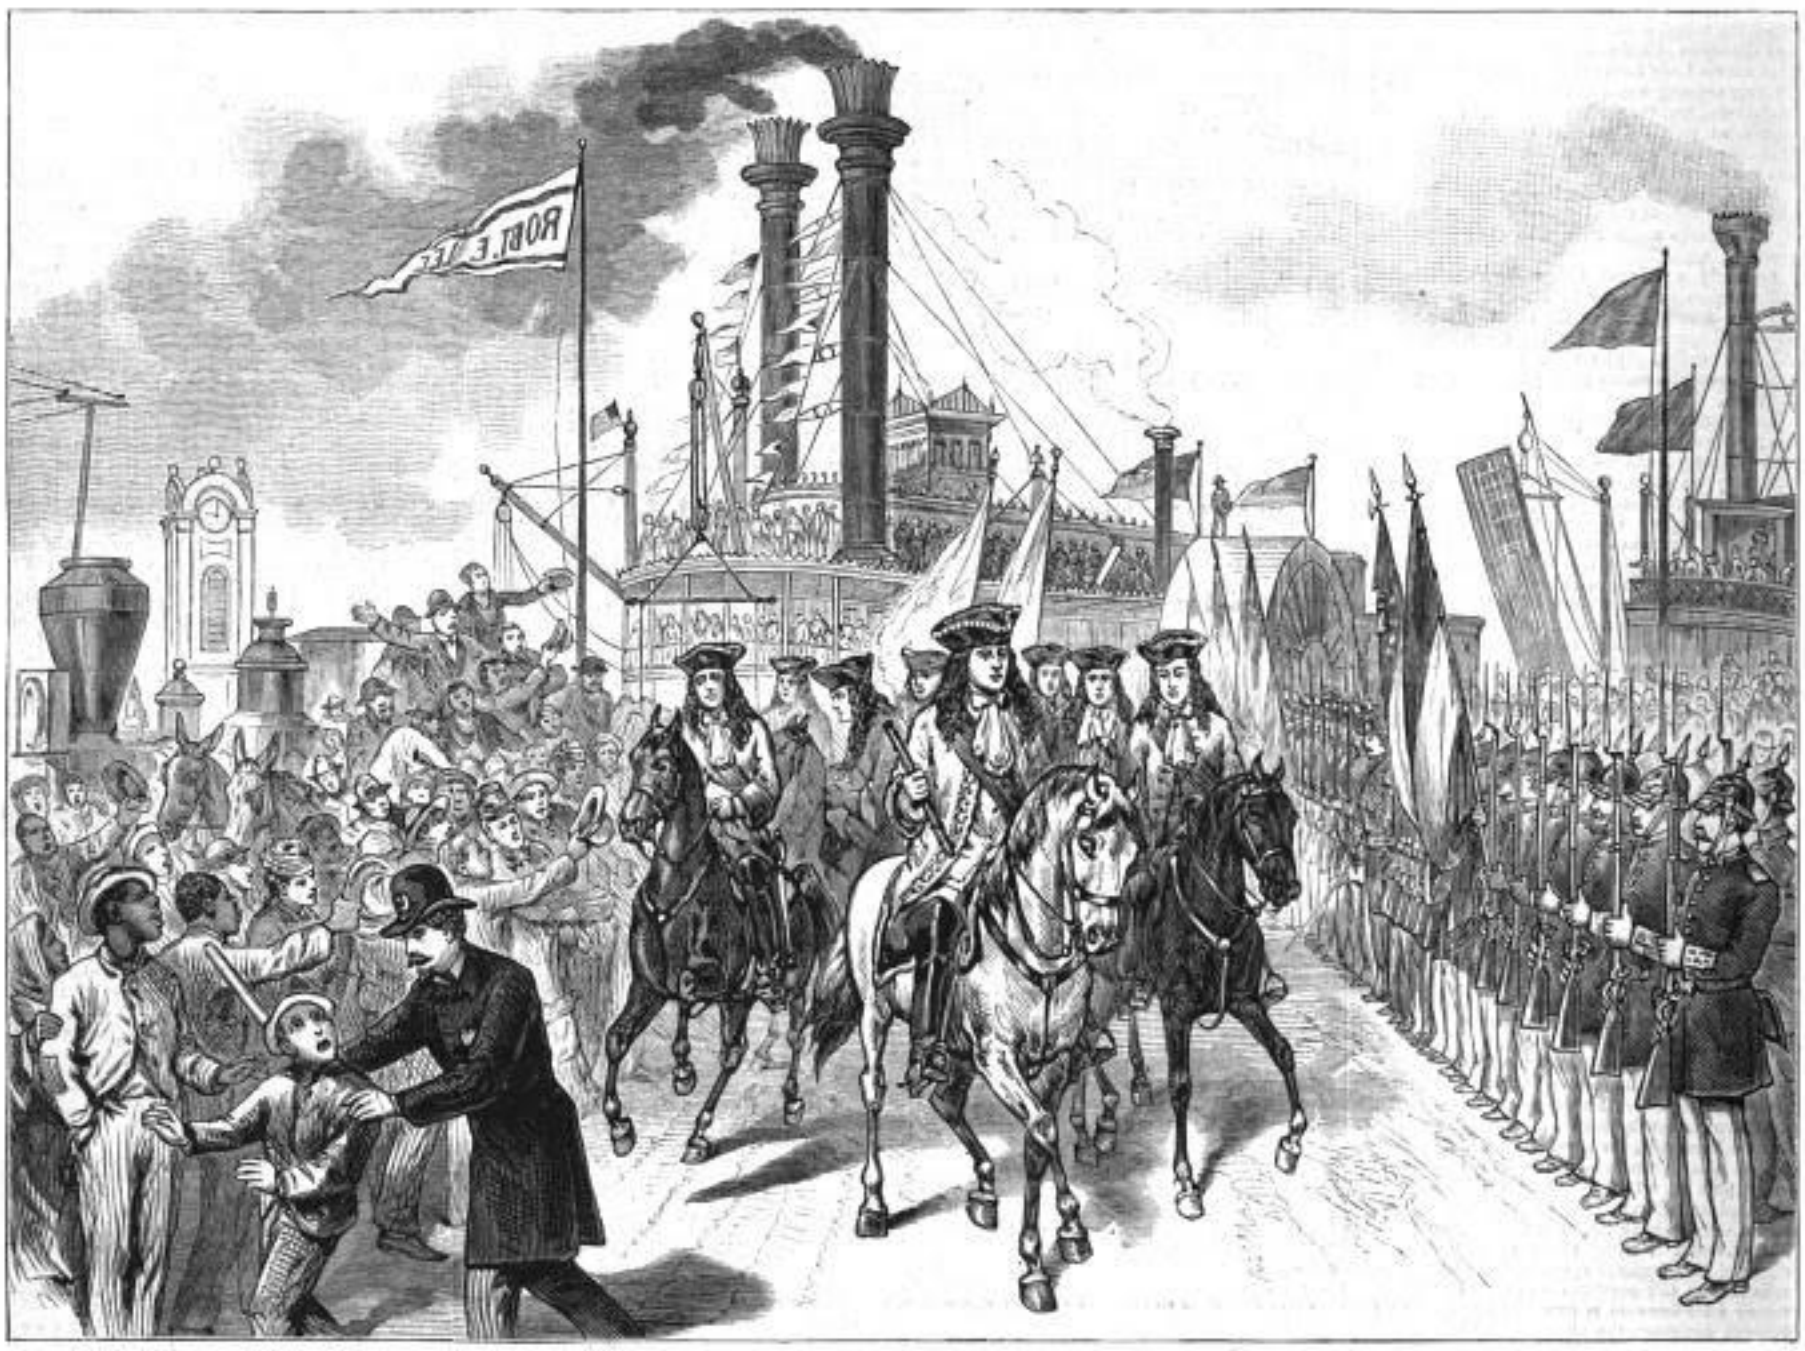
THE Duke of Connaught will be attended to the marriage altar by two "best men"—his eldest and youngest brothers, the Prince of Wales and Prince Leopold. The duke and his bride will take a wedding trip in the royal yacht *Osborne*, which will last two months. They will visit Lisbon, Cadiz, Gibraltar, Malaga, Almeria, Carthagena, Malta, and other Mediterranean ports.

A GERMAN paper states that a descendant of the great Copernicus is living now at a small town of Posen, exercising the calling of a shoemaker. It is known that Copernicus was a Canon of the Chapter of Frauenberg, and must be supposed to have died without leaving any issue. It has been said that his true son was Kepler, and that in his turn Kepler was the scientific father of Newton.

MR. BENNETT WOODCROFT, who may be said to have originated the British Patent Office, and the working of which he so ably and zealously superintended from the time of its establishment down to within the last two years, died at Brompton, February 7th. He was born at Bennett Grange, near Sheffield, in December, 1803, and was consequently in his seventy seventh year when he died.

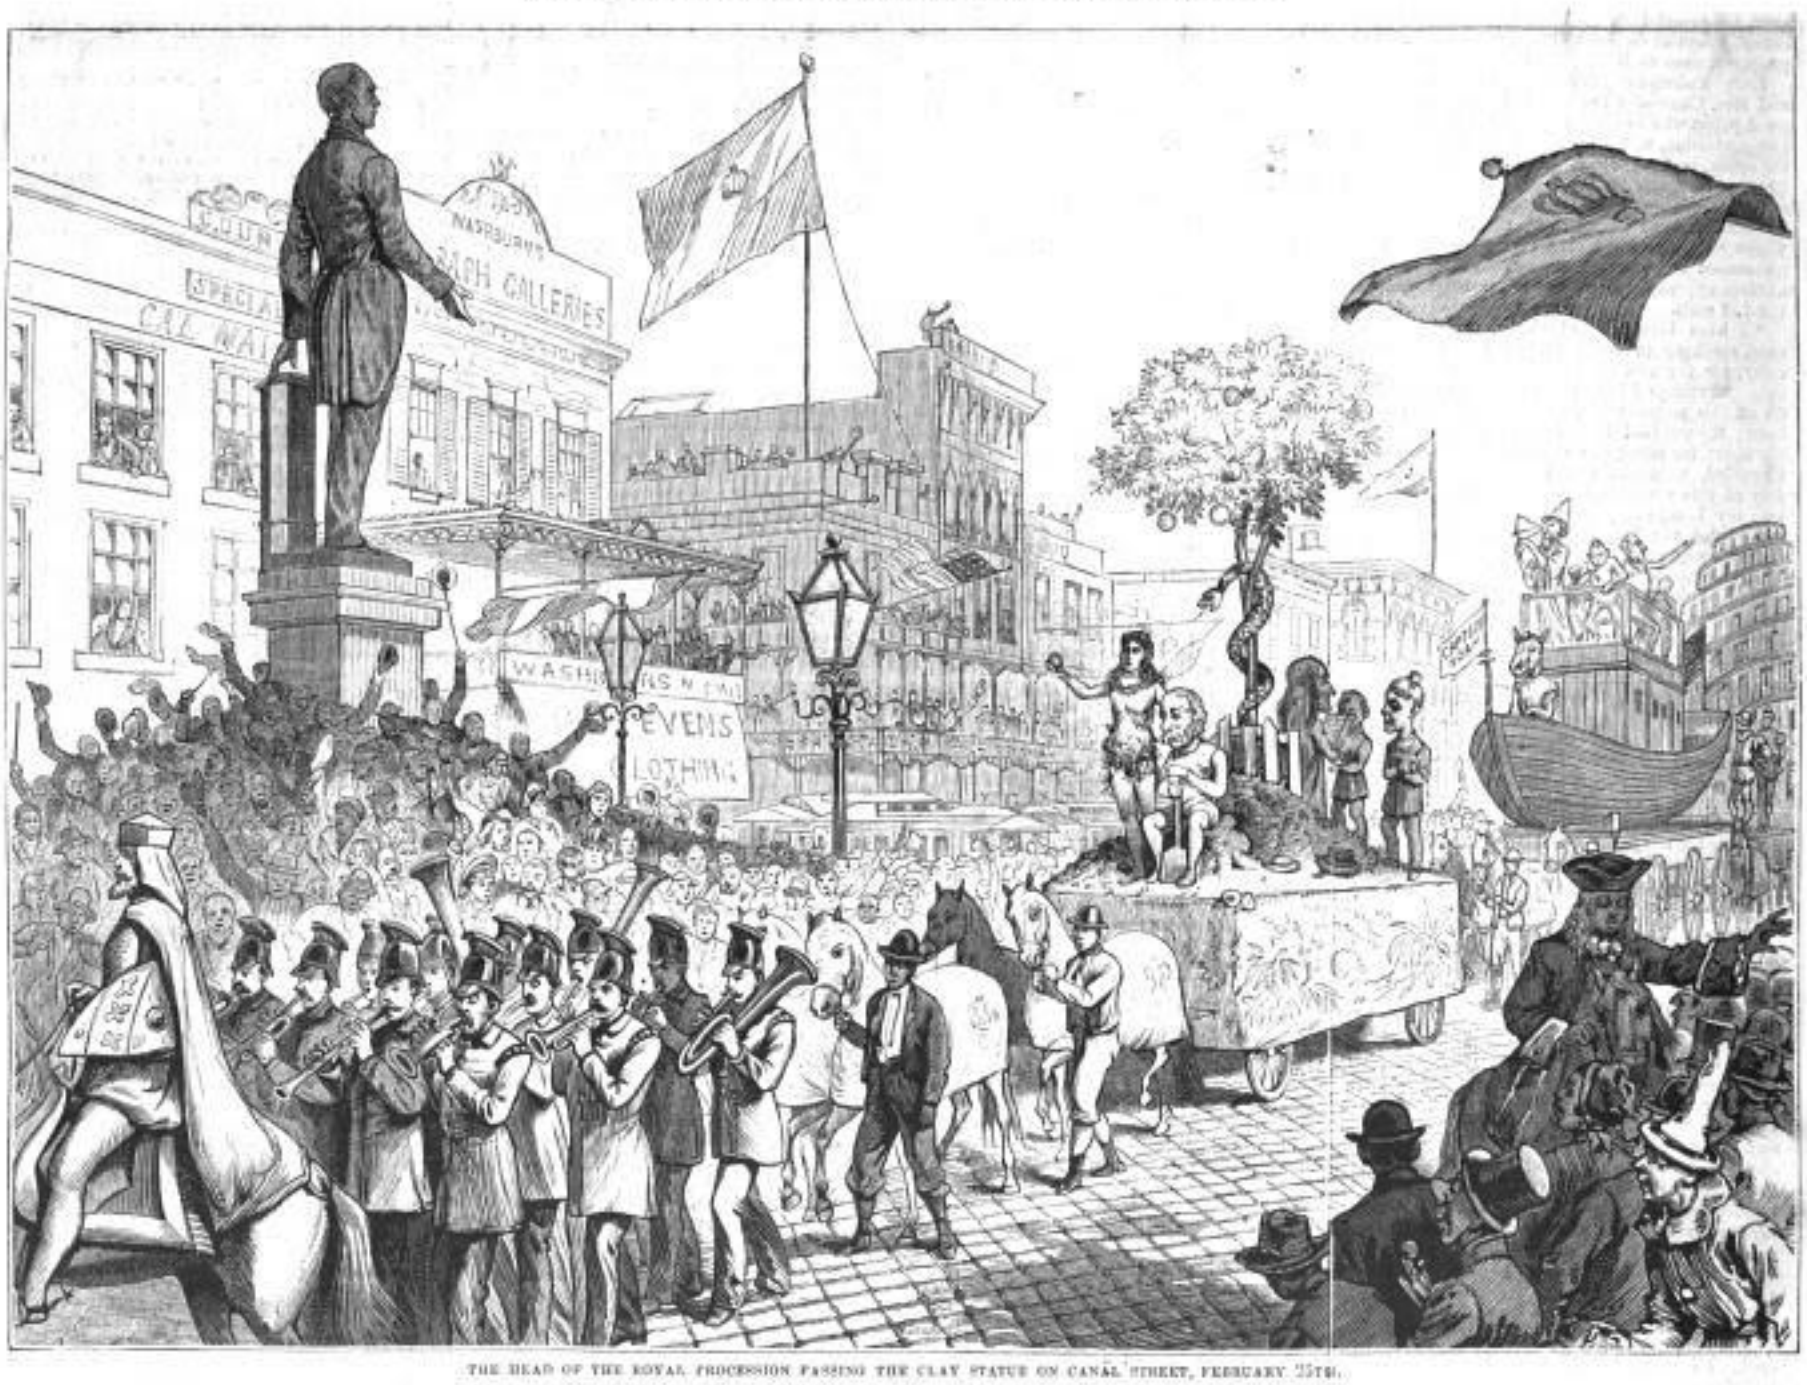
THE will of the late Loyal Wilcox of Hartford, Conn., makes the following bequests: American Educational Society, $2,500; American Congregational Union, $2,500; Oberlin College, $4,000; Methodist Church, Canton, $1,000, for support of the ministry in that church; Home Missionary Society, $5,000; American Board of Foreign Missions, $2,500; Ripon College, Wisconsin, $5,000.

QUEEN VICTORIA will leave London at the end of March. She will rest one night at the British Embassy in Paris and proceed thence to the Italian Lakes, where she will be met by the Duke and Duchess of Connaught, who will then be on their wedding tour. Thence she goes to Germany. Prince Amadeus, Duke Aosta and ex-King of Spain, will meet Queen Victoria at the Italian frontier. The King will visit her at Lake Maggiore.



THE gentleman who maintains the chief ecclesiastical authority over the Indians has very little of pomp and circumstance when he travels among them. A covered wagon cannot withstand the winds that sweep across the prairies, so putting into an open wagon sufficient provisions for himself and his driver, and food for the two horses, the excellent Bishop Hare begins a long journey among his wild charges. At night he sets up his tent on the open prairie, or, wrapped in a buffalo robe, sleeps in the wagon.

KING OSCAR of Sweden is about to circulate a reply to Pope Pius IX.'s numerous attacks on Freemasonry. The King of Sweden has long been a distinguished Mason, and proposes to prove, by facts connected with the history of the craft, that the Pope's attacks were perfectly groundless, and need not be observed even by faithful Catholics. The publication will be further enlarged by a collection of King Oscar's principal addresses to Masons in various Lodges in Sweden and Norway. The work will appear simultaneously in Swedish and German.



ONLY one Senator who answered to his name on the 4th of March, 1861, has been a continuous member of the body, and that is Anthony of Rhode Island. Hannibal Hamlin has been a Senator, but he had resigned his seat on the 7th that he might serve as Vice-President from 1861 until 1865. He was again elected to the Senate in 1866, and was re-elected in 1867. Chandler of Michigan was also one of the Republicans who took possession of the Senate Chamber in 1861, but he left in 1875, and has only recently returned. Howe of Wisconsin was sworn in on the 4th of March, 1861, and his term of service ended at high twelve, March 4th, 1879.

AN effort is being made to secure for Mr. Timothy C. Murphy of Norwich, Conn., a suitable recognition from Congress for his many humane acts in rescuing persons from the waters of the Thames River. A list of affidavits, sworn to before General James B. Coit, Commissioner of the Superior Court, has been sent to the Hon. John T. Wait, and it is probable that at an early date Mr. Murphy will be honored with the highest gold medal. Mr. Murphy's exploits cover all the years reaching back to 1873, and among the persons rescued at the risk of his life are Robert Shugrue, Arthur McGee, Thomas Connell and James Murphy, who were capsized in a sail-boat in 1874; John W. Burke, Stephen B. Heing and two sons, capsized in a sail-boat in 1875; Thomas Cummings, who was crowded overboard from the *City of Lawrence* as she was returning from an excursion in 1876; N. A. Smith, capsized in a row-boat in 1876; Patrick Shea, who fell from the *City of Lawrence* in 1877; and an unknown man who fell into the river in 1873. Affidavits from the persons rescued accompany the affidavits of Mr. Murphy.

NEW YORK CITY.—ROASTING AND PREPARING COFFEE FOR MARKET.—SEE PAGE 46.

Digitized by Google

COFFEE, AND HOW TO PREPARE IT.

THE fondness for coffee is perhaps more widely diffused over the world than that for any other beverage, not even excepting spirituous liquors. Both civilized and savage nations can unite on a common platform of coffee. The luxurious palaces of Europe and the tent of the Bedouin Arab alike are its home. The most extensive coffee-consuming countries are the United States, Great Britain, France and Germany. In our country the taste for this stimulating beverage pervades all classes, and there is an enormous amount consumed, being over three hundred million pounds a year, of which nearly two-thirds comes from Brazil.

The coffee is brought here in the berry, and it must be roasted and ground before is can be distilled into the beverage we all are fond of. The roasting is principally done by the large wholesale dealers, and a walk through certain New York streets in the evening, when the coffee-roasters are in full blast, will present most interesting scenes to the coffee-lover. The air for blocks around is redolent with suggestions of the breakfast-table.

It being a subject which appeals so strongly to many persons, we have this week devoted an entire page to illustrating the process of coffee-roasting as carried on in the extensive establishment of Messrs. Thurber & Co., of this city, and into which we were enticed in a recent ramble. A visit to such an establishment presents one of the most animated and picturesque scenes which can be imagined. A very small stretch of the imagination would enable one to believe, as he beheld the smoke and glare of the fires of the coffee-roasters, coupled with the busy action of the workmen, that he was gazing on a realization of Weir's great picture, "The Forging of the Shaft."

It may be thought by many that the roasting of coffee is a comparatively simple process, when, in fact, it is quite the reverse. The process requires skill, experience and constant practice; expert roasters are usually experienced men and command high salaries. A bad coffee-roaster is dear at any price, as the coffee may be ruined or its value greatly injured by an error in judgment or an instant's inattention. Owing to these circumstances, in addition to the fact that in order to do good work it is necessary to roast a considerable quantity at a time, none of the small hand-machines produce uniformly good results, and they are only to be tolerated where distance makes it impossible for the retail merchant to obtain regular and (when not in air-tight packages) frequent supplies of the roasted article. *How much* it should be roasted is also an important part of the question; for making "black" or "French" coffee, it should be roasted higher than usual (the French also often add a little chicory), and some sections are accustomed to a higher roast than others, but as a whole the customary New York stan ard will best suit the average American palate. The other conditions necessary to be observed have been summarized by a well-known epicure and expert, who, while not exactly giving the history of coffee "from the cradle to the grave," does describe its progress from the time it is imported until it reaches the breakfast-table, and in a way so clear and forcible as to be of great value.

It is important that the wholesale dealer should exercise care and judgment in his selection, as there is almost as much difference in the flavor of coffee as there is of tea; this is especially true of Mocha, Java, Maracaibo, and other fancy coffees, of which frequently the brightest and handsomest-looking lots are greatly lacking in the flavor and aroma which constitute the chief value of coffee, and which can be ascertained only by testing carefully each invoice purchased.

Retail dealers should buy their coffee of a reliable house that has a reputation to sustain, and that cannot be induced to cut down prices below what they can afford to furnish an article that will do them credit; if roasted do not buy much at a time (unless in air-tight packages), a week or ten days' supply is enough, and if the purchaser is situated so he can buy it twice a week, so much the better; keep it in a dry place, and, if possible, in a tin can which shuts tightly—never in a pine box, or bin; for the smell of the wood is quickly absorbed by the coffee.

Consumers should adopt the above suggestions to retail dealers—buy of a reliable dealer who will not represent an inferior article as "Java." It is better to buy it already roasted if it can be had fresh, but otherwise great care must be exercised in roasting, to do it uniformly and thoroughly. If bought roasted, buy in small quantities and buy often, keep it dry and in a tightly closed tin can, or in a glass or earthen jar. Have a small "hand coffee-mill" and grind only when ready to use it, and if during rainy weather the kernels become damp and tough, warm them up in a clean pot or skillet, but do not scorch them; this drives off the moisture, restores the flavor, and makes it grind better. The grinding is an important feature; if ground too coarse, much of the strength and aroma of the coffee is lost; if too fine, it is hard to make it clear, but of the two the latter is least objectionable; both the strength and flavor of the coffee, however, is a necessity, and if a little of the finely powdered coffee flows out with the liquid extract, it is clean and will hurt nobody. It is better, however, to grind it *just right*, which is so that the largest pieces will be no larger than pinheads. As to making coffee, there are many recipes and formulas, including a large number of new and so-called improved coffee-pots, but we have never seen any of the new methods which in the long run gave as satisfactory results as the following old-fashioned recipe:

Grind moderately fine a large cup of coffee; break into it one egg with shell; mix well, adding just enough cold water to thoroughly wet the grounds; upon this pour one pint of boiling water; let it boil slowly for ten to fifteen minutes, and then stand three minutes to settle; pour through a fine wire sieve into coffee-pot, which should be first rinsed with hot water; this will make enough for four persons. *Coffee should be served as soon as made.* At table first rinse the cup with hot water, put in the sugar, then fill half full of hot milk, add your coffee, and you have a delicious beverage that will be a revelation to many poor mortals who have an indistinct remembrance of, and an intense longing for, *an ideal cup of coffee*. If you have cream, so much the better, and in that case boiling water can be added either in the pot or cup to make up for the space occupied by the milk as above; or condensed milk will be found a good substitute for cream.

We have thus briefly indicated the points necessary to be observed in obtaining uniformly good coffee, whether made from Rio or Java, and other mild flavored coffees. In the Eastern and Middle States, Mocha, Java, Maracaibo, Ceylon, etc., are most highly esteemed and generally used; but at the West and in the South, more Rio coffee is consumed. The coffee *par excellence*, however, is a mixture of Mocha and Java roasted together and thus thoroughly blended. Mocha alone is too rough and acrid to suit many palates, but blended as above it is certainly delicious. In all varieties, however, there is a considerable range as to quality and flavor, and, as before stated, the best guide for the consumer is to buy of a reliable dealer and throw upon his shoulders the responsibility of furnishing a satisfactory article.

Hotels and restaurants desiring good coffee make it in *small quantities* and *frequently*. It is impossible for coffee to be good when it is kept simmering for hours after it is made.

OUR ELEVATED RAILROADS.

HOW TO AVOID ACCIDENTS AT CROSSINGS.

THE proposed junction of the New York and the Metropolitan Elevated Railways at Wall, Pearl and Beaver Streets, and the joint use of a common track by both roads, has provoked almost universal protest from property-owners in that vicinity, as well as from the traveling public. The section which it is proposed to use jointly is that from Wall to Division Street. At the point in question Wall and Pearl Streets intersect each other nearly at right angles. The southwestern angle made by Wall and Pearl is bisected by Beaver Street, running from southwest to northeast, into two acute angles of about forty degrees and fifty degrees respectively. The lower one of these angles is occupied by a six-story building, and the upper by one of about the same height. Trains of the Metropolitan Railway going north will cross the track of the south-going trains of the New York Elevated, and enter upon the track of the same road going northward. Thus there will be constant peril of collisions. Both roads will be compelled to run trains often enough to accommodate passengers, and the most dangerous kind of confusion will inevitably arise. The familiar street-car blockade would fall into utter insignificance beside an interruption to the operation of rapid transit on the two roads if a Metropolitan north-bound train should break down from any cause when it was crossing from Beaver Street to the main "up" track on Pearl. All the tracks "up" and "down" would then be effectually blocked at this point.

Now this peril can be easily averted by the simple expedient of changing the routes of the respective roads so as to admit of elevating and depressing their tracks, as shown in our illustration on page 48. This will cost money, but these companies are coining wealth at the hands of the public, and there is no reason at all why they should be permitted to hazard life and limb by refusing to adopt such precautions as may be necessary for the protection of their patrons. By purchasing and demolishing buildings and securing the right of way so as to avoid the present junction and joint occupancy of one track at so unfavorable a point, all of the difficulties which surround the arrangement now proposed would be obviated.

Even in a pecuniary point of view, the course here suggested would, as we believe, result advantageously to the companies. Trains could be run more rapidly and frequently, and in the greater facilities of serving the public each road would have ample compensation for the increased cost of providing such facilities. The cost of one serious accident, attended with loss of life, under the method objected to, would probably be greater than the expense of making the changes necessary to secure safety. The plan suggested by our illustration would involve an elevation and depression equal only to the height of a car, and could easily be carried out by competent engineering skill.

Neither in this or in any other case should these roads be permitted to cross at a level, and it is to be hoped that the Legislature will enact such laws as will prohibit, absolutely, all attempts in that direction.

FUN.

HOP merchants—Dancing-masters.

WHO is going to pay us for the forty days that are Lent every Spring?

PICTURE frames are not always hung on account of their gilt any more than men.

A PATENT-MEDICINE advertiser says that fat is not conducive to long life. That is true. A fat hog rarely lives through the Winter.

GAVROCHE meets a negro pulling away with enjoyment at an excellent pipe. "What a quantity that fellow must have smoked," he exclaimed, "to have colored (*colorié*) his face that way."

PAPA had been ill some time, and his little girl wanted to know: "How is it that you are not dead? Here they have buried Cousin John, and you were sick a long time before he was."

STEALING bodies, argues a medical student, is not a grave offense; it's just stiffication.—[*Keokuk Constitution.* There's tomb much levity on this subject.—[*St. Albans Adv.* We don't like the first man's stone, but mon-u-ment right, aye, and it's not your vault, either.—[*Boston Post.* Can't some wise headstone this down a little; it palls on us.—[*N. Y. Star.*

SCIENCE says now that kissing on the lips must be abolished in the interest of health. Most potent, grave and reverend seigniors, scholars and philosophers, there are moments you know nothing of, when a man don't care two cents for science, and when he is going to plant kisses where they belong, if the laws of health are ripped from Alpha to Berachoba.

AN Italian innkeeper confessed to a priest, who asked him if he never greased the teeth of his guests' horses to prevent their eating. He replied that he had never done so. The next time he confessed that he had committed the act several times. "Why," said the priest, "you told me the last time that you had never done it!" "Holy father," replied the innkeeper, "I did not know the trick then."

Advertisements for any of Frank Leslie's Publications will be received, at regular rates, by Col. W. B. Crooks, 1,309 Chestnut St., Philadelphia.

THE ONLY WAY.

THE only way to cure catarrh is by the use of a cleansing and healing lotion, applied to the inflamed and diseased membrane. Snuffs and fumigators, while affording temporary relief, irritate the affected parts and excite a more extended inflammation. Besides, no outward applications alone can cure catarrh. The disease originates in a vitiated state of the blood, and a thorough alterative course of treatment is necessary to remove it from the system. Dr. Sage's Catarrh Remedy has long been known as an efficient standard remedy for this disease, but, to insure a radical and permanent cure, it should be used in conjunction with Dr. Pierce's Golden Medical Discovery, the best vegetable alterative yet discovered. The Discovery cleanses the vitiated blood, while the Catarrh Remedy allays the inflammation and heals the diseased tissues.

THURBER'S RELIABLE CANNED GOODS.

GREAT progress has been made within a few years in the art of Preserving Fruits, Vegetables, Fish and Meats in tins, and in consequence the consumption has largely increased. As yet, however, canned goods are not generally thought to be "fresh," and some brands are not, perhaps, entitled to be so considered. Those packed by us, however, are Hermetically Sealed at the sources of supply, when they are in the best possible condition, by a process which preserves the much-to-be-desired fresh, natural flavors; and they are really in better condition, fresher, more palatable and wholesome than many so-called "fresh" articles which are exposed for sale during considerable periods of time in city markets. All goods bearing our name are guaranteed to be of superior quality, and dealers are authorized to refund the purchase price in any case where consumers have cause for dissatisfaction. It is, therefore, to the interest of both dealers and consumers to use THURBER'S BRANDS.

H. K. & F. B. THURBER & CO.,

Manufacturers of and Dealers in Food Products, New York.

THE ideal hotel must unite three things: A perfect table, luxurious room accommodations, and attentiveness to the wants of the guests. Such is par *excellence* the character of the celebrated New York hotel, the ST. NICHOLAS. An elevator makes all parts of the house easy of access, and the location is central and convenient.

TO MAKE a perfect cup of coffee, as described in our article this week, use the "Perfect" Coffee Steeper, manufactured by Woodward & Bush, 1⅛ Barclay Street, New York.

IN connection with the article on "Coffee and How to Prepare It," it will be of interest to our readers to learn that we shall at an early date lay before them illustrations and descriptions of the manufacture of Borden's Condensed Milk. As the use of Borden's Condensed Milk—the preserved, known throughout the world as the Gail Borden Eagle Brand, and the plain or unpreserved, served by the wagons of the New York Condensed Milk Company in this city, Brooklyn, Williamsburg, Jersey City and vicinity—is so universal, it seems unnecessary for us to call attention to one of its chief merits, namely, its great advantage over ordinary milk, or even cream, in the preparation of a cup of coffee. An article on the subject of coffee would be incomplete without calling attention to Borden's Condensed Milk as a necessary adjunct.

THE Quaker City Chromo Company, whose advertisement appears in this issue of our paper, is a well-known and reliable house, and their chromo, "Canaries and Jewels," cannot fail to please any who send for it.

Blair's Pills.—Great English Remedy for Gout and Rheumatism. All Druggists have them.

Stuttering cured by BATES'S APPLIANCES. Send for description to BATES & CO., Box 2,226, New York.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast-tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—See article in the *Civil Service Gazette.*

Sold only in soldered tins, labeled

JAMES EPPS & CO., Homœopathic Chemists, London, England.

Delicious. Economical.

EAST INDIAN

MANIOCA

Is healthful, easily digested, and unlike any other article of diet. Once used for **Puddings, Griddle Cakes, Jellies, Blanc Mange** or **Soup,** it will never be discontinued. Sold by first-class Grocers everywhere, and wholesale by

SMITH & VANDERBEEK,
45 & 47 Park Place, New York.

FOR TEN DOLLARS CASH

We will insert a seven-line advertisement one week in a list of 260 weekly newspapers, or four lines in a different list of 337 papers, or ten lines two weeks in a choice of either of four separate and distinct lists containing from 70 to 100 papers each, or four lines one week in all four of the small lists, or one line one week in all six lists combined, being more than 1,000 papers. We also have lists of papers by States throughout the United States and Canada. Send 10 cents for our 100-page pamphlet. Address GEORGE P. ROWELL & CO., Newspaper Advertising Bureau, No. 10 Spruce Street, New York.

THOSE INTERESTED IN DECORATIVE ART as applied to the embellishment of their *table damask, linens,* etc., with artistic monograms, initials, or lanciful figures of children, etc., sketched in *Indelible Ink,* may obtain specimens and illustrated circulars by addressing *F. A. WHITING, Dunellen, N. J.*

Consolation for the Nervous.

Vitalized Phosphates, a brain and nerve food, cures all derangements of the nerves, restores enfeebled digestion, gives vigor in place of weakness and inaptitude, re-invigorates the over-worked brain, and PREVENTS consumption. Physicians have prescribed 160,000 packages in all forms of debility and nervousness, thus restoring vitality to the system by food, not by medicine.

Or MRS. DR. S. B. COLLINS, LaPorte, Ind.

JOHN HOLLAND'S Patent Record GOLD PEN
Patented Oct. 2, 1872.

Is the highest achievement in the manufacture of Gold Pens and the result of experiments for more than twenty years. The "RECORD" Pen is produced by a skillful combination of the two precious and non-corrosive metals; *16 kr. Gold* and *Platinum*, while the ordinary gold pen contains an alloy of copper, reducing its fineness without yielding that elasticity, duality and steel like temper which the costly *Platinum* supplies. The "RECORD" Gold Pen *Points* are of the best *Iridium*, (Diamonds,) indestructible with fair treatment, and polished to glass like smoothness.

Steel pen writers have now every objection to gold fairly overcome, and every requirement in a Pen which will endure and not oxidize, squarely met. The "RECORD" Gold Pen is guaranteed to possess Durability, Permanency of Spring and Perfection of Point. Price, $2.50, sold by all Jewelers and Stationers in the United States. If not found order direct from *JOHN HOLLAND, Manufacturer, 19 W. 4th St., Cincinnati.*

CARDS, 10 Lily of the Valley, 10 Scroll, 10 Engraved, 10 Transparent, 1 Model Love Letter, 1 Card Case, name on all, 15c. WARD & CO., Northford, Conn.

NEW YORK CITY.—THE ELEVATED RAILWAY CROSSING AT PEARL, WALL, AND BEAVER STREETS—SUGGESTION FOR THE PREVENTION OF ACCIDENTS BY ELEVATING AND DEPRESSING THE TRACKS.—SEE PAGE 46.

INHALATION vs. DISEASE.

It is somewhat remarkable that nearly all the wonderful discoveries that have been made in the science of medicine have been by humble and at the time unknown men. The theory of cure by inhalation of diseases of the air-passages is quite ancient, but it remained for a minister in a small Western town to make practical this theory by the discovery of compounds most positively affecting the air passages of the head, throat and lungs, and the invention of methods for the successful application of them. It was the case in this invention as in many others, an accidental stumbling upon it by the discoverer while in search of some remedy which would repair the terrible ravages disease had made in his own system. And now leading physicians of all schools, after a thorough examination of this simple and wonderful method, acknowledge its great merit. Its powerful effect is best illustrated in a case of Catarrh—a disease universal and terrible—for which it is an almost certain cure.

A short description will be interesting. It is an ulceration of the head. Its indications are, hawking, spitting, *weak, inflamed eyes*, frequent soreness of the throat, dryness and heat of the nose, *matter* running from the head down the throat, often ringing or deafness in the ears, loss of smell, memory impaired, dullness and *dizziness* of the head, often in the first stages, but more commonly in its advanced stages, attended with pains in chest or left side, and under the shoulder-blades. Indigestion usually attends Catarrh; a hacking cough and colds are very common. Some have all these symptoms, others only a part. Very little pain attends Catarrh until the liver and the lungs are attacked in consequence of the stream of pollution running from the head into the stomach.

All such persons catch cold easily, and have frequently a running at the nostrils; the breath sometimes reveals to all around the corruption within, while the patient has frequently lost all sense of smell. The disease advances cautiously, until pain in the chest, lungs or bowels startles him; he hacks and coughs, has dyspepsia, liver complaint, and is urged by his doctor to take this or that; perhaps even cod-liver oil is prescribed. Perfectly ridiculous! The foul ulcers in the head cannot be reached by pouring such stuff into the poor, jaded stomach.

Thousands are dying in early life with consumption who can look back a few years—perhaps only months—when it was *only Catarrh*. Neglected when a cure is possible, very soon it will transform the features of health and youth into the dark, pallid appearance, while the hacking cough, the excess of blood gushing from the lungs, or night-sweats, all significantly proclaim it is *too late; and thus a neglected Catarrh ends* in the consumptive's grave.

NASAL CATARRH.—Sometimes the disease only affects the membranes lining the nasal passages, and they may be easily reached and cured by simple means. But when it is located in the *frontal sinus*, or in the *posterior nares*, or if it has entered the *Eustachian tubes*, and is injuring the ears, then nothing but finely-medicated vapor can effectually reach it and destroy it. And certainly after it has affected the throat and bronchial tubes, as all well-read physicians will readily attest, nothing can be relied on to effect a permanent cure but the inhalation of properly medicated vapor. In the same manner that we breathe common air, we can inhale and breathe a medicated air; and it is perfectly simple, any one can see, thus to treat disease of the *throat, bronchial pipes and lungs*. How much better this method by which remedies are conveyed directly to the seat of the disease, than to resort to the uncertain and too frequent *mischievous* action of medicines into the stomach!

PUBLIC SPEAKERS, after leaving the platform, overheated with the strain of their mental and physical effort, neglect sufficient precaution, and a cold is the result. This neglected opens the way to Catarrh, and to a possible loss of voice. I have suffered so keenly myself that I cannot urge upon public speakers too strongly the necessity of removing the disease when a cure is possible.

AMONG WOMEN catarrh is very common. The decrees of fashion compel women to go from the dry atmosphere of furnace-heated houses, into the open air with the head but poorly protected. Many suffer keenly from bronchitis and difficulties of the throat and lungs. I have received many hundreds of letters from grateful women in all parts of the country.

TEACHERS IN OUR SCHOOLS are greatly subject to this fearful malady. Confinement in close, ill-ventilated school-rooms; the over-heated atmosphere, charged with the steaming poison exuding from the bodies of the not always over-clean children, breed this disease with fearful rapidity.

Many of our leading divines, lawyers and prominent business men have tried this remedy with wonderful success. We know Mr. Childs as an honest Christian man.—*Cincinnati Daily Gazette.*

MY EXPERIENCE.—*Eighteen years* of terrible headache, disgusting nasal discharges, dryness of the throat, acute bronchitis, coughing, soreness of the lungs, raising bloody mucus, and even night-sweats, incapacitating me for my professional duties and bringing me to the verge of the grave—ALL caused by, and the results of, NASAL CATARRH. After spending hundreds of dollars and obtaining no relief, I compounded my CATARRH SPECIFIC AND COLD-AIR INHALING BALM, and wrought upon myself a *wonderful cure*. Now I can speak for hours with no difficulty, and can breathe freely in any atmosphere. At the calls of numerous friends, I have given my cure to the public, and have now thousands of patients in all parts of the country. My cure is *certain, thorough, and perfect*, and is indorsed by EVERY PHYSICIAN who has examined it.

T. P. CHILDS.

From the Chancellor of the University of Nebraska.

T. P. CHILDS—*Dear Sir:* I think you have the true theory and practice for the cure of Nasal Catarrh, and also for the treatment of the respiratory organs. My throat is now so well restored that I lecture daily without difficulty, and I find no difficulty whatever in preaching. You are at full liberty to use my name for the benefit of others. Yours very truly,

E. B. FAIRFIELD, D. D., LL.D., Lincoln, Neb.

JUDGE J. COLLETT, of Lima, O., writes: "You will remember how terribly Catarrh had taken hold upon me, making me offensive to myself and to all around, and withal suffering day and night. Now I am cured; head free, air-passages all open; and breathing natural."

MRS. J. A. HUMPHREY, Franklin, Pa., writes: "Your specific has done what all my doctors could not do—it has cured me."

SAMUEL T. G. BURROW, Worcester, Mass., says: "Your method is perfect; thousands will bless your name; it has effectually cured me."

Many surprising incidents of peculiarly distressing cases, cured, will be sent on application.

Do not trifle with some cheap thing, which at best can afford but temporary relief, while the roots of the vile disease are left to strike deeper and deeper. Be in earnest and thorough, or do nothing! Circulars, price-lists, and all necessary information can be had by addressing (with return stamp),

REV. T. P. CHILDS, TROY, OHIO.

The April Number of Frank Leslie's Sunday Magazine fully maintains its well-deserved reputation as one of the best, in every respect, published, and worthy of a place in every American household. As this may be regarded as the Easter number, the leader has deeply interesting Easter story, entitled "Winona," by Mary G. Hollister, Missionary at Aintab, Turkey. This is followed by a very instructive paper on "Some Easter Customs," by Mr. Godfrey A. Hudson. "David Fleming's Forgiveness" continues to grow in interest. Thomas Middleton has an admirable story, "Dr. Ellerton's Own Case." We have not space, however, to enumerate even the most attractive features of the contents of this richly freighted publication, filling 128 quarto pages, and embracing every style of literature; the reader cannot fail to be interested, entertained and edified. The illustrations are profuse, and of great artistic merit, adding not a little to the interest and popularity of the SUNDAY MAGAZINE, which is certainly a marvel of cheapness, the subscription being only $3 per annum, postpaid; a single copy 25 cents. Address, Frank Leslie's Publishing House, 53, 55 and 57 Park Place, New York.

Important to Mothers.

MRS. WINSLOW'S SOOTHING SYRUP is the only thing that mothers can rely upon for their children. It corrects acidity of the stomach, cures wind colic, regulates the bowels and gives rest, health and comfort to mother and child. During the process of teething its value is incalculable. It softens the gums, reduces inflammation and allays all pain, thereby giving rest to the child and comfort to the mother.

Three Strokes;

OR,

THE SECRET OF COZY DELL,

BY

Prof. Henry C. De Mille,

Will commence in No. 729 of

FRANK LESLIE'S CHIMNEY CORNER.

Frank Leslie's Publishing House,

53, 55 & 57 Park Place, New York.

All who would have feet free from corns, dress the feet with a view to health, good taste and comfort. Shoes made on our lasts, modeled from NATURE—an essentially different style—and latest improvements. They press the foot evenly, giving elasticity in walking, and by the ingenuity of their construction, they appear smaller than they really are, giving an elegant appearance even to the largest and clumsiest feet.

throughout his diocese was almost unparalleled. Under his fostering care the Romish Church, of which he was so distinguished an ornament, flourished and grew apace; and the Cathedral of Cincinnati, as well as the numerous other ecclesiastical edifices scattered throughout the city, are standing monuments at once of his exquisite taste and of his unrivaled zeal. It was never suspected that Dr. Purcell's immense energy was, after all, only weakness in disguise, and that the apparently magnificent results of his labors were only monuments of folly. Such, however, it has now been discovered is the painful truth.

The misfortunes which have overtaken the venerable prelate must be regarded, in whatever light considered, as a great calamity. There is, indeed, but one redeeming fact in the situation. The personal honesty and integrity of the Archbishop remain untarnished. No one has dared to question the purity of his motives or the nobility of his aim. But our respect and sympathy for the unfortunate must not blind us to the disastrous results which have followed from his conduct, or make us indifferent to the sorrows which he has brought upon others. And if we may not utter words of condemnation regarding the man who is already prostrate and in the dust, we may, at least, point out some of the lessons which this catastrophe is so well fitted to teach.

There are many lessons which may be drawn from this unfortunate affair. We shall confine our attention to only a few. There is a lesson for the clergy. Clergymen should not become bankers or speculators. A bankrupt clergyman, no matter how talented he may be, no matter how pure and noble his character, is no longer qualified for the sacred office. His example is worthless; his power for good—his usefulness is gone. The loftier the position, the greater the fall. The fate which has befallen Archbishop Purcell should be a lesson to the clergy of all denominations, but more especially to the younger members of that profession, to keep their hands clear of purely mundane matters, to give themselves wholly to those things which properly pertain to their sacred office, and to make a more liberal use of the laity in the management of the secular affairs of the Church.

There is a lesson for the people. They ought not to intrust their savings to the care of their ecclesiastical superiors. When they put their money in an ordinary savings bank their interests are protected by law. The directors of such institutions are responsible for the moneys they receive in trust; they are limited as to the amount they can receive from any one depositor; and they are directed as to the manner in which their funds should be invested. In giving their money to their priests or their ministers—in other words in putting their money into these ecclesiastical savings banks—they are without any of the safeguards of the law; they have no guarantee, no assurance of safety but the word of a man in whom they happen to have confidence, mainly because of the sacred character of his office. In the present instance, the many hundreds of simple-minded, honest people who are suffering because of this, cannot by any possibility recover their deposits should the charity of the Catholic community fail to respond to the appeal about to be made, and success in one case, even if achieved, can afford no guarantee of success in any other like extremity.

There is a lesson for the Christian public. This disaster, however much it may be due to carelessness or mismanagement generally, is certainly the result of extravagance. Cincinnati has been proud of its religious temples. Where to-day is the glory of the Cathedral, of St. Xavier's, of St. Patrick's, and of the Holy Angels? Costly church edifices have for some years past been too much the rage; and what has been the result? Many of the most spacious as well as most beautiful of our ecclesiastical structures are really bankrupt institutions. Church debt is one of the great scandals of this age and of this country. A more wholesome faith, a more thorough and widely-spread piety might be found compatible with greater simplicity of worship, and with less pretentious ecclesiastical buildings. Much as we may admire the taste and zeal of Archbishop Purcell, we must all lament that this taste and this zeal should have brought about a disaster which will do incalculable damage to the cause of true religion, and which it will require the labor and sacrifice of many years to repair.

IN THE OLD WORLD.

THE nuptials of Prince Arthur, third son of the Queen of England and Empress of India, and Princess Louise Margaret, third daughter of Prince Frederic Karl, the "Red Prince," nephew of the Emperor of Germany, as elsewhere stated, were celebrated with royal pomp in St. George's Chapel, at Windsor, on the 13th of March. Exceptional "Queen's weather" heightened the extraordinary splendors of the occasion, not the least marvelous feature of which—thanks to the Atlantic cable and the enterprise of a New York journal—was the publication of its minutest details on the very same day, three thousand miles off. Without reproducing these details here, it may be remarked that, like the weddings of three other children of Queen Victoria—the Crown Princess of Germany, the Prince of Wales and Princess Louise—the wedding of Prince Arthur took place in Lent. Prince Leopold, indeed, with his scrupulous regard for ecclesiastical law, earnestly protested against this violation of it. But his royal mother, as head of the Anglican Church, and scarcely less willful than its founder, King Henry VIII., overruled all objections. Prince Leopold was not present at the brilliant ceremony, his absence being officially attributed to his having fallen ill at Darmstadt. Moreover, a disappointed love-match may have been only partially lost sight of amidst the blaze of this splendid conventional wedding, for the Crown Princess, who is credited with having brought about the latter, is supposed to have done so because she suspected the Crown Prince's heir, Prince William, of cherishing a more than second-cousinly affection for the young Princess Louise Margaret, and preferred to be her sister-in-law rather than her mother-in-law. The course of true love is even less apt to run smooth in a royal family than in one of humbler rank. England, absorbed in listening to merry marriage-bells, has almost forgotten for the moment the distresses caused by strikes and mercantile failures at home, and the wars it has on hand in Afghanistan and in Zululand.

In France, the existence of a strong conservative element, for which the thoughtful leaders of the Republican party and the French people themselves have hitherto received too little credit abroad, has again been demonstrated by a decisive ministerial victory. The discussion of the Electoral Commission's report in favor of impeaching the De Broglie and Rochebouet Cabinets resulted in the rejection of the proposed impeachment by 317 votes against 159 in the Chamber of Deputies. This victory of the Government in its struggle with the fanatical extremists among the Republicans, attests the moderation of strength and responsibility on its part. The good of the country is preferred by it and by the majority of the Deputies to any mere personal vengeance on the exposed and defeated foes of the Republic. At the same time the reactionary and treasonable plots of the men of May 16th and their immediate successors are not left uncondemned and unpunished. After the vote had been taken on the impeachment question M. Rameau proposed an order of the day that "the De Broglie and Rochebouet Cabinets by their culpable schemes betrayed the Government they should have served, and the Chamber accordingly delivers them over to the judgment of the nation, and orders that the foregoing resolution be placarded in every commune in France." This order was passed, 240 yeas to 154 nays.

The conduct of Prince von Bismarck and many other signs indicate the probable speedy dissolution of the German Reichstag, so soon as the Budget shall have been voted. Bismarck insists upon having his protectionist programme carried out, and the chief object of the German Tariff Commission in recommending, at his instance, increased duties on meats is manifestly to restrict American imports. It is not equally manifest that, should such duties be imposed, any ensuing loss of ours would be Germany's gain.

The rejection by the Reichstag of a motion in favor of a European Congress to arrange a general disarmament is a deplorable proof that the millennium is still far distant. The armies of Great Britain, France, Germany, Austria and Hungary, and Italy, are approximately estimated, on a peace-footing, at 2,265,000 men, and a military expenditure of $480,000,000. On a war-footing they number 6,470,000 men, with a potentially indefinite increase in the expenditure of both men and money. Disarmament might resolve these armies of idle consumers in peace, and terrible destroyers of life and property in war, into a vast industrial army of producers. This is not at all likely to be effected in the actual condition of Europe, but it is something to have had the idea brought to the attention of a Parliament, and a German Parliament at that.

If a tithe of the money squandered on the splendidly-equipped armies of the Austro-Hungarian Empire had been devoted to the thorough protection, by great engineering works, of the valleys of the Upper Danube and the River Theiss against the perils of inundation, so terrible a disaster as has just befallen the City of Szegedin and the district of a hundred square miles around it, rendering 70,000 people homeless, could not have happened.

THERE are said to be anywhere from 5,000 to 10,000 candidates for the positions within the gift of the new Senate and House of Representatives. There are nearly 120 officers of the Senate of all grades, and for these alone the applicants number 2,000. The Republican Senators, for the first time in many years, will be simple spectators of the scramble, and may find a compensation for their loss of power in the new and strange experience.

THERE is a marked decline in the sale of the four per cent. bonds. One reason for this is, no doubt, found in the revival of business and the growing demand for money in other channels. Accounts from all parts of the country agree that many branches of industry and trade are showing a quickened life, and unless Congress shall unsettle public confidence by initiating a revolutionary policy, or attacking the financial fabric now slowly acquiring permanency and strength, there is every reason to anticipate a year of solid prosperity for all our leading business interests.

A BILL has been introduced into the Legislature at Albany to compel the elevated railroad companies in New York to run five cents trains between the hours of five and nine in the morning and four to eight in the evening. The Bill also prohibits storing engines or cars for the night or washing or repairing them in or over any street or avenue. Another Bill provides for the proper lighting of the structures of elevated roads. Both these measures should become laws. The companies can well afford to carry passengers at five cents each, and unless they shall do so, the benefits of rapid transit must be largely lost to the working classes—twenty cents a day for passage to and fro being more than the workingman, who is earning a dollar or two dollars per diem, can afford to pay.

IT is estimated that 50,000 applications for pensions will be received under the Arrears of Pensions Act, of which about 12,000 will be by widows who are entitled to the benefit of the law, and that of this number 35,000 will be allowed. After the 20th of this month it is expected to adjudicate and issue certificates at the rate of about 10,000 monthly. The first notification a pensioner will have of the allowance of his claim will be the receipt of the certificate which entitles him to the money, and which he can then get if it is in the Treasury and not otherwise appropriated. Appropriations of this Congress were so heavy, however, that the prompt payment of pensions is doubtful. The average amount received by each pensioner under this Act is about $900. If the Commissioner's estimate is correct, of 35,000 valid claims, the amount called for will be $31,500,000 for pensioners already on the rolls. The appropriation made by Congress was $27,000,000.

THE interposition of Executive clemency in behalf of counterfeiters and other criminals has not unfrequently resulted most disadvantageously to the public interests. The *Departmental Review*, published at Washington, mentions the case of one expert counterfeiter whose pardon cost a quarter of a million of dollars. Within two years after being pardoned by the Governor of Ohio he engraved and uttered counterfeit bills on six banks to the amount of $150,000, involving a loss of at least $100,000 to those upon whom they were passed. In prosecuting the persons who passed these counterfeit notes the Government has expended $100,000, and it will cost, at least, an additional $50,000 to maintain these convicts in their places of confinement. One would suppose that the disposition to pardon counterfeiters and persons guilty of fraud upon the public revenue, which has been a somewhat conspicuous characteristic of the present Administration, would be curbed by the presentation of facts like these, supplied by the Chief of the Secret Service Division.

IN a recent address before a political club in this city, Mr. David Dudley Field stated that the salaries paid annually in the various branches of the municipal government aggregate $10,500,000, costing the people at the rate of $10.50 per capita for every man, woman and child in the city. And this is exclusive of the large fees paid to the Sheriff, Register, County Clerk and the City Marshals. Nor does it embrace many other officers holding State appointments, nor the quite large array of Federal officers. Mr. Field sharply criticised the extravagant expenditures in many departments of the city administration, referring especially to the excessive cost of our police system. The London police are paid $6 a week. Paris has 2,000,000 of people, and a police force of 7,756 "agents of police," inclusive of 6,800 common policemen. The whole force costs but 12,168,850 francs a year, exclusive of equipment and an indemnity of 185 francs to each policeman for lodging. This is equivalent to $2,433,000, while our force of 2,500 policemen in the year 1878 cost $3,315,000. It is plain that we are paying very dearly for our municipal whistle, and it would seem to be the imperative duty of those who control the public purse to promptly reduce the salaries and compensation of officials all along the line.

NEWS OF THE WEEK.

Domestic.

BISHOP GILMOUR (R. C.) of Cleveland, Ohio, has issued a pastoral letter condemning secret societies.

ANDREW JOHNSON, son of the late ex-President, died at his home, at Union Depot, Tenn., March 11th.

SECRETARY SHERMAN has ordered the use of the polariscope in determining the grade of Cuban centrifugal sugar.

JUDGE BARRETT has rendered a decision sustaining the taxation of the New York Elevated Railroad as personal property.

A BILL to provide for a convention to revise the State Constitution has been introduced in the Massachusetts Legislature.

DURING the year ending on March 1st the pork-packing operations of Chicago showed a total of 4,911,913 hogs packed and cured.

FORMAL charges have been prepared against the Rev. Mr. Talmage before the Brooklyn Presbytery, and on Mr. Talmage's demand the trial will be public.

THIRTEEN vessels of the Gloucester (Mass.) fishing fleet are still missing. The crews numbered 156 men. The fleet represented a money value of $75,000.

SECRETARY SHERMAN writes that there need be no apprehension of business being disturbed by the withdrawal from the national bank depositories of money to meet the calls for bonds maturing in May and April.

A BILL giving women the right of suffrage in school district meetings, on liquor questions, and in elections where they are taxpayers, has been adversely reported in the Connecticut Legislature.

COLONEL ROBERT A. ALSTON, a member of the Georgia Legislature, was shot and killed by Captain Edward Cox in the State Treasurer's office at Atlanta, March 11th.

DR. JOHN M. WOODWORTH, Supervising Surgeon-General of the Marine Hospital Service of the United States, died at Washington, March 14th, aged 42 years.

A BILL similar in its provisions to the Maine Tramp Law has passed in the Delaware Senate, and the New York Assembly has also passed an Act for the punishment of all vagrants.

CONSIDERABLE excitement prevails among politicians at the discovery that under an old law there can be no changes of the minor employés of the United States Senate without the approval of the Vice-President.

THE New Jersey Legislature adjourned March 14th. The session was the shortest in many years. Some 200 Bills were passed, including several for a general reduction of salaries and fees of State and county officials.

MRS. RICHARD B. CONNOLLY, the wife of ex-Comptroller Connolly, died in Switzerland on March 13th. She will be remembered for her active and liberal sympathy with many religious and charitable societies in this city.

RECENT arrivals of immigrants at Castle Garden show a perceptible increase as compared with the arrivals reported during the corresponding period last year. The number landed last week has been 1,101 against 810 for same week in last March.

BY a vote of 12 to 17 the Senate of New York has refused to remove Superintendent Smyth of the Insurance Department, after considering the charges presented by Governor Robinson. A resolution asking the superintendent to resign has been rejected by the Assembly.

THE New Jersey Legislature has rejected the Bill to abolish convict labor in the State Prison, and passed another authorizing a commission of seven persons to inquire into the whole subject of the competition of such labor with free labor, and report at the next legislative session. The New York State Senate has directed Superintendent Pillsbury to inquire into the same subject of Prison labor.

THE Annual Supply Bill reported to the New York Legislature, appropriates a total of $820,629, of which $170,000 is for the Commissioners of Emigration. Other sums are as follows: Fisheries, $15,000; State Survey, $35,000; Elmira Reformatory, $30,000; Repairs of Armories, $19,500; Idiot Asylum, $12,600; Willard Asylum, $100,000; Hudson River Asylum, $50,000; Buffalo Asylum, $25,000; Western House of Refuge, $40,000; Randall's Island, $10,035; Catholic Protectory, $50,000; Seamen's Retreat, $30,000.

Foreign.

ALL the Russian troops in Roumania have been ordered home.

PRESIDENT GRÉVY has pardoned one hundred and fifty Communists.

THE formation of a Gambetta Ministry in France is thought to be inevitable.

AN English pilot-boat was run down, March 14th, by the mail-steamer *Severn*, and fifteen lives were lost.

CHILI and Bolivia are at war, and the forts of the latter are blockaded. Peru has protested against the course of the Chilian Government.

THE grand prize of the French Academy for poetry has been adjudged to the Communist refugee, M. Renard, now a professor in Louisiana.

GENERAL BERTHAUT, who was Minister of War under the Duke De Broglie, has resigned the command of the Eighteenth Army Corps of France.

A NEW Egyptian Ministry has been formed with Mohammed Tewfik as President of the Council. The representatives of France and England remain in the Cabinet.

SEVERAL cotton mills in the department of the Nord, France, have stopped on account of depression in trade. The most important of the suspended mills is at Lille, containing 7,000 spindles.

THE proposed dissolution of the German Reichstag is likely to be deferred until Autumn. Prince Bismarck has declared his willingness to give Alsace and Lorraine a separate Cabinet, and asserted that Germany cannot be the first to begin partial disarmament.

LORD DUFFERIN, the British Ambassador at St. Petersburg, has been instructed to lay stress upon the necessity of strictly upholding all the provisions of the treaty of Berlin and declare decisively that the San Stefano provisions must not be revived under any pretext whatever.

JAMES ORTON WOODRUFF.

AMONG the projectors of remarkable enterprises who in these modern times have achieved distinction, Mr. James Orton Woodruff is entitled to a conspicuous place. Mr. Woodruff was born in Auburn, this State, in the year 1840, his father being Harmon Woodruff, one of the old and respected merchants of that city, who retired some ten years ago from an active business life of more than fifty years, and is still full of vigor, though upwards of eighty years of age. Mr. James O. Woodruff, owing to physical prostration which followed active military service during the War of the Rebellion, was compelled for a time to seek recuperation in a Southern climate. While in Florida for that purpose the idea of a floating college first impressed itself upon his mind, and to such a degree that from that time until the present he has persistently devoted himself to the attainment of that one object. At length he has the satisfaction of seeing his anticipations realized and his labors about to be rewarded by the embarkation of the "Woodruff Scientific Expedition around the World," aboard the magnificent steamship *General Worden*, now lying at the foot of Second Street, Hoboken.

Mr. Woodruff has been for several years one of the most prominent and public-spirited citizens of Indianapolis, Ind. The present system of waterworks in that city was introduced and perfected by him. The Woodruff Place in that city, generally conceded to be one of the most beautiful parks for residences in this country, was designed and laid out by him. Mr. Woodruff, although still young, is possessed of a large and varied experience, and chief among his characteristics is that of indomitable perseverance. The success of the proposed expedition—an expedition, however novel, based upon sound and correct principles, considering the object to be attained—cannot but prove a lasting monument to his name.

JAMES ORTON WOODRUFF, PROJECTOR OF THE "WOODRUFF SCIENTIFIC EXPEDITION AROUND THE WORLD."

RESCUE OF ITALIAN SLAVES FROM A PADRONE.

IN the early part of January the Italian Consul in New York City received a communication which purported to be written by four Italian boys, complaining that they were held in bondage in Syracuse by a notorious padrone, named Giovanni Romagnano. He sent the letter to the Society for the Prevention of Cruelty to Children, and Superintendent Jenkins wrote to Chief-of-Police Davis, in Syracuse, asking him to arrest Romagnano, and to detain him in custody until an officer of the Society should arrive. The birds had flown, however, and Superintendent Davis telegraphed back: "The party has left here and gone to Utica." On the receipt of this dispatch Superintendent Jenkins wrote to Chief-of-Police Dwyer, at Utica, who arrested Romagnano, and the boys found with him were also taken into custody. Superintendent Jenkins, with Mr. Chiardi, of the Society, went to Utica and had an interview with the boys at Police Headquarters, when, to the surprise of everybody present, the latter denied all knowledge of the letter addressed to the Italian Consul; said that the charges contained in it were untrue, and, in fact, that the whole proceeding was an absurdity as far as the arrest of the padrone and themselves was concerned, because he had always treated them well. Officer Chiardi assured the boys, who were probably terrified by the near presence of their task-master, that he was their friend, and that if they told the truth they need not fear the consequences, as they would be fully protected. The little fellows gained courage, and, after having been assured that they would never get back again into the hands of Romagnano, admitted the letter to be their joint production. Romagnano was searched, and inside the lining of his coat was found a package containing fifty-four $20 gold pieces and one $10 gold piece, each coin being carefully wrapped between two papers. Besides this money, containing $20 in Romagnano had a pocketbook greenbacks, and a purse with $9.72 in small change.

Romagnano was committed to jail, and the boys were given into the custody of the authorities to be held as witnesses against him. When the case was called, on February 25th last, N. E. Kernan, of Utica, appeared for the prosecution. The testimony of the boys, who all told the same story, was conclusive against the defendant, and the court having found him guilty, only fined him $50. The punishment, according to the statute, is a fine not exceeding $250 and from one month to twelve months' imprisonment.

The Recorder ordered that the boys should be given $50 each of the money found with Romagnano, and the balance to be returned to the latter. Superintendent Jenkins and Officer Chiardi brought the boys to New York, whence they will be sent back to their native country. Their names are: Nicola Vita, aged 16; Giovanni Miccucci, aged 14; Vincenzo Mazza, aged 13, and Michael Angelo Fortunato, aged 12. Romagnano's late slaves were born in the province of Basilicata, Southern Italy. Giovanni Romagnano is well known in his calling, and is a companion of the noted padrones Antonio Bigia and Raisele di Grazia. Romagnano is the owner of large property in Italy, which he purchased with the money he acquired in his degrading calling. When Romagnano was arrested a postal card negotiating for the sale of two more children was found in his possession.

The system of purchasing and employing Italian youths by padrones in this country has grown to serious proportions, and it is well that so influential an organization as the Society for the Prevention of Cruelty to Children has addressed itself to the work of breaking up the abuse. In this task, it should have the support of the authorities and of all citizens who abhor and desire to exterminate every form of human slavery and injustice.

RECEPTION OF BAYARD TAYLOR'S REMAINS.

THE Hamburg steamer *Gellert*, with the remains of Hon. Bayard Taylor, United States Minister to Germany, on board, passing slowly up the river with flags at half-mast, reached her dock at Hoboken a few moments before five o'clock on Thursday afternoon, March 13th. As soon as the steamer had been spoken at Sandy Hook the cutter proceeded down the bay to meet her. On board were Collector E. A. Merritt, Major John J. Diehl, E. C. Stedman, the poet; C. B. Sanborn, brother-in-law of Bayard Taylor; S. Bancroft, Jr., of Wilmington, Delaware; W. H. Stiner, of the Goethe Club; General C. K. Graham, Colonel J. H. Storey, and members of the Goethe Club and others.

At Quarantine the remains were taken from below and placed upon the steamer's deck. With the coffin had been placed the floral gifts of the late Mr. Taylor's friends abroad. The flowers had faded, but the leaves were bright and fresh. The coffin was carefully lifted out of the case inclosing it, and placed on a table covered with black cloth, under the direction of Captain Kuhewine of the *Gellert*. The coffin consisted of a hermetically sealed case inclosed in an oaken box covered with black broadcloth, adorned with wide silken braid, arrayed in knots, and puffs of crape at the corners, and heavy silver handles. An American flag was laid upon the coffin in festoons. A wreath given by the Emperor William was placed at the head of the casket, a laurel wreath from Auerbach at the foot, and the crosses and wreaths from the several legations on the top. Attached to one wreath was a red-and-white streamer, with the inscription in gold letters, "Republica Peruana"; another streamer, the gift of the English Legation, had the letters "B. T." woven in colors. The floral tributes of the other legations were decorated simply with white satin. On the bier by the side of the coffin were also placed six German evergreens in pots brought from Berlin. They were about two feet high and are to be planted about the grave at Longwood Cemetery.

As the *Gellert* passed the Battery a salute of 100 guns was fired, and many vessels in the harbor and river ran their flags to the half-mast. The remains were promptly removed from the steamship, fourteen sailors carrying the casket from the deck of the *Gellert* to the revenue-cutter *Chandler*, by which it was transferred to the city.

A thousand persons gathered in the neighborhood of the Vesey Street pier before the remains were taken off the cutter. Twelve men of Koltes Post carried the coffin along the pier to West Street, where an improvised catafalque was waiting to carry the remains to the City Hall. In the centre rested the coffin, around which was entwined the American flag. A few flowers lay on top. Over the coffin was a canopy of pyramidal shape; from each corner and the apex waved a black and white plume. The body of the wagon, the platform and the canopy were covered with heavy black cloth, relieved by a silver bullion border. The catafalque was drawn by six white horses with black trappings.

The procession was formed in West Street, Captain McCullagh and his men leading. Then came a brass band of twenty pieces, and Koltes Post No. 32; the catafalque followed, and last were the singing societies with an additional band. Twelve men from Koltes Post and the deputation of the Delta Kappa Epsilon fraternity formed a body-guard. Through West Street to Barclay Street the procession moved slowly, and then along Broadway to the City Hall. The bands played dirges during the march. All along West and Barclay Streets and Broadway, crowds of persons gathered to watch the procession. On the steps of the City Hall were the members of the Board of Aldermen, Mayor Cooper, Algernon S. Sullivan, the orator of the day, and others. As the catafalque halted in front of the building the German singing societies sang the "Am Sergeines Dichters." At the conclusion of the singing, Algernon S. Sullivan delivered his address.

At the close of Mr. Sullivan's oration the sarcophagus was borne by members of the guard of honor up the broad staircase and the winding stairs within to the Governor's Room, where it was deposited on the catafalque. It was then announced that the coffin would not be opened to give an opportunity for viewing the remains. The room was soon cleared of the crowd and the remains were left in charge of a guard of twenty-four members of Koltes Post, who remained on duty in parties of four until the departure for Pennsylvania at noon on Friday. A life-size portrait of the late Mr. Taylor, in crayon, which had been suspended from the balcony during the exercises in front of the City Hall, was hung at the head of the bier as the body lay in state.

The detachment of Koltes Post, Grand Army of the Republic, which watched over the body, escorted the remains to the depot of the Pennsylvania Railroad, Jersey City, on Friday, where they were placed in a special train, consisting of a combination car and the directors' car of the Philadelphia, Wilmington and Baltimore Railroad. These cars were attached to the 1 P. M. Pennsylvania train, and ran as a special train from the junction through direct to Kennett Square.

The remains lay over night at "Cedarcroft," which was formerly Mr. Taylor's country residence, and the funeral took place at noon on Saturday, at Longwood Cemetery, near Kennett Square, where are buried Bayard Taylor's first wife and his brother, Colonel Frederick Taylor, who was killed at the battle of Gettysburg. The Rev. Dr. William Furniss, of Philadelphia, and the Rev. Dr. H. N. Powers, of Bridgeport, Connecticut, conducted the funeral services.

NEW YORK.—NICOLA VITA, GIOVANNI MICCUCCI, VINCENZO MAZZA AND MICHAEL ANGELO FORTUNATO, ITALIAN SLAVES RESCUED BY THE SOCIETY FOR THE PREVENTION OF CRUELTY TO CHILDREN, AT UTICA.—FROM A PHOTOGRAPH BY MORA.

THE LAST ROYAL WEDDING.

HIS ROYAL HIGHNESS Prince Arthur, Duke of Connaught, seventh child and third son of Queen Victoria, was married in St. George's Chapel, Windsor, on March 13th, to Her Royal Highness the Princess Louise Margaret, daughter of the "Red Prince" of Germany, in the presence of a brilliant assemblage, which included the Queen and several members of the royal family, the King and Queen of Belgium and many German princes. The service was performed by the Archbishop of Canterbury.

The Clerk of the Royal Chapel, the Marshal, the equerries of the bridegroom and the maids-of-honor, met the Queen at the chapel, where Her Majesty was received by the great officers, and was conducted to the dais by the Lord Chamberlain, Mendelssohn's march in "Athalie" being played on the organ as the procession moved up the chapel. A quarter of an hour after the departure of Her Majesty from the castle, the bridegroom, accompanied by his supporters, the Prince of Wales and the Duke of Edinburgh, proceeded with their respective suites in the Queen's carriages from the state-entrance of the castle to St. George's Chapel, attended by a Captain's escort of the Guards. The bridegroom was received at the west entrance by the Lord Chamberlain in full ceremonial, and conducted to a seat on the right of the dais leading to the altar; the Prince of Wales and the Duke of Edinburgh occupying seats near by.

The bride left the Queen's entrance to the castle at 12:30, accompanied by her father and the Crown Prince

Digitized by Google

of Germany, with a numerous suite. She was received at the west door by the Lord Chamberlain.

The bridal procession was immediately formed, and moved up the nave to the choir, the train of her Royal Highness being borne by eight unmarried daughters of dukes, marquises and earls. As the procession passed up the chapel, Handel's "Occasional Overture" was given on the organ. The bride was conducted to a seat in the choir on the left of the dais, and her supporters to seats near her, while the bridesmaids stood behind, and the Lord Chamberlain and Vice-Chamberlain next to them. The bride was given away by her father. The body of the chapel was occupied by about 150 Ambassadors and foreign Ministers with their families, Cabinet Ministers, members of the nobility, and distinguished soldiers and sailors.

At the conclusion of the service the choir sang the "Hallelujah Chorus," and Mendelssohn's "Wedding March" pealed forth as the bride and bridegroom left the chapel, while in the long walk a salute of guns announced the termination of the ceremony. The royal family and guests left the chapel in the reversed order in which they entered it. All the royal personages returned to the Queen's entrance to the castle, where the registry of the marriage was signed in the green drawing-room, and duly attested by the Queen and the other distinguished personages invited to attend for that purpose.

The bridal dress of the Princess Louise Margaret of Prussia is of heavy white satin, and the low bodice is embroidered with lace four inches in width. The skirt is ornamented with lace twelve inches in width, and there is attached in front, a little towards the right, a small bouquet of myrtle. The train is thirteen feet long, and is covered by a rich lace flounce, the width of which is three feet and a half, and upon which is laid a branch of myrtle. The bridal veil is a square of lace blossoms, about ten feet and a half square, which will be fastened to the top of the crown, enveloping the princess. All the lace is of the finest point d'Alençon; the design, modern in style, representing a fantastic combination of oranges, myrtle and roses. The bridal handkerchief is made on the same pattern, and has in one corner the interlaced name of the bride and in the other the Prussian eagle. The bridal wreath, the orange-blossoms and leaves, will be added in England. The recent bereavements in the two royal and imperial families have rendered several black *robes de cour* for the princess indispensable. Among these are a velvet dress, bodice, and skirt richly embroidered with pearl lace, and a dress of rep, the satin insertion of which is adorned with rich bead embroidery. The traveling costume is gray, braided with soutache. The dresses of the bridesmaids are most costly and rich.

The princess was born July 25th, 1860, and is the daughter of Friedrich Karl, the "Red Prince," nephew of Emperor William. In form she is tall, has gray eyes, and a profusion of fair hair; though not considered beautiful, is very attractive, and has numerous accomplishments, being particularly skillful with her pencil.

The groom, Prince Arthur, Duke of Connaught, was born on May 1st, 1850. He was educated in the Woolwich Military Academy, and ten years ago was commissioned a lieutenant in the Royal Engineers, subsequently receiving commissions in the Royal Artillery and in the Rifle Brigade. In May, 1874, he was created Duke of Connaught and Strathearn and Earl of Sussex. The match is said to be one of love on both sides.

WHAT THE TELEGRAPH BROUGHT.

THE south wind was sweeping hot and fierce across the island. The ragged branches of the sparse cedars and willows were all bent out northwards, stretching away from the ceaseless sweep of this wild Summer wind that for days and weeks had given them no rest. In the northwest the sun was sinking into a low bank of mist, through which his rays streamed, glorious with crimson and gold, upon the shoals and sandbars of the Sound, upon the lighthouse in the harbor, upon the long line of great windows in the old Government hospital, high up on the bank, and upon the dark figure of a young girl, hurrying on before the wind, which blew her clothing wildly before her, as if to hasten her rapid footsteps.

She was walking straightforward towards the sunset, heedless of the sinuous path which wound among the ragged grass tufts and the coarse reeds of the bank. The sunlight, streaming into her eyes beneath the flapping border of her sun-bonnet, did not dazzle her.

She gazed fixedly upon it, with steady, wide-open eyes, from which another light flashed out—a light fierce and restless, more in keeping with the wild spirit at her back than with the calm glory before her. Once she paused and wrung her hands as if in pain. "Oh!" she said, with a long, low, shivering breath; and then she went on, striding fiercely through the water, to where a little boat was moored. Loosening this, she sprang in, and, taking an oar, sculled the little craft with dexterous hand out among the low breakers of the Sound, straight onwards through the rosy pathway of the dying day.

Free of the shoals and sandbars of the harbor, she laid aside her oar, and, dropping her arms upon her lap, buried her face in them.

All the past was sweeping rapidly over her memory in the lonely twilight—the long dreary years since her stepmother's second marriage with the rough old port-collector had brought them to live upon this southern island; the desolate discomfort of the abandoned Government hospital, which was their home; the sordid cares and weary drudgery which filled up her life; the dull stagnation into which her mind was settling, and the wild longing after something other than all this which was born of old remembrances of a happier time, and of the teachings of that gentle father who had so early faded out of her life; the struggles to raise herself out of the depths of ignorance into which her fate had plunged her. And then the ray of light that had fallen suddenly athwart the gloom of her prison-house. That bright face once more shone upon her; those blue eyes once more smiled into hers; that cheery voice again echoed in her ears, "Miss Fettie, think of me henceforth always as your friend."

She went over it all again—that dreary evening when, the housework done, the children in bed, and the stepmother gone out with her husband for a gossip with a neighbor, some sudden impulse had sent her back to her books, and she had sat in the kitchen, working out a "sum" by the light-wood blaze. She heard again the purring of the fire, and the clicking of the telegraph in the next room; and then the silence, the opening door, the steps upon the kitchen-floor, and the bright young presence stood again before her. It was only the new telegraph-operator, but to her the sunny-haired boy, with his rosy, dimpled cheek, his full red lips, and those great blue eyes, shaded by long lashes—to her it was an Apollo, a god, a being divine, which irradiated the dark kitchen with its presence.

And he sat down beside her in the firelight, and had taken the slate from her hands, and revealed the hidden mysteries of the "sum"; and she had grown bold to tell him of her aspirations and her disappointments, and how, with no sympathy, no help, no friend, the hope of an education was fading away with despair; and he had cheered her and encouraged her, and promised her such help as he could give—promised with a laugh and a blush, for he himself was not educated, he said—not as he had hoped to be. And then the heavy tread of the stepmother had sounded upon the long piazza, and the youth had risen to go, holding out his hand for a firm, warm, good-night clasp, with those words which thrilled her yet, in the misty darkness, "Miss Fettie, think of me henceforth always as your friend."

The weeks that followed passed in rapid review; weeks in which the promised friendship had become the joy of her life, and her most secret hopes and aspirations had unfolded themselves before him as a flower unfolds to the sunlight. And then the cloud had gathered—so suddenly, so darkly—the girl shivered as she thought. It was only a few words to her stepmother. "Would Mrs. Corson consent to take a few boarders for the Summer weeks? His mother and sister, and—and—a young lady," and the bright, blue eyes had fallen for a moment, and the fair cheek had been suffused with a girlish blush, and the light had died out of Fettie's life. And all to-day he had been gone away to meet them, on the little sailboat which carried the mail, and Fettie had been preparing the rooms for the mother and sister and—the young lady, who had brought a blight upon her life, and all day the wild fierce grief had been gnawing, gnawing, and now——

There was a shout, a scream, a rushing of the waters. The girl sprang to her feet. Close upon her was the white-winged sailboat; the figure standing upon the bow—how well, in that sudden instant, she knew it! The voice that cried to the man at the helm—even in this swift moment how it thrilled to her heart, as the crash, too late foreseen, struck down the little boat, and the cold waters engulfed the girlish form! How was it that she knew, as the water closed above her head, that he had sprung after her? What swift intuition taught her that he would save her life? A strange, wild sweetness surged over her heart as consciousness faded away from her in the watery depths.

She knew when she awoke that she was lying in the sailboat, and that his mother was looking upon her, even in that moment, with a cold repulsion, as one who had jeoparded her son's life. She roused herself proudly from the deathly weakness which almost overpowered her, and dragged herself to the stern, where Jack Abbott, the mail-carrier, sat, holding the tiller in one hand and the sheet in the other. He would have leaped into the water to save her, too, she knew full well, more gladly, perhaps, than the other, if his duty and care for her as well had not kept him at his post; but that thought only chilled her heart the more. She made no reply to his rough, earnest congratulations and wonderings, and sprang upon the shore as the keel grazed the sands.

"Let me go, Mr. Ralph!" she cried, almost fiercely, as he sought to detain her.

"Do not stop the girl, Ralph," said his mother. "She is wet through, and must hurry home to change her clothes; and you, too, as well."

The words were not unkind, but the tone—ah! how it chilled her, beyond even the chilling of the wet garments, which clung to her and swept the sands about her feet, as she hurried home.

How for a time she cowered in the shadows of her room, tormented by troubling thought. But she had not even seen their faces in the darkness. She must know what they were like. She could not wait, and she rose and dressed hastily and went out upon the broad piazza.

Through the wide, curtainless windows of the telegraph-room the light-wood fire shone bright. She crept to the window and looked in. The mother sat in the rude, easy-chair, facing the window, her arms around her boy. Not cold and proud now the face which gazed with such unutterable fondness upon him, as he smiled up into her eyes, or turned to play with the long curls of his little sister's chestnut hair. And that radiant presence which confronted her without knowing it, ah, how bright it was! It dazzled Fettie's hot, glazed eyes as the sun-blaze had been powerless to do. And yet how serenely fair was the beautiful creature who leaned against the mantel, looking down upon the group of mother and children.

She had not stirred nor uttered a sound, but he knew that she was there, and, rising, came quickly out to her, before she had time to flee away.

"We were talking of you, Fettie," he said; "come in and see my mother, and Ethel and Alice," and he led her unwillingly along. How could she resist the firm clasp of that kindly hand?

The weeks which followed were ages of torture to the girl. The visitors were kind to her—more than kind—recognizing in her that heart equality with which circumstances have nothing to do; it was not their fault that she suffered, yet how should she not suffer? Constantly busy about them in the necessary offices which fell to her lot, not even their genuine and unfailing courtesy could bridge over the gulf which had been fixed between them.

Little Alice made much of her, delighting to help her in her homely tasks, and not permitting the service which it was Fettie's duty to render in her room. Ethel was even caressing in her manner to her, full of little tendernesses and sympathetic pettings; but whom did Ethel not caress? Even the children, dull, uninteresting little mortals that they were, fell into a share of her pettings, and Alice, Mrs. Montagu, Ralph even, she tended and fondled with almost a mother's affectionate care and tenderness.

Mrs. Montagu took a kind interest in Fettie's struggles, lending her books and advising her about her studies; but it needed no prophet's vision to see that her heart was set upon a union between Ethel and Ralph, and a less sensitive soul than Fettie's would have felt, beneath all her kindness, her shrinking from any association between the island girl and her son. Fettie avoided Ralph with a proud disdain of any imputation of interfering with his mother's plans; indeed she would gladly have kept aloof from them all, but they followed her with kind intentions, glad, they thought, to throw a little brightness across her dreary life.

They wanted her to go with them upon the Sound one lovely moonlight evening, but Fettie had been deaf to Alice's entreaties, to Ethel's little blandishments. "I want to study to-night," she had said; and then Ralph, coming out upon the piazza from his telegraph office, had entreated, "Do come, Fettie, I must have one able seaman among so many helpless passengers;" and Mrs. Montagu had added, "The studies will go on all the better for a little play, Fettie," and Fettie could not but yield, could not but be flattered by the words and smile.

Ethel had brought a guitar to her island home, and she used to play upon it when they went upon the water in the moonlight—playing accompaniments to Ralph's singing, or to glees or choruses in which they all joined—all but Fettie, who sat alone at the tiller, guiding the little boat. "It would have been such a pity to have no music," Ethel said. Why should not Ralph hang over her as she played in the moonlight, humming little bits and refrains of airs out of that other world of theirs into which Fettie might never enter, smiling up into his dark blue eyes, from under her long golden lashes? And then, as her heart was throbbing, and her eyes burning with grief, he had left them all and come over to her; his hand had touched hers as he took the tiller from her, his eyes had darkened with that soft, sudden smile which was not—with a wild throb of joy her heart told her—not as he had smiled upon Ethel—oh, no, not like that!

The warmth of that smile played around her all the night. She awaked in the morning from dreams sweet, tender, vague, she knew not what; they had faded from her, but their gladness remained. All day she went about her work in a bright halo, tremulous, misty, which shut her off from the harsh distastefulness of duty. She kissed Alice for the first time when she ran to beg her to join them in their afternoon walk, and went to her room to dress, laying out the delicate sprigged calico that Ethel had showed her how to make—the first pretty dress which she had had for years. Would he notice the change in her? Would his eyes soften again with that sudden smile when he saw her? And while she was smiling into the glass which told her the flattering tale that she had never even dreamed of before, she heard the banging of the great hall-door, the voices on the piazza, the footsteps on the path—they had gone away and forgotten her. Yes, there they went, Alice skipping at her mother's side, Ethel and Ralph following more slowly, their heads bent down and talking earnestly—they had forgotten her! With a wild passion of grief she threw herself upon the bed, burying her face in the pillows; then as the voices of the children called to her along the hall, she caught up her sun-bonnet and rushed out, taking the direction opposite to that in which the others had gone.

There was neither tree nor house along the white, sandy road which led inland to the scattered village, and the south wind swept heavily against her, laden with burning sand. Weary with its wild battling and with the tempest of her emotions, she came upon a bare, unpainted, barn-like structure—a sort of rural church. The door stood open, and by a sudden impulse the girl ascended the steep steps and went in. Fettie's religious nature had never been aroused, but at this moment, in her lonely struggle of feeling, the open church door appealed to her, with an offer of refuge, companionship, help. Oh, if she could fly away, and be at rest!

Yet, when she entered, the bare, uncarpeted floors, the rough wooden benches, the stained walls, struck to her heart with a cold chill; no comfort here—no hiding for her weary head from the pitiless storm which beat her. Only at the end of the long room the raised platform and red-curtained pulpit seemed to offer her shelter and seclusion. It was with a half-frightened, guilty feeling, as of one unconsecrated, who treads some hallowed grounds, that she threw herself upon the carpet of the platform, behind the protecting curtains. And then, by a natural revulsion of feeling, the waves of trouble rolled away, a worn-out peacefulness stole over her, in which she lost all consciousness of herself.

The sound of voices came to her through the broken window behind the pulpit, as in a dream.

"To break Ethel's heart for this girl! My dear boy, you do not know what you are thinking of!"

"Ethel does not love me, mother—not as you mean. We love each other dearly; she is the sweetest girl in the world—but Fettie!"

"Dear child, you do not know your own heart. This is only a temporary fascination. Come away from the island—come home with us, and you will soon forget it."

"Oh, mother, mother, mother! it is you who do not know. I will go away, if you say so, but I cannot give her up. I have loved her since the first day I saw her."

There were footsteps upon the bare church floor, and then the soft voice went on:

"My boy, consider. She is noble and good, I grant, but think how different from all that you have been accustomed to. Think of her want of education; think of her relatives—would you wish to make them yours? She is attractive here from the very contrast of her surroundings; but place her among superior people, you yourself would be the first to feel her deficiencies. No man's love is strong enough to bear such a strain. Your life would be ruined, and hers."

She was interrupted by a vision which stood before her—a vision of dark, flashing eyes and burning cheeks, and a voice cried, with a sharp intonation of pain:

"Do you think I would let his life be ruined? He need not go away—I will go!" and, like a flash, she was gone.

In the blind agony which possessed her, she did not see that he had started up to follow her, but had been held by his mother's detaining hand; she saw nothing but the white road along which she flew, hurried on by her desperate thoughts. She would leave the island; she would go to Beaufort and get a service-place. No one should say that she had ruined his life. What need to contrast her with those superior beings of another world? Had she asked to be made their equal? And she was not inferior!—she was not!—she was not! She felt in her soul that she was of their kind—not like these others among whom she lived. But she would go away and earn her bread by hard work; no one should say that she had ruined his life.

She had reached the house and thrown herself upon her bed. Only a few moments' rest from this throbbing, bounding pain; only a few moments, and then she would go away. In the midst of her torture she remembered that the tide would serve at nine o'clock. Jack Abbott would be going with the mail. He would be good to her and would let her go with him to Beaufort to get a place.

The room grew dark and light again, with the broad band of moonlight on the floor, while she lay there, beaten by the tempest of her grief. If they had called her she had not heard it; but now a light footfall sounded on the floor, and cool, soft finger-tips were laid upon the hot cheeks, buried among the pillows.

"Fettie, dear," said Ethel's voice, "look up; I want to tell you something."

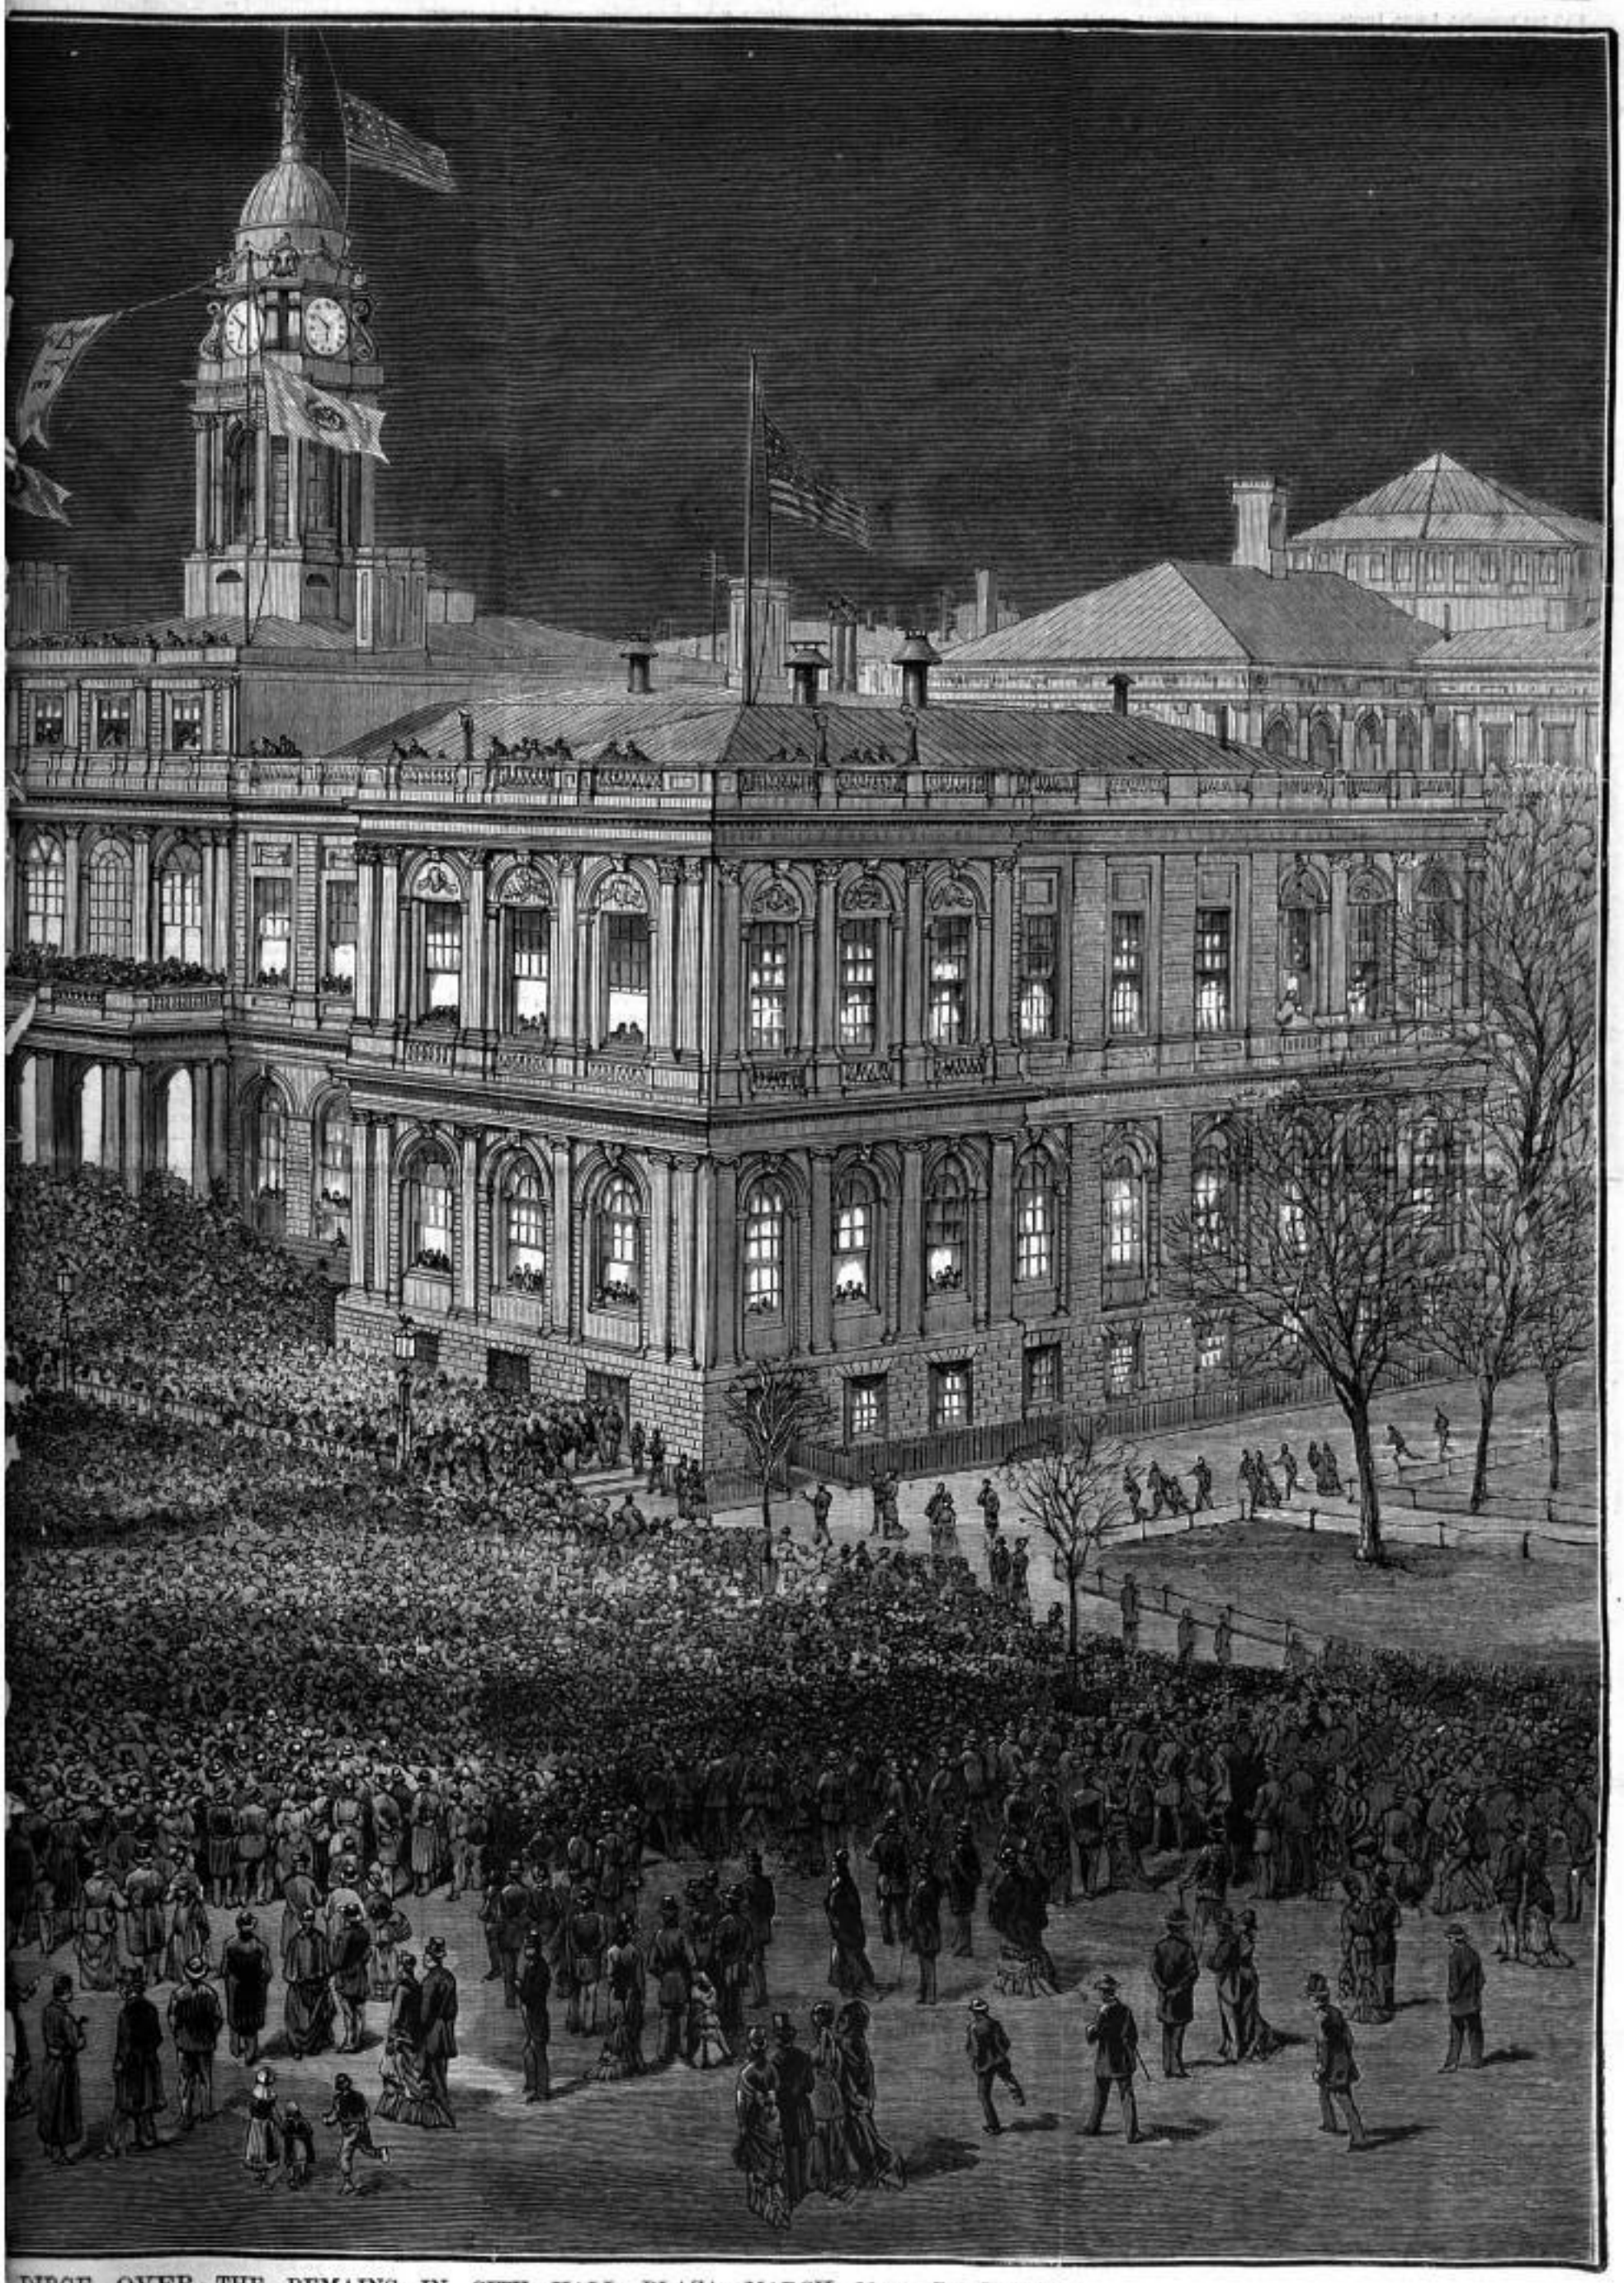
Who ever resisted Ethel? Fettie raised her tired head, and aching, tear-dimmed eyes.

"How pretty your dress is, Fettie," said Ethel, busy about her with gentle caressing touch; "even in the moonlight I can see how sweetly you look; but you have tumbled it dreadfully, lying on the bed; let me straighten it out; they want to see you, Fettie; Ralph wants you. Make yourself pretty and come."

Fettie sat down again upon the bed. "I cannot see him, Ethel, I am going away."

"Yes, with me to-morrow, dear, but not to-night. It is all a mistake, Fettie. Ralph told me something this afternoon—a great secret—but he did not need, for I knew it all before. Do you think I have no eyes? And it will all come out right in the end. We are not living in a story-book, Fettie, and Mrs. Montagu is not a 'cruel parent'!" and Ethel laughed lightly, and wound her arms about Fettie's waist.

"But it is you, Ethel, whom she——" and Fettie tried to free herself from the soft embrace that hurt her so cruelly.



"I know," said Ethel, "and I should once have liked to marry Ralph, for I love them all so dearly. Mrs. Montagu has always been like a mother to me—I have never known any other, Fettie, and she is my guardian, and I should be glad to give my money to her. It has been so cruel to her since she lost her property, that Ralph would not stay in college, but would go away and work. He could not understand that she would be happier, denying herself everything, that her proud hopes of him might be fulfilled. She is so proud—not wrongly proud, I think, Fettie; but it kills her to see him descend into a lower sphere of life. And if he had my money he need not, you know. I wish I might give him the money, but not myself, Fettie dear. Once I would have done it willingly enough, but now—there is some one else——"

She hid her face for a moment upon Fettie's shoulder, then, raising it again with a bright laugh:

"So you see," she said, "that it cannot be as Mrs. Montagu wished. I have told her all—and now you must let me tie your hair up again, and take you into the other room, for I have told Ralph that you are my little sister, and that you are going away with me to-morrow, that I may buy you some pretty dresses, and send you to school, for I am very grand now, Fettie. I shall be twenty-one next week, and my own mistress. Did you know that Ralph and I were born the same day? And he has so much to say to you, and only this one evening to say it in, you know."

All the time, she had been busy about the girl, her slender, dexterous finger-tips putting hair and eyes and dress in order, with winning little caresses and coaxing smiles—Ethel's own smiles and caresses, stronger than chains and fetters to bind others to her will. And

LISETTE.

DO you remember, Lisette, Lisette,
Your bright little room in the Rue d'Arcade?
(I was a student, you a grisette.)
Do you remember how overhead
The great white moon hung, tender and warm,
And made the shadows fall sharp and black
From the gabled roofs; and your slender arm
Gleamed in the moonlight, forth and back,
As you threw me kisses, so fast and sweet?
I swear your hand was whiter than pearl.
How gayly my feet rang down the street
When I came to meet you—my girl, my girl!

Do you remember the old blue gown
That I loved so much, with the elbows frayed,
And the pretty trimming of eider-down?
Do you remember the scarf you made,
With your hair inwoven, and gave to me
When the Christmas snow lay white and chill,
And you came and sat, like a child, on my knee,
And fed the birds at the window-sill?
Over the city the church-bells rang—
You crossed yourself with a little prayer;
And my heart stood still with a yearning pang
For the church-bells ringing in English air.

Do you remember when Spring came in,
How often we took the road at morn
And tramped afar from the heat and din,
By blossomed orchards and budding corn—
Into the woodlands and far away;
And beautiful Paris lay behind
A cloud of dust in the fresh, bright day?
Out of your wonderful bag we dined
On bread and kisses, and fruit and wine.
Sweet! 'Twas the wine of love I sipped
When your exquisite lips bent down to mine,
And over my shoulder your soft hair slipped.

Do you remember, my own true love,
The day of parting? Ah, sweet Lisette,
I would give up my hope of a life above
If only that day I might quite forget!
Pale, like a statue, I saw you stand,
In the old blue dress I had learned to prize;
You wore no ring on your slender hand—
No ray of hope in your gentle eyes;
And smiled and kissed me and said "Good-by!"
My little darling, so meek and true,
The happiest year of all years gone by
Was the one sweet year that I spent with you.

MADELINE S. BRIDGES.

THE FALLEN LEAVES.

BY WILKIE COLLINS.

CHAPTER XV.

THE medium of correspondence between Amelius and Regina's maid was an old woman who kept a shop for the sale of newspapers and periodicals in a by-street not far from Farnaby's house. From this place his letters were delivered to the maid, under cover of the morning newspapers—and here he found the answers waiting for him later in the day. "If Rufus could only have taken her out for a walk, I might have seen Regina this afternoon," thought Amelius. "As it is, I may have to wait until to-morrow, or later still. And then, there's the sovereign to Phœbe." He sighed as he thought of the fee. Sovereigns were becoming scarce in our young Socialist's purse.

Arriving in sight of the newsvender's shop, Amelius noticed a man leaving it, who walked away towards the further end of the street. When he entered the shop himself a minute afterwards, the woman took up a letter from the counter. "A young man has just left this for you," she said.

Amelius recognized the maid's handwriting on the address. The man whom he had seen leaving the shop was Phœbe's messenger.

He opened the letter. Her mistress, Phœbe explained, was too much flurried to be able to write. The master had astonished the whole household by appearing among them at least three hours before the time at which he was accustomed to leave his place of business.

He had found "Mrs. Ormond" (otherwise Regina's friend and correspondent, Cecilia) paying a visit to his niece, and had asked to speak with her in private before she took leave. The result was an invitation to Regina, from Mrs. Ormond, to stay for a little while at her house in the neighborhood of Harrow. The ladies were to leave London together, in Mrs. Ormond's carriage, that afternoon. Under stress of strong persuasion on the part of her uncle and aunt, as well as of her friend, Regina had ended in giving way. But she had not forgotten the interests of Amelius. She was willing to see him privately on the next day, provided he left London by the train which reached Harrow soon after eleven in the forenoon. If it happened to rain, then he must put off his journey until the first fine day, arriving in any case at the same hour. The place at which he was to wait was described to him; and with these instructions the letter ended.

The rapidity with which Mr. Farnaby had carried out his resolution to separate the lovers placed the weakness of Regina's character before Amelius in a new and startling light. Why had she not stood on her privileges, as a woman who had arrived at years of discretion, and refused to leave London until she had first heard what her lover had to say? Amelius had left his American friend, feeling sure that Regina's decision would be in his favor, when she was called upon to choose between the man who was ready to marry her, and the man who was nothing but her uncle by courtesy. For the first time, he now felt that his own confident anticipations might, by bare possibility, deceive him. He returned to his lodgings in such a state of depression, that compassionate Rufus insisted on taking him out to dinner, and hurried him off afterwards to the play. Thoroughly prostrated, Amelius submitted to the genial influence of his friend. He had not even energy enough to feel surprised when Rufus stopped, on their way to the tavern, at a dingy building adorned with a Grecian portico, and left a letter and a card in charge of a servant at the side-door.

The next day by a happy interposition of Fortune proved to be a day without rain. Amelius followed his instructions to the letter. A little watery sunshine showed itself as he left the station at Harrow. His mind was still in such a state of doubt and disturbance that it drew from superstition a faint encouragement to hope. He hailed the feeble November sunlight as a good omen.

Mr. and Mrs. Ormond's place of residence stood alone, surrounded by its own grounds. A wooden fence separated the property, on one side, from a muddy little by-road, leading to a neighboring farm. At a wicket-gate in this fence, giving admission to a shrubbery situated at some distance from the house, Amelius now waited for the appearance of the maid.

After a delay of a few minutes only, the faithful Phœbe approached the gate with a key in her hand. "Where is she?" Amelius asked, as the girl opened the gate.

"Waiting for you in the shrubbery. Stop, sir; I have something to say to you first."

Amelius took out his purse, and produced the fee. Even he had observed that Phœbe was perhaps a little too eager to get her money!

"Thank you, sir. Please to look at your watch. You mustn't be with Miss Regina a moment longer than a quarter of an hour."

"Why not?"

"This is the time, sir, when Mrs. Ormond is engaged every day with her cook and housekeeper. In a quarter of an hour the orders will be given, and Mrs. Ormond will join Miss Regina for a walk in the grounds. You will be the ruin of me, sir, if she finds you here." With that warning, the maid led the way along the winding paths of the shrubbery.

"I must thank you for your letter, Phœbe," Amelius said, as he followed her. "By-the-by, who was your messenger?"

Phœbe's answer was no answer at all. "Only a young man, sir," she said.

"In plain words, your sweetheart, I suppose?"

Phœbe's expressive silence was her only reply. She turned a corner, and pointed to her mistress standing alone before the entrance of a damp and deserted summer-house.

Regina put her handkerchief to her eyes, when the maid had discreetly retired. "Oh," she said, softly, "I am afraid this is very wrong!"

Amelius removed the handkerchief by the exercise of a little gentle force, and administered comfort under the form of a kiss. Having opened the proceedings in this way, he put his first question. "Why did you come here?"

"How could I help it?" said Regina, feebly. "They were all against me. What else could I do?"

It occurred to Amelius that she might, at her age, have asserted a will of her own. He kept his idea, however, to himself; and, giving her his arm, led her slowly along the path of the shrubbery. "You have heard, I suppose, what Mr. Farnaby expects of me?" he said.

"Yes, dear."

"I call it worse than mercenary—I call it downright brutal."

"Oh, Amelius, don't talk so!"

Amelius came suddenly to a standstill. "Does that mean that you agree with him?" he asked.

"Don't be angry with me, dear. I only meant there was some excuse for him."

"What excuse?"

"Well, you see, he has a high idea of your family, and he thought you were rich people. And—I know you didn't mean it, Amelius—but still you did disappoint him!"

Amelius dropped her arm. This mildly-persistent defense of Mr. Farnaby exasperated him.

"Perhaps I have disappointed you," he said.

"Oh, no, no! Oh, how cruel you are!" The ready tears showed themselves again in her magnificent eyes—gentle, considerate tears, that raised no storm in her bosom, and produced no unbecoming results in her face. "Don't be hard on me!" she said, appealing to him helplessly, like a charming, overgrown child.

Some men might have still resisted her, but Amelius was not one of them. He took her hand, and pressed it tenderly.

"Regina," he said, "do you love me?"

"You know I do!"

He put his arm round her waist, he concentrated the passion that was in him into a look, and poured that look into her eyes. "Do you love me as dearly as I love you?" he whispered.

She felt it with all the little passion that was in her. After a moment of hesitation she put one arm timidly around his neck, and, bending her grand head, laid it on his bosom. Her finely-rounded, supple, muscular figure trembled as if she had been the weakest woman living. "Dear Amelius!" she murmured, almost inaudibly. He tried to speak to her—his voice failed him. She had, in perfect innocence, fired his young blood. He drew her closer and closer to him: he lifted her head, with a masterful resolution which she was not able to resist, and pressed his kisses in hot and breathless succession on her lips. His vehemence frightened her. She tore herself out of his arms with a sudden exertion of strength that took him completely by surprise. "I didn't think you would have been rude to me!" With that mild reproach, she turned away, and took the path which led from the shrubbery to the house. Amelius followed her, entreating that she would accept his excuses and grant him a few minutes more. He modestly laid all the blame on her beauty—he lamented that he had not resolution enough to resist the charm of it. When did that commonplace compliment ever fail to produce its effect? Regina smiled with the weakly complacent good-nature, which was only saved from being contemptible by its association with her personal attractions. "Will you promise to behave?" she stipulated. And Amelius, not very eagerly, promised.

"Shall we go into the summer-house?" he suggested.

"It's very damp at this time of year," Regina answered, with placid good sense. "Perhaps we might catch cold—we had better walk about."

They walked accordingly. "I wanted to speak to you about our marriage," Amelius resumed.

She sighed softly. "We have some time to wait," she said, "before we can think of that."

He passed this reply over without notice. "You know," he went on, "that I have an income of five hundred a year?"

"Yes, dear."

"There are hundreds of thousands of respectable artisans, Regina (with large families), who live comfortably on less than half my income."

"Do they, dear?"

"And many gentlemen are not better off. Curates, for instance. Do you see what I am coming to, my darling?"

"No, dear."

"Could you live with me in a cottage in the country, with a nice garden, and one little maid to wait on us, and two or three new dresses in a year?"

Regina lifted her fine eyes in sober ecstasy to the sky. "It sounds very tempting," she remarked, in the sweetest tones of her voice.

"And it could all be done," Amelius proceeded, "on five hundred a year."

"Could it, dear?"

"I have calculated it—allowing the necessary margin—and I am sure of what I say. And I have done something else: I have asked about the Marriage License. I can easily find lodgings in the neighborhood. We might be married at Harrow in a fortnight."

Regina started; her eyes opened widely, and rested on Amelius with an expression of incredulous wonder. "Married in a fortnight?" she repeated. "What would my uncle and aunt say?"

"My angel, our happiness doesn't depend on your uncle and aunt—our happiness depends on ourselves. Nobody has any power to control us. I am a man and you are a woman, and we have a right to be married whenever we like." Amelius pronounced this last oracular sentence with his head held high, and a pleasant inner persuasion of the convincing manner in which he had stated his case.

"Without my uncle to give me away!" Regina exclaimed. "Without my aunt! With no bridesmaids, and no friends, and no wedding-breakfast? Oh, Amelius, what can you be thinking of?" She drew back a step, and looked at him in helpless consternation.

For the moment, and the moment only, Amelius lost all patience with her. "If you really loved me," he said, bitterly, "you wouldn't think of the bridesmaids and the breakfast!" Regina had her answer ready in her pocket—she took out her handkerchief. Before she could lift it to her eyes Amelius recovered himself. "No, no," he said, "I didn't mean that—I am sure you love me—take my arm again. Do you know, Regina, I doubt whether your uncle has told you everything that passed between us. Are you really aware of the hard terms that he insists on? He expects me to increase my five hundred a year to two thousand before he will sanction our marriage."

"Yes, dear, he told me that."

"I have as much chance of earning fifteen hundred a year, Regina, as I have of being made King of England. Did he tell you that?"

"He doesn't agree with you, dear—he thinks you might earn it (with your abilities) in ten years."

This time it was the turn of Amelius to look at Regina in helpless consternation. "Ten years!" he repeated. "Do you coolly contemplate waiting ten years before we are married? Good heavens! is it possible that you are thinking of the money?—that you can't live without carriages and footmen, and ostentation and grandeur——?"

He stopped. For once, even Regina showed that she had spirit enough to be angry. "You ought to be ashamed of yourself to speak to me in that way!" she broke out, indignantly. "If you have no better opinion of me than that, I won't marry you at all—no, not if you had fifty thousand a year, sir, to-morrow! Am I to have no sense of duty to my uncle—to the good man who has been a second father to me? Do you think I am ungrateful enough to set his wishes at defiance? Oh, yes, I know you don't like him! I know that a great many people don't like him. That doesn't make any difference to me. But for dear Uncle Farnaby, I might have gone to the workhouse; I might have been a starving needle-woman, a poor, persecuted maid-of-all-work. Am I to forget that, because you have no patience, and only think of yourself? Oh, I wish I had never met with you! I wish I had never been fool enough to be as fond of you as I am!" With that confession, she turned her back on him, and took refuge in her handkerchief once more.

Amelius stood looking at her in silent despair. After the tone in which she had spoken of her obligations to her uncle, it was useless to anticipate any satisfactory result from the exertion of his influence over Regina. Recalling what he had seen and heard, in Mrs. Farnaby's room, Amelius could not doubt that the motive of pacifying his wife was the motive which had first led Farnaby to receive Regina into his house. Was it unreasonable or unjust to infer that the orphan child must have been mainly indebted to Mrs. Farnaby's sense of duty to the memory of her sister for the parental protection afforded to her from that time forth? It would have been useless, and worse than useless, to place before Regina such considerations as these. Her exaggerated ideas of the gratitude that she owed to her uncle was beyond the limited reach of reason. Nothing was to be gained by opposition; and no sensible course was left but to say some peace making words and submit.

"I beg your pardon, Regina, if I have offended you. You have sadly disappointed me. I haven't deliberately misjudged you; I can say no more."

She turned round quickly, and looked at him. There was an ominous change to resignation in his voice, there was a dogged submission in his manner, that alarmed her. She had never yet seen him under the perilously-patient aspect in which he now presented himself, after his apology had been made.

"I forgive you, Amelius, with all my heart," she said—and timidly held out her hand.

He took it, raised it silently to his lips, and dropped it again.

She suddenly turned pale. All the love that she had in her to give to a man she had given to Amelius. Her heart sank; she asked herself, in blank terror, if she had lost him.

"I am afraid it is *I* who have offended you," she said. "Don't be angry with me, Amelius! don't make me more unhappy than I am!"

"I am not in the least angry," he answered, still in the quiet, subdued way that terrified her. "You can't expect me, Regina, to contemplate a ten years' engagement cheerfully."

She took his hand, and held it in both her own hands—held it as if his love for her was there and she was determined not to let it go.

"If you will only leave it to me," she pleaded, "the engagement sha'n't be so long as that. Try my uncle with a little kindness and respect, Amelius, instead of saying hard words to him. Or let me try him, if you are too proud to give way. May I say that you had no intention of offending him, and that you are willing to leave the future to me?"

"Certainly," said Amelius, "if you think it will be of the slightest use." His tone added more: his tone said, plainly, "I don't believe in him, mind, as you do."

She still persisted. "It will be of the greatest use," she went on. "He will let me go home again, and he will not object to your coming to see me. He doesn't like to be despised and set at defiance—who does? Be patient, Amelius; I will persuade him to expect less money from you—only what you may earn, dear, with your talents, long before ten years have passed." She waited for a word of reply which might show that she had encouraged him a little. He only smiled. "You talk of loving me," she said, drawing back from him with a look of reproach; "and you don't even believe what I say to you." She stopped, and looked behind her with a faint cry of alarm. Hurried footsteps were audible on the other side of the evergreens that screened them. Amelius stepped back to a turn in the path, and discovered Phœbe.

"Don't stay a moment longer, sir!" cried the girl. "I've been to the house—and Mrs. Ormond isn't there—and nobody knows where she is. Get out by the gate, sir, while you have the chance."

Amelius returned to Regina. "I mustn't get the girl into a scrape," he said. "You know where to write to me. Good-by."

Regina made a sign to the maid to retire. Amelius had never taken leave of her as he was taking leave of her now. She forgot the fervent embrace and daring kisses—she was desperate at the bare idea of losing him. "Oh, Amelius, don't doubt that I love you! Say you believe I love you! Kiss me before you go!" He kissed her—but, oh, not as he had kissed her before. He said the words she wanted him to say—but only to please her, not with all his heart. She let him go; reproaches would be wasted at that moment. Phœbe found her pale and immovable, rooted to the spot on which they had parted. "Dear, dear me, miss, what's gone wrong?" And her mistress answered wildly, in words that had never before passed her placid lips. "Oh, Phœbe, I wish I was dead!"

CHAPTER XVI.

SUCH was the impression left on the mind of Regina by the interview in the shrubbery.

The impression left on the mind of Amelius was stated in equally strong language, later in the day. His American friend asked innocently for news, and was answered in these terms:

"Find something to occupy my mind, Rufus, or I shall throw the whole thing over and go to the devil."

The wise man from New England was too wise to trouble Amelius with questions, under these circumstances. "Is that so?" was all he said. Then he put his hand in his pocket, and, producing a letter, laid it quietly on the table.

"For me?" Amelius asked.

"You wanted something to occupy your mind," the wily Rufus answered. "There 'tis."

Amelius read the letter. It was dated "Hampden Institution." The secretary invited Amelius, in highly complimentary terms, to lecture, in the hall of the Institution, on Christian Socialism, as taught and practiced in the Community at Tadmor. He was offered two thirds of the profits derived from the sale of places, and was left free to appoint his own evening (at a week's notice) and to issue his own advertisements. Minor details were reserved to be discussed with the secretary, when the lecturer had consented to the arrangement proposed to him.

Having finished the letter, Amelius looked at his friend. "This is your doing," he said.

Rufus admitted it, with his customary candor. He had a letter of introduction to the secretary, and he had called by appointment that morning. The Institution wanted something new to attract the members and the public. Having no present intention of lectur-

Digitized by Google

ing himself, he had thought of Amelius, and had spoken his thought. "I mentioned," Rufus added, slyly, "that I didn't reckon you would mount the platform. But he's a sanguine creature, that secretary—and he said he'd try."

"Why should I say No?" Amelius asked, a little irritably. "The secretary pays me a compliment, and offers me an opportunity of spreading our principles. Perhaps," he added, more quietly, after a moment's reflection, "you thought I might not be equal to the occasion—and, in that case, I don't say you were wrong."

Rufus shook his head. "If you had passed your life in this decrepid little island," he said, "I might have doubted you, likely enough. But Tadmor's situated in the United States. If they don't practice the boys in the art of *orating*, don't you tell me there's an American citizen with a voice in *that* society. Guess again, my son. You won't! Well, then, 'twas Uncle Farnaby I had in my mind. I said to myself—not to the secretary—Amelius is bound to consider Uncle Farnaby. Oh, my, what would Uncle Farnaby say?"

The hot temper of Amelius took fire instantly. "What the devil do I care for Farnaby's opinions?" he burst out. "If there's a man in England who wants the principles of Christian Socialism beaten into his thick head, it's Farnaby. Are you going to see the secretary again?"

"I might look in," Rufus answered, "in the course of the evening."

"Tell him I'll give the lecture—with my compliments and thanks. If I can only succeed," pursued Amelius, heating himself with the new idea. "I may make a name as a lecturer, and a name means money, and money means beating Farnaby with his own weapons. It's an opening for me, Rufus, at the crisis of my life."

"That is so," Rufus admitted. "I may as well look up the secretary."

"Why shouldn't I go with you?" Amelius suggested.

"Why not?" Rufus agreed.

They left the house together.

(*To be continued.*)

Causes of Bad Health.

THE external causes of bad health have been defined as being reducible to seven great classes. These are atmospherical variations, physical accidents, organic poisons, errors in feeding, drinking and breathing, parasites or foreign living organisms infesting the body, occupations and modes of life, nervous or mental impressions. It has been observed by a scientist that of the twenty-four million eight hundred and fifty thousand people into which the English community was divided, the healthiest class was the professional; and then follow in order of healthfulness the agricultural, the domestic, the commercial and the industrious classes. It is among children under five years of age, however, that occurs the greatest amount of mortality, and, in fact, the mortality of young infants is known to be in such a deplorable state as to require much study and thought for its solution.

With reference to occupations and their tendency to shorten life, the value of fresh air as a preservative of health is instanced by the fact that the rate of mortality among grocers is considerably less than that among drapers. The disease which destroys the draper is pulmonary consumption. While the grocer bustles about his business with the shop-door open all day, the draper lives in a close place, with the shop-doors for the most part closed, and breathes, moreover, a dusty, close atmosphere. The heat and closeness which are the general characteristics of drapers' shops, account for the generally unhealthy appearance of the attendants in them. Publicans—who as a class are very comfortable, well housed, clothed and fed, and not obliged to go out in all weathers—should, it will be thought, compare favorably with other tradesmen as regards longevity. Such, however, is not the case, for we find that, in spite of all these advantages, they die so much faster than the rest of the people that in England a hundred and thirty-eight publicans die in proportion to a hundred of the whole of the community who are employed in seventy leading occupations.

The Victoria Cross.

OF all prizes that men in the British Army and Navy covet, there is none more eagerly sought, more jealously guarded, or more dearly loved than the simple cross in gun-metal, bearing the inscription "For Valor." The Victoria Cross was instituted by Royal Warrant on January 19th, 1856, as a reward for individual instances of merit and valor in the army and navy. Although many acts of heroism had been performed in both services in the earlier part of Queen Victoria's reign, it was not deemed advisable to make the action of the warrant retrospective, and the heroes of the Crimea were therefore the first who received the much-coveted decoration. The cross itself is a simple piece of gun-metal, bronze-colored, with the royal crest in the middle, and below the words "For Valor"; in the centre of the reverse the date of the act of heroism is inscribed, and on the bar to which the ribbon is attached the name of the individual and of the corps to which he belongs. On this bar also is engraved a sprig of laurel, and the bar is attached to the cross by the letter V on a red or blue ribbon, according to the service in the army or navy of the recipient. It is not to soldiers and sailors only, however, that the Victoria Cross is awarded, and many civilians who have distinguished themselves by acts of conspicuous bravery have been enrolled among the hero-band. The actual money value of the cross is only a few shillings, but the laurel crown of the Romans cost even less, and decorations are of course altogether valueless from that point of view. The day has not come yet when chivalry lies dead, or when bravery sells itself for cash. Many a brave knight has gone into the clash of arms and has fought bloody battles for the sake of a flower from the hair of his mistress, or a scarf which has encircled her fair neck; and, in these later times, many a man has gone into the deadly breach and through tempests of fiery missiles for the love of country and honor, sustained in the midst of dangers by the hope that some day that simple Maltese Cross, devised by the Queen, and always, when practicable, conferred by her own hand, may rest upon his breast. The Victoria Cross carries with it £10 a year pension for each non-commissioned officer and private, with an additional annuity of £5 for every additional bar, such bar being added upon each fresh act of bravery equal to the first.

Photography in the Bank of France.

THE Bank of France, according to the London *News*, appears to have hit upon an ingenious method of treating doubtful customers. The establishment has for some time past availed itself of photography, and among its officers is a photographic detective, to examine suspicious documents through the medium of a camera, which under some circumstances exercises a sharper vision than the human eye. Where an erasure has been made, for instance, the camera detects it at once, let the spot be ever so smoothly rubbed over, while a word or figure that to the eye has been perfectly scratched out is clearly reproduced in a photograph of the document. If we are to believe a recent account, the Bank of France has now added to its precautions an invisible studio placed in the gallery behind the cashiers. Hidden behind some heavy curtains is a camera, ready for work, and at a signal from any of the cashiers, the photographer proceeds to do his duty by depicting the particular customer who may be standing at the desk. The clerk engages the man's attention, and in a few moments the portrait is taken, and the bank in the possession of a photograph which may hereafter prove of value. The camera is then fitted with a fresh sensitive plate, and stands ready for use upon another emergency. How far such an arrangement could be of practical value remains to be seen, but the principal banking establishment in Paris has certainly to thank photography for the discovery of several frauds of late. A photographic laboratory and requisites form part of the institution, and most of the officials themselves have to submit to the process of being photographed, so that the direction may be in the possession of their portraits. This practice, it is held, is a deterrent against evil ways, for should any of the clerks be tempted to go astray, they know very well that they leave records of themselves behind. The same system prevails among the Paris police, where every one, from the highest to the lowest, is photographed.

Aerial Telegraphy.

PROFESSOR LOOMIS, of Washington, is experimenting in the mountains of West Virginia to demonstrate what he calls aerial telegraphy, which is based on the theory that at certain elevations there is a natural electric current, by taking advantage of which wires may be wholly dispensed with. It is said that he has telegraphed as far as eleven miles by means of kites flown with copper wire. When the kites reached the same altitude or got into the same current, communication by means of an instrument similar to the Morse instrument was easy and perfect, but ceased as soon as one of the kites was lowered. He has built towers on two hills about twenty miles apart, and from the tops of them run up steel rods into the region of the electric current. The statement is made that in this way, without any wire, he has been able to keep up telegraphic communication for months at a time. A heavy storm, however, prevents communication for a time, probably disarranging the current. In a recent letter Professor Loomis announced that he had recently discovered that the telephone could be used for this method of communication as well as telegraphic instruments, and that of late he had done all his talking with his assistant, twenty miles away, by telephone, the connection being aerial only. He claims that he can telegraph across the sea without other wires than those necessary to reach the elevation of the current. This claim of Professor Loomis belongs to the class of remarkable discoveries not yet demonstrated—a very large class—in which students of science are working with great energy.

The Telectroscope.

THE telephone and the phonograph are threatened with eclipse by a new apparatus, which, if report speaks truly, promises to be of considerable utility. It is called the telectroscope, and has been submitted by its inventor, M. Senlecq, to the Comte du Mornel and M. H. d'Arros, who are said to have reported favorably as to its merits. It is intended to produce telegraphically the pictures imprinted on the reflector of a distant camera obscura. The apparatus depends upon the sensitiveness of selenium to shades of light, and the effects of electric currents. Should M. Senlecq succeed in perfecting the invention, we shall have an instrument that will enable us to view distant scenes, just as the telephone enables us to hear sounds beyond the reach of our unassisted ears.

Divining in Scotland.

A PROCESS of divining, allied to casting lots, was formerly resorted to by young women in order to discover a thief, or to ascertain whether a young man who was courting one of them was in earnest, and would in the future become that girl's husband. The process was called the Bible and Key trial, and the formula was as follows: A key and Bible were procured, the key being so much longer than the Bible that when placed between the leaves the head and the handle would project. If the inquiry was about the good faith of a sweetheart the key was placed in Ruth i. 16, on the words, "Entreat me not to leave thee; where thou goest I will go," etc. The Bible was then closed and tied around with tape. Two neutral persons sitting opposite each other held out the forefingers of their right hands, and the person who was consulting the oracle suspended the Bible between their two hands, resting the projecting parts of the key on the outstretched forefingers. No one spoke except the inquirer, and she, as she placed the key and Bible in position, repeated slowly the whole passage, "Entreat me not to leave thee," John or James or whatever the name of the youth was, "for where thou goest I will go," etc. If the key and the Bible turned and fell off the fingers, the answer was favorable; and generally by the time the whole passage was repeated this was the result, provided the parties holding up the key and the Bible were firm and steady. For the detection of a thief the formula was the same, with only this difference, that the key was put into the Bible at the fiftieth Psalm, and the inquirer named the suspected thief and then repeated the eighteenth verse of that Psalm, "When thou sawest a thief then thou consentest with him," etc. If the Bible turned round and fell, it was held to be proof that the person named was the thief. This method of divining was not so frequently practiced, not through want of faith in its efficacy, but through superstitious terror, for the movement of the key was regarded as evidence that some unseen dread power was present.

SCIENTIFIC INTELLIGENCE.

Ulm, Bavaria, is to hold an exhibition of much interest, illustrating the history of printing and wood engraving.

Professor Famintzin, of St. Petersburg, has been elected member of the Russian Academy of Sciences in place of the late Professor Gelenoff.

The Russian Physical and Chemical Society is now discussing the means of a thorough study of the surface of the moon, especially by means of spectrum analysis.

A Native of Marseilles has purchased the right of extracting chlorate of potash from the Dead Sea, and effects to net $8 a ton on an indefinite quantity of it delivered at London.

The Madrid Historical Academy announces, after investigation, that there was no truth in the report that the remains of Christopher Columbus had been discovered in the Cathedral of San Domingo.

Dr. Aub, one of the oldest Rabbis in Berlin, recently received from the University of Munich a new doctor's diploma, commemorative of his having received that degree there fifty years ago. It was conferred by Dr. Steinthal in the name of the philosophical faculty.

The Director of the Postal Telegraph Service of the French Republic has been made a member of the Cabinet and placed on the same footing as the Postmaster General of the British Government. The present holder of that office is M. Cochery.

Among Recent Deaths is that of M. Chauffod, Professor of Zoology at the Paris School of Medicine. M. Chauffod during his whole career opposed M. Claude Bernard's determinism, and advocated the existence of a vital principle and final causes in a number of books largely circulated.

Russia has lost one more of her mathematicians—Professor Popoff, of Kazan. His works on the integration of differential equations, on hydrodynamics, on the waves which arise from the motion of a body, on definite integrals, on the calculus of variations, etc., have given to the late professor an eminent place among mathematicians.

The Italian Secretary for Agriculture, Industry and Commerce, has offered a prize of 3,000 lire (about $615) for the best monograph on the cultivation, growth, and diseases of the species *citrus* (the common lemon-tree). The competition will last until May, 1881, and all particulars may be learnt direct from the Secretary's office at Rome.

In Germany a man who wishes to become a medical practitioner has to pass some time in the course of his third year's study an examination in chemistry and physics, botany, zoology, anatomy and physiology; and at the close of his studies he has to spend sometimes as much as a five months' session in passing a final examination in the practical departments.

The Installation of Objects sent in for the Anthropological Exhibition at Moscow will begin in the end of March. The interesting collections from Samarcand have already arrived, as well as very interesting objects sent by the East Siberian branch of the Russian Geographical Society. Those of stone implements and of quaternary mammals especially draw the attention of the organizing committee, as well as several numismatic collections.

M. Chevreul, who, although about ninety years of age, enjoying good robust health, has resigned the administration of the Jardin des Plantes. M. Jules Ferry, the new Minister of Public Instruction, has written him a letter eulogistic of his career, and appointing him Honorary Administrator; also appointing as his successor for a term of five years, M. Fremy, the eminent Professor of Chemistry, Director of the Laboratory at the Gardens, the practical School of Chemistry in Paris.

The Aosta Section of the Italian Alpine Club proposes to celebrate this year the centenary of Saussure's travels in the Alps, which opened up quite a new world for science and for travelers. In 1779 he staid for the first time in the Valley of Annecy, and the club proposes to put a commemorative marble plate on the house he inhabited in the village of Dolonne, near Courmayeur. An inscription will probably be placed also on the Grammont Mountain, whence Saussure made his famous observations on Mont Blanc, the first ascent of which he made in 1787.

Photographing Sound.—A very ingenious method of recording articulate vibrations by means of phonography has just been invented. The apparatus consists of a steel mirror capable of oscillations on a diametral axis, to the back of which is attached a lever connecting it to the centre of a telephone disk, arranged with the ordinary mouthpiece. Whenever the disk is made to vibrate, the mirror oscillates with it, and a beam of sunlight thrown on the reflectors from a heliostat describes lines of light on a suitably prepared screen. If the latter be movable at right angles to those lines of light and carries a collodion film, the oscillation of the light is recorded on the prepared surface as a more or less complex curve, having the peculiarity of the sound wave which caused each particular movement. It is impossible to describe the infinite variety of shapes produced by the variations of sound, but they are extremely curious and very graceful.

The Capacity of Wood to Absorb Water.—M. Maumené has discovered that the proportions in which wood absorbs water differ in an eminent degree in various species. He tried his experiments on thirty-six species of wood, and the means he employed are very interesting. He had small cylinders turned to the dimensions of four inches in length and somewhat less than a quarter of an inch in diameter. These were first dried in the air and then over sulphuric acid under the receiver of an air pump, until the weight remained constant, and then plunged under water until they ceased to absorb any further moisture. The differences found in the capacities of the various kinds of wood to absorb water were extraordinary. They varied from 9.37 per cent. in the locust-tree of the West Indies to 174.86 per cent. in the horse chestnut. The quantity of water absorbed by wood in its ordinary state varies from 4.36 to 150.64 per cent. These observations will prove of value to manufacturers of furniture, carriages and pianos.

A Remedy for the Eruption Caused by Poison Ivy.—Dr. S. A. Brown, of the United States Navy, believes that he has found a specific for the eruption caused by contact with poison oak, sumach, ivy, etc. This specific is bromine. The eruption never extends after the first thorough application, but promptly begins to diminish. Within twenty-four hours, if the application be persisted in, the patient is entirely cured. There is no pain attending its use; of course, the epidermis peels off as after other treatment. He uses the bromine dissolved in olive oil in the proportion of ten to twenty drops of bromine to the ounce of oil, and applies by rubbing gently on the affected part three or four times a day, and specially on going to bed at night. The oil is to be washed off twice a day with castile soap. The bromine is so volatile that the solution should be renewed within twenty-four hours of its preparation, as it will get out of a bottle, however well corked. It is better to stand the bottle on its corked end, in the intervals of application. When it is desirable to keep the solution any length of time, a glass stoppered bottle will be necessary as bromine rapidly destroys cork.

PERSONAL GOSSIP.

FATHER RYAN, the poet-priest, is very ill at his home in Mobile from partial paralysis of the throat.

MR. HOMER BASS, M. P., one of the famous brewers of that name, was recently married to Hon. Louisa Bagot, daughter of Lord Bagot.

CHARLES H. BELL has been appointed United States Senator from New Hampshire for the extra session, vice Senator Wadleigh, whose term has expired.

QUEEN VICTORIA, it is rumored, has expressed a strong wish to see Canada, and the Prince of Wales is encouraging her to visit both that country and the United States.

THE withdrawal of the British fleet from Constantinople has been delayed in consequence of the desire of the Sultan to give a banquet in honor of Admiral Hornby.

THE Empress of Austria travels imperially. *En route* to England she left Vienna in a special train of two palace cars for herself, five for her suite, and three containing kitchen, etc.

GENERAL SIMON CAMERON celebrated his eightieth birthday at Harrisburg on March 8th. His house was crowded by friends, and the general was in an extremely happy mood.

COUNT VON MOLTKE, Chief Marshal of the German Empire and Chief of the General Staff, on March 8th celebrated in Holstein the sixtieth anniversary of his entry into military service. He received congratulations from all quarters.

IDA LEWIS, now Ida Lewis Wilson, has been appointed keeper of Lime Rock Light Station, at an annual salary of $750, an advance of $250 over the salary heretofore paid, made "in consideration of the remarkable services of Mrs. Wilson in the saving of lives."

THE Earl of Dufferin, late Governor-General of Canada, and now appointed Ambassador to St. Petersburg, has been compelled, in consequence of his removal from England, to resign the Presidency of the Royal Geographical Society, which was recently conferred upon him.

MR. J. MILTON TURNER, ex-Minister to Liberia, is making speeches in Missouri in opposition to the proposed emigration of colored people of that State to Liberia. He advises them to stay where they are, and tells them they can do better in Missouri than in any other country under the sun.

DUKE POZZO DI BORGO, who died recently in Paris, at the age of eighty-seven, had one of the most magnificent residences in France, the Château and Park of Montmesnil, which was destroyed in the war of 1870-71, but since restored. His annual income was about 400,000 francs.

MRS. LOCKWOOD, the first woman admitted to practice in the Supreme Court, is fifty years old, tall, erect, gray-haired, and the possessor of fine eyes. She made her first appearance in the court dressed in a semi-mannish blue cloth sacque, with brass buttons, and a plain velveteen skirt.

SENOR CASTELAR will deliver, in Oxford, in the Summer term, a series of lectures on Spanish literature. The language will be French, for the simple reason that no one in Oxford understands Spanish; but the lecturer will, in his last discourse, make an attempt on his audience in his own native language.

THE vestry of St. Mark's Church, Philadelphia, have elected the Rev. James De Koven, D.D., of Racine, Wis., as rector in the place of the Rev. Dr. Hoffman, who has accepted the position of Dean of the General Theological Seminary in New York. It is not known whether or not Dr. De Koven will accept the position.

PRINCE CHARLES of Roumania has offered to the Sultan a piece of ground in Bucharest, free of all expense, for the erection of a mosque for the use of his Majesty's Mohammedan subjects in the principality. The Mohammedans have not been permitted to have places of worship in Roumania since the principality was made a semi-independent State.

CHAN POY KWAI is the name of an educated Chinaman who is on the way East from San Francisco to deliver a series of lectures on the Chinese problem. He is about thirty years of age and is remarkably intelligent-looking for a Chinaman. He speaks English with such perfection that one would scarcely detect from listening to him that he was not an Englishman by birth.

THE Emperor of Germany has no imperial crown, and Dresden and some other important towns propose to get up one, with the accompanying insignia, as a present on the occasion of his golden wedding, hoping that, as it will be a gift to the sovereign rather than the man, it will be accepted, notwithstanding the announced determination of the Emperor to decline to receive presents on the coming anniversary.

LORD DUFFERIN has already more Orders of knighthood than any English civilian—K.P., G.C.M.G. (Grand Cross of St. Michael and St. George), and K.C.B., and it is quite on the cards that he will be Governor-General of India, and add the decoration of the Grand Cross of the Star of India to the rest. Five English Prime Ministers (Pitt, Peel, Canning, Perceval and Gladstone) in the present century never had any kind of decoration.

THE silver wedding of the Emperor and Empress of Austria will be kept as a festival throughout the empire. In Vienna, especially, a grand procession, in imitation of the mediæval processions, is intended. The Viennese committee have confided the artistic arrangements to Professors Kaudmann and Makart, the architects Sicsit and Wagner, and the painter Schlicher. Professor Makart is preparing drawings of the groups and costumes, for which his studies for his great picture of the "Entry of Charles V. into Antwerp" render him well qualified.

IN addition to the degree of LL.D., conferred upon Mr. John D. Philbrick, Superintendent of Public Schools of Boston, by St. Andrew's University, that gentleman has received several honors from abroad. The French Government made him a Chevalier of the Legion of Honor, and the University of France gave him the decoration of the Golden Palm, with the title of "officer of public instruction." The Golden Palm is the highest honor conferred by the university, and has been given to but one other American—General Eaton, United States Commissioner of Education.

THE Austrian Crown Prince Rudolphe would have accompanied his Imperial mother on her visit to Ireland for some hunting, had not the loyal anxiety of the Hungarians for the safety of the heir apparent induced them to send up a deputation, headed by Count Clam-Gallas, to beg their sovereign not to let his son hunt. Francis Joseph, when this request was made, laughingly said: "My good Count, why do you always let your own son hunt? I see him generally amongst the first in the field." "A Clam-Gallas more or less matters little, your Majesty," answered the Count; "but the youth on whom the future tranquillity and good government of the Empire will rest, should not lightly risk his neck." The promise was at once given, and Prince Rudolphe remains at home.

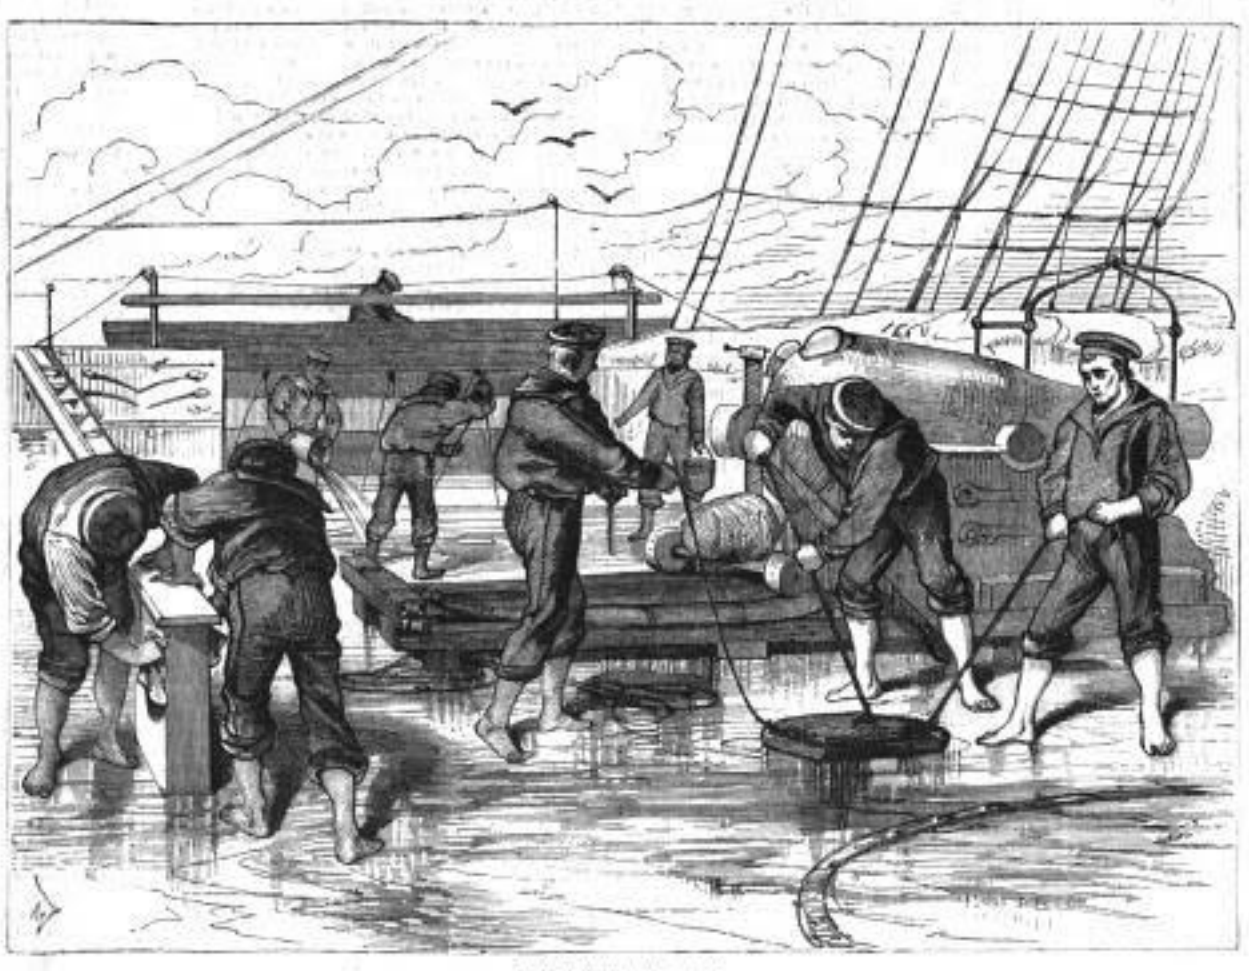
LIFE ON BOARD A MAN-OF-WAR.

IT is the boast of an American man-of-war that a person may roll about its decks in the cleanest and whitest of clothes, without soiling them in the least. That the boast is not an idle one will be believed by visitors to any of our ships, either at the Navy Yards, on foreign stations, or ocean duty. This thorough cleansing of decks and polishing of metal-work is a result, in more senses than one, of the extreme discipline maintained by the executive officer. Not only is it a portion of the regular work, but it is done by members of the crew as a punishment for the infraction of some of the many rules of the ship. In naval parlance, the scrubbing apparatus is termed a "holy-stone"—a designation said by some to have originated from the fact that the work is done on Sundays, and by others because of the numerous prayers said by the sailors over its head. The block is of sandstone of fine grit and about eighteen inches square. There is an eye in each end for ropes, and an indentation on top for the "squilgee" handle. After the deck has been considerably drenched with water, a quantity of sand is scattered over it, and the holystone is set at work with a man at each end, who pull it to and fro, while another guides it with the "squilgee." This monotonous labor is kept up for several hours, until the decks are as smooth and as white as a porcelain plate.



At "down-quarters" during the instruction of the crew at the gun, the assistant-surgeon gives a lesson in practical surgery, so that every man may learn how to relieve himself or assist a comrade when wounded in action, particularly for stopping the flow of blood. The simplest instrument for this purpose is the well-known tourniquet; but when no such method is at hand, quite effective ones may be improvised with handkerchiefs and pieces of wood or metal. The main part of the lesson is to inform the men of the exact location of the great veins in the arms and thighs, by a pressure on which the flow of blood from wounds in the extremities may be readily stopped. A sailor who has exhibited speed, accuracy and skill in affixing the tourniquet, and making and applying a substitute for the usual instrument, is rewarded with the honor of instructing details of the crew, under the supervision of the assistant-surgeon, as shown in our illustration.

There is a common conviction among naval sailors that the whilom glory of the American navy has departed; that the service is rapidly deteriorating through the enactments of landsmen who cannot distinguish a "sick-bay" from the Gulf of Mexico; that even for a season of peace there is little inducement for a man-of-war's man to remain in the service, and that there is absolutely nothing to keep up the old-time spirit which evolved heroes without number. It was a sorrowful day for Jack when, through the influence of the late Admiral Foote, his supply of grog was cut off, although a glorious one for the cause of temperance. In the good old days to stop a sailor's grog was the most horrible of all punishment that could be inflicted upon him, in his estimation, and he was almost inconsolable. He would rather undergo any kind of punishment than be deprived of his grog. To lose his *tot* of corn-juice morning and noon, and when the "*mate-brace* was spliced," was something he could barely endure. It was amusing to see the men in single file as they approached the grog-tub, and to see with what care the tot was lifted so as not to spill a drop of the precious fluid, and to look at the eager eyes, as with a steady hand it was carried to the lips, and, with the head thrown well back, the tot was drained almost as dry as if wiped out with a cloth. It required considerable vigilence on the part of the officer of the deck, Paymaster's Steward and Jack of the Dust, "to keep the veterans from *doubling the tub*."

The punishments regarded as light beside that of "loss of grog" would be esteemed by every one but a sailor of a pretty severe character. Congress has from time to time wrestled with rules for the better government of the Navy, and through these efforts much has been done to elevate the standard of manliness in those who from choice or otherwise have connected themselves with the naval service. By eliminating the degrading and barbaric practice of flogging, Congress recognized the sailor as a member of the human family, and did much to popularize this branch of the service. Yet an "Executive" can find means not only of punishing but of annoying those who may fall under the ban, or whom from dislike or malice he may imagine commits acts of insubordination. There is no limit to the length a martinet may carry his hazing proclivities and just keep within the law's requirements. Still a sailor would submit to any manner of punishment with a considerable degree of resignation if he could only have his ration of grog restored.

A LESSON IN SURGERY—APPLYING THE TOURNIQUET.

HOLYSTONING THE DECK.

LIFE ON BOARD AN AMERICAN MAN-OF-WAR.—SCENES ON THE U. S. S. "TICONDEROGA," DURING A RECENT CRUISE.—FROM SKETCHES BY H. A. OGDEN.

MARY FLETCHER HOSPITAL,

BURLINGTON, VT.

THERE is no higher or better use of wealth than that which contemplates the relief of the suffering and unfortunate. This, unquestionably, was the feeling which inspired Miss Mary Fletcher, of Burlington, Vt., to build and endow the hospital in that city which bears her name, and which was formally opened on the 22d of January last. Miss Fletcher appropriated, in all, for this charity the sum of $150,000. Of this sum $50,000 was for the erection of the buildings, and they have been erected within that limit, and $100,000 was for the permanent endowment of the hospital. She subsequently added $25,000 for the purchase of the site for the institution.

The architecture of the building is very imposing, with its stately portico, the red brick trimmed and varied with black, the massive portals, the generous windows and the tower surmounting all; and the whole structure reflects credit upon the architect—Mr. W. P. Wentworth, of Boston. The main building is of brick, is four stories high, including basement, and is surmounted by a large observatory, the entire height of the building from the top of the weather-vane on the observatory to the ground being 84 feet. The building has a frontage of 80 feet on the north, and 56 feet on the west. On the southwest of the main building is a single story L, 28x40 feet, and a little to the west and connected with the main building by a corridor 75 feet long is the amphitheatre, which has a frontage of 38 feet by 46 feet deep. The amphitheatre is fitted with five rows of elevated, semi-circular seats, and it is in this room that all surgical operations will be performed and the clinical lectures delivered. In this building also are consultation, anæsthetizing and recovery rooms. A few rods from the amphitheatre have been erected three small buildings to be used, respectively, as a laundry, autopsy room and stable. The arrangements are throughout very complete; the patients' rooms especially are most admirably adapted to their intended purpose. The utmost care has been paid to the important matter of ventilation; and while all the building is heated by steam, each room also contains a fireplace and

NEW YORK.—MONUMENT TO THE SOLDIERS OF THE TOWN OF WALLKILL.—FROM A PHOTO. BY E. JESSUP.

grate, thus giving an additional guarantee of perfect purity of atmosphere and also affording a better opportunity for regulating the temperature.

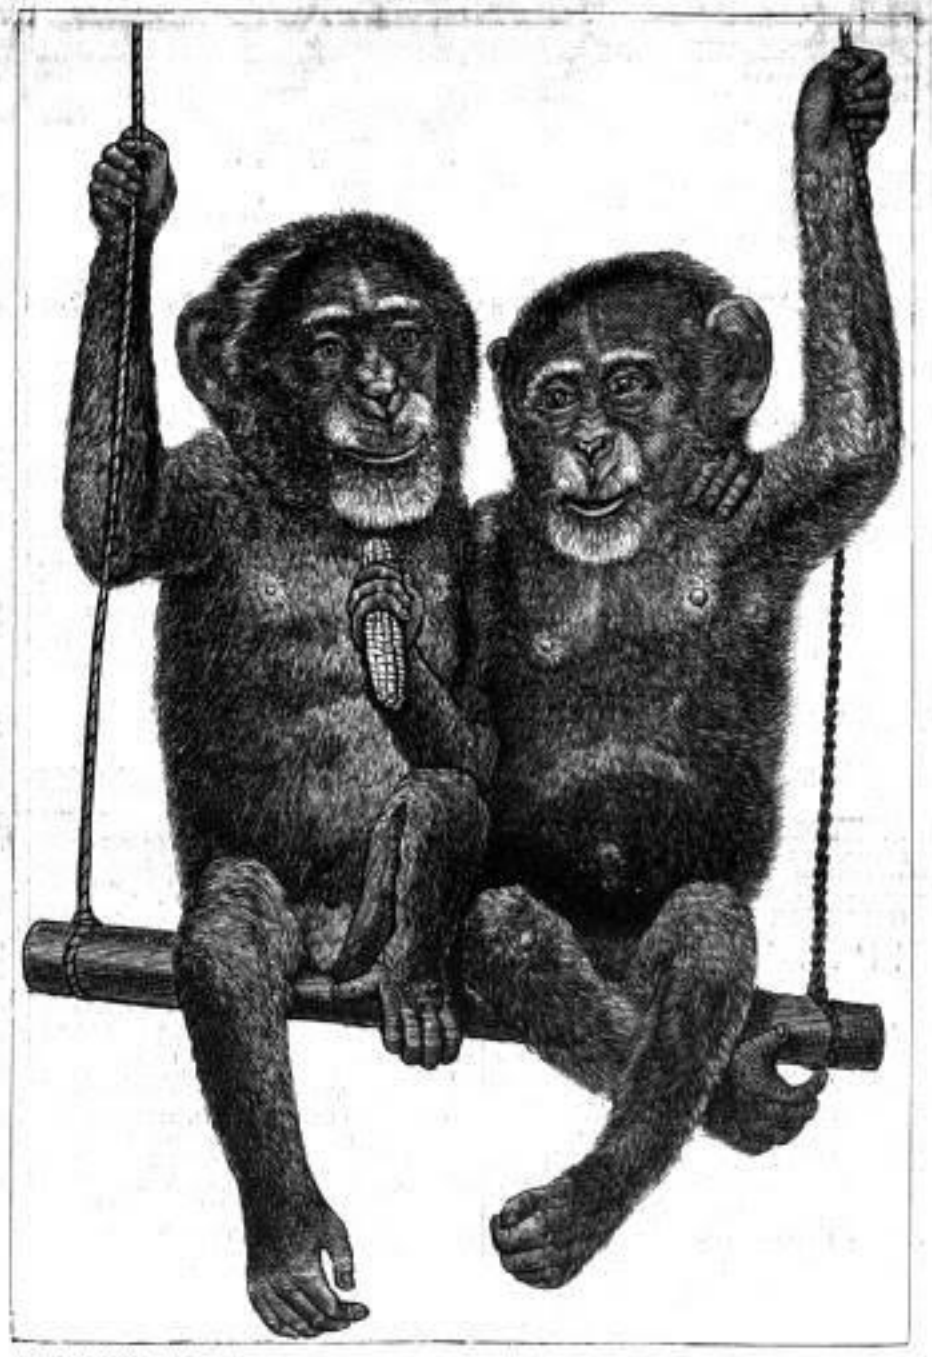
The Fletcher Hospital is designed primarily for Vermont, and it is the hope and expectation of its founder and corporators that it will become one of the great institutions of the State. It is in one sense a *free* hospital, for while those patients able to do so will pay certain rates, according to the accommodations they receive, those from that State wholly unable to pay anything will be received to the extent of the accommodations, under certain fixed regulations. It is not expected that the hospital will, at the outset, be crowded with patients, but that increasing demands will be made upon its accommodations as the city increases in size and population. The plans of the managers look to the future as well as to the present.

THE LATE ADAM AND EVE.

THERE was much genuine grief in Philadelphia over the death of the two remarkable chimpanzees, Adam and Eve, who had been comfortably lodged in the Zoological Gardens. They had given exhibition of rare intellectual powers, and by their suavity, their peaceful and decorous habits, and their marked appreciation of popular notice had endeared themselves to all habitués of the "Zoo." Affectionate and constant to each other, solicitous in a large degree for each other's comfort, cheery, graceful and loquacious in their way, they had become, in the brief period of their domicile, objects of wonder, not only to the general run of visitors, but to medical and scientific enthusiasts. They were the largest of their species which had survived the long journey, and great things were expected of them. Every possible attention was given them, but an unusually severe Winter brought upon one a fatal illness and so affected the other that, with the loss of companionship, life became too dreary to be longer borne, and so was speedily ended. One survived the other but a few days, and the couple had a host of real mourners. The chief were the doctors, who, in manipulating the cadavers, will find little recompense for the loss of opportunity for studying the development of these wonderful "kin beyond the sea."

MONUMENT TO THE SOLDIERS OF WALLKILL, NEW YORK.

THIS monument, now in course of construction, and to be erected at Middletown, N. Y., to the memory of the dead soldiers of the war of the Rebellion, consists of a bottom base eight feet square by two feet thick, a second base six feet square by one foot four inches, a third base four feet nine square at bottom, and molded to an octagon at the top, two feet three inches thick. In each of the four corners is a small cannon, and on the front panel of the base is inscribed the following: "Erected to the Memory of the Soldiers of the Town of Wallkill." The next block consists of the die, three feet six inches at bottom, and diminishing slightly towards the top. The cap is gothic, and in each of the panels is a corps badge. On the mold of this cap next the die are raised polished stars for each State of the Union. Then the pedestal, on the front of which is a monogram, N.Y.S.V. (New York State Volunteers), on a polished shield. Surmounting the whole is a soldier seven feet high, standing at parade rest. Every side of every block of this monument is highly polished, and has raised panels with finely hammered work. The total height is twenty-two feet. The monument is of Vermont granite. It is surrounded by a granite coping and an iron fence. The design is by Mr. O. E. Owen, of Middletown, N. Y.



GAMBETTA.

GAMBETTA became famous and popular all at once in December, 1868, when speaking as counsel for the *Rèveil*, which had been prosecuted for organizing a subscription to raise a monument to the representative Baudin, who was slain at the *coup d'état* of 1851. He delivered an harangue, which was one long, impassioned and scathing philippic against Napoleon III. Most people wondered that the Judges of the Sixth Chamber should have allowed him to proceed to the end of this denunciation unchecked; but one must have heard Gambetta speak to understand the enthralling charm of his oratory. I witnessed a proof of this in April, 1870, when he uttered his memorable speech about the "irreconcilables," plainly telling the Ollivier Ministry that he and his followers only accepted the Liberal concessions of the Empire as a "bridge" towards the Republic. In the ardor of his peroration he swept his hand over the ledge of the tribune and knocked a bowl of beef broth, which had been brought for his refreshment, on to the heads of two ushers beneath. In the case of ordinary speakers this mishap would have raised inextinguishable laughter; but as it was, no one even smiled, and the two ushers wiped their hair, ears, and coats in the mutest resignation. Gambetta came to demolish Napoleon's throne just at the time when a man of his sort was wanted. The generation which had seen the butcheries of December, 1851, had half passed away, and the new generation was inclined to judge of the Empire by its pinchbeck splendor and the great material prosperity it had conferred on the land. Gambetta roused the conscience of the nation by reminding it of the crimes which it had no business to bury in oblivion. He came like Daniel at the feast of Belshazzar, but he did more than interpret the writing on the wall: he himself wrote the "Mene, Mene, Tekel, Upharsin" with the blood of the martyred Baudin. From the first it was never doubtful that his prophecies would be fulfilled. All Paris felt that great events were impending; but Gambetta himself had an idea that he should be suddenly arrested and shipped off to Cayenne. I met him a few days after the battles of Woerth and Forbach, when the Empress Regent had put Paris in a state of siege, and at parting I said: "Au revoir au Capitol." He shook his head and answered that he thought Palikao, the Prime Minister, would try to kidnap him. "All my footsteps are dogged," said he, "and my poor aunt advises me to carry a revolver about with me. But that would do no good." The apprehension of being arrested did not shake Gambetta's nerve or interfere with his spirits. He had not taken to "doing Banting" in those days, and after every one of those copious repasts in which he delighted, and where Burgundy was his staple wine, he would jest in a truly Rabelaisian style about his imperial enemies. One of the mistakes he made at this time (he himself calls it *the* capital blunder of his life) was to trust in Bazaine. He worked with all his might to get that traitor appointed Commander-in-Chief, and he succeeded. If the truth must be told, he was fairly carried away by the seductive eloquence of Madame Bazaine. There was no resisting that dark-eyed little Mexican beauty, who chattered like a humming-bird, and amid weeping, wringing of hands, and ecstatic declarations of patriotism, vowed her husband's willingness to die for his country. "Can't you understand what a soldier like my husband must feel at seeing the army commanded by an oaf like this third Napoleon?" exclaimed Madame Bazaine, passionately (within an hour after she had kissed the hand of the Empress and protested her allegiance to the throne). "Yes," answered Gambetta, and for that one time in his life he was weak.

He is not weak now. I wish I could put into fitting words the intense admiration I feel for Gambetta's proconsulate at Tours and at Bordeaux. Let it be remembered that he had then to contend against the sulkiness of Legitimists, the lukewarmness of Orleanists, the downright disaffection of Bonapartists; and that he yet slew nobody, arrested no one, and caused armies to spring up from beneath the sod, as it were. He saved the honor of France. He committed blunders, of course, but how few! And it must be reckoned to his credit that amidst overwhelming temptations to make money (*e.g.*, the Morgan Loan), he left office no richer than he had been before. After the peace he took up his residence in a third-floor apartment of the Rue Montaigne, where his aunt, Mademoiselle Massabie, acted as his housekeeper, and there he remained until his proprietorship of the *République Française* having made him rich, he removed to more suitable lodgings. The Conservative journals have poked much fun at Gambetta, and tried to paint him as a greedy adventurer; but I do not think it would be possible to find a man less wrapt up in self and more devoted to his party and its principles. The dominant sentiment in his mind is the ambition to do what no one else has been able to do, viz., found the Republic in France. Very good-natured withal, he refuses the co-operation of no one who can help him towards this end, inasmuch that when the Cabinet of the 16th of May was overthrown, and hundreds of placemen were trembling for their emoluments, he kept many of them in their situations, simply because they had sent him supplicatory letters.

VERMONT.—THE MARY FLETCHER HOSPITAL, RECENTLY OPENED AT BURLINGTON.

PENNSYLVANIA.—ADAM AND EVE, THE LATE CHIMPANZEES OF THE PHILADELPHIA ZOOLOGICAL GARDEN. FROM A SKETCH BY GEORGE T. HOBBS.

ARTIFICIAL MINERALS.

FOR a long time past the attention of geologists has been turned to the study of the means by which nature has worked in the production of the rocks and minerals, constituting the crust of the earth. Already a large number of minerals have been produced out of their elements in the laboratories of chemists; and although no commercial value attaches to them, they are of great interest in enabling us to solve many problems in geology. Nature has had ages to work in while the imitations of man are of momentary duration, and hence the size of the productions of the former must greatly exceed those of the latter. Rubies, sapphires, corundums, diamonds and feldspar have been made in considerable quantity. Some time ago M. Meunier, a geologist, informed the Academy of Sciences of Paris that he had been able to produce an artificial brochantite (sub-sulphate of copper) wholly rebellious to the chemist. In exceeding his researches he has now succeeded in obtaining melanochroite, a sub-chromate of lead. By mixing together cold solutions of galena (sulphide of lead) and potassium bichromate, and allowing them to remain undisturbed for many months, he obtained crystals of melanochroite resembling

Digitized by Google

in every respect those found in nature. Although, as we have said, such experiments may have no practical value, they, nevertheless, are a step in advance in the study of the composition of the globe.

OUR PLACES OF AMUSEMENT.

THE event of the week at the Academy of Music was the production of Marchetti's "Ruy Blas," with Madame Marie Roze as the Queen, and Signor Campanini in the title rôle. Society mustered in its full strength, and when the curtain rose every available seat was occupied by the representatives of musical criticism, and the lovers of good music at its best. The libretto is an adaptation of Victor Hugo's thrilling romance, the score the composition of Filippo Marchetti. The opera was originally produced at La Scala, Milan. Rich in clearly defined melodies, the harmonies are delightfully tinted, and the ensemble exceptionally brilliant, while the martial music may be described by the hackneyed but appropriate term—soul-stirring. Never did Madame Marie Roze sing more sympathetically; never did she exhibit her high dramatic powers more vividly; never did the subtle charms of her finished acting and beauteous presence appeal more intensely. She was every inch a queen, a right royal beauty, combining the *hauteur* of a Medicis with the womanly softness of Faria. The duet "Dolce Volutia" was rapturously encored, the recalls being again and again repeated; while her rendering of the ballad "O Mia Dolce Alemagna" and the "Larda Durata" achieved signal triumphs. Signor Campanini was at his very best, and his acting would have done no discredit to his great master, Salvini. In the last act, the snatching of the sword from his relentless, merciless foe, and his subsequent death agony, were simply superb exhibitions of dramatic powers. Madame Lablache made much of a small part, enacting the duchess duenna to the life. The manner in which the opera was put on the stage does infinite credit to Colonel Mapleson. The dresses were magnificent and true to the Hidalgo period, while the court scene with its march past was a veritable pageant. "Ruy Blas" is destined to become immensely popular while it has added additional and special lustre to the management.

At Wallack's a mere "Scrap of Paper" is drawing large audiences. This adaptation of Sardou's "Pattes de Mouches" is crisp as a new bank note, and bright as a Jablakoff candle.

"The Banker's Daughter" having passed the Rubicon of one hundred nights at the Union Square, bids fair for a phenomenal score.

At Fifth Avenue "Thro' the Dark" has scored a genuine success. The plot is intensely dramatic, the situations full of the keenest and most vivid interest. Not for one moment does the attention flag, and when light and happiness are at length happily arrived at "Thro' the Dark," the feeling of the audience is one of intense relief. The management has mounted the piece in a manner to justify the highest encomiums, and the cast is exceptionally a strong one.

"Hardly ever" has a ship encountered such favorable weather as the "Pinafore." The theatrical ports she is now unloading at are the Lyceum, the Standard, and the Broadway. The crew is in admirable condition, and the cargo which is nightly sent ashore well worthy of investment.

"The Black Crook" has been revived at Niblo's, "La Cigale," at the Olympic, while at Booth's "The Little Duke," the maddest, merriest of opera bouffes, was produced on Saturday night, more of which anon.

"Engaged," Mr. W. S. Gilbert's burlesque comedy, is doing its sparkling gently. Its tone is refreshing and thorough, whilst the sparkle of its dialogue and its charming *mise en scène* render a visit to the Park Theatre a coveted enjoyment. The acting of Agnes Booth marks the true *artiste*. It is natural, devoid of forced effects, and exquisitely sympathetic.

FUN.

WHY was a mother of one of the old Peruvian rulers like a piece of rubber? She was an Incaleulator.

THE proprietor of a bone-factory announces that persons leaving their bones with him can have them ground at short notice.

BRIGHT LITTLE GIRL: "The robbers can't steal my mamma's diamond ear-rings 'cause papa hid them." *Visitor*: "Where has he hid them?" *Little girl*: "Why, I heard him tell mamma he had put them up the spout; and he guessed they would stay there."

A CITIZEN went into a Norwich hardware store the other day and inquired, "How much do you ask for a bath-tub for a child?" "Three dollars and seventy-five cents," was the reply. "W-h-e-w!" whistled the customer. "Guess we'll have to keep on washing the baby in the coal-scuttle, till prices come down."

THE sisters had not been on the most loving terms for some time, when one day a lady visitor praised the good looks of the offspring of one. "How much he looks like Mrs. Black," said she, "especially when she laughs." Mrs. Black was expressing her pleasure at the compliment implied, when the *enfant terrible* blurted out, "Mamma says I look like a fool when I laugh!" Tableau.

TO KNOW whether a garden has been planted or not, a Western paper gives the following rule: "If one forgets whether beds are planted or not, a good way to tell is to turn a stray cat into the garden. If the beds are planted, the cat will proceed to race round and dig into them, and act as if it had relatives in China whom it was anxious to get at; while, if they are not, it will sit down calmly in the path and seem to be meditating on the progress of missionary work in Africa. A cat's instinct seldom deceives in this matter."

A WRITER on household adornment says: "One can easily transform a long and uninteresting parlor into a series of small, artistic rooms, full of sentiment. Gather there easy-chairs, footstools, lounges strewn with pillows, workstands, writing-tables, jardinières, bits of bunt furniture, screens, etc." Oh, yes: these trifles cost comparatively nothing. And you might also bring up the wood-horse and saw, and the washing-machine, and fill in with two or three rosewood pianos, and strew a few coal-stoves over the floor, and hang the wash-boiler and several iron pots on the wall—and you will be surprised at the effect.

THURBER'S RELIABLE CANNED GOODS.

GREAT progress has been made within a few years in the art of Preserving Fruits, Vegetables, Fish and Meats in tins, and in consequence the consumption has largely increased. As yet, however, canned goods are not generally thought to be "fresh," and some brands are not, perhaps, entitled to be so considered. Those packed by us, however, are Hermetically Sealed at the sources of supply, when they are in the best possible condition, by a process which preserves the much-to-be-desired fresh, natural flavors; and they are really in better condition, fresher, more palatable and wholesome than many so-called "fresh" articles which are exposed for sale during considerable periods of time in city markets. All goods bearing our name are guaranteed to be of superior quality, and dealers are authorized to refund the purchase price in any case where consumers have cause for dissatisfaction. It is, therefore, to the interest of both dealers and consumers to use THURBER'S BRANDS.

H. K. & F. B. THURBER & CO.,

Manufacturers of and Dealers in Food Products, New York.

THE PHYSICAL PARADOX.

IT has been said that "the blood is the source of life." It is as truly the source of disease and death. No life, that is to say, no healthy tissue can be generated from impure blood, no organ of the body can normally perform its functions when supplied with impure blood. The fluid that should carry life and health to every part, carries only weakness and disease. Blood is the source of life only when it is *pure*. If it has become diseased, it must be cleansed by proper medication, else every pulsation of the human heart sends a wave of disease through the system. To cleanse the blood of all impurities, use Dr. Pierce's Golden Medical Discovery and Pleasant Purgative Pellets, the most effectual alterative, tonic, and cathartic remedies yet discovered. *They are especially efficient in scrofulous diseases.*

THE great gift book sale of A. W. Lovering, the book-king of Boston, is a marked feature of the times. Its very existence in these hard times is a proof of the success which will ever attend the judicious exercise of business energy, commercial honesty and strict performance of promises. Mr. Lovering has been honorably and universally known in Boston for over twenty-five years, and during that time has deservedly won the esteem and confidence of the community for reliability, promptitude and liberality. His colossal gift sale is an acknowledged success; his gifts are awarded with the utmost impartiality (pianos, watches and diamond rings, stretching far into the thousands, having already been given away). All we can say is, send for his large catalogue explaining the modus operandi of the sale.

THE celebrated instruments of Daniel F. Beatty, the great piano and organ manufacturer of Washington, N. J., are unrivaled in purity of tone, action, and excellency of finish, being the result of years of indefatigable labor, the aim of which has been to make only the very best, and sell at the least possible profit. This course has resulted in the name of Beatty becoming a household word in every State and Territory of the Union and Canadas, and familiar to numbers of the residents of England, Germany, France and Italy. The special offers of Mr. Beatty, which appear in our columns to-day, mean just what they say. The instruments are all and more than is claimed for them, while the prices are barely manufacturer's cost, for Mr. Beatty is determined to place his unexcelled instruments in the homes of the entire music-loving population. No one contemplating the purchase of an organ or piano should fail to take advantage of his offers, as a neglect to do so will be a matter of regret. Remember these offers are only good during the next thirty days. The illustrated catalogue of Mr. Beatty is detailed and full of information interesting to every one. It will be mailed free on application. Send for a copy to DANIEL F. BEATTY, Washington, N. J.

THOUGH the ST. NICHOLAS hotel was built more than twenty years ago, New York to-day has nothing to surpass it. The superb luxury and completeness of its accommodations are beyond cavil, from its cuisine down to the most trifling detail. The stranger seeking a temporary home in New York here finds his beau ideal of hospitality. The rates have been reduced to $3.50 per day.

INDIGESTION, DYSPEPSIA, nervous prostration, and all forms of general debility relieved by taking MENEMAN'S PEPTONIZED BEEF TONIC, the only preparation of beef containing its *entire nutritious properties*. It is not a mere stimulant like the extracts of beef, but contains blood-making, force-generating and life-sustaining properties; is invaluable in all enfeebled conditions, whether the result of exhaustion, nervous prostration, overwork, or acute disease; particularly if resulting from pulmonary complaints. CARWELL, HAZARD & CO., Proprietors, New York.

Positive Cure for Bunions and Corns, $1. MR. FRIEMS, Oakland Valley, N. Y.

Blair's Pills.—Great English Remedy for Gout and Rheumatism. All Druggists have them.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast-tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—See article in the *Civil Service Gazette*.

Important to Mothers.

MRS. WINSLOW'S SOOTHING SYRUP is the only thing that mothers can rely upon for their children. It corrects acidity of the stomach, cures wind colic, regulates the bowels, and gives rest, health and comfort to mother and child. During the process of teething its value is incalculable. It softens the gums, reduces inflammation and allays all pain, thereby giving rest to the child and comfort to the mother.

ORGAN BEATTY PIANO

BEST IN USE — BEST IN USE

$340 ORGAN FOR $85.

(*NEW STYLE, NO. 1685.*)

BEATTY ORGAN Take notice. Upon my return from Europe in 1878 I advertised largely "Beatty's offer for this month. This beautiful Piano Upright Parlor Organ, style No. 1685, thirteen Stops, two Knee-Swells, three sets of Reeds, in solid black walnut case, with handsome French veneering, laid on solid walnut. Weight when boxed, about 300 pounds; height, 58 in.; depth, 24 in.; length, 30 in.," etc. So great was the demand for this beautiful Piano Upright Parlor Organ our men at the factory were compelled to work until 12 o'clock P. M. to fill orders. Monopolists' price for this instrument, about $240.00.

MY PRICE, ONLY $85.00. In order to meet the public demand this unparalleled offer is extended until further notice. We have made a judicious and large CASH purchase of the best material which enter into its construction, at an extremely low price, and are thus enabled to continue to sell this beautiful new style at the unprecedented price of only $85. Order at once, as every Instrument when introduced into a new locality sells others, as it becomes a standing advertisement for me in your own home. This is that I am enabled to sell this instrument, in order to have it introduced, at this very low price.

ORDER NOW. To assure yourself that you can secure these unparalleled offers you must order now, as I cannot guarantee to keep them down thus low for any definite time. I may be able to do it only a single month or I may be able to continue it six months or a year. One thing is certain: the price never will be lower, and may at any time be higher; so if you have thoughts of buying a Piano or Organ in the near future you must order now to assure yourself of these splendid offers. Large Illustrated Newspaper, with much valuable information about cost of Pianos and Organs, sent FREE. Address

DANIEL F. BEATTY, Washington, New Jersey, U. S. America.

$1,000 PIANO FOR $255.

(*NEW STYLE, NO. 2023.*)

BEATTY PIANO Square Grand. New style No. 2023. Magnificent rosewood case, three strings, seven and one-third octaves. Beatty's full agraffe iron scale. All round corners, and back finished same as front. French grand action. Beautiful fret desk. Handsomely carved pedals. Heavy rosewood moulding around the entire instrument. Fully warranted for six years. Sent anywhere on half month test trial. ☞ No money required until you have fully tested the Piano at your own home. Order at once. If you are not entirely satisfied with the instrument you are under no obligations whatever to keep it. Monopolists' price, about $1,000.

MY PRICE ONLY $255

Thousands Now in Use that are

☞ GIVING ENTIRE SATISFACTION.

Upon my return from Europe in 1878 I advertised largely "Beatty's offer for this month. This beautiful Piano Upright Parlor Organ, style No. 2023, three strings, seven and one-third octaves, Beatty's full agraffe iron scale, all round corners, and back finished same as front, French grand action, beautiful fret desk, handsomely carved pedals, heavy rosewood moulding around the entire instrument, fully warranted for six years,

FRANK LESLIE'S
ILLUSTRATED NEWSPAPER

Entered according to the Act of Congress, in the year 1879, by FRANK LESLIE, in the Office of the Librarian of Congress at Washington.

No. 1,227—Vol. XLVIII.] NEW YORK, APRIL 5, 1879. [Price 10 Cents.

THE EXTENSION OF AMERICAN TRADE.

Visit of the American Industrial Deputation to Mexico.

THE exhibition of American and Mexican products at the Mineria was thronged daily by all classes of the residents of Mexico, from the *zarape*-clad Indian followed by his wife, the stereotyped infant hammocked in the stereotyped *rebozo* on her back, to the high-hatted, high-shirt-collared, high-heeled swells, their señoras and señoritas either in raven-black, which becomes them, or in gaudy, ill-sorted, defiant colors, that become them not. Why will the Mexican swells persist in wearing heels high as Popocatapetl? Why will they, in walking, wobble like a Chinese lady of seven buttons? Why do they imagine that a big toe bulging upwards, like a mushroom out of mother earth, is a thing of beauty? What a crop of bunions are being raised for Mexico during this year of grace—bunions as large as lemons or *granadillas!* On Sunday it was next to an impossibility to gain admission to the Mineria, so great was the throng; yet, it was a gentle, passive crowd, that moved sluggishly onward like the waters of the "lazy Scheldt." The "chromo" exhibit possessed a strong fascination for the Mexican, especially such of the pictures as betrayed a religious or ecclesiastical tendency. The Pope was snapped up in a twinkling, and a saint, no matter how remote in the litany, sold at a very respectable figure. "If I only had a chromo of the Virgin of Guadalupe, my fortune was made!" sighed Mr. Kelly, the exhibitor. The Mexicans are not very severe or accurate art-critics. I saw "An Indian Summer in the Adirondacks" sell for a scene near Jalapa, and a likeness of Peter Cooper realized a dollar, under the impression that it was that of Cardinal Manning attired in secular raiment. Mr. Kelly returns to Mexico for the exhibition in January next, to bring with him several thousand chromos of the Virgin of Guadalupe, with as many of Hidalgo, since in every homestead, from the palace on the Plaza Mayor to the sugar-cane cabin out in the tawny sands, are representations of the Virgin and the patriot to be seen—rude, ill-drawn daubs, to be sure, but to the present hour regarded by these simple people as specimens of the very highest art. I have already mentioned the exhibit of Messrs. Rogers, Cooper, and Davis respectively. Plows shone very conspicuously in the Mineria, and every one exhibited was bought up instanter; and Mr. Dickinson, who represented Deere & Co., Moline, Ill., informed me that he could have sold his entire exhibit four times over. Harrison & Co., Belleville, and H. H. Smith & Co., Pekin, Ill., displayed drawings of wagons, plows, threshing-machines and other agricultural implements. Porter & Mowbray, of Winona, Minn., exhibited six different classes of flour. George S. Bowen, of Chicago, made a goodly show of cotton prints from the Harmony Mills, at Cohoes, N. Y.; Richardson & Co., New York; and Lockwood & Co., Waterville, Me. Nails were strongly represented by the Riverside and Benwood Iron Works of Wheeling, W. Va., and the Bellair (Ohio) Works. Wood & Co. and Park Brother & Co., through C. L. Umbstaetter, exhibited sheet-iron and cast-steel; while Gill Brothers & Co., of Steubenville, Ohio, displayed a large assortment of glassware.

Continued on page 70.]

MEXICO.—WATER-CARRIERS AT THE FOUNTAIN IN THE PLAZA SANTO DOMINGO, CITY OF MEXICO.—FROM A SKETCH BY H. A. OGDEN.

"THREE STROKES; Or, THE SECRET OF COZY DELL." It began in No. 722 of FRANK LESLIE'S CHIMNEY CORNER. Read De Mille's brilliant story.

Digitized by Google

of Germany, with a numerous suite. She was received at the west door by the Lord Chamberlain.

The bridal procession was immediately formed, and moved up the nave to the choir, the train of her Royal Highness being borne by eight unmarried daughters of dukes, marquises and earls. As the procession passed up the chapel, Handel's "Occasional Overture" was given on the organ. The bride was conducted to a seat in the choir on the left of the dais, and her supporters to seats near her, while the bridesmaids stood behind, and the Lord Chamberlain and Vice-Chamberlain next to them. The bride was given away by her father. The body of the chapel was occupied by about 150 Ambassadors and foreign Ministers with their families, Cabinet Ministers, members of the nobility, and distinguished soldiers and sailors.

At the conclusion of the service the choir sang the "Hallelujah Chorus," and Mendelssohn's "Wedding March" pealed forth as the bride and bridegroom left the chapel, while in the long walk a salute of guns announced the termination of the ceremony. The royal family and guests left the chapel in the reversed order in which they entered it. All the royal personages returned to the Queen's entrance to the castle, where the registry of the marriage was signed in the green drawing-room, and duly attested by the Queen and the other distinguished personages invited to attend for that purpose.

The bridal dress of the Princess Louise Margaret of Prussia is of heavy white satin, and the low bodice is embroidered with lace four inches in width. The skirt is ornamented with lace twelve inches in width, and there is attached in front, a little towards the right, a small bouquet of myrtle. The train is thirteen feet long, and is covered by a rich lace flounce, the width of which is three feet and a half, and upon which is laid a branch of myrtle. The bridal veil is a square of lace blossoms, about ten feet and a half square, which will be fastened to the top of the crown, enveloping the princess. All the lace is of the finest point d'Alençon; the design, modern in style, representing a fantastic combination of oranges, myrtle and roses. The bridal handkerchief is made on the same pattern, and has in one corner the interlaced name of the bride and in the other the Prussian eagle. The bridal wreath, the orange-blossoms and leaves, will be added in England. The recent bereavements in the two royal and imperial families have rendered several black *robes de cour* for the princess indispensable. Among these are a velvet dress, bodice, and skirt richly embroidered with pearl lace, and a dress of rep, the satin insertion of which is adorned with rich bead embroidery. The traveling costume is gray, braided with soutache. The dresses of the bridesmaids are most costly and rich.

The princess was born July 25th, 1860, and is the daughter of Friedrich Karl, the "Red Prince," nephew of Emperor William. In form she is tall, has gray eyes, and a profusion of fair hair; though not considered beautiful, is very attractive, and has numerous accomplishments, being particularly skillful with her pencil.

The groom, Prince Arthur, Duke of Connaught, was born on May 1st, 1850. He was educated in the Woolwich Military Academy, and ten years ago was commissioned a Lieutenant in the Royal Engineers, subsequently receiving commissions in the Royal Artillery and in the Rifle Brigade. In May, 1874, he was created Duke of Connaught and Strathearn and Earl of Sussex. The match is said to be one of love on both sides.

WHAT THE TELEGRAPH BROUGHT.

THE south wind was sweeping hot and fierce across the island. The ragged branches of the sparse cedars and willows were all bent out northwards, stretching away from the ceaseless sweep of this wild Summer wind that for days and weeks had given them no rest. In the northwest the sun was sinking into a low bank of mist, through which his rays streamed, glorious with crimson and gold, upon the shoals and sandbars of the Sound, upon the lighthouse in the harbor, upon the long line of great windows in the old Government hospital, high up on the bank, and upon the dark figure of a young girl, hurrying on before the wind, which blew her clothing wildly before her, as if to hasten her rapid footsteps.

She was walking straightforward towards the sunset, heedless of the sinuous path which wound among the ragged grass tufts and the coarse reeds of the bank. The sunlight, streaming into her eyes beneath the flapping border of her sun-bonnet, did not dazzle her.

She gazed fixedly upon it, with steady, wide-open eyes, from which another light flashed out — a light fierce and restless, more in keeping with the wild spirit at her back than with the calm glory before her. Once she paused and wrung her hands as if in pain. "Oh!" she said, with a long, low, shivering breath; and then she went on, striding fiercely through the water, to where a little boat was moored. Loosening this, she sprang in, and, taking an oar, sculled the little craft with dexterous hand out among the low breakers of the Sound, straight onwards through the rosy pathway of the dying day.

Free of the shoals and sandbars of the harbor, she laid aside her oar, and, dropping her arms upon her lap, buried her face in them.

All the past was sweeping rapidly over her memory in the lonely twilight — the long dreary years since her stepmother's second marriage with the rough old port-collector had brought them to live upon this southern island; the desolate discomfort of the abandoned Government hospital, which was their home; the sordid cares and weary drudgery which filled up her life; the dull stagnation into which her mind was settling, and the wild longing after something other than all this which was born of old remembrances of a happier time, and of the teachings of that gentle father who had so early faded out of her life; the struggles to raise herself out of the depths of ignorance into which her fate had plunged her. And then the ray of light that had fallen suddenly athwart the gloom of her prison-house. That bright face once more shone upon her; those blue eyes once more smiled into hers; that cheery voice again echoed in her ears. "Miss Fettie, think of me henceforth always as your friend."

She went over it all again—that dreary evening when, the housework done, the children in bed, and the stepmother gone out with her husband for a gossip with a neighbor, some sudden impulse had sent her back to her books, and she had sat in the kitchen, working out a "sum" by the light-wood blaze. She heard again the purring of the fire, and the clicking of the telegraph in the next room; and then the silence, the opening door, the steps upon the kitchen-floor, and the bright young presence stood again before her. It was only the new telegraph-operator, but to her the sunny-haired boy, with his rosy, dimpled cheek, his full red lips, and those great blue eyes, shaded by long lashes—to her it was an Apollo, a god, a being divine, which irradiated the dark kitchen with his presence.

And he sat down beside her in the firelight, and had taken the slate from her hands, and revealed the hidden mysteries of the "sum"; and she had grown bold to tell him of her aspirations and her disappointments, and how, with no sympathy, no help, no friend, the hope of an education was fading away with despair; and he had cheered her and encouraged her, and promised her such help as he could give—promised with a laugh and a blush, for he himself was not educated, he said—not as he had hoped to be. And then the heavy tread of the stepmother had sounded upon the long piazza, and the youth had risen to go, holding out his hand for a firm, warm, good-night clasp, with those words which thrilled her yet, in the misty darkness, "Miss Fettie, think of me henceforth always as your friend."

The weeks that followed passed in rapid review; weeks in which the promised friendship had become the joy of her life, and her most secret hopes and aspirations had unfolded themselves before him as a flower unfolds to the sunlight. And then the cloud had gathered—so suddenly, so darkly—the girl shivered as she thought. It was only a few words to her stepmother. "Would Mrs. Corson consent to take a few boarders for the Summer weeks? His mother and sister, and—and—a young lady," and the bright, blue eyes had fallen for a moment, and the fair cheek had been suffused with a girlish blush, and the light had died out of Fettie's life. And all to-day he had been gone away to meet them, on the little sailboat which carried the mail, and Fettie had been preparing the rooms for the mother and sister and—the young lady, who had brought a blight upon her life, and all day the wild fierce grief had been gnawing, gnawing, and now——

There was a shout, a scream, a rushing of the waters. The girl sprang to her feet Close upon her was the white-winged sailboat; the figure standing upon the bow—how well, in that sudden instant, she knew it! The voice that cried to the man at the helm—even in this swift moment how it thrilled to her heart, as the crash, too late foreseen, struck down the little boat, and the cold waters engulfed the girlish form! How was it that she knew, as the water closed above her head, that he had sprung after her? What swift intuition taught her that he would save her life? A strange, wild sweetness surged over her heart as consciousness faded away from her in the watery depths.

She knew when she awoke that she was lying in the sailboat, and that his mother was looking upon her, even in that moment, with a cold repulsion, as one who had jeoparded her son's life. She roused herself proudly from the deathly weakness which almost overpowered her, and dragged herself to the stern, where Jack Abbott, the mail-carrier, sat, holding the tiller in one hand and the sheet in the other. He would have leaped into the water to save her, too, she knew full well, more gladly, perhaps, than the other, if his duty and care for her as well had not kept him at his post; but that thought only chilled her heart the more. She made no reply to his rough, earnest congratulations and wonderings, and sprang upon the shore as the keel grazed the sands.

"Let me go, Mr. Ralph!" she cried, almost fiercely, as he sought to detain her.

"Do not stop the girl, Ralph," said his mother. "She is wet through, and must hurry home to change her clothes; and you, too, as well."

The words were not unkind, but the tone—ah! how it chilled her, beyond even the chilling of the wet garments, which clung to her and swept the sands about her feet, as she hurried home.

How for a time she cowered in the shadows of her room, tormented by troubling thought. But she had not even seen their faces in the darkness. She must know what they were like. She could not wait, and she rose and dressed hastily and went out upon the broad piazza.

Through the wide, curtainless windows of the telegraph-room the light-wood fire shone bright. She crept to the window and looked in. The mother sat in the rude, easy-chair, facing the window, her arms around her boy. Not cold and proud now the face which gazed with such unutterable fondness upon him, as he smiled up into her eyes, or turned to play with the long curls of his little sister's chestnut hair. And that radiant presence which confronted her without knowing it, ah, how bright it was! It dazzled Fettie's hot, glazed eyes as the sun-blaze had been powerless to do. And yet how serenely fair was the beautiful creature who leaned against the mantel, looking down upon the group of mother and children.

She had not stirred nor uttered a sound, but he knew that she was there, and, rising, came quickly out to her, before she had time to flee away.

"We were talking of you, Fettie," he said; "come in and see my mother, and Ethel and Alice," and he led her unwillingly along. How could she resist the firm clasp of that kindly hand?

The weeks which followed were ages of torture to the girl. The visitors were kind to her—more than kind—recognizing in her that heart equality with which circumstances have nothing to do; it was not their fault that she suffered, yet how should she not suffer? Constantly busy about them in the necessary offices which fell to her lot, not even their genuine and unfailing courtesy could bridge over the gulf which had been fixed between them.

Little Alice made much of her, delighting to help her in her homely tasks, and not permitting the service which it was Fettie's duty to render in her room. Ethel was even caressing in her manner to her, full of little tendernesses and sympathetic pettings; but whom did Ethel not caress? Even the children, dull, uninteresting little mortals that they were, fell into a share of her pettings, and Alice, Mrs. Montagu, Ralph even, she tended and fondled with almost a mother's affectionate care and tenderness.

Mrs. Montagu took a kind interest in Fettie's struggles, lending her books and advising her about her studies; but it needed no prophet's vision to see that her heart was set upon a union between Ethel and Ralph, and a less sensitive soul than Fettie's would have felt, beneath all her kindness, her shrinking from any association between the island girl and her son. Fettie avoided Ralph with a proud disdain of any imputation of interfering with his mother's plans; indeed she would gladly have kept aloof from them all, but they followed her with kind intentions, glad, they thought, to throw a little brightness across her dreary life.

They wanted her to go with them upon the Sound one lovely moonlight evening, but Fettie had been deaf to Alice's entreaties, to Ethel's little blandishments. "I want to study to-night," she had said; and then Ralph, coming out upon the piazza from his telegraph office, had entreated, "Do come, Fettie, I must have one able seaman among so many helpless passengers;" and Mrs. Montagu had added, "The studies will go on all the better for a little play, Fettie," and Fettie could not but yield, could not but be flattered by the words and smile.

Ethel had brought a guitar to her island home, and she used to play upon it when they went upon the water in the moonlight—playing accompaniments to Ralph's singing, or to glees or choruses in which they all joined—all but Fettie, who sat alone at the tiller, guiding the little boat. "It would have been such a pity to have no music," Ethel said. Why should not Ralph hang over her as she played in the moonlight, humming little bits and refrains of airs out of that other world of theirs into which Fettie might never enter, smiling up into his dark blue eyes, from under her long golden lashes? And then, as her heart was throbbing, and her eyes burning with grief, he had left them all and come over to her; his hand had touched hers as he took the tiller from her, his eyes had darkened with that soft, sudden smile which was not—with a wild throb of joy her heart told her—not as he had smiled upon Ethel—oh, no, not like that!

The warmth of that smile played around her all the night. She awaked in the morning from dreams sweet, tender, vague, she knew not what; they had faded from her, but their gladness remained. All day she went about her work in a bright halo, tremulous, misty, which shut her off from the harsh distastefulness of duty. She kissed Alice for the first time when she ran to beg her to join them in their afternoon walk, and went to her room to dress, laying out the delicate sprigged calico that Ethel had showed her how to make—the first pretty dress which she had had for years. Would he notice the change in her? Would his eyes soften again with that sudden smile when he saw her? And while she was smiling into the glass which told her the flattering tale that she had never even dreamed of before, she heard the banging of the great hall-door, the voices on the piazza, the footsteps on the path—they had gone away and forgotten her. Yes, there they went, Alice skipping at her mother's side, Ethel and Ralph following more slowly, their heads bent down and talking earnestly—they had forgotten her! With a wild passion of grief she threw herself upon the bed, burying her face in the pillows; then as the voices of the children called to her along the hall, she caught up her sun-bonnet and rushed out, taking the direction opposite to that in which the others had gone.

There was neither tree nor house along the white, sandy road which led inland to the scattered village, and the south wind swept heavily against her, laden with burning sand. Weary with its wild battling and with the tempest of her emotions, she came upon a bare, unpainted, barn-like structure—a sort of rural church. The door stood open, and by a sudden impulse the girl ascended the steep steps and went in. Fettie's religious nature had never been aroused, but at this moment, in her lonely struggle of feeling, the open church door appealed to her, with an offer of refuge, companionship, help. Oh, if she could fly away, and be at rest!

Yet, when she entered, the bare, uncarpeted floors, the rough wooden benches, the stained walls, struck to her heart with a cold chill; no comfort here—no hiding for her weary head from the pitiless storm which beat her. Only at the end of the long room the raised platform and red-curtained pulpit seemed to offer her shelter and seclusion. It was with a half-frightened, guilty feeling, as of one unconsecrated, who treads some hallowed grounds, that she threw herself upon the carpet of the platform, behind the protecting curtains. And then, by a natural revulsion of feeling, the waves of trouble rolled away, a worn-out peacefulness stole over her, in which she lost all consciousness of herself.

The sound of voices came to her through the broken window behind the pulpit, as in a dream.

"To break Ethel's heart for this girl! My dear boy, you do not know what you are thinking of!"

"Ethel does not love me, mother—not as you mean. We love each other dearly; she is the sweetest girl in the world—but Fettie!"

"Dear child, you do not know your own heart. This is only a temporary fascination. Come away from the island—come home with us, and you will soon forget it."

"Oh, mother, mother, mother! it is you who do not know. I will go away, if you say so, but I cannot give her up. I have loved her since the first day I saw her."

There were footsteps upon the bare church floor, and then the soft voice went on:

"My boy, consider. She is noble and good, I grant, but think how different from all that you have been accustomed to. Think of her want of education; think of her relatives—would you wish to make them yours? She is attractive here from the very contrast of her surroundings; but place her among superior people, you yourself would be the first to feel her deficiencies. No man's love is strong enough to bear such a strain. Your life would be ruined, and hers."

She was interrupted by a vision which stood before her—a vision of dark, flashing eyes and burning cheeks, and a voice cried, with a sharp intonation of pain:

"Do you think I would let his life be ruined? He need not go away—I will go!" and, like a flash, she was gone.

In the blind agony which possessed her, she did not see that he had started up to follow her, but had been held by his mother's detaining hand; she saw nothing but the white road along which she flew, hurried on by her desperate thoughts. She would leave the island; she would go to Beaufort and get a service-place. No one should say that she had ruined his life. What need to contrast her with those superior beings of another world? Had she asked to be made their equal? And she was not inferior!—she was not!—she was not! She felt in her soul that she was of their kind—not like these others among whom she lived. But she would go away and earn her bread by hard work; no one should say that she had ruined his life.

She had reached the house and thrown herself upon her bed. Only a few moments' rest from this throbbing, bounding pain; only a few moments, and then she would go away. In the midst of her torture she remembered that the tide would serve at nine o'clock. Jack Abbott would be going with the mail. He would be good to her and would let her go with him to Beaufort to get a place.

The room grew dark and light again, with the broad band of moonlight on the floor, while she lay there, beaten by the tempest of her grief. If they had called her she had not heard it; but now a light footfall sounded on the floor, and cool, soft finger-tips were laid upon the hot cheeks, buried among the pillows.

"Fettie, dear," said Ethel's voice, "look up; I want to tell you something."

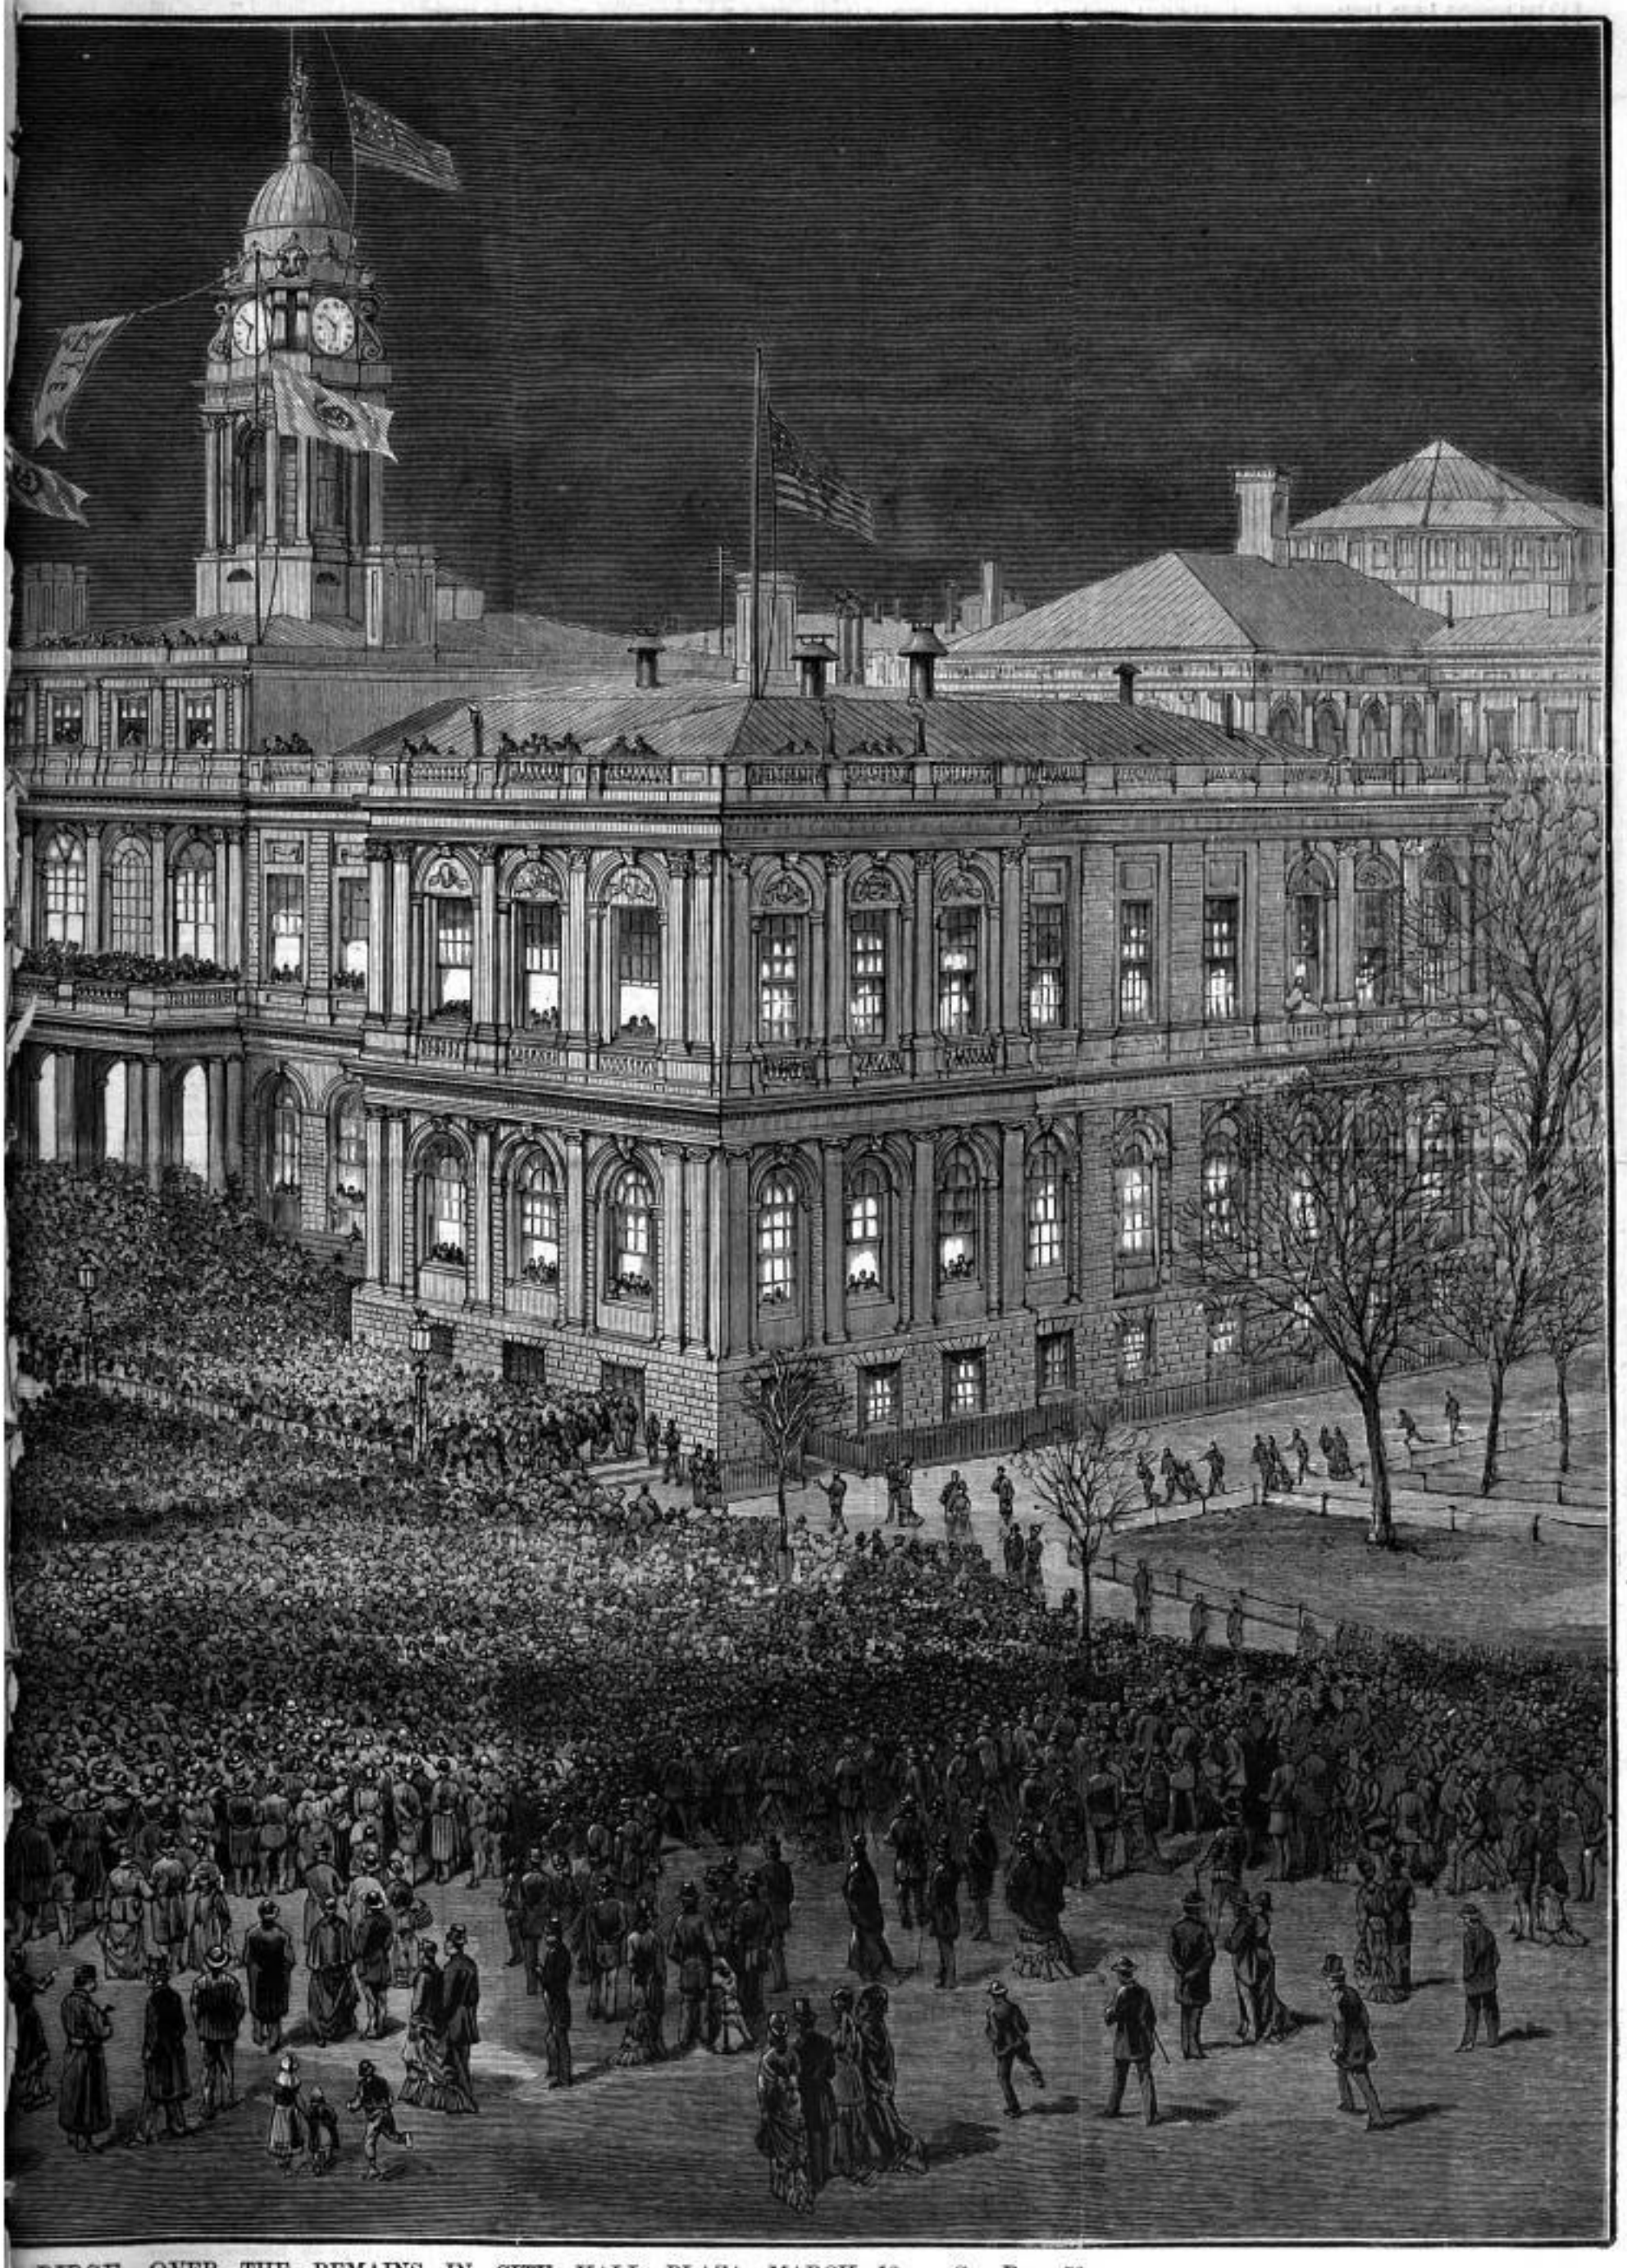
Who ever resisted Ethel? Fettie raised her tired head, and aching, tear-dimmed eyes.

"How pretty your dress is, Fettie," said Ethel, busy about her with gentle caressing touch; "even in the moonlight I can see how sweetly you look; but you have tumbled it dreadfully, lying on the bed; let me straighten it out; they want to see you, Fettie; Ralph wants you. Make yourself pretty and come."

Fettie sat down again upon the bed. "I cannot see him, Ethel, I am going away."

"Yes, with me to-morrow, dear, but not to-night. It is all a mistake, Fettie. Ralph told me something this afternoon—a great secret—but he did not need, for I knew it all before. Do you think I have no eyes? And it will all come out right in the end. We are not living in a story-book, Fettie, and Mrs. Montagu is not a 'cruel parent'!" and Ethel laughed lightly, and wound her arms about Fettie's waist.

"But it is you, Ethel, whom she——" and Fettie tried to free herself from the soft embrace that hurt her so cruelly.



"I know," said Ethel, "and I should once have liked to marry Ralph, for I love them all so dearly. Mrs. Montagu has always been like a mother to me—I have never known any other, Fettie, and she is my guardian, and I should be glad to give my money to her. It has been so cruel to her since she lost her property, that Ralph would not stay in college, but would go away and work. He could not understand that she would be happier, denying herself *everything*, that her proud hopes of him might be fulfilled. She is so proud—not wrongly proud, I think, Fettie; but it kills her to see him descend into a lower sphere of life. And if he had my money he need not, you know. I wish I might give him the money, but not myself, Fettie dear. Once I would have done it willingly enough, but now—there is some one else——"

She hid her face for a moment upon Fettie's shoulder, then, raising it again with a bright laugh:

"So you see," she said, "that it *cannot* be as Mrs. Montagu wished. I have told her all—and now you must let me tie your hair up again, and take you into the other room, for I have told Ralph that you are my little sister, and that you are going away with me to-morrow, that I may buy you some pretty dresses, and send you to school, for I am very grand now, Fettie. I shall be twenty-one next week, and my own mistress. Did you know that Ralph and I were born the same day? And he has so much to say to you, and only this one evening to say it in, you know."

All the time, she had been busy about the girl, her slender, dexterous finger-tips putting hair and eyes and dress in order, with winning little caresses and coaxing smiles—Ethel's own smiles and caresses, stronger than chains and fetters to bind others to her will. And

LISETTE.

DO you remember, Lisette, Lisette,
Your bright little room in the Rue d'Arcade?
(I was a student, you a grisette.)
Do you remember how overhead
The great white rosso hung, tender and warm,
And made the shadows fall sharp and black
From the gabled roofs; and your slender arm
Gleamed in the moonlight, forth and back,
As you threw me kisses, so fast and sweet?
I swear your hand was whiter than pearl
How gayly my foot rang down the street
When I came to meet you—my girl, my girl!

Do you remember the old blue gown
That I loved so much, with the elbows frayed,
And the pretty trimming of eider-down?
Do you remember the scarf you made,
With your hair inwoven, and gave to me
When the Christmas snow lay white and chill,
And you came and sat, like a child, on my knee,
And fed the birds at the window-sill?
Over the city the church-bells rang—
You crossed yourself with a little prayer;
And my heart stood still with a yearning pang
For the church-bells ringing in English air.

Do you remember when Spring came in,
How often we took the road at morn
And tramped afar from the heat and din,
By blossomed orchards and budding corn—
Into the woodlands and far away;
And beautiful Paris lay behind
A cloud of dust in the fresh, bright day?
Out of your wonderful bag we dined
On bread and kisses, and fruit and wine.
Sweet! 'Twas the wine of love I sipped
When your exquisite lips bent down to mine,
And over my shoulder your soft hair slipped.

Do you remember, my own true love,
The day of parting? Ah, sweet Lisette,
I would give up my hope of a life above
If only that day I might quite forget!
Pale, like a statue, I saw you stand,
In the old blue dress I had learned to prize;
You were no ring on your slender hand—
No ray of hope in your gentle eyes;
And smiled and kissed me and said "Good-by!"
My little darling, so meek and true,
The happiest year of all years gone by
Was the one sweet year that I spent with you.

MADELINE S. BRIDGES.

THE FALLEN LEAVES.

BY WILKIE COLLINS.

CHAPTER XV.

THE medium of correspondence between Amelius and Regina's maid was an old woman who kept a shop for the sale of newspapers and periodicals in a by-street not far from Farnaby's house. From this place his letters were delivered to the maid, under cover of the morning newspapers—and here he found the answers waiting for him later in the day. "If Rufus could only have taken her out for a walk, I might have seen Regina this afternoon," thought Amelius. "As it is, I may have to wait until to-morrow, or later still. And then, there's the sovereign to Phœbe." He sighed as he thought of the fee. Sovereigns were becoming scarce in our young Socialist's purse.

Arriving in sight of the newsvender's shop, Amelius noticed a man leaving it, who walked away towards the further end of the street. When he entered the shop himself a minute afterwards, the woman took up a letter from the counter. "A young man has just left this for you," she said.

Amelius recognized the maid's handwriting on the address. The man whom he had seen leaving the shop was Phœbe's messenger.

He opened the letter. Her mistress, Phœbe explained, was too much flurried to be able to write. The master had astonished the whole household by appearing among them at least three hours before the time at which he was accustomed to leave his place of business.

He had found "Mrs. Ormond" (otherwise Regina's friend and correspondent, Cecilia) paying a visit to his niece, and had asked to speak with her in private before she took leave. The result was an invitation to Regina, from Mrs. Ormond, to stay for a little while at her house in the neighborhood of Harrow. The ladies were to leave London together, in Mrs. Ormond's carriage, that afternoon. Under stress of strong persuasion on the part of her uncle and aunt, as well as of her friend, Regina had ended in giving way. But she had not forgotten the interests of Amelius. She was willing to see him privately on the next day, provided he left London by the train which reached Harrow soon after eleven in the forenoon. If it happened to rain, then he must put off his journey until the first fine day, arriving in any case at the same hour. The place at which he was to wait was described to him; and with these instructions the letter ended.

The rapidity with which Mr. Farnaby had carried out his resolution to separate the lovers placed the weakness of Regina's character before Amelius in a new and startling light. Why had she not stood on her privileges, as a woman who had arrived at years of discretion, and refused to leave London until she had first heard what her lover had to say? Amelius had left his American friend, feeling sure that Regina's decision would be in his favor, when she was called upon to choose between the man who was ready to marry her, and the man who was nothing but her uncle by courtesy. For the first time, he now felt that his own confident anticipations might, by bare possibility, deceive him. He returned to his lodgings in such a state of depression, that compassionate Rufus insisted on taking him out to dinner, and hurried him off afterwards to the play. Thoroughly prostrated, Amelius submitted to the genial influence of his friend. He had not even energy enough to feel surprised when Rufus stopped, on their way to the tavern, at a dingy building adorned with a Grecian portico, and left a letter and a card in charge of a servant at the side-door.

The next day by a happy interposition of Fortune proved to be a day without rain. Amelius followed his instructions to the letter. A little watery sunshine showed itself as he left the station at Harrow. His mind was still in such a state of doubt and disturbance that it drew from superstition a faint encouragement to hope. He hailed the feeble November sunlight as a good omen.

Mr. and Mrs. Ormond's place of residence stood alone, surrounded by its own grounds. A wooden fence separated the property, on one side, from a muddy little by-road, leading to a neighboring farm. At a wicket-gate in this fence, giving admission to a shrubbery situated at some distance from the house, Amelius now waited for the appearance of the maid.

After a delay of a few minutes only, the faithful Phœbe approached the gate with a key in her hand. "Where is she?" Amelius asked, as the girl opened the gate.

"Waiting for you in the shrubbery. Stop, sir; I have something to say to you first."

Amelius took out his purse, and produced the fee. Even he had observed that Phœbe was perhaps a little too eager to get her money!

"Thank you, sir. Please to look at your watch. You mustn't be with Miss Regina a moment longer than a quarter of an hour."

"Why not?"

"This is the time, sir, when Mrs. Ormond is engaged every day with her cook and housekeeper. In a quarter of an hour the orders will be given, and Mrs. Ormond will join Miss Regina for a walk in the grounds. You will be the ruin of me, sir, if she finds you here." With that warning, the maid led the way along the winding paths of the shrubbery.

"I must thank you for your letter, Phœbe," Amelius said, as he followed her. "By-the-by, who was your messenger?"

Phœbe's answer was no answer at all. "Only a young man, sir," she said.

"In plain words, your sweetheart, I suppose?"

Phœbe's expressive silence was her only reply. She turned a corner, and pointed to her mistress standing alone before the entrance of a damp and deserted summer-house.

Regina put her handkerchief to her eyes, when the maid had discreetly retired. "Oh," she said, softly, "I am afraid this is very wrong!"

Amelius removed the handkerchief by the exercise of a little gentle force, and administered comfort under the form of a kiss. Having opened the proceedings in this way, he put his first question, "Why did you come here?"

"How could I help it?" said Regina, feebly. "They were all against me. What else could I do?"

It occurred to Amelius that she might, at her age, have asserted a will of her own. He kept his idea, however, to himself; and, giving her his arm, led her slowly along the path of the shrubbery. "You have heard, I suppose, what Mr. Farnaby expects of me?" he said.

"Yes, dear."

"I call it worse than mercenary—I call it downright brutal."

"Oh, Amelius, don't talk so!"

Amelius came suddenly to a standstill. "Does that mean that you agree with him?" he asked.

"Don't be angry with me, dear. I only meant there was some excuse for him."

"What excuse?"

"Well, you see, he has a high idea of your family, and he thought you were rich people. And—I know you didn't mean it, Amelius—but still you did disappoint him!"

Amelius dropped her arm. This mildly-persistent defense of Mr. Farnaby exasperated him.

"Perhaps I have disappointed you," he said.

"Oh, no, no! Oh, how cruel you are!" The ready tears showed themselves again in her magnificent eyes—gentle, considerate tears, that raised no storm in her bosom, and produced no unbecoming results in her face. "Don't be hard on me!" she said, appealing to him helplessly, like a charming, overgrown child.

Some men might have still resisted her, but Amelius was not one of them. He took her hand, and pressed it tenderly.

"Regina," he said, "do you love me?"

"You know I do!"

He put his arm round her waist, he concentrated the passion that was in him into a look, and poured that look into her eyes. "Do you love me as dearly as I love you?" he whispered.

She felt it with all the little passion that was in her. After a moment of hesitation she put one arm timidly around his neck, and, bending her grand head, laid it on his bosom. Her finely-rounded, supple, muscular figure trembled as if she had been the weakest woman living. "Dear Amelius!" she murmured, almost inaudibly. He tried to speak to her—his voice failed him. She had, in perfect innocence, fired his young blood. He drew her closer and closer to him; he lifted her head, with a masterful resolution which she was not able to resist, and pressed his kisses in hot and breathless succession on her lips. His vehemence frightened her. She tore herself out of his arms with a sudden exertion of strength that took him completely by surprise. "I didn't think you would have been rude to me!" With that mild reproach, she turned away, and took the path which led from the shrubbery to the house. Amelius followed her, entreating that she would accept his excuses and grant him a few minutes more. He modestly laid all the blame on her beauty—he lamented that he had not resolution enough to resist the charm of it. When did that commonplace compliment ever fail to produce its effect? Regina smiled with the weakly complacent good-nature, which was only saved from being contemptible by its association with her personal attractions. "Will you promise to behave?" she stipulated. And Amelius, not very eagerly, promised.

"Shall we go into the summer-house?" he suggested.

"It's very damp at this time of year," Regina answered, with placid good sense. "Perhaps we might catch cold—we had better walk about."

They walked accordingly. "I wanted to speak to you about our marriage," Amelius resumed.

She sighed softly. "We have some time to wait," she said, "before we can think of that."

He passed this reply over without notice. "You know," he went on, "that I have an income of five hundred a year?"

"Yes, dear."

"There are hundreds of thousands of respectable artisans, Regina (with large families), who live comfortably on less than half my income."

"Do they, dear?"

"And many gentlemen are not better off. Curates, for instance. Do you see what I am coming to, my darling?"

"No, dear."

"Could you live with me in a cottage in the country, with a nice garden, and one little maid to wait on us, and two or three new dresses in a year?"

Regina lifted her fine eyes in sober ecstasy to the sky. "It sounds very tempting," she remarked, in the sweetest tones of her voice.

"And it could all be done," Amelius proceeded, "on five hundred a year."

"Could it, dear?"

"I have calculated it—allowing the necessary margin—and I am sure of what I say. And I have done something else: I have asked about the Marriage License. I can easily find lodgings in the neighborhood. We might be married at Harrow in a fortnight."

Regina started; her eyes opened widely, and rested on Amelius with an expression of incredulous wonder. "Married in a fortnight?" she repeated. "What would my uncle and aunt say?"

"My angel, our happiness doesn't depend on your uncle and aunt—our happiness depends on ourselves. Nobody has any power to control us. I am a man and you are a woman, and we have a right to be married whenever we like." Amelius pronounced this last oracular sentence with his head held high, and a pleasant inner persuasion of the convincing manner in which he had stated his case.

"Without my uncle to give me away!" Regina exclaimed. "Without my aunt! With no bridesmaids, and no friends, and no wedding-breakfast? Oh, Amelius, what can you be thinking of?" She drew back a step, and looked at him in helpless consternation.

For the moment, and the moment only, Amelius lost all patience with her. "If you really loved me," he said, bitterly, "you wouldn't think of the bridesmaids and the breakfast!" Regina had her answer ready in her pocket—she took out her handkerchief. Before she could lift it to her eyes Amelius recovered himself. "No, no," he said, "I didn't mean that—I am sure you love me—take my arm again. Do you know, Regina, I doubt whether your uncle has told you everything that passed between us. Are you really aware of the hard terms that he insists on? He expects me to increase my five hundred a year to two thousand before he will sanction our marriage."

"Yes, dear, he told me that."

"I have as much chance of earning fifteen hundred a year, Regina, as I have of being made King of England. Did he tell you *that*?"

"He doesn't agree with you, dear—he thinks you might earn it (with your abilities) in ten years."

This time it was the turn of Amelius to look at Regina in helpless consternation. "Ten years?" he repeated. "Do you coolly contemplate waiting ten years before we are married? Good heavens! is it possible that you are thinking of the money?—that you can't live without carriages and footmen, and ostentation and grandeur——?"

He stopped. For once, even Regina showed that she had spirit enough to be angry. "You ought to be ashamed of yourself to speak to me in that way!" she broke out, indignantly. "If you have no better opinion of me than that, I won't marry you at all—no, not if you had fifty thousand a year, sir, to-morrow! Am I to have no sense of duty to my uncle—to the good man who has been a second father to me? Do you think I am ungrateful enough to set his wishes at defiance? Oh, yes, I know you don't like him! I know that a great many people don't like him. That doesn't make any difference to me. But for dear Uncle Farnaby, I might have gone to the workhouse; I might have been a starving needle-woman, a poor, persecuted maid-of-all-work. Am I to forget that, because you have no patience, and only think of yourself? Oh, I wish I had never met with you! I wish I had never been fool enough to be as fond of you as I am!" With that confession, she turned her back on him, and took refuge in her handkerchief once more.

Amelius stood looking at her in silent despair. After the tone in which she had spoken of her obligations to her uncle, it was useless to anticipate any satisfactory result from the exertion of his influence over Regina. Recalling what he had seen and heard, in Mrs. Farnaby's room, Amelius could not doubt that the motive of pacifying his wife was the motive which had first led Farnaby to receive Regina into his house. Was it unreasonable or unjust to infer that the orphan child must have been mainly indebted to Mrs. Farnaby's sense of duty to the memory of her sister for the parental protection afforded to her from that time forth? It would have been useless, and worse than useless, to place before Regina such considerations as these. Her exaggerated ideas of the gratitude that she owed to her uncle was beyond the limited reach of reason. Nothing was to be gained by opposition; and no sensible course was left but to say some peace making words and submit.

"I beg your pardon, Regina, if I have offended you. You have sadly disappointed me. I haven't deliberately misjudged you; I can say no more."

She turned round quickly, and looked at him. There was an ominous change to resignation in his voice, there was a dogged submission in his manner, that alarmed her. She had never yet seen him under the perilously-patient aspect in which he now presented himself, after his apology had been made.

"I forgive you, Amelius, with all my heart," she said—and timidly held out her hand.

He took it, raised it silently to his lips, and dropped it again.

She suddenly turned pale. All the love that she had in her to give to a man she had given to Amelius. Her heart sank; she asked herself, in blank terror, if she had lost him.

"I am afraid it is *I* who have offended you," she said. "Don't be angry with me, Amelius! don't make me more unhappy than I am!"

"I am not in the least angry," he answered, still in the quiet, subdued way that terrified her. "You can't expect me, Regina, to contemplate a ten years' engagement cheerfully."

She took his hand, and held it in both her own hands—held it as if his love for her was there and she was determined not to let it go.

"If you will only leave it to me," she pleaded, "the engagement sha'n't be so long as that. Try my uncle with a little kindness and respect, Amelius, instead of saying hard words to him. Or let me try him, if you are too proud to give way. May I say that you had no intention of offending him, and that you are willing to leave the future to me?"

"Certainly," said Amelius, "if you think it will be of the slightest use." His tone added more: his tone said, plainly, "I don't believe in him, mind, as you do."

She still persisted. "It will be of the greatest use," she went on. "He will let me go home again, and he will not object to your coming to see me. He doesn't like to be despised and set at defiance—who does? Be patient, Amelius; I will persuade him to expect less money from you—only what you may earn, dear, with your talents, long before ten years have passed." She waited for a word of reply which might show that she had encouraged him a little. He only smiled. "You talk of loving me," she said, drawing back from him with a look of reproach; "and you don't even believe what I say to you." She stopped, and looked behind her with a faint cry of alarm. Hurried footsteps were audible on the other side of the evergreens that screened them. Amelius stepped back to a turn in the path, and discovered Phœbe.

"Don't stay a moment longer, sir!" cried the girl. "I've been to the house—and Mrs. Ormond isn't there—and nobody knows where she is. Get out by the gate, sir, while you have the chance."

Amelius returned to Regina. "I mustn't get the girl into a scrape," he said. "You know where to write to me. Good-by."

Regina made a sign to the maid to retire. Amelius had never taken leave of her as he was taking leave of her now. She forgot the fervent embrace and daring kisses—she was desperate at the bare idea of losing him. "Oh, Amelius, don't doubt that I love you! Say you believe I love you! Kiss me before you go!" He kissed her—but, ah, not as he had kissed her before. He said the words she wanted him to say—but only to please her, not with all his heart. She let him go; reproaches would be wasted at that moment. Phœbe found her pale and immovable, rooted to the spot on which they had parted. "Dear, dear me, miss, what's gone wrong?" And her mistress answered wildly, in words that had never before passed her placid lips. "Oh, Phœbe, I wish I was dead!"

CHAPTER XVI.

SUCH was the impression left on the mind of Regina by the interview in the shrubbery.

The impression left on the mind of Amelius was stated in equally strong language, later in the day. His American friend asked innocently for news, and was answered in these terms:

"Find something to occupy my mind, Rufus, or I shall throw the whole thing over and go to the devil."

The wise man from New England was too wise to trouble Amelius with questions, under these circumstances. "Is that so?" was all he said. Then he put his hand in his pocket, and, producing a letter, laid it quietly on the table.

"For me?" Amelius asked.

"You wanted something to occupy your mind," the wily Rufus answered. "There 'tis."

Amelius read the letter. It was dated "Hampden Institution." The secretary invited Amelius, in highly complimentary terms, to lecture, in the hall of the Institution, on Christian Socialism, as taught and practiced in the Community at Tadmor. He was offered two thirds of the profits derived from the sale of places, and was left free to appoint his own evening (at a week's notice) and to issue his own advertisements. Minor details were reserved to be discussed with the secretary, when the lecturer had consented to the arrangement proposed to him.

Having finished the letter, Amelius looked at his friend. "This is your doing," he said.

Rufus admitted it, with his customary candor. He had a letter of introduction to the secretary, and he had called by appointment that morning. The Institution wanted something new to attract the members and the public. Having no present intention of lectur-

Digitized by Google

ing himself, he had thought of Amelius, and had spoken his thought. "I mentioned," Rufus added, slyly, "that I didn't reckon you would mount the platform. But he's a sanguine creature, that secretary—and he said he'd try."

"Why should I say No?" Amelius asked, a little irritably. "The secretary pays me a compliment, and offers me an opportunity of spreading our principles. Perhaps," he added, more quietly, after a moment's reflection, "you thought I might not be equal to the occasion—and, in that case, I don't say you were wrong."

Rufus shook his head. "If you had passed your life in this decrepid little island," he said, "I might have doubted you, likely enough. But Tadmor's situated in the United States. If they don't practice the boys in the art of *orating*, don't you tell me there's an American citizen with a voice in *that* society. Guess again, my son. You won't! Well, then, 'twas Uncle Farnaby I had in my mind. I said to myself—not to the secretary—Amelius is bound to consider Uncle Farnaby. Oh, my, what would Uncle Farnaby say?"

The hot temper of Amelius took fire instantly. "What the devil do I care for Farnaby's opinions?" he burst out. "If there's a man in England who wants the principles of Christian Socialism beaten into his thick head, it's Farnaby. Are you going to see the secretary again?"

"I might look in," Rufus answered, "in the course of the evening."

"Tell him I'll give the lecture—with my compliments and thanks. If I can only succeed," pursued Amelius, heating himself with the new idea. "I may make a name as a lecturer, and a name means money, and money means beating Farnaby with his own weapons. It's an opening for me, Rufus, at the crisis of my life."

"That is so," Rufus admitted. "I may as well look up the secretary."

"Why shouldn't I go with you?" Amelius suggested.

"Why not?" Rufus agreed.

They left the house together.

(*To be continued.*)

Causes of Bad Health.

THE external causes of bad health have been defined as being reducible to seven great classes. These are atmospherical variations, physical accidents, organic poisons, errors in feeding, drinking and breathing, parasites or foreign living organisms infesting the body, occupations and modes of life, nervous or mental impressions. It has been observed by a scientist that of the twenty-four million eight hundred and fifty thousand people into which the English community was divided, the healthiest class was the professional; and then follow in order of healthfulness the agricultural, the domestic, the commercial and the industrious classes. It is among children under five years of age, however, that occurs the greatest amount of mortality, and, in fact, the mortality of young infants is known to be in such a deplorable state as to require much study and thought for its solution.

With reference to occupations and their tendency to shorten life, the value of fresh air as a preservative of health is instanced by the fact that the rate of mortality among grocers is considerably less than that among drapers. The disease which destroys the draper is pulmonary consumption. While the grocer bustles about his business with the shop-door open all day, the draper lives in a close place, with the shop-doors for the most part closed, and breathes, moreover, a dusty, close atmosphere. The heat and closeness which are the general characteristics of drapers' shops, account for the generally unhealthy appearance of the attendants in them. Publicans—who as a class are very comfortable, well housed, clothed and fed, and not obliged to go out in all weathers—should, it will be thought, compare favorably with other tradesmen as regards longevity. Such, however, is not the case, for we find that, in spite of all these advantages, they die so much faster than the rest of the people that in England a hundred and thirty-eight publicans die in proportion to a hundred of the whole of the community who are employed in seventy leading occupations.

The Victoria Cross.

OF all prizes that men in the British Army and Navy covet, there is none more eagerly sought, more jealously guarded, or more dearly loved than the simple cross in gun-metal, bearing the inscription "For Valor." The Victoria Cross was instituted by Royal Warrant on January 19th, 1856, as a reward for individual instances of merit and valor in the army and navy. Although many acts of heroism had been performed in both services in the earlier part of Queen Victoria's reign, it was not deemed advisable to make the action of the warrant retrospective, and the heroes of the Crimea were therefore the first who received the much-coveted decoration. The cross itself is a simple piece of gun-metal, bronze-colored, with the royal crest in the middle, and below the words "For Valor"; in the centre of the reverse the date of the act of heroism is inscribed, and on the bar to which the ribbon is attached the name of the individual and of the corps to which he belongs. On this bar also is engraved a sprig of laurel, and the bar is attached to the cross by the letter V on a red or blue ribbon, according to the service in the army or navy of the recipient. It is not to soldiers and sailors only, however, that the Victoria Cross is awarded, and many civilians who have distinguished themselves by acts of conspicuous bravery have been enrolled among the hero-band. The actual money value of the cross is only a few shillings, but the laurel crown of the Romans cost even less, and decorations are of course altogether valueless from that point of view. The day has not come yet when chivalry lies dead, or when bravery sells itself for cash. Many a brave knight has gone into the clash of arms and has fought bloody battles for the sake of a flower from the hair of his mistress, or a scarf which has encircled her fair neck; and, in these later times, many a man has gone into the deadly breach and through tempests of fiery missiles for the love of country and honor, sustained in the midst of dangers by the hope that some day that simple Maltese Cross, devised by the Queen, and always, when practicable, conferred by her own hand, may rest upon his breast. The Victoria Cross carries with it £10 a year pension for each non-commissioned officer and private, with an additional annuity of £5 for every additional bar, such bar being added upon each fresh act of bravery equal to the first.

Photography in the Bank of France.

THE Bank of France, according to the London *News*, appears to have hit upon an ingenious method of treating doubtful customers. The establishment has for some time past availed itself of photography, and among its officers is a photographic detective, to examine suspicious documents through the medium of a camera, which under some circumstances exercises a sharper vision than the human eye. Where an erasure has been made, for instance, the camera detects it at once, let the spot be ever so smoothly rubbed over, while a word or figure that to the eye has been perfectly scratched out is clearly reproduced in a photograph of the document. If we are to believe a recent account, the Bank of France has now added to its precautions an invisible studio placed in the gallery behind the cashiers. Hidden behind some heavy curtains is a camera, ready for work, and at a signal from any of the cashiers, the photographer proceeds to do his duty by depicting the particular customer who may be standing at the desk. The clerk engages the man's attention, and in a few moments the portrait is taken, and the bank in the possession of a photograph which may hereafter prove of value. The camera is then fitted with a fresh sensitive plate, and stands ready for use upon another emergency. How far such an arrangement could be of practical value remains to be seen, but the principal banking establishment in Paris has certainly to thank photography for the discovery of several frauds of late. A photographic laboratory and requisites form part of the institution, and most of the officials themselves have to submit to the process of being photographed, so that the direction may be in the possession of their portraits. This practice, it is held, is a deterrent against evil ways, for should any of the clerks be tempted to go astray, they know very well that they leave records of themselves behind. The same system prevails among the Paris police, where every one, from the highest to the lowest, is photographed.

Aerial Telegraphy.

PROFESSOR LOOMIS, of Washington, is experimenting in the mountains of West Virginia to demonstrate what he calls aerial telegraphy, which is based on the theory that at certain elevations there is a natural electric current, by taking advantage of which wires may be wholly dispensed with. It is said that he has telegraphed as far as eleven miles by means of kites flown with copper wire. When the kites reached the same altitude or got into the same current, communication by means of an instrument similar to the Morse instrument was easy and perfect, but ceased as soon as one of the kites was lowered. He has built towers on two hills about twenty miles apart, and from the tops of them run up steel rods into the region of the electric current. The statement is made that in this way, without any wire, he has been able to keep up telegraphic communication for months at a time. A heavy storm, however, prevents communication for a time, probably disarranging the current. In a recent letter Professor Loomis announced that he had recently discovered that the telephone could be used for this method of communication as well as telegraphic instruments, and that of late he had done all his talking with his assistant, twenty miles away, by telephone, the connection being aerial only. He claims that he can telegraph across the sea without other wires than those necessary to reach the elevation of the current. This claim of Professor Loomis belongs to the class of remarkable discoveries not yet demonstrated—a very large class—in which students of science are working with great energy.

The Telectroscope.

THE telephone and the phonograph are threatened with eclipse by a new apparatus, which, if report speaks truly, promises to be of considerable utility. It is called the telectroscope, and has been submitted by its inventor, M. Senlecq, to the Comte du Mornel and M. H. d'Arros, who are said to have reported favorably as to its merits. It is intended to produce telegraphically the pictures imprinted on the reflector of a distant camera obscura. The apparatus depends upon the sensitiveness of selenium to shades of light, and the effects of electric currents. Should M. Senlecq succeed in perfecting the invention, we shall have an instrument that will enable us to view distant scenes, just as the telephone enables us to hear sounds beyond the reach of our unassisted ears.

Divining in Scotland.

A PROCESS of divining, allied to casting lots, was formerly resorted to by young women in order to discover a thief, or to ascertain whether a young man who was courting one of them was in earnest, and would in the future become that girl's husband. The process was called the Bible and Key trial, and the formula was as follows: A key and Bible were procured, the key being so much longer than the Bible that when placed between the leaves the head and the handle would project. If the inquiry was about the good faith of a sweetheart the key was placed in Ruth i. 16, on the words, "Entreat me not to leave thee; where thou goest I will go," etc. The Bible was then closed and tied around with tape. Two neutral persons sitting opposite each other held out the forefingers of their right hands, and the person who was consulting the oracle suspended the Bible between their two hands, resting the projecting parts of the key on the outstretched forefingers. No one spoke except the inquirer, and she, as she placed the key and Bible in position, repeated slowly the whole passage, "Entreat me not to leave thee," John or James or whatever the name of the youth was, "for where thou goest I will go," etc. If the key and the Bible turned and fell off the fingers, the answer was favorable; and generally by the time the whole passage was repeated this was the result, provided the parties holding up the key and the Bible were firm and steady. For the detection of a thief the formula was the same, with only this difference, that the key was put into the Bible at the fiftieth Psalm, and the inquirer named the suspected thief and then repeated the eighteenth verse of that Psalm, "When thou sawest a thief then thou consentest with him," etc. If the Bible turned round and fell, it was held to be proof that the person named was the thief. This method of divining was not so frequently practiced, not through want of faith in its efficacy, but through superstitious terror, for the movement of the key was regarded as evidence that some unseen dread power was present.

SCIENTIFIC INTELLIGENCE.

Ulm, Bavaria, is to hold an exhibition of much interest, illustrating the history of printing and wood engraving.

Professor Famintzin, of St. Petersburg, has been elected member of the Russian Academy of Sciences in place of the late Professor Gelenzoff.

The Russian Physical and Chemical Society is now discussing the means of a thorough study of the surface of the moon, especially by means of spectrum analysis.

A Native of Marseilles has purchased the right of extracting chlorate of potash from the Dead Sea, and expects to get $8 a ton on an indefinite quantity of it delivered at London.

The Madrid Historical Academy announces, after investigation, that there was no truth in the report that the remains of Christopher Columbus had been discovered in the Cathedral of San Domingo.

Dr. Auh, one of the oldest Rabbis in Berlin, recently received from the University of Munich a new doctor's diploma, commemorative of his having received that degree there fifty years ago. It was conferred by Dr. Steinthal in the name of the philosophical faculty.

The Director of the Postal Telegraph Service of the French Republic has been made a member of the Cabinet and placed on the same footing as the Postmaster General of the British Government. The present holder of that office is M. Cochery.

Among Recent Deaths is that of M. Chauffod, Professor of Zoology at the Paris School of Medicine. M. Chauffod during his whole career opposed M. Claude Bernard's determinism, and advocated the existence of a vital principle and final causes in a number of books largely circulated.

Russia has lost one more of her mathematicians—Professor Popoff, of Kazan. His works on the integration of differential equations, on hydrodynamics, on the waves which arise from the motion of a body, on definite integrals, on the calculus of variations, etc., have given to the late professor an eminent place among mathematicians.

The Italian Secretary for Agriculture, Industry and Commerce, has offered a prize of 3,000 lire (about $575) for the best monograph on the cultivation, growth, and diseases of the species *citrus* (the common lemon-tree). The competition will last until May, 1881, and all particulars may be learnt direct from the Secretary's office at Rome.

In Germany a man who wishes to become a medical practitioner has to pass some time in the course of his third year's study an examination in chemistry and physics, botany, zoology, anatomy and physiology; and at the close of his studies he has to spend sometimes as much as a five months' session in passing a final examination in the practical departments.

The Installation of Objects sent in for the Anthropological Exhibition at Moscow will begin in the end of March. The interesting collections from Samarcand have already arrived, as well as very interesting objects sent by the East Siberian branch of the Russian Geographical Society. Those of stone implements and of quaternary mammals especially draw the attention of the organizing committee, as well as several numismatic collections.

M. Chevreul, who, although about ninety years of age, enjoying good robust health, has resigned the administration of the Jardin des Plantes. M. Jules Ferry, the new Minister of Public Instruction, has written him a letter eulogistic of his career, and appointing him Honorary Administrator; also appointing as his successor for a term of five years, M. Fremy, the eminent Professor of Chemistry, Director of the Laboratory at the Gardens, the practical School of Chemistry in Paris.

The Aosta Section of the Italian Alpine Club proposes to celebrate this year the centenary of Saussure's travels in the Alps, which opened up quite a new world for science and for travelers. In 1779 he staid for the first time in the Valley of Annecy, and the club proposes to put a commemorative marble plate on the house he inhabited in the village of Dolonne, near Courmayeur. An inscription will probably be placed also on the Grammont Mountain, whence Saussure made his famous observations on Mont Blanc, the first ascent of which he made in 1787.

Photographing Sound.—A very ingenious method of recording articulate vibrations by means of photography has just been invented. The apparatus consists of a steel mirror capable of oscillations on a diametral axis, to the back of which is attached a lever connecting it to the centre of a telephone disk, arranged with the ordinary mouthpiece. Whenever the disk is made to vibrate, the mirror oscillates with it, and a beam of sunlight thrown on the reflector from a heliostat describes lines of light on a suitably prepared screen. If the latter be movable at right angles to those lines of light and carries a collodion film, the oscillation of the light is recorded on the prepared surface as a more or less complex curve, having the peculiarity of the sound wave which caused each particular movement. It is impossible to describe the infinite variety of shapes produced by the variations of sound, but they are extremely curious and very graceful.

The Capacity of Wood to Absorb Water.—M. Mannond has discovered that the proportions in which wood absorbs water differ in an eminent degree in various species. He tried his experiments on thirty-six species of wood, and the means he employed are very interesting. He had small cylinders turned to the dimensions of four inches in length and somewhat less than a quarter of an inch in diameter. These were first dried in the air and then over sulphuric acid under the receiver of an air pump, until the weight remained constant, and then plunged under water until they ceased to absorb any further moisture. The differences found in the capacities of the various kinds of wood to absorb water were extraordinary. They varied from 9.37 per cent. in the locust-tree of the West Indies to 174.86 per cent. in the horse chestnut. The quantity of water absorbed by wood in its ordinary state varies from 4.38 to 180.64 per cent. These observations will prove of value to manufacturers of furniture, carriages and pianos.

A Remedy for the Eruption Caused by Poison Ivy.—Dr. H. A. Brown, of the United States Navy, believes that he has found a specific for the eruption caused by contact with poison oak, sumach, ivy, etc. This specific is bromine. The eruption never extends after the first thorough application, but promptly begins to diminish. Within twenty-four hours, if the application be persisted in, the patient is entirely cured. There is no pain attending its use; of course, the epidermis peels off as after other treatment. He uses the bromine dissolved in olive oil in the proportion of ten to twenty drops of bromine to the ounce of oil, and applies by rubbing gently on the affected part three or four times a day, and specially on going to bed at night. The oil is to be washed off twice a day with castile soap. The bromine is so volatile that the solution should be renewed within twenty-four hours of its preparation, as it will get out of a bottle, however well corked. It is better to stand the bottle on its corked end, in the intervals of application. When it is desirable to keep the solution any length of time, a glass stoppered bottle will be necessary as bromine rapidly destroys cork.

PERSONAL GOSSIP.

FATHER RYAN, the poet-priest, is very ill at his home in Mobile from partial paralysis of the throat.

MR. HOMER BASS, M. P., one of the famous brewers of that name, was recently married to Hon. Louisa Bagot, daughter of Lord Bagot.

CHARLES H. BELL has been appointed United States Senator from New Hampshire for the extra session, vice Senator Wadleigh, whose term has expired.

QUEEN VICTORIA, it is rumored, has expressed a strong wish to see Canada, and the Prince of Wales is encouraging her to visit both that country and the United States.

THE withdrawal of the British fleet from Constantinople has been delayed in consequence of the desire of the Sultan to give a banquet in honor of Admiral Hornby.

THE Empress of Austria travels imperially. *En route* to England she left Vienna in a special train of two palace cars for herself, five for her suite, and three containing kitchen, etc.

GENERAL SIMON CAMERON celebrated his eightieth birthday at Harrisburg on March 8th. His house was crowded by friends, and the general was in an extremely happy mood.

COUNT VON MOLTKE, Chief Marshal of the German Empire and Chief of the General Staff, on March 26th celebrated in Holstein the sixtieth anniversary of his entry into military service. He received congratulations from all quarters.

IDA LEWIS, now Ida Lewis Wilson, has been appointed keeper of Lime Rock Light Station, at an annual salary of $750, an advance of $250 over the salary heretofore paid, made "in consideration of the remarkable services of Mrs. Wilson in the saving of lives."

THE Earl of Dufferin, late Governor-General of Canada, and now appointed Ambassador to St. Petersburg, has been compelled, in consequence of his removal from England, to resign the Presidency of the Royal Geographical Society, which was recently conferred upon him.

MR. J. MILTON TURNER, ex-Minister to Liberia, is making speeches in Missouri in opposition to the proposed emigration of colored people of that State to Liberia. He advises them to stay where they are, and tells them they can do better in Missouri than in any other country under the sun.

DUKE POZZO DI BORGO, who died recently in Paris, at the age of eighty-seven, had one of the most magnificent residences in France, the Château and Park of Montretout, which was destroyed in the war of 1870-71, but since restored. His annual income was about 500,000 francs.

MRS. LOCKWOOD, the first woman admitted to practice in the Supreme Court, is fifty years old, is erect, gray-haired, and the possessor of fine eyes. She made her first appearance in the court dressed in a semi-mannish blue cloth sacque, with brass buttons, and a plain velveteen skirt.

SENOR CASTELAR will deliver, in Oxford, in the Summer term, a series of lectures on Spanish literature. The language will be French, for the simple reason that no one in Oxford understands Spanish; but the lecturer will, in his last discourse, make an attempt on his audience in his own native language.

THE vestry of St. Mark's Church, Philadelphia, have elected the Rev. James De Koven, D.D., of Racine, Wis., as rector in the place of the Rev. Dr. Hoffman, who has accepted the position of Dean of the General Theological Seminary in New York. It is not known whether or not Dr. De Koven will accept the position.

PRINCE CHARLES of Roumania has offered to the Sultan a piece of ground in Bucharest, free of all expense, for the erection of a mosque for the use of his Majesty's Mohammedan subjects in the principality. The Mohammedans have not been permitted to have places of worship in Roumania since the principality was made a semi-independent State.

CHAN POY KWAI is the name of an educated Chinaman who is on the way East from San Francisco to deliver a series of lectures on the Chinese problem. He is about thirty years of age and is remarkably intelligent-looking for a Chinaman. He speaks English with such perfection that one would scarcely detect from listening to him that he was not an Englishman by birth.

THE Emperor of Germany has no imperial crown, and Dresden and some other important towns propose to get up one, with the accompanying insignia, as a present on the occasion of his golden wedding, hoping that, as it will be a gift to the sovereign rather than the man, it will be accepted, notwithstanding the announced determination of the Emperor to decline to receive presents on the coming anniversary.

LORD DUFFERIN has already more Orders of knighthood than any English civilian—K.P., G.C.M.G. (Grand Cross of St. Michael and St. George), and K.C.B., and it is quite on the cards that he will be Governor-General of India, and add the decoration of the Grand Cross of the Star of India to the rest. Five English Prime Ministers (Pitt, Peel, Canning, Perceval and Gladstone) in the present century never had any kind of decoration.

THE silver wedding of the Emperor and Empress of Austria will be kept as a festival throughout the empire. In Vienna, especially, a grand procession, in imitation of the medieval processions, is intended. The Viennese committee have confided the artistic arrangements to Professors Kundmann and Makart, the architects Streit and Wagner, and the painter Schilcher. Professor Makart is preparing drawings of the groups and costumes, for which his studies for his great picture of the "Entry of Charles V. into Antwerp" render him well qualified.

IN addition to the degree of LL.D., conferred upon Mr. John D. Philbrick, Superintendent of Public Schools of Boston, by St. Andrew's University, that gentleman has received several honors from abroad. The French Government made him a Chevalier of the Legion of Honor, and the University of France gave him the decoration of the Golden Palm, with the title of "officer of public instruction." The Golden Palm is the highest honor conferred by the university, and has been given to but one other American—General Eaton, United States Commissioner of Education.

THE Austrian Crown Prince Rudolphe would have accompanied his Imperial mother on her visit to Ireland for some hunting, had not the loyal anxiety of the Hungarians for the safety of the heir apparent induced them to send up a deputation, headed by Count Clam-Gallas, to beg their sovereign not to let his son hunt. Francis Joseph, when this request was made, laughingly said: "My good Count, why do you always let your own son hunt? I see him generally amongst the first to the field." "A Clam-Gallas more or less matters little, your Majesty," answered the Count; "but the youth on whom the future tranquility and good government of the Empire will rest, should not lightly risk his neck." The promise was at once given, and Prince Rudolphe remains at home.

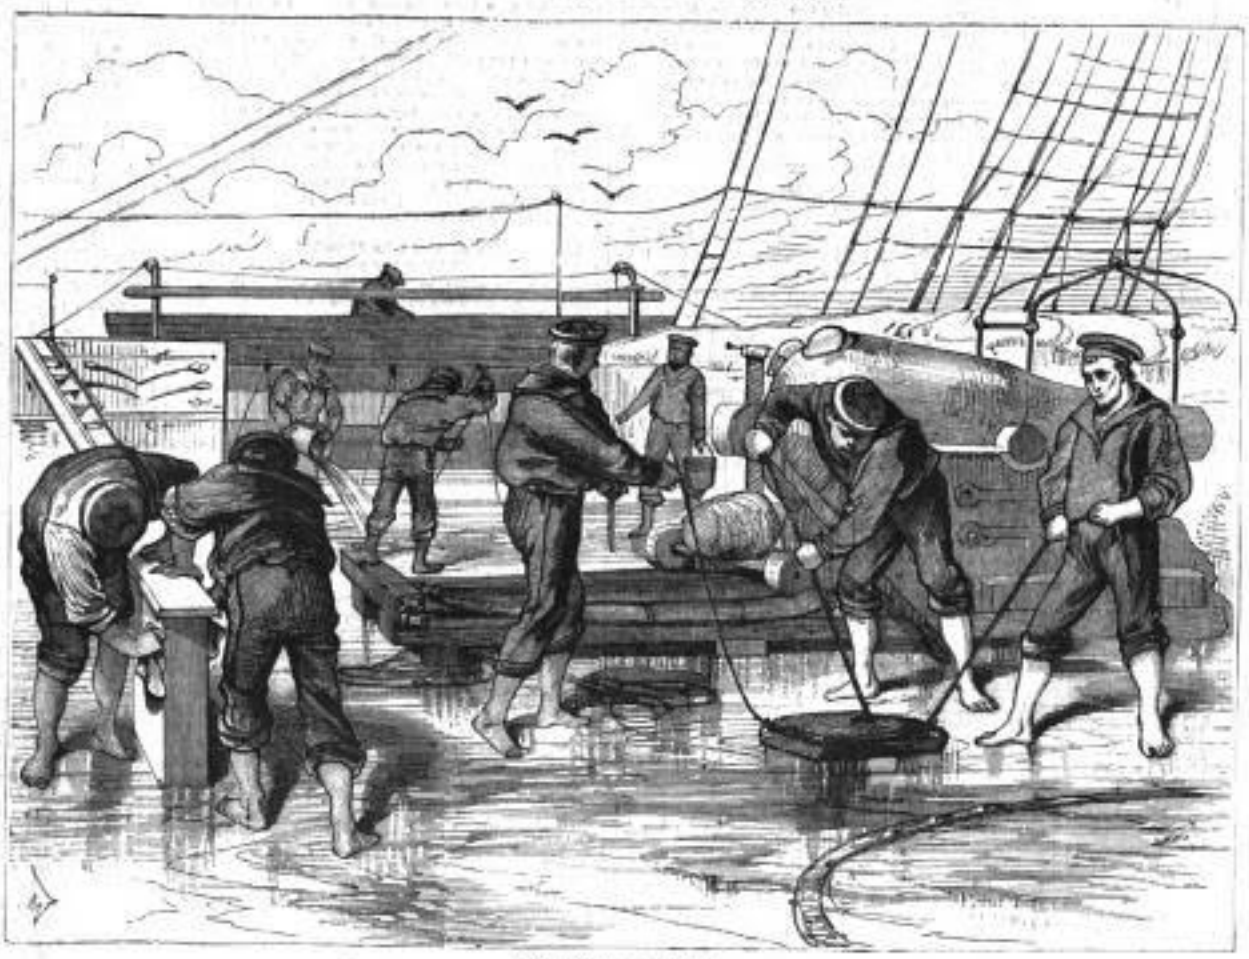
LIFE ON BOARD A MAN-OF-WAR.

IT is the boast of an American man-of-war that a person may roll about its decks in the cleanest and whitest of clothes, without soiling them in the least. That the boast is not an idle one will be believed by visitors to any of our ships, either at the Navy Yards, on foreign stations, or ocean duty. This thorough cleansing of decks and polishing of metal-work is a result, in more senses than one, of the extreme discipline maintained by the executive officer. Not only is it a portion of the regular work, but it is done by members of the crew as a punishment for the infraction of some of the many rules of the ship. In naval parlance, the scrubbing apparatus is termed a "holy-stone"—a designation said by some to have originated from the fact that the work is done on Sundays, and by others because of the numerous prayers said by the sailors over its head. The block is of sandstone of fine grit and about eighteen inches square. There is an eye in each end for ropes, and an indentation on top for the "squilgee" handle. After the deck has been considerably drenched with water, a quantity of sand is scattered over it, and the holystone is set at work with a man at each end, who pull it to and fro, while another guides it with the "squilgee." This monotonous labor is kept up for several hours, until the decks are as smooth and as white as a porcelain plate.



At "down-quarters" during the instruction of the crew at the gun, the assistant-surgeon gives a lesson in practical surgery, so that every man may learn how to relieve himself or assist a comrade when wounded in action, particularly for stopping the flow of blood. The simplest instrument for this purpose is the well-known tourniquet; but when no such method is at hand, quite effective ones may be improvised with handkerchiefs and pieces of wood or metal. The main part of the lesson is to inform the men of the exact location of the great veins in the arms and thighs, by a pressure on which the flow of blood from wounds in the extremities may be readily stopped. A sailor who has exhibited speed, accuracy and skill in affixing the tourniquet, and making and applying a substitute for the usual instrument, is rewarded with the honor of instructing details of the crew, under the supervision of the assistant-surgeon, as shown in our illustration.

There is a common conviction among naval sailors that the whilom glory of the American navy has departed; that the service is rapidly deteriorating through the enactments of landsmen who cannot distinguish a "sick-bay" from the Gulf of Mexico; that even for a season of peace there is little inducement for a man-of-war's man to remain in the service, and that there is absolutely nothing to keep up the old-time spirit which evolved heroes without number. It was a sorrowful day for Jack when, through the influence of the late Admiral Foote, his supply of grog was cut off, although a glorious one for the cause of temperance. In the good old days to stop a sailor's grog was the most horrible of all punishment that could be inflicted upon him, in his estimation, and he was almost inconsolable. He would rather undergo any kind of punishment than be deprived of his grog. To lose his *tot* of corn-juice morning and noon, and when the "main-brace was spliced," was something he could barely endure. It was amusing to see the men in single file as they approached the grog-tub, and to see with what care the tot was lifted so as not to spill a drop of the precious fluid, and to look at the eager eyes, as with a steady hand it was carried to the lips, and, with the head thrown well back, the tot was drained almost as dry as if wiped out with a cloth. It required considerable vigilence on the part of the officer of the deck, Paymaster's Steward and Jack of the Dust, "to keep the veterans from *doubling the tub*."

The punishments regarded as light beside that of "loss of grog" would be esteemed by every one but a sailor of a pretty severe character. Congress has from time to time wrestled with rules for the better government of the Navy, and through these efforts much has been done to elevate the standard of manliness in those who from choice or otherwise have connected themselves with the naval service. By eliminating the degrading and barbaric practice of flogging, Congress recognized the sailor as a member of the human family, and did much to popularize this branch of the service. Yet an "Executive" can find means not only of punishing but of annoying those who may fall under the ban, or whom from dislike or malice he may imagine commits acts of insubordination. There is no limit to the length a martinet may carry his bazing proclivities and just keep within the law's requirements. Still a sailor would submit to any manner of punishment with a considerable degree of resignation if he could only have his ration of grog restored.

A LESSON IN SURGERY—APPLYING THE TOURNIQUET.

HOLYSTONING THE DECK.

LIFE ON BOARD AN AMERICAN MAN-OF-WAR—SCENES ON THE U. S. S. "TICONDEROGA," DURING A RECENT CRUISE.—FROM SKETCHES BY H. A. OGDEN.

MARY FLETCHER HOSPITAL, BURLINGTON, VT.

THERE is no higher or better use of wealth than that which contemplates the relief of the suffering and unfortunate. This, unquestionably, was the feeling which inspired Miss Mary Fletcher, of Burlington, Vt., to build and endow the hospital in that city which bears her name, and which was formally opened on the 22d of January last. Miss Fletcher appropriated, in all, for this charity the sum of $150,000. Of this sum $50,000 was for the erection of the buildings, and they have been erected within that limit, and $100,000 was for the permanent endowment of the hospital. She subsequently added $25,000 for the purchase of the site for the institution.

The architecture of the building is very imposing, with its stately portico, the red brick trimmed and varied with black, the massive portals, the generous windows and the tower surmounting all; and the whole structure reflects credit upon the architect—Mr. W. P. Wentworth, of Boston. The main building is of brick, is four stories high, including basement, and is surmounted by a large observatory, the entire height of the building from the top of the weather-vane on the observatory to the ground being 84 feet. The building has a frontage of 80 feet on the north, and 56 feet on the west. On the southwest of the main building is a single story L, 28x40 feet, and a little to the west and connected with the main building by a corridor 75 feet long is the amphitheatre, which has a frontage of 38 feet by 46 feet deep. The amphitheatre is fitted with five rows of elevated, semi-circular seats, and it is in this room that all surgical operations will be performed and the clinical lectures delivered. In this building also are consultation, anæsthetizing and recovery rooms. A few rods from the amphitheatre have been erected three small buildings to be used, respectively, as a laundry, autopsy room and stable. The arrangements are throughout very complete; the patients' rooms especially are most admirably adapted to their intended purpose. The utmost care has been paid to the important matter of ventilation; and while all the building is heated by steam, each room also contains a fireplace and

NEW YORK.—MONUMENT TO THE SOLDIERS OF THE TOWN OF WALLKILL.—FROM A PHOTO. BY E. JESSUP.

grate, thus giving an additional guarantee of perfect purity of atmosphere and also affording a better opportunity for regulating the temperature.

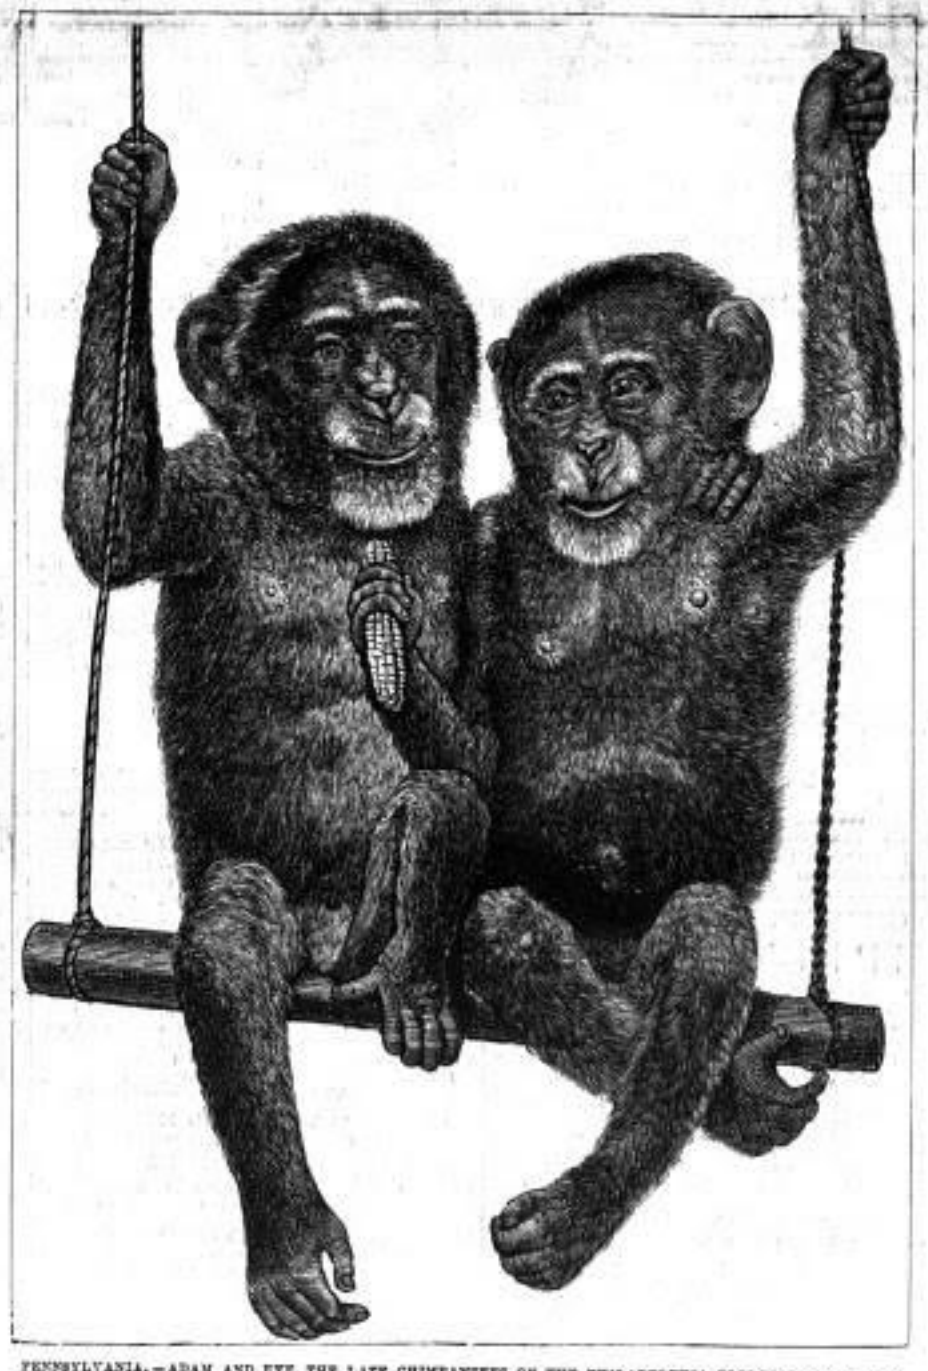
The Fletcher Hospital is designed primarily for Vermont, and it is the hope and expectation of its founder and corporators that it will become one of the great institutions of the State. It is in one sense a *free* hospital, for while those patients able to do so will pay certain rates, according to the accommodations they receive, those from that State wholly unable to pay anything will be received to the extent of the accommodations, under certain fixed regulations. It is not expected that the hospital will, at the outset, be crowded with patients, but that increasing demands will be made upon its accommodations as the city increases in size and population. The plans of the managers look to the future as well as to the present.

THE LATE ADAM AND EVE.

THERE was much genuine grief in Philadelphia over the death of the two remarkable chimpanzees, Adam and Eve, who had been comfortably lodged in the Zoological Gardens. They had given exhibition of rare intellectual powers, and by their suavity, their peaceful and decorous habits, and their marked appreciation of popular notice had endeared themselves to all *habitués* of the "Zoo." Affectionate and constant to each other, solicitous in a large degree for each other's comfort, cheery, graceful and loquacious in their way, they had become, in the brief period of their domicile, objects of wonder, not only to the general run of visitors, but to medical and scientific enthusiasts. They were the largest of their species which had survived the long journey, and great things were expected of them. Every possible attention was given them, but an unusually severe Winter brought upon one a fatal illness and so affected the other that, with the loss of companionship, life became too dreary to be longer borne, and so was speedily ended. One survived the other but a few days, and the couple had a host of real mourners. The chief were the doctors, who, in manipulating the cadavers, will find little recompense for the loss of opportunity for studying the development of these wonderful "kin beyond the sea."

MONUMENT TO THE SOLDIERS OF WALLKILL, NEW YORK.

THIS monument, now in course of construction, and to be erected at Middletown, N. Y., to the memory of the dead soldiers of the war of the Rebellion, consists of a bottom base eight feet square by two feet thick, a second base six feet square by one foot four inches, a third base four feet nine square at bottom, and molded to an octagon at the top, two feet three inches thick. In each of the four corners is a small cannon, and on the front panel of the base is inscribed the following: "Erected to the Memory of the Soldiers of the Town of Wallkill." The next block consists of the die, three feet six inches at bottom, and diminishing slightly towards the top. The cap is gothic, and in each of the panels is a corps badge. On the mold of this cap next the die are raised polished stars for each State of the Union. Then the pedestal, on the front of which is a monogram, N.Y.S.V. (New York State Volunteers), on a polished shield. Surmounting the whole is a soldier seven feet high, standing at parade rest. Every side of every block of this monument is highly polished, and has raised panels with finely hammered work. The total height is twenty-two feet. The monument is of Vermont granite. It is surrounded by a granite coping and an iron fence. The design is by Mr. O. E. Owen, of Middletown, N. Y.



GAMBETTA.

GAMBETTA became famous and popular all at once in December, 1868, when speaking as counsel for the *Rèveil*, which had been prosecuted for organizing a subscription to raise a monument to the representative Baudin, who was slain at the *coup d'état* of 1851. He delivered an harangue, which was one long, impassioned and scathing philippic against Napoleon III. Most people wondered that the Judges of the Sixth Chamber should have allowed him to proceed to the end of this denunciation unchecked; but one must have heard Gambetta speak to understand the enthralling charm of his oratory. I witnessed a proof of this in April, 1870, when he uttered his memorable speech about the "irreconcilables," plainly telling the Ollivier Ministry that he and his followers only accepted the Liberal concessions of the Empire as a "bridge" towards the Republic. In the ardor of his peroration he swept his hand over the ledge of the tribune and knocked a bowl of beef broth, which had been brought for his refreshment, on to the heads of two ushers beneath. In the case of ordinary speakers this mishap would have raised inextinguishable laughter; but as it was, no one even smiled, and the two ushers wiped their hair, ears, and coats in the mutest resignation. Gambetta came to demolish Napoleon's throne just at the time when a man of his sort was wanted. The generation which had seen the butcheries of December, 1851, had half passed away, and the new generation was inclined to judge of the Empire by its pinchbeck splendor and the great material prosperity it had conferred on the land. Gambetta roused the conscience of the nation by reminding it of the crimes which it had no business to bury in oblivion. He came like Daniel at the feast of Belshazzar, but he did more than interpret the writing on the wall: he himself wrote the "Mene, Mene, Tekel, Upharsin" with the blood of the martyred Baudin. From the first it was never doubtful that his prophecies would be fulfilled. All Paris felt that great events were impending; but Gambetta himself had an idea that he should be suddenly arrested and shipped off to Cayenne. I met him a few days after the battles of Woerth and Forbach, when the Empress Regent had put Paris in a state of siege, and at parting I said: "Au revoir au Capitol." He shook his head and answered that he thought Palikao, the Prime Minister, would try to kidnap him. "All my footsteps are dogged," said he, "and my poor aunt advises me to carry a revolver about with me. But that would do no good." The apprehension of being arrested did not shake Gambetta's nerve or interfere with his spirits. He had not taken to "doing Banting" in those days, and after every one of those copious repasts in which he delighted, and where Burgundy was his staple wine, he would jest in a truly Rabelaisian style about his imperial enemies. One of the mistakes he made at this time (he himself calls it *the* capital blunder of his life) was to trust in Bazaine. He worked with all his might to get that traitor appointed Commander-in-Chief, and he succeeded. If the truth must be told, he was fairly carried away by the seductive eloquence of Madame Bazaine. There was no resisting that dark-eyed little Mexican beauty, who chattered like a humming-bird, and amid weeping, wringing of hands, and ecstatic declarations of patriotism, vowed her husband's willingness to die for his country. "Can't you understand what a soldier like my husband must feel at seeing the army commanded by an oaf like this third Napoleon?" exclaimed Madame Bazaine, passionately (within an hour after she had kissed the hand of the Empress and protested her allegiance to the throne). "Yes," answered Gambetta, and for that one time in his life he was weak.

He is not weak now. I wish I could put into fitting words the intense admiration I feel for Gambetta's proconsulate at Tours and at Bordeaux. Let it be remembered that he had then to contend against the sulkiness of Legitimists, the lukewarmness of Orleanists, the downright disaffection of Bonapartists; and that he yet slew nobody, arrested no one, and caused armies to spring up from beneath the sod, as it were. He saved the honor of France. He committed blunders, of course, but how few! And it must be reckoned to his credit that amidst overwhelming temptations to make money (*e.g.*, the Morgan Loan), he left office no richer than he had been before. After the peace he took up his residence in a third-floor apartment of the Rue Montaigne, where his aunt, Mademoiselle Massabie, acted as his housekeeper, and there he remained until his proprietorship of the *République Française* having made him rich, he removed to more suitable lodgings. The Conservative journals have poked much fun at Gambetta, and tried to paint him as a greedy adventurer; but I do not think it would be possible to find a man less wrapt up in self and more devoted to his party and its principles. The dominant sentiment in his mind is the ambition to do what no one else has been able to do, viz., found the Republic in France. Very good-natured withal, he refuses the co-operation of no one who can help him towards this end, inasmuch that when the Cabinet of the 16th of May was overthrown, and hundreds of placemen were trembling for their emoluments, he kept many of them in their situations, simply because they had sent him supplicatory letters.

VERMONT.—THE MARY FLETCHER HOSPITAL, RECENTLY OPENED AT BURLINGTON.

PENNSYLVANIA.—ADAM AND EVE, THE LATE CHIMPANZEES OF THE PHILADELPHIA ZOOLOGICAL GARDEN, FROM A SKETCH BY GEORGE T. HOBBS.

ARTIFICIAL MINERALS.

FOR a long time past the attention of geologists has been turned to the study of the means by which nature has worked in the production of the rocks and minerals, constituting the crust of the earth. Already a large number of minerals have been produced out of their elements in the laboratories of chemists; and although no commercial value attaches to them, they are of great interest in enabling us to solve many problems in geology. Nature has had ages to work in while the imitations of man are of momentary duration, and hence the size of the productions of the former must greatly exceed those of the latter. Rubies, sapphires, corundums, diamonds and feldspar have been made in considerable quantity. Some time ago M. Meunier, a geologist, informed the Academy of Sciences of Paris that he had been able to produce an artificial brochantite (sub-sulphate of copper) wholly rebellious to the chemist. In extending his researches he has now succeeded in obtaining melanochroite, a subchromate of lead. By mixing together cold solutions of galena (sulphide of lead) and potassium bichromate, and allowing them to remain undisturbed for many months, he obtained crystals of melanochroite resembling

Digitized by Google

in every respect those found in nature. Although, as we have said, such experiments may have no practical value, they, nevertheless, are a step in advance in the study of the composition of the globe.

OUR PLACES OF AMUSEMENT.

THE event of the week at the Academy of Music was the production of Marchetti's "Ruy Blas," with Madame Marie Roze as the Queen, and Signor Campanini in the title rôle. Society mustered in its full strength, and when the curtain rose every available seat was occupied by the representatives of musical criticism, and the lovers of good music at its best. The libretto is an adaptation of Victor Hugo's thrilling romance, the score the composition of Filippo Marchetti. The opera was originally produced at La Scala, Milan. Rich in clearly defined melodies, the harmonies are delightfully tinted, and the *ensemble* exceptionally brilliant, while the martial music may be described by the hackneyed but appropriate term—soul-stirring. Never did Madame Marie Roze sing more sympathetically; never did she exhibit her high dramatic powers more vividly; never did the subtle charms of her finished acting and beauteous presence appeal more intensely. She was every inch a queen, a right royal beauty, combining the *hauteur* of a Medicis with the womanly softness of Fazia. The duet "Dolce Volutta" was rapturously encored, the recalls being again and again repeated; while her rendering of the ballad "O Mia Dolce Alemagna" and the "Larda Durata" achieved signal triumphs. Signor Campanini was at his very best, and his acting would have done no discredit to his great master, Salvini. In the last act, the snatching of the sword from his relentless, merciless foe, and his subsequent death agony, were simply superb exhibitions of dramatic powers. Madame Lablache made much of a small part, enacting the duchess duenna to the life. The manner in which the opera was put on the stage does infinite credit to Colonel Mapleson. The dresses were magnificent and true to the Hidalgo period, while the court scene with its march past was a veritable pageant. "Ruy Blas" is destined to become immensely popular while it has added additional and special lustre to the management.

At Wallack's a mere "Scrap of Paper" is drawing large audiences. This adaptation of Sardou's "Pattes de Mouches" is crisp as a new bank note, and bright as a Jablakoff candle.

"The Banker's Daughter" having passed the Rubicon of one hundred nights at the Union Square, bids fair for a phenomenal score.

At Fifth Avenue "Thro' the Dark" has scored a genuine success. The plot is intensely dramatic, the situations full of the keenest and most vivid interest. Not for one moment does the attention flag, and when light and happiness are at length happily arrived at "Thro' the Dark," the feeling of the audience is one of intense relief. The management has mounted the piece in a manner to justify the highest encomiums, and the cast is exceptionally a strong one.

"Hardly ever" has a ship encountered such favorable weather as the "Pinafore." The theatrical ports she is now unloading at are the Lyceum, the Standard, and the Broadway. The crew is in admirable condition, and the cargo which is nightly sent ashore well worthy of investment.

"The Black Crook" has been revived at Niblo's, "La Cigale," at the Olympic, while at Booth's "The Little Duke," the maddest, merriest of opera bouffes, was produced on Saturday night, more of which anon.

"Engaged," Mr. W. S. Gilbert's burlesque comedy, is doing its spiriting gently. Its tone is refreshing and thorough, whilst the sparkle of its dialogue and its charming *mise en scène* render a visit to the Park Theatre a coveted enjoyment. The acting of Agnes Booth marks the true *artiste*. It is natural, devoid of forced effects, and exquisitely sympathetic.

FUN.

WHY was a mother of one of the old Peruvian rulers like a piece of rubber? She was an incaraiser.

THE proprietor of a bone-factory announces that persons leaving their bones with him can have them ground at short notice.

BRIGHT LITTLE GIRL: "The robbers can't steal my mamma's diamond ear-rings 'cause papa hid them." *Visitor*: "Where has he hid them?" *Little girl*: "Why, I heard him tell mamma he had put them up the spout; and he guessed they would stay there."

A CITIZEN went into a Norwich hardware store the other day and inquired, "How much do you ask for a bath-tub for a child?" "Three dollars and seventy-five cents," was the reply. "W-h-e-w!" whistled the customer. "Guess we'll have to keep on washing the baby in the coal-scuttle, till prices come down."

THE sisters had not been on the most loving terms for some time, when one day a lady visitor praised the good looks of the offspring of one. "How much he looks like Mrs. Black," said she, "especially when she laughs." Mrs. Black was expressing her pleasure at the compliment implied, when the *enfant terrible* blurted out, "Mamma says I look like a fool when I laugh!" Tableau.

TO KNOW whether a garden has been planted or not, a Western paper gives the following rule: "If one forgets whether beds are planted or not, a good way to tell is to turn a stray cat into the garden. If the beds are planted, the cat will proceed to race round and dig into them, and act as if it had relatives in China whom it was anxious to get at; while, if they are not, it will sit down calmly in the path and seem to be meditating on the progress of missionary work in Africa. A cat's instinct seldom deceives in this matter."

A WRITER on household adornment says: "One can easily transform a long and uninteresting parlor into a series of small, artistic rooms, full of sentiment. Gather there easy-chairs, footstools, lounges strewn with pillows, workstands, writing-tables, bric-à-brac, bits of buhl furniture, screens, etc." Oh, yes: these trifles cost comparatively nothing. And you might also bring up the wood-horse and saw, and the washing-machine, and fill in with two or three rosewood pianos, and strew a few coal-stoves over the floor, and hang the wash-boiler and several iron pots on the wall—and you will be surprised at the effect.

THURBER'S RELIABLE CANNED GOODS.

GREAT progress has been made within a few years in the art of Preserving Fruits, Vegetables, Fish and Meats in tins, and in consequence the consumption has largely increased. As yet, however, canned goods are not generally thought to be "fresh," and some brands are not, perhaps, entitled to be so considered. Those packed by us, however, are Hermetically Sealed at the sources of supply, when they are in the best possible condition, by a process which preserves the much-to-be-desired fresh, natural flavors; and they are really in better condition, fresher, more palatable and wholesome than many so-called "fresh" articles which are exposed for sale during considerable periods of time in city markets. All goods bearing our name are guaranteed to be of superior quality, and dealers are authorized to refund the purchase price in any case where consumers have cause for dissatisfaction. It is, therefore, to the interest of both dealers and consumers to use THURBER'S BRANDS.

H. K. & F. B. THURBER & CO.,

Manufacturers of and Dealers in Food Products, New York.

THE PHYSICAL PARADOX.

IT has been said that "the blood is the source of life." It is as truly the source of disease and death. No life, that is to say, no healthy tissue can be generated from impure blood, no organ of the body can normally perform its functions when supplied with impure blood. The fluid that should carry life and health to every part, carries only weakness and disease. Blood is the source of life only when it is *pure*. If it has become diseased, it must be cleansed by proper medication, else every pulsation of the human heart sends a wave of disease through the system. To cleanse the blood of all impurities, use Dr. Pierce's Golden Medical Discovery and Pleasant Purgative Pellets, the most effectual alterative, tonic, and cathartic remedies yet discovered. *They are especially efficient in scrofulous diseases.*

THE great gift book sale of A. W. Lovering, the book-seller of Boston, is a marked feature of the times. Its very existence in these hard times is a proof of the success which will ever attend the judicious exercise of business energy, commercial honesty and strict performance of promises. Mr. Lovering has been honorably and universally known in Boston for over twenty-five years, and during that time has deservedly won the esteem and confidence of the community for reliability, promptitude and liberality. His colossal gift sale is an acknowledged success; his gifts are awarded with the utmost impartiality (pianos, watches and diamond rings, stretching far into the thousands, having already been given away). All we can say is, send for his large catalogue explaining the modus operandi of the sale.

THE celebrated instruments of Daniel F. Beatty, the great piano and organ manufacturer of Washington, N. J., are unrivaled in purity of tone, action, and excellency of finish, being the result of years of indefatigable labor, the aim of which has been to make only the very *best*, and sell at the least possible profit. This course has resulted in the name of Beatty becoming a household word in every State and Territory of the Union and Canadas, and familiar to numbers of the residents of England, Germany, France and Italy. The special offers of Mr. Beatty, which appear in our columns to-day, mean just what they say. The instruments are all and more than is claimed for them, while the prices are barely manufacturer's cost, for Mr. Beatty is determined to place his unexcelled instruments in the homes of the entire music-loving population. No one contemplating the purchase of an organ or piano should fail to take advantage of his offers, as a neglect to do so will be a matter of regret. Remember these offers are only good during the next thirty days. The illustrated catalogue of Mr. Beatty is detailed and full of information interesting to every one. It will be mailed free on application. Send for a copy to DANIEL F. BEATTY, Washington, N. J.

THOUGH the ST. NICHOLAS hotel was built more than twenty years ago, New York to-day has nothing to surpass it. The superb luxury and completeness of its accommodations are beyond cavil, from its cuisine down to the most trifling detail. The stranger seeking a temporary home in New York here finds his beau ideal of hospitality. The rates have been reduced to $3.50 per day.

INDIGESTION, DYSPEPSIA, nervous prostration, and all forms of general debility relieved by taking MENEHAN'S PEPTONIZED BEEF TONIC, the only preparation of beef containing its *entire nutritious properties*. It is not a mere stimulant like the extracts of beef, but contains blood-making, force-generating and life-sustaining properties; is invaluable in all enfeebled conditions, whether the result of exhaustion, nervous prostration, overwork, or acute disease; particularly if resulting from pulmonary complaints. CANWELL, HAZARD & CO., Proprietors, New York.

MISCELLANEOUS.

Housekeeping Made Easy; Or, American Practical Cookery Book. Profusely illustrated. Worth its weight in gold to every housekeeper. 12mo. Cloth. Retail price, $1.50.

Six Hundred Receipts. An invaluable and comprehensive guide for the housekeeper. 12mo. Cloth. Retail price, $1.50.

Hoyle's Games. The only recognized authority and guide on all games of chance or skill, in Europe or America. Retail price, $1.50.

ART, SCIENCE AND MEDICINE.

Everybody's Lawyer and Book of Forms. Specially compiled for the merchant and man of business. By Crosby and Vanderpoel. 608 pages. 12mo. Retail price, $2.

Diseases of Horses, Cattle and Sheep. Their description and treatment. Numerous illustrations. By Dr. R. McClure. Retail price, $2.

Cattle and their Diseases. By R. Jennings, V. S. A comprehensive guide to the stock-raiser, farmer and owner of horses and cattle. Profusely illustrated. 12mo. Cloth. Retail price, $2.

The Family Doctor. The parent's best guide to health, and treatment of disease and accident in every form. By Prof. R. S. Taylor, M. D. Numerous illustrations. Retail price, $2.

Woman and Her Diseases, from the Cradle to the Grave. How to cure and prevent the diseases to which she is liable. By Dr. K. H. Dickson. Retail price, $1.75.

The Ladies' Medical Guide and Marriage Friend. By Dr. H. Pancoast. A popular description of the marriage relation, and its influence on health. More than 100 illustrations. 12mo. Cloth. Retail price, $2.

Facts and Hints for Every Day Life. What one wants to know about everything. Profusely illustrated and comprehensively described. Retail price, $2.

Health in Relation to the Human Form. By Drs. Brinton and Napheys. Full-page illustrations. A medical and hygienic guide for women. Retail price, $2.

Nuttall's Standard Pronouncing Dictionary. More than 80,000 terms used in art, science, commerce and daily life, fully explained. Retail price, $2.

TRAVEL AND ADVENTURE.

The Wonders of the Arctic World, and a Complete History of the Polaris Expedition. Numerous full-page illustrations. By Epes Sargent and W. H. Cunnington. Retail price, $2.50.

Travels and Discoveries in North and Central Africa. The journal of an expedition under the auspices of the British Government. By Henry Barth, LL. D., D. C. L. Maps and numerous illustrations. Retail price, $2.

Female Life among the Mormons; Or, Maria Ward's Disclosures. Startling, but truthful narratives. Many illustrations. Retail price, $2.

Male Life among the Mormons; a companion volume. Profusely illustrated. Retail price, $2.

Temperance Tales. By L. M. Sargent. 650 pages. A collection of thrilling narratives of the effects of intemperance in all classes of society. Retail price, $2.

RELIGION, Etc.

Beginning Life. A book for young men. By Principal Tulloch. Solid, sensible and salutary. Retail price, $1.50.

The Blessings of an Open Bible, as shown in the history of Christianity, from the time of our Saviour to the present day. Numerous illustrations. By V. W. Milner and the Rev. J. F. Berg. Retail price, $1.50.

The History of Palestine, from the Patriarchal Age to the Present Time. By the Rev. John Kitto. Numerous illustrations. Retail price, $2.

Mornings with Jesus. Devotional Readings for the Family and Closet for every day in the year. By the late Rev. William Jay, of Bath. 12mo. Cloth. Retail price, $1.50.

Evenings with Jesus. The companion volume. By the same author. Retail price, $1.50.

FICTION.

The Wandering Jew. By Eugene Sue. Splendid library edition, 12mo., beautifully illustrated. Retail price, $1.50.

Valentine Vox, the Ventriloquist. By Cockton. Just the thing to promote a hearty laugh on a dull day. Beautifully illustrated. Retail price, $1.50.

Cudjo's Cave. By J. T. Trowbridge. A genuine New England novel of the old school. 500 pages. Retail price, $2.

Neighbor Jackwood. Another startling and characteristic New England novel, by the same author. A life-like record of the backwoods. Retail price, $2.

The Three Scouts. By the same author. The creations are marvelous and the situations startling. Retail price, $2.

Goatland; A Story of Country Life. With 12 full-page illustrations. Full of exquisite engravings and lively anecdote. Retail price, $2.25.

Outpost. A novel. A graphic relation of the adventures of a primitive settler's family in the agricultural districts of the Middle Atlantic States. Retail price, $1.50.

Ten Nights in a Bar Room, and What I Saw There. By T. S. Arthur. With full page illustrations. Thrilling and sensational, but painfully true. Retail price, $2.

CASSELL'S TECHNICAL MANUALS.

Important to Mothers.

MRS. WINSLOW'S SOOTHING SYRUP is the only thing that mothers can rely upon for their children. It corrects acidity of the stomach, cures wind colic, regulates the bowels, and gives rest, health and comfort to mother and child. During the process of teething its value is incalculable. It softens the gums, reduces inflammation and allays all pain, thereby giving rest to the child and comfort to the mother.

ORGAN BEATTY PIANO

BEST IN USE — BEST IN USE

$340 ORGAN FOR $85.

(NEW STYLE, NO. 1685.)

BEATTY ORGAN Take notice. Upon my return from Europe in 1878 I advertised largely "Beatty's offer for this month. This beautiful Piano Upright Parlor Organ, style No. 1685, thirteen Stops, two Knee Swells, three sets of Reeds, in solid black walnut case, with handsome French veneering, laid on solid walnut. Weight when boxed, about 350 pounds; height, 58 in.; depth, 24 in.; length, 80 in.," etc. So great was the demand for this beautiful Piano Upright Parlor Organ our men at the factory were compelled to work until 10 o'clock P. M. to fill orders. Monopolists' price for this instrument, about $340.00.

MY PRICE, ONLY $85.00. In order to meet the public demand this unparalleled offer is extended until further notice. We have made a judicious and large CASH purchase of the best material which enter into its construction, at an extremely low price, and are thus enabled to continue to sell this beautiful new style at the unprecedented price of only $85. Order at once, as every instrument when introduced into a new locality sells others, as it becomes a standing advertisement for me in your own home. Thus it is that I am enabled to sell this instrument, in order to have it introduced, at this very low price.

ORDER NOW. To assure yourself that you can secure these unparalleled offers you must order now, as I cannot guarantee to keep them down this low for any definite time. I may be able to do it only a single month or I may be able to continue it six months or a year. One thing is certain: the price never will be lower, and may at any time be higher; so if you have thoughts of buying a Piano or Organ in the near future you must order now to assure yourself of these splendid offers. ☞ Large Illustrated Newspaper, with much valuable information about cost of Pianos and Organs, sent FREE. Address,

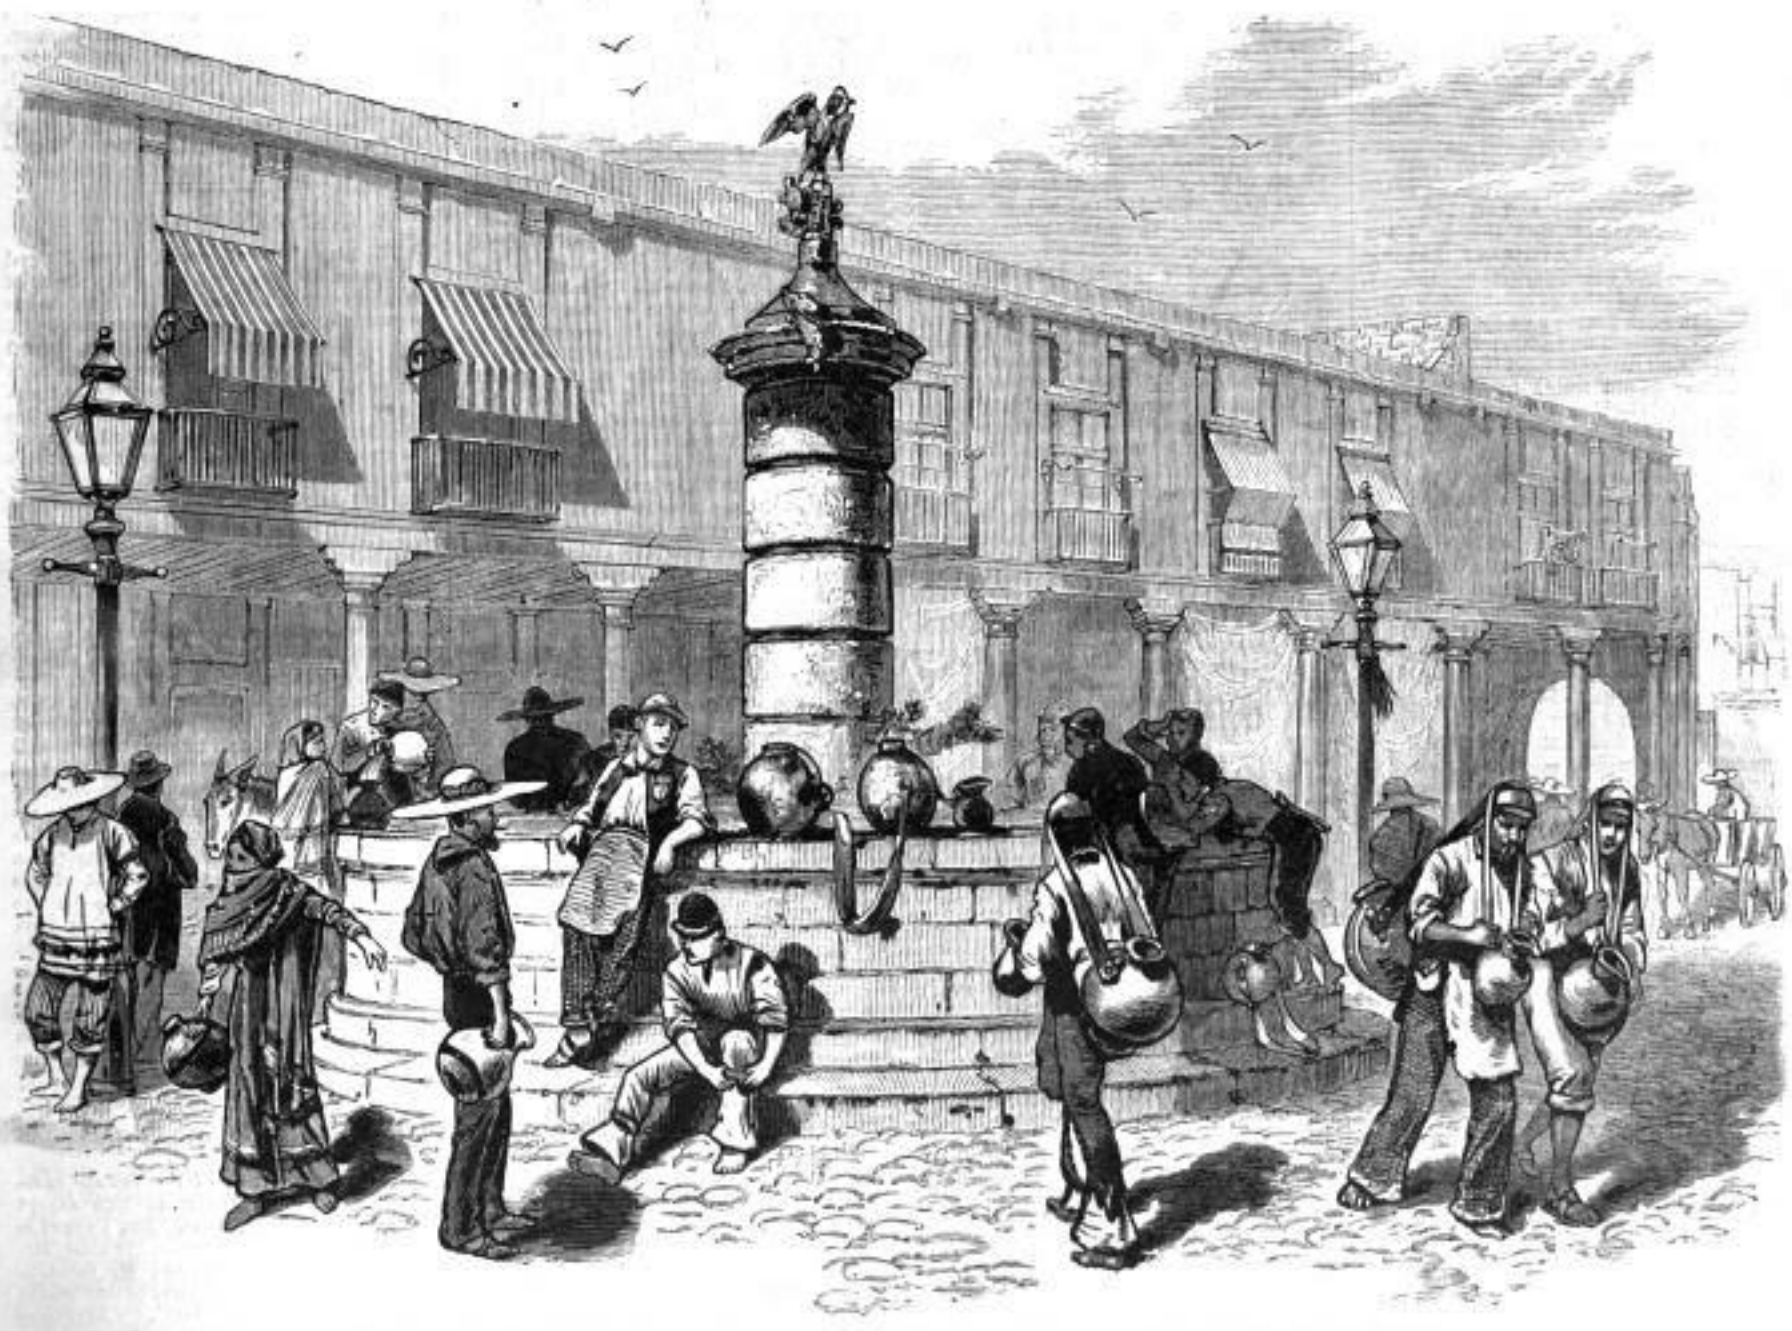
THE EXTENSION OF AMERICAN TRADE.



VISIT OF THE AMERICAN INDUSTRIAL DEPUTATION TO MEXICO.

THE exhibition of American and Mexican products at the Mineria was thronged daily by all classes of the residents of Mexico, from the *zarape*-clad Indian followed by his wife, the stereotyped infant hammocked in the stereotyped *rebozo* on her back, to the high-hatted, high-shirt-collared, high-heeled swells, their señoras and señoritas either in raven-black, which becomes them, or in gaudy, ill-sorted, defiant colors, that become them not. Why will the Mexican swells persist in wearing heels high as Popocatapetl? Why will they, in walking, wobble like a Chinese lady of seven buttons? Why do they imagine that a big toe bulging upwards, like a mushroom out of mother earth, is a thing of beauty? What a crop of bunions are being raised for Mexico during this year of grace—bunions as large as lemons or *granadillas!* On Sunday it was next to an impossibility to gain admission to the Mineria, so great was the throng; yet, it was a gentle, passive crowd, that moved sluggishly onward like the waters of the "lazy Scheldt." The "chromo" exhibit possessed a strong fascination for the Mexican, especially such of the pictures as betrayed a religious or ecclesiastical tendency. The Pope was snapped up in a twinkling, and a saint, no matter how remote in the litany, sold at a very respectable figure. "If I only had a chromo of the Virgin of Guadalupe, my fortune was made!" sighed Mr. Kelly, the exhibitor. The Mexicans are not very severe or accurate art-critics. I saw "An Indian Summer in the Adirondacks" sell for a scene near Jalapa, and a likeness of Peter Cooper realized a dollar, under the impression that it was that of Cardinal Manning attired in secular raiment. Mr. Kelly returns to Mexico for the exhibition in January next, to bring with him several thousand chromos of the Virgin of Guadalupe, with as many of Hidalgo, since in every homestead, from the palace on the Plaza Mayor to the sugar-cane cabin out in the tawny sands, are representations of the Virgin and the patriot to be seen—rude, ill-drawn daubs, to be sure, but to the present hour regarded by these simple people as specimens of the very highest art. I have already mentioned the exhibit of Messrs. Rogers, Cooper, and Davis respectively. Plows shone very conspicuously in the Mineria, and every one exhibited was bought up instanter; and Mr. Dickinson, who represented Deere & Co., Moline, Ill., informed me that he could have sold his entire exhibit four times over. Harrison & Co., Belleville, and H. H. Smith & Co., Pekin, Ill., displayed drawings of wagons, plows, threshing-machines and other agricultural implements. Porter & Mowbray, of Winona, Minn., exhibited six different classes of flour. George S. Bowen, of Chicago, made a goodly show of cotton prints from the Harmony Mills, at Cohoes, N. Y.; Richardson & Co., New York; and Lockwood & Co., Waterville, Me. Nails were strongly represented by the Riverside and Benwood Iron Works of Wheeling, W. Va., and the Bellair (Ohio) Works. Wood & Co. and Park Brother & Co., through C. L. Umbstaetter, exhibited sheet-iron and cast-steel; while Gill Brothers & Co., of Steubenville, Ohio, displayed a large assortment of glassware.

THE NEW CONGRESS.

THE Forty-sixth Congress has met in extraordinary session at the call of the President, and has been duly organized, with a Democratic majority in both of its branches. The re-election of Mr. Randall as Speaker of the House of Representatives is commonly accepted as a tribute, not only to his acknowledged skill as a parliamentarian, but also to the predominance of comparatively moderate ideas among the Democratic members of that body.

Whether this augury shall be confirmed or not by the deliberations of the present session, it is at least safe to say that the Democrats are now put on trial before the country as they have not been before since the outbreak of the late Civil War, when the sceptre of power passed from their hands, or, rather, was violently tossed from their hands, and left to be grasped by their Republican rivals. And the circumstances under which the Democrats succeed to the legislative control of the country are well calculated to impose upon them the duty and necessity of walking with vigilance and circumspection in the narrow way which has been opened to them by the hesitating favor of the people.

We say the "hesitating favor" of the people, for it behooves the Democrats of the House of Representatives to remember that they have maintained their ascendency in that body by a constantly decreasing majority since the date of their overwhelming supremacy in the popular branch of the Forty-fourth Congress; and it behooves them also to remember that they hold the Senate to-day rather by virtue of the great political reaction which supervened in 1874, than by virtue of the predominance they now hold in such States as New York, New Jersey, Connecticut and Ohio; for if these States were all called to elect their Senators to-day, they would follow the example of New York in electing Republicans to represent them in that branch of the National Legislature.

Holding the House of Representatives by such a narrow margin, and holding the Senate by a tenure which has respect rather to the past than the present, the Democrats are placed under the strongest obligations of prudence as well as of public duty, to disengage their steps from any line of conduct that shall savor of partisan rashness or of revolutionary violence. They cannot afford the indulgence of partisan rashness, because their majority is not large enough to insure the predominance of passion over reason, and because their temporary triumph under the lead of the former would be the sure precursor of defeat in the coming Presidential contest. They cannot afford to symbolize with revolutionary violence by attempting to coerce the Executive into an unwilling compliance with their measures of legislation, because in so doing they would not only sin against the theory of our Government, but against the very tenure by which they now hold the Senate.

We explained last week that, in the distribution of powers under the Federal Constitution, the framers of that instrument determined that the distribution should cover different tracts of time as well as different spheres of jurisdiction—the division and co-ordination of powers in several distinct departments being ordained to guard against the despotism of any particular department, and the overlapping of the times covered by the incumbents of Federal place, at any given epoch, being ordained to guard against the rash and tumultuous wishes of the "living present."

The Democrats are placed under especial obligation to regard the latter feature of the Constitution, because, in case the President should dissent from any act of the two Houses of Congress, he would not only be in the exercise of a technical right, vested in him by the Constitution, but the moral ground on which he can claim to exercise it would be precisely similar in its origin to the moral ground on which the Democratic majority of the Senate must rest their control of that body; for if it be said that the President has no moral right to veto an act of the National Legislature passed in 1879, because he was elected on the "effete issues" of 1876, it would be easy for him to retort that, on this theory, the Senate, composed as it largely is of men elected at a still earlier date, has no moral right to impose its present will on him. In a word, the Democrats can as little impeach the moral as the constitutional right of the President to exercise his lawful prerogatives in matters of new legislation; for in impeaching the former they would cast discredit on the pretensions by which they hold to-day a continuing majority in the Senate.

In so arguing, we express no opinion upon the merits of the issues which may come to be joined between the Legislative and Executive Departments. It may be that the President will give his assent to the repealing measures desiderated by the Democrats. If he should do so the threatened conflict will be avoided. If he should refuse that assent he will be called to give his reasons for such refusal, and in the presence of those reasons it will remain for the Representatives of the people, assembled in Congress, to exercise their rightful constitutional power to pass the Bills in question "over the President's head." If they should fail in this attempt, the methods of the Constitution will have been exhausted, and the issue must be remitted to the arbitration of the people at the next Congressional and Presidential election. To block the wheels of Government, in revenge for such a failure, would be to install anarchy and revolution in the place of those orderly processes which are marked out by the Constitution for the enforcement of political changes; and who can doubt that the party which provokes such an issue would be swept away by the consuming indignation of the people? If the Democrats wish to learn the perils of such a course let them study the popular reaction which the Republican Party has provoked by the abuses of its power in the heyday of its supremacy.

THE VANDERBILT WILL.

THE decision of Surrogate Calvin in the Vanderbilt will case, confirming in every respect the probate of the will and codicils, will be received with general satisfaction as the only proper conclusion of a contest which should never have been made. The Surrogate's opinion covers all the more important issues raised in the case, and, as to some of the witnesses of the contestant, speaks in terms of severe but merited condemnation. Analyzing the testimony as to monomania, the Surrogate concludes that it shows Commodore Vanderbilt was a man "of very vigorous mind and strong nature, but lacking the amenities of education and culture and a delicate respect for the opinions of his fellow-men." The Surrogate argues that it was impossible that William H. Vanderbilt could have exerted an undue influence upon his father, and he urges those interested to "bring to merited punishment" the principal spiritualistic witnesses, "together with their guilty suborners." In conclusion, the Surrogate censures the contestant for the aspersions cast upon the character of Mr. Vanderbilt, remarking upon this point as follows:

"The tardy apology, after the most diligent and persistent effort to secure witnesses capable of testifying to the charges, while praiseworthy in itself, affords but a sorry and meagre amend for the endurance by a delicate, sensitive, cultured woman, for two years, of a baseless slander of her private character. It is an occasion of no regret, but of gratification, that no mesh of prurient and defamatory matter has been kept out of this case, consistently with the rights of all the parties engaged in this unseemly revelation of family secrets. It may well be doubted whether, in the best and most exemplary families, there do not things occur which a reverent regard for the decency, the modesty and sacred character of domestic life would preserve inviolate. But when such revelations are sought to be made in violation of the obligations of filial and fraternal duty, it behooves courts to confine such disclosures to the narrowest practicable limits consistent with the legal rights of the litigants."

All persons who have the slightest regard for the decencies of life will thank Surrogate Calvin for this opportune and emphatic rebuke of that malevolent spirit, only too frequently exhibited, which delights in defamation of personal character, and, for mercenary or other ends, does not scruple "to uncover to the public gaze the secrets of a parent's domestic and private life," and expose to the glare of the world the most sacred mysteries of the family and household. Indeed, the decision in this notable case can scarcely be without its influence upon the public mind as to the whole general subject of maintaining the inviolability of wills. The success which had attended some other efforts to set aside wills and testaments, involving large pecuniary interests, has produced a deep solicitude among persons of all classes as to whether any one could dispose of his estate by will with any confidence that such a disposition would be respected by the courts against the assaults of dissatisfied heirs and next of kin. Men of means were beginning to inquire whether, after all, it was worth while to accumulate, by earnest toil and scrupulous economy, a competence for those near and dear to them, if, when death closed their account, discontented and mercenary relatives, direct or remote, could step in and set aside the testamentary disposition of the fortune so accumulated. Surrogate Calvin, by his vigorous denunciation of all disreputable conspiracies of this sort, no less than by his righteous decision, has established a judicial precedent which will be of vast service in the future to honest and legitimate heirs, while at the same time it will deepen in the minds of intending testators the feeling of confidence in the maintenance of their testamentary purposes as lawfully and regularly expressed.

GAS AND ELECTRICITY.

WHEN, a number of months ago, Mr. Edison gravely assured the public that he had solved the whole problem of electrical lighting; that he had experimentally demonstrated the feasibility of dividing and subdividing the electric current at will, and that his plans gave promise of greatly reducing the cost of illumination, the public hailed the announcement with delight, and the price of gas-stocks everywhere rapidly declined. But the rosy promises of the wizard of Menlo Park still remain unfulfilled, and the indications, both at home and abroad, seem to warrant the opinion that gas corporations are yet to have their way for an indefinite number of years. Nor have the latter been slow to avail themselves of the knowledge that electrical lighting for ordinary domestic use is still a matter of the future. With confidence revived, they have restored the price of their stocks, and go on making consumers pay a profit ranging from more than two hundred to four hundred per cent. on cost of gas production.

It must not be considered, however, that electrical lighting is merely a chimera, or that efforts to supersede gas by its use have been relaxed. Enough has already been accomplished by electricians to heighten the desire to attain the one grand end in view. Experiments are constantly going on, and within a comparatively short period many new inventions and improvements have been brought to public notice, more particularly in France and England. At this moment at least a dozen different "systems" of electric lighting are in operation, their authors using as many different machines for generating the currents and of contrivances for producing and diffusing the illumination. Its adaptability to illuminating open, out-of-door spaces, public thoroughfares, docks and harbors, and the interior of large establishments, has been amply illustrated in London, Woolwich, Sheffield, Paris and Havre. The Jablochkoff candle system has been used in both Paris and London with great satisfaction as to its brilliant illuminating powers. The proprietors of the London *Times* use the system of M. Rapieff in lighting their establishment, and estimate its cost at about one-third the price of gas. Quite recently the Van der Weyde lamp was employed to illuminate Regent Street, London, and people were literally amazed by its overpowering brilliancy. In this country the practical use of the electric light has not extended beyond a very few manufacturing establishments, the Brush apparatus, an American invention, being the one mostly employed. A Brooklyn gentleman also is the accredited inventor of a generator and electric lamp. It is said that an apparatus after his plan, costing in the neighborhood of three hundred dollars, is susceptible of giving a light equal to twenty-four hundred candles.

That the amount of illumination afforded by the electric light is far greater than that of any other now in common use, and that its employment is desirable, so far as its adaptation may permit, will not be denied, but there is a practical question to settle before it can meet with wide success, and that question relates wholly to its cost. The public will yield to the extortionate exactions of gas companies, and submit—because they must—to their swindling system of measurement, until such time as a cheaper illuminating agent than coal gas can be procured. As it now stands, the electric light is regarded as a luxury too expensive for ordinary, everyday purposes, and is for the masses rather a curiosity than a benefaction.

The statements published by sanguine inventors and other persons in interest, to the effect that the cost of the electric light will be much below that of other illuminating agencies, thus far remains without satisfactory confirmation. In fact, all investigation, unfortunately, tends to prove that the cost of the electric light is greatly in excess of that of gas, even when the illuminating power is equal. This is shown by a series of experiments recently conducted by Messrs. Bennett and Valon, at Westgate-on-Sea, England. Six lamps, each adapted to burn Jablochkoff candles, were arranged at intervals of eighty yards, on standards 9½ feet high, along the sea-road. The candles were made to burn 1½ hours, but required renewing every hour. A small Siemens machine, exciting a large six-light Siemens, produced the electric current, which was divided into two circuits, having three lamps in each. A ten-horse engine imparted a velocity of 1,263 revolutions per minute to the smaller and 959 to the larger machine. A twenty-inch globe was used to test the light, and each lamp gave an illumination equal to 197 candles, or 1,182 in all. The experiment began December 2d, and was continued four hours during each of twenty-four nights. The total working expenses, in United States coin, amounted to $196.67. Messrs. Bennett and Valon state in their report that to produce an equivalent with gas 107½ lamps would be required, each burning five cubic feet per hour of the quality of gas at Westgate, giving eleven candles. The cost of this, for a period of ninety-six hours, they state at $81.43, thus showing a saving in favor of gas equal to $115.18.

Only a short time ago one of the London gas companies received permission to make an experimental trial on the Waterloo-road for the purpose of comparison with the cost of lighting the Thames Embankment by the Jablochkoff candle. In a distance of five hundred yards they increased the illuminating power from 264 candles, costing $465 per year, to 1,720 candles, the cost of which was quite $2,000 per annum. The result proved that it would cost fully ten times as much to light the same space equally as well with the electric light.

That this difficulty of cost may be overcome, and the electric light be brought into ordinary use, are consummations devoutly to be desired. The gas companies have had their own way far too long. While few or no improvements have been made in the manufacture of gas, the profits of the corporations have been enormous. Their stocks, in many instances, have doubled and trebled the par value, and the dividends have proved a mine of wealth to the stockholders. No business has turned out to be so lucrative. In this country, to-day, the price of untaxed gas, costing the manufacturers from 60 to 80 cents per 1,000 cubic feet, is charged to consumers at $2.50 and on up to $3.50 per 1,000 cubic feet, meter measure, according to locality. The profit ranges from 212 to 337 per cent. Where is the merchant, manufacturer, or banker, who realizes such extortionate gains? He who shall succeed in furnishing the civilized world with a better and cheaper light than coal gas will rank, deservedly and by common consent, among the foremost benefactors of mankind.

OUR PENSION ROLL.

THE liberality shown by the United States Government in its treatment of those who have fought and suffered in its defense amounts almost to extravagance. Pensioners totally disabled are now paid $864 per annum, which is the largest sum ever paid any class of military pensioners by any Government. Up to the War of the Rebellion, and for some time afterwards, this class received $96, but the amount has been gradually increased by nearly every Congress until it is now nearly ten times the former figure. The last increase was from $600 to $864. The "totally disabled" are such as have lost both eyes, or both arms, or both legs, or are otherwise entirely disqualified from physical exertion. In all, there are over fifty different classes of invalids on the rolls, not including widows and orphans, and special cases, like Mrs. Lincoln. The number who receive $600 per year is 701. Of the total number of pensioners, 34,890 receive each $102 and upwards annually. While the ravages of death and marriage (widows marrying are no longer entitled to pensions) steadily reduce the roll, the diminution in numbers has an offset in the increase of rates from time to time and the enlargement of the list, so that the annual payments for the next five years promise to be larger than for the last five years. But the minor children on the rolls are now coming of age rapidly, and will all disappear from the list within four years, with a corresponding reduction, of course, in the expenditure on pension account. Last year 10,321 were thus dropped, having come of age.

THE SENATE COMMITTEES.

IN the reconstruction of the Senate committees, all the chairmanships except three go to the Democrats. Mr. Bayard is Chairman of the Committee on Finance; Mr. Eaton, of Foreign Relations; Mr. Gordon, of Commerce; Mr. Thurman, of Judiciary; Mr. Davis (of West Virginia), on Appropriations; Mr. Kernan, of Patents; and Mr. Saulsbury on Privileges and Elections. The

Digitized by Google

Finance Committee has a majority in favor of soft money so far as the Democratic side is concerned. It is significant of the tendency of Democratic opinion as to the Appropriation Bills that the five Democratic Senators on the Appropriations Committee are pronounced and aggressively in favor of the most extreme partisan measures which were considered in their joint caucus of last session. Of the twenty-nine regular committees, twenty chairmanships are given to the South and only nine to the rest of the country, but this apparent partiality could not well be avoided since the South furnishes thirty of the total of forty-three Democratic Senators — nineteen of whom are ex-confederate officers. Of course, with this preponderance of members, the South, so far as the Senate is concerned, will be largely responsible for the legislation of Congress. It is to be hoped that the representatives of that section may not signalize their return to power by adopting the reactionary policy to which Mr. Beck and a few others seek to commit them.

IN THE OLD WORLD.

THE Cabinet difficulties of the French Republic are not yet ended, and it looks as if Gambetta, whose silence during all the recent disputes is significant, will have to become President of the Council in place of Waddington. But Gambetta would doubtless prefer to wait quietly for a still higher position. It is a pity that when there is so much practical work to be done by the conservative French Republic, its work should be hindered and even its existence imperiled by fanatical radicals, who play into the hands of monarchical and imperial reactionaries by thrusting forward burning religious as well as burning political questions which it would do no harm, but on the contrary much good, to let cool off for a while. Great excitement has been caused by the introduction in the Chamber of Deputies of Jules Ferry's Higher Education Bill, proposing to exclude the Jesuits from teaching. The Jesuits have in France twenty-seven colleges, with 848 teachers; twenty-six other communities, having sixty-one establishments and 1,089 teachers, are also unrecognized by the State, and they will consequently be deprived by the Bill of the right of teaching. It is presumed that if the Bill passes, the disqualified Orders will transfer their establishments to those recognized by law. But all the indications justify the belief that the Bill will be bitterly resisted, and perhaps its discussion will produce a more profound agitation than even the impeachment of the De Broglie Ministry would have done. Whatever perils may await the Grévy Government, there is good reason to hope it will pass safely through them. M. Frederic Harrison is right when he calls the closing of the French revolution and the founding of a permanent republic in the midst of Europe "the greatest political experiment of our age."

Few reflect how vast a difference is made by a little more or less of rain. Enough has now fallen throughout the province of Lahore, where fears of famine were lately rife, to insure the safety of the Spring harvest, and thus entirely change the financial and political, and affect even the military, aspects of the situation in India. Definite terms of peace have been sent by the Viceroy to Yakoob Khan, son of the late Ameer of Afghanistan, who has not yet had time to reply. Meanwhile, it is positively said that 20,000 Russians are being conveyed across the Caspian Sea, with Merv as their destination. It is also announced that Abdul Khan, who is Russia's favored candidate for the Afghan throne, is advancing on Cabul with many adherents. Abdul Khan is the son of the eldest brother of the late Shere Ali. He is, in fact, the legitimate heir to the throne of Afghanistan, but for six years past has lived in retirement in Samarcand, being supported by a pension awarded him by the Czar of Russia. He recently had an interview with General Kaufman, the Russian representative; and it is now supposed that, having received pledges of assistance in an attempt to regain his rightful inheritance, he is moving forward with that object in view. It appears inevitable that Russia and England must ultimately confront each other in Central Asia. But for the present Prince Gortschakoff and Lord Dufferin (the latter having taken friendly counsel at Berlin with Prince Bismarck) are reported to be successfully making a temporary amicable settlement of all the angry Eastern questions of the day. The Sultan has expressed the strongest desire for still closer relations of friendship with his British allies.

In the German parliament, the Chancellor seems likely to gain converts to his protectionist programme, although the bitterest hostilities have been provoked by his war upon Socialism and his attempts to force the members of the Reichstag to put on themselves the yoke of his Disciplinary Bill. A stormy session was caused the other day by a mere allusion to the possibility of there ever arising a Republic in Germany. Emperor William's birthday will be duly celebrated, but, on account of his indisposition, the ceremonial will be brief.

The business situation in Great Britain does not improve, and grave apprehensions of another financial crash are felt in commercial circles. Rumors affecting the solvency of institutions of high standing produced great depression during the past week. Great dissatisfaction with the proposed Tariff policy of Canada is expressed in England, but it is declared that Parliament will not interfere in the matter. A batch of correspondence in reference to South Africa has been published, showing that Lord Chelmsford desires to be recalled, and that the Home Government strongly deprecates the precipitancy with which Sir Bartle Frere rushed into war with the Zulus. The Government, under date of the 20th instant, instructed the latter that it is indisposed to sanction annexation or any further interference with the internal affairs of Zulu than is necessary for securing the safety of the colonies.

Prince Gortschakoff, in a reply to Lord Salisbury's dispatch pressing the execution of the Treaty of Berlin, declares that Russia must support within the limits of that treaty, the interests of the population for whose defense she went to war, and adds that a general understanding would be greatly facilitated if those populations acquired the conviction that their interests would be effectually defended by Europe within the same limits when Russian troops were no longer there to protect them. Gortschakoff says further that all that the British Government and its agents can do to induce in them confidence, moderation and resignation, and thus effect the equitable and pacific execution of the treaty, will meet with Russia's co-operation.

Menotti Garibaldi, son of the "Hero of the Red Shirt," proposes to leave Italy next Summer with a colony of three thousand Italians for New Guinea, in Australasia. He had better establish his colony in Virginia, Florida, Texas, or California. The great tidal wave of emigration to America is already rising in Europe, and particularly in Great Britain.

THE Democratic members of the House of Representatives, at a caucus held March 20th, adopted a resolution directing the Speaker to appoint all the standing committees. This means that the majority propose to open the door to general legislation instead of confining themselves to the passage of the necessary appropriation bills. If this purpose shall be persisted in, the session will probably be a long one affecting the business interests of the country most unfavorably.

A NATIONAL convention of Irishmen, just held in Chicago, has taken steps to remedy the evil of crowding the Irish immigrant population into large cities. An executive committee was appointed with authority to establish a statistical bureau for the dissemination of facts useful to immigrants who intend to settle on the lands, and, if practicable, establish diocesan and parochial bureaus to assist in the work. The movement will commend itself to public approval as at once timely and judicious.

THE State Legislature, in the interest of policy-holders in life insurance companies, has passed a Bill which makes it the duty of the Superintendent of the Insurance Department, whenever it shall appear that the capital stock of a company is impaired to the extent of twenty-five per cent., to require the stockholders to make good in cash the amount of the deficiency within ninety days. If the officers of the company fail to comply with the order, the Attorney-General is required to at once bring an action for the dissolution of the corporation. The law is a very proper one, but its utility will depend altogether upon the efficiency with which it is enforced.

THE plans for the International Exhibition in Mexico, in January next, are assuming form and shape. All nations will be invited to participate, and such as have diplomatic relations with Mexico will be requested to send special commissioners. All goods for exhibition may be entered free of duty, and will be shown in special buildings, without charge for space or storage. This exhibition will give our manufacturers and merchants an opportunity to develop a trade with Mexico which they should utilize to the utmost. There is no reason at all why at least seventy-five per cent. of the trade of that country should not be in our hands.

ONE of the wholesome signs of the times is the improvement in the iron trade, which in some districts is so marked that the demand exceeds the supply and capacity of the mills. New furnaces are being put in operation every week, and the outlook is full of encouragement. The steel-rail interest is also actively prosperous, so much so that good authorities believe the total capacity of the mills will be inadequate to meet the demand for 1879. Good prices for iron rails are assured for the next three months at least. Sales to the extent of 10,000 tons were effected in Philadelphia a few days since. A circular of Eastern bar iron manufacturers, just issued, says "the mills are full of orders at $2.50 to $4 advance on old prices, while the stocks of pig-iron are reduced, good qualities scarce, and prices advancing to a living figure."

THE publishing house of D. Appleton & Co., of this city, have suffered, as we have done, from the fraudulent practices of dishonest adventurers, and have just issued the following cautionary announcement:

"WARNING.—A party calling himself M. S. Gardiner, alias D. S. Davis, is traveling through the country (from latest reports, is now in the Southwestern States) soliciting subscriptions for 'Myra's Paris Fashion Journal,' and representing himself as the agent of Appleton & Co., 814 Broadway, New York City. There is not, and, as far as we can learn, never has been, a firm of that name at the address given. We herewith give notice that we have no connection whatever with the 'Journal' above mentioned; nor do we know the man, except through complaints received from persons who have paid him money, and have failed to receive the magazine they subscribed for. *None of our Agents are allowed to collect payment in advance.* D. APPLETON & CO., Publishers,

"549 & 551 *Broadway, New York.*"

MEMBERS of Congress seem to find it easier to enact laws than to obey them when made. The Revised Statutes, for instance, require the disbursing officers of the two Houses to deduct from the monthly payments of each member the amount of his salary for each day that he has been absent, *unless such member assigns as the reason for such absence the sickness of himself or some member of his family.* This law is violated, deliberately and repeatedly, at every session. A notable illustration is furnished in the case of Senator Sharon, of Nevada, who drew from the Secretary of the Senate, recently, compensation amounting to $10,000, being for the whole of the last Congress, with mileage added for sessions which he did not attend, being engaged elsewhere on his purely personal business during almost the entire period. Under the law, the Senator not assigning sickness as the reason of his absence, was entitled to but the merest fraction of this sum; but it was taken without scruple, just as others have taken it, in plain defiance of law and propriety. This may seem to be a trivial matter, but it is a matter which demands attention all the same. If the law is wrong, let it be repealed; but if it is right, and so long as it remains on the statute-book, let it be enforced inflexibly and impartially.

NO ONE can complain that our circulating mediums are not sufficiently numerous and varied. We have now eleven kinds of money, namely, copper cents, nickels, subsidiary silver, old silver, standard silver dollars, trade dollars, twenty-cent pieces, gold, Treasury notes, national bank notes, and fractional currency. The fractional currency is nearly all withdrawn, only $14,000,000 being now out, but there is a demand for a reissue, especially of the fifty-cent notes. The experience of the Treasury officials shows that paper money is more popular than silver, the paying teller in the Treasury cash-room stating that one hundred dollars in bills are called for to six dollars in standard silver dollars. There are many complaints of a redundancy of silver, particularly from small towns, where it accumulates, and no complaint from any direction that there is a scarcity of it. All of the old silver has come out of its hiding-places, and this, added to the Mexican dollars, the "daddy" dollars, the trade dollars, the immense amount of subsidiary silver, makes a quantity about three times larger than we ever had before in circulation at one time. The "daddy" dollars are now being issued at the rate of $2,000,000 monthly.

ACCORDING to the latest official returns, the paupers in England and Wales sustain the proportion of one to every thirty of the population. In round numbers, the amount of poor-rates levied amounts to the startling sum of sixty-five millions of dollars, but, out of this total, about twenty-three millions go towards the police, county, highway, and school boards, leaving a balance of forty-two millions towards the support of some 750,000 paupers. A good deal of complaint is made that the poor-house system is greatly abused by those who administer it. Instead of being exclusively devoted to the aged and destitute poor, and those of tender age, the workhouses are filled continuously with able-bodied paupers of both sexes, at a large cost to the country. One journal says that the policy of the majority of the poor authorities tends "to foster whole broods of permanent paupers, who come to look upon the workhouse as their natural home, instead of as a temporary asylum in times of distress." This question of the best method of dealing with the poor is by no means a new one, but its difficulties do not seem to diminish with discussion. One of the main points, as laid down by John Stuart Mill, is how to give the needful help with the smallest encouragement to undue reliance on it; and this problem contains in a nutshell the whole theory of what relief should be.

NEWS OF THE WEEK.

Domestic.

L. B. BRADLEY, ex-Governor of Nevada, died at Elko, March 21st, aged seventy-four.

FIVE hundred and seventy-seven Chinamen arrived at San Francisco on March 21st.

AMONG recent deaths is that of Hon. George Goldthwaite, ex-United States Senator from Alabama.

THE lower branch of the Connecticut Legislature has passed a Bill providing for the use of the bell-punch liquor register.

MR. HUBERT O. THOMPSON has been appointed as County Clerk of New York by Governor Robinson, in place of Mr. Gumbleton, removed.

ABOUT one hundred Democrats and thirty-four Republicans and Independents have been elected to the Louisiana Constitutional Convention.

THE Senate Judiciary Committee has pronounced the action of the President in restoring Major Benjamin F. Runkle to the Army to be illegal.

THE next contest for the Astley belt is to take place in London, commencing on June 16th. Ennis will enter against Rowell, the present champion.

THE Senate of Tennessee has passed a Bill to adjust the State debt at forty cents on the dollar, and four per cent. interest, subject to the approval of the people.

GENERAL FRANCIS A. WALKER has been nominated as Superintendent of the Census, and Mr. Clarence King to be Director of Surveys under the Interior Department.

CONGRESS met in extra session, March 18th. In the House Mr. Randall was elected Speaker, receiving 144 votes to 125 for General Garfield, and 13 for Hon. Arch. B. Wright.

MR. BENJAMIN C. PORTER, an actor well-known in New York, was murdered in Marshall, Texas, March 20th, by a ruffian named Currie, who assaulted a lady under Porter's protection.

THE Executive Committee of the trustees of Cornell University have called Professor Von Holst, of the German University of Friedberg, to deliver ten lectures on "American Constitutional History" in the latter part of the next term.

ARCHBISHOP PURCELL of Cincinnati has published an appeal for help in his present financial difficulties. He places the amount of the debt at $1,400,000, which is a much smaller figure than that which rumor has generally assigned.

DENNIS KEARNEY is stumping Southern California for the new Constitution. In his speeches he abuses people without stint. A dispatch from Santa Ana says that one of the men thus vilified gave Kearney an unmerciful beating.

MAYOR COOPER proposes to submit to Governor Robinson charges against the Police Commissioners of this city. The Commissioners last week appeared before the Mayor for trial, but, not being permitted to be heard by counsel, refused to reply to his interrogatories.

THE Republicans of Connecticut have nominated the present State officers for re-election. The Democrats have nominated for Governor, Thomas W. Segar; Lieutenant-Governor, J. D. Bailey; Secretary of State, David S. Baker, Jr.; Attorney-General, Charles H. Page; General Treasurer, Patrick Farrell.

THE annual report of the Chief of the Bureau of Statistics says that fifty-three per cent. of our foreign commerce is with Great Britain and her colonial and other dependencies. Of the provisions and breadstuffs exported during the year, over eighty per cent. was produced in the Western and Northwestern States.

THE new officers of the United States Senate, selected by the Democrats, are as follows: For Secretary, Colonel John C. Burch, of Tennessee; for Sergeant-at-Arms, R. J. Bright, of Indiana; for Chief Clerk, Francis E. Shober, of North Carolina; for Executive Clerk, H. H. Peyton of Virginia; for Chaplain, the Rev. J. G. Bellock, of Virginia.

OWING to the previous suspension of four unsound banks in New Orleans, all the others, thirteen in number, virtually suspended payments on March 20th. They adopted a resolution to pay out $200 only in cash to any one depositor, the rest of the business to be done on certified checks. Over $1,500,000 in currency were forwarded to New Orleans by bankers in this city by way of relieving the pressure.

Foreign.

THE Bulgarian Assembly of Notables has begun work in earnest on the new Constitution.

THE steamer *Ontario* has been chartered by the English Government to carry 500 American mules to Natal.

THE Swiss State Council at Berne, by a vote of twenty-seven to fifteen, has resolved to restore capital punishment in Switzerland.

THE French ironclad *Arrogante*, on March 19th, sprang a leak and sank, with forty-seven seamen, in a furious gale in the Mediterranean.

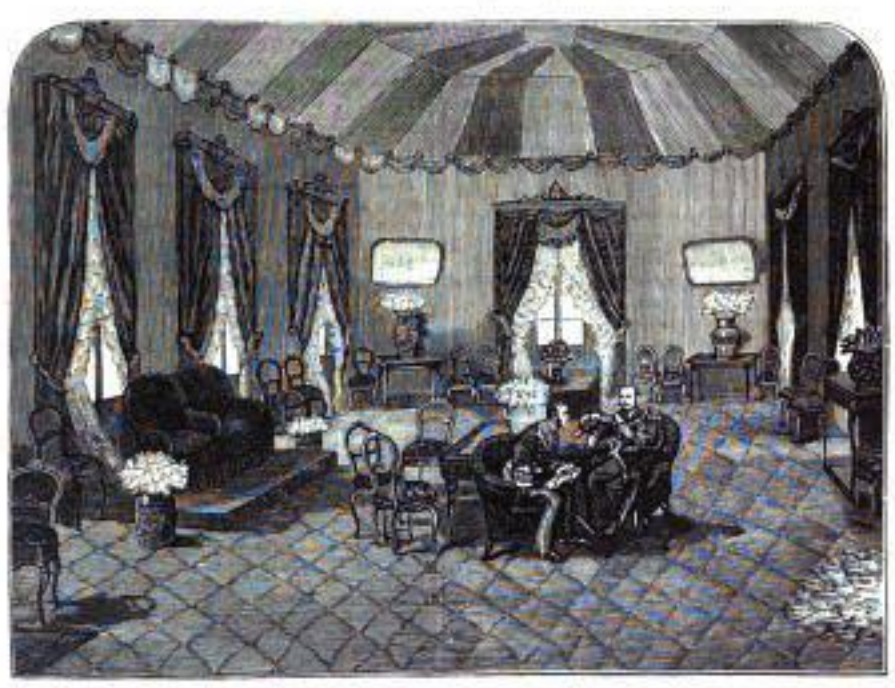
THE betrothal of the King of Spain to the Princess Marie, daughter of the Count de Paris, is regarded as ultimately not improbable.

THE Austrian Government has asked the Reichsrath to authorize the issue of 100,000,000 florins gold rentes to meet the requirements of the current year.

MANY avalanches have recently occurred in the Austrian Tyrol. At Bielberg ten houses were crushed by one of these, forty persons were killed, eighteen seriously injured, and fifteen others missing.

IT is stated that 120,000 persons "were flooded out" by the recent disaster at Szegedin, in Hungary, and that 5,200 out of 10,000 houses were flooded. Everything possible is being done for the relief of the sufferers. The floods have subsided.

IN a discussion in the German Reichstag on a motion to give autonomy to Alsace-Lorraine, Prince Bismarck favored an arrangement for a consultative representation of the province with a voice in the discussion of laws directly affecting it.



A CABLE company is organizing, with 20,000,000 francs capital, under the auspices of an important Parisian financial establishment. It will acquire the existing Brest and St. Pierre cable with the concession of 1868, insuring important advantages over all later concessions.

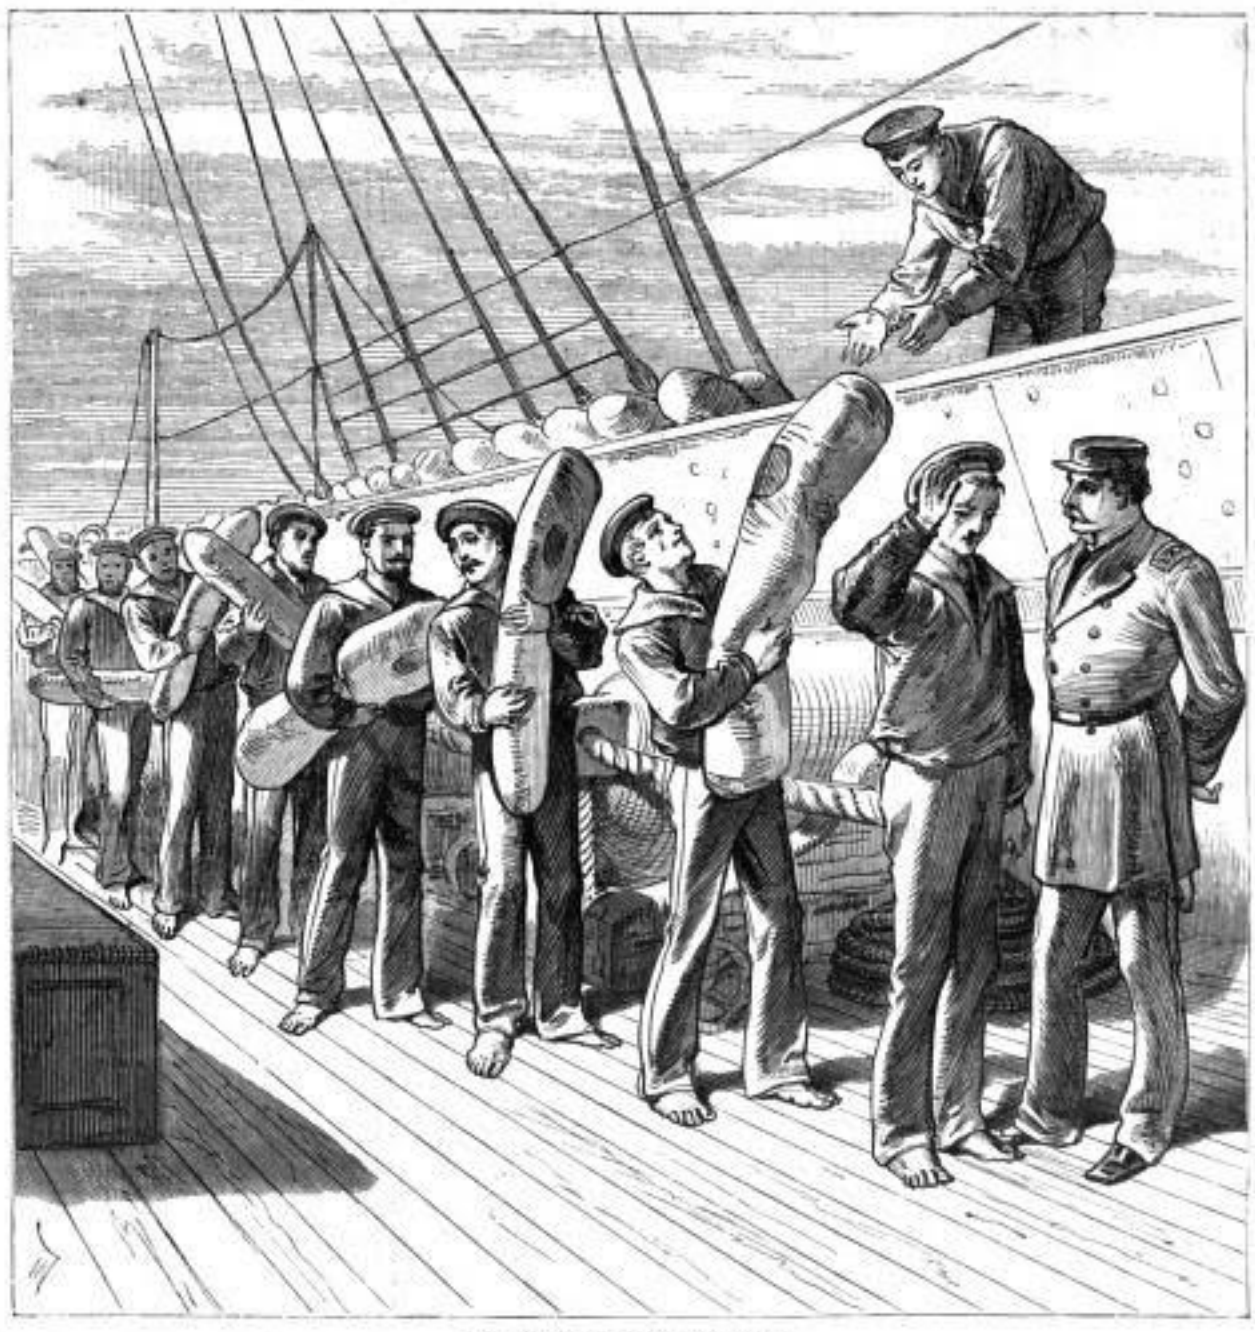
THE SHIP'S CREW AT DINNER.

LIFE ON BOARD AN AMERICAN MAN-OF-WAR.



THE crew of an American man-of-war are usually called up at four o'clock in the morning in Summer, and at five in Winter. The master-at-arms sees that all the men turn out immediately on the call, with the exception of those who have had night watches. Then the order, "All hands pack hammocks," is piped, when the crew lash their hammocks, take them on deck and deliver them to the hammock-stowers — men detailed especially to stow them away in the netting. Every man has his hammock marked white or black, according to the watch to which he belongs, as well as with the number assigned him on shipping. The hammock is made of canvas, generally cotton, and when lashed for stowing contains the mattress and blanket. Eight turns

INSPECTION OF RATIONS.

of the cord are taken in the lashing. As soon as the hammocks are stowed, fifteen minutes are allowed for coffee; then the word is passed, "Turn to—scrub decks," when the operations of the holystone, described last week, take place. At eight o'clock the crew are piped to breakfast, and a few minutes before nine the drum beats, "Retire to sick-bay," where all cases of sickness are treated by the surgeon or his assistants. Then comes the order for the scouring of all the bright work about the ship. At half-past nine there is an inspection at quarters, followed by division drills, and other evolutions. The executive officer inspects the men and quarters, excepting on Sunday, when the captain of the ship does so. After the inspection the men engage in various kinds of work until the dinner-hour.

It is an old custom under the regulations for the ship's cook to submit every day, at seven bells or

STOWING HAMMOCKS IN THE MORNING.

Digitized by Google

half-past eleven o'clock, a sample of the rations to be served that day for dinner. The officer of the deck is obliged to taste and examine it to see if it is properly cooked. If it meets his approbation he orders it to be served out, when the cook retires to the galley and prepares the quantity necessary for the messes. If it is not up to the standard the cook makes further experiments and submits a second sample for examination. At ten minutes to twelve the mess-cloths are spread on the deck, and the various articles of food, placed in dishes, on them. The men with their tin pans, jack-knives, spoons, etc., sit around the cloth, preferring rather to eat from the deck than from tables or swinging shelves, as they are less liable to roll over or have their food scattered about. The ration is changed every day, and when in port the men have fresh beef and vegetables three or four times a week. In fair weather the crew mess on the spar deck; in bad on the berth deck. At one o'clock all hands turn to for work. Three-quarters of an hour are allowed for breakfast and supper. Some privileged characters are permitted to take their pans from the cloths and eat in a more lounging way, as shown in one of the illustrations. Supper is served at four or five o'clock. At sunset the gun is fired, the colors are hauled down, and the masts and yards lowered. From that time to nine o'clock the men are allowed to indulge in smoking, reading, writing, story-telling, singing, and various kinds of games. At nine o'clock the men are piped down, which means turn in or go to bed. Berth deck lights are turned out at eight o'clock, steerage at nine, ward-room at ten, unless permission is granted by the commanding officer for an extension of time. In the line of punishments in the "good old times" the black-list was the net that caught the most fish, and was rarely free from offenders. Every petty offense was punishable by being black-listed. These victims were the people who did the dirty work of the ship, and were constantly employed scouring, scraping, scrubbing, and all manner of work. No let up on a black-lister; extra duties were always assigned to those unfortunates. Iron stanchions were polished like silver, and repainted for the next victim; lighting and eye-bolts reflecting the sun's rays and representing many days' weary labor were again painted over to await the next customer. Solid shot were worn as smooth as glass from work bestowed upon them with canvas and sand. The strip of copper that showed above the water's edge was the grand climax for the black-lister. With a bucket of sand and pieces of canvas the poor fellow was provided with a grating slung over the side, on which he scoured from morning to night, doing penance for his sins, making the copper look like burnished gold, to be again tarnished in a few days by the action of the sea and to wait for the next "lister."

The master-at-arms has a large bag called a "lucky bag." This bag seems never to get full, notwithstanding the immense amount of provender stuffed into its capacious maw. Each day the master-at-arms makes his grand rounds just before inspection, to gather up such trifles as sea-boots, pea-jackets, shirts, caps, pantaloons, diddy-boxes, and any articles he may happen to drop upon, or is left lying around by the careless fellows. At intervals the "lucky bag" is "piped up," when those who have lost articles are allowed to claim the same and take a week or ten days on the black-list. Knowing ones will not claim these articles when they cannot be proven as theirs, but will let the property go to auction rather than be black-listed. Auction is held from time to time for the sale of unclaimed goods found in the "lucky bag," when the owners may bid on the lost articles without the fear of being black-listed.

TRIX.

"DO you know where Miss Beatrix is?"

There was something sharp in Mr. St. John's glance as he questioned little Rosetta, his cousin's maid.

"Yes, sir; she's in the garden with Mr. Le Blond and the young gentlemen."

At this answer the sharpness of Forrest St. John's glance increased, and turning from the door of Redwood, he passed quickly along the terrace.

At the end he stopped, before descending the steps, and looked down the broad garden-path. He saw plainly the group there under the locusts—a regally beautiful young lady in purple silk, two dark-eyed boys leaning upon her lap, a young, fair-complexioned man standing so as to overlook the book upon which the eyes of all were fixed. It was certainly a peaceful scene, yet the eyes of Forrest St. John grew bloodshot and sullen as he stood surveying the group.

Descending the steps, he advanced slowly, never removing his baleful gaze until he came face to face with the young lady. She looked up. First surprise, then observation, then offense, showed themselves in her mobile countenance. She turned silently again to her book.

"I wish to speak with you, Trix."

"Certainly, as soon as I am at leisure. Go on, Reginald."

"It is Max's turn now," responded the elder of Miss St. John's young brothers.

She turned the book in her lap so that Max could continue his reading of German. A lurid flush of anger overspread her cousin's florid face. He waited with what grace he could until it was Miss St. John's pleasure to give him a hearing.

Unconscious as she appeared, her face had grown clouded, and the expression of pleasure had fled, too, from the features of Paul Le Blond. The boys only appeared totally indifferent to the presence of the new arrival, who stood whipping his bootleg with his slender riding-whip. As soon as the last word of the lesson was pronounced, Le Blond extended his hand to the younger boy.

"Come, Max, we have detained your sister longer than was necessary."

"It has not been irksome; I have enjoyed it," answered Miss St. John, rising and shaking out the folds of purple silk crushed by her brothers' resting arms. "They do so well!"

The boys turned gratefully at her praise, kissed and embraced her.

When they had turned aside with their tutor, she joined her cousin, who had advanced impatiently a few steps up the main path.

"I wish to know," he began, at once, "what need there is of your mixing yourself up with the boys' lessons? Isn't Le Blond capable?"

"He does not teach German, and I gained quite a good knowledge of it while abroad," answered his companion, indifferently arranging the lace around her wrist, though it was evident that Mr. Forrest St. John was in a foaming passion.

"Then let them go without learning German! They have lessons enough, and it only encourages him."

"Encourages whom, if you please?"

"Le Blond. He watches for a chance to speak to you, day or night, and you know it!"

A color like the red glint of an opal came into Trix St. John's oval cheeks. She did not speak. Her cousin's watching eyes saw. He foamed over.

"A white-faced adventurer, who would like to be master here! And it's a burning shame to you, Trix, that you are flattered by it! Any lady would resent it as an insult."

"Stop, if you please!"

"I beg your pardon," muttered the other, sullenly. "I did not quite mean that. Come, Trix, give up these German lessons, or give that Le Blond his walking-papers. To please me," he added.

A faint smile curled Beatrix's beautiful lips at the last words.

"I cannot please you in this matter, Forrest."

He choked an angry answer.

"It is desirable that the boys have early lessons in German. And I know of no reason why Mr. Paul Le Blond should have his walking-papers, as you term it. He teaches and disciplines the boys well."

"If you don't dismiss him, I shall, Trix!"

"By what authority?" coolly.

"By the authority of my relationship and right to prevent you from throwing yourself away on a poverty-stricken fellow who is nobody knows who!"

"I do not think that I shall wed Mr. Le Blond until he asks me," with a curious smile.

"He'll soon have the impudence to do that with the encouragement you give him."

Miss St. John's fine black brows had contracted, and her nutty curls touched a burning color in her cheeks; and when her cousin added, "You mean to marry him, but, by heaven, you shall not!" she stopped in the path.

"Forrest," she said, "I hate reproaches and recriminations, but there is no other way with you. You, who are not fit to govern your own life, shall not be allowed the government of mine. You have squandered the fortune my father left you; you are my cousin, and, by courtesy, my guest. You are nothing more. You shall be permitted no authority over me. The law gives you none, and I will not submit to your interference in my affairs."

The florid face was quite white now. The sullen black eyes were fixed upon the ground. But Forrest St. John controlled his rage.

"I beg your pardon, Trix; but you do have a way that puts me in a cursed passion. I don't mean to interfere in your affairs, of course. You can marry whom you like."

He turned away with a downcast countenance and boiling heart, leaving her to go alone to the house. Trix entered the great hall of Fairfields alone. The cedar-door clanged after her. She went up to her chamber. There the beautiful hot cheeks cooled slowly. Her face grew calm, introspective.

"Sweet with the bitter," she murmured. "Does Paul Le Blond watch for my coming? *Does* he love me? He is a loyal, true-hearted gentlemen, and——"

The confession she made under her breath brightened again the dreaming eyes, crested the beautiful head.

Down the avenue walked Forrest St. John, gnawing a white lip.

"I'll conquer her yet. I mean to be master here. She shall marry me!"

* * * * * * *

Paul Le Blond sat alone in the schoolroom. The boys, permitted a half-holiday, had gone to town with their ponies. Beatrix had gone with them on her graceful filly.

Paul Le Blond held a book in his hand. It was open where a knot of rose-colored ribbon was laid between the pages. He closed it quickly at sound of a step at the door. Mr. St. John entered.

"Miss St. John wishes you to go to the Corners and get the German books for the boys she was speaking of last evening," he said, in the ungracious way in which he spoke habitually to the tutor of his young cousins.

"Certainly," replied Paul, rising with alacrity. He was lithe, active, graceful, his fair, spiritual face in strong contrast with St. John's over-indulged and sensuous shape. The other hated him for the clear, dark-gray eyes, which always looked into his without flinching.

"You will have to go and return along the shore. Miss St. John wants you to return before two," he said, turning from the room as Paul, with a smile, reached for his hat.

Along the shore. The little waves were rocking in the sunshine. The tide was out, so that he went down in the sands to see their sparkle and white-fretting about the rocks. The sky hung above of *lapis lazuli*. The beach-birds twittered sweetly. He enjoyed it all, as only pure, fine souls can.

But when he came back the tide was thundering in, loud and strong. The yellow frothing surges swept up to the feet of the cliffs, which they had so far abandoned two hours before. Suddenly he found the way impassable. He turned back in surprise and bewilderment. The water had washed out his path. He was hemmed in.

Forrest St. John received the riders cordially. Even the careless boys observed and wondered at his graciousness. But it was certainly pleasanter than his usual surliness. They were about to dine.

"Where is Mr. Le Blond?" asked Beatrix.

"Gone to the woods for botanical specimens, I believe," replied her cousin.

She saw a little, quick smile of his a moment after, but could not read it.

"Come, Reginald, to your dinner," said Miss St. John.

"Come here a moment, Trix."

The boy stood at the drawing-room window with his toy telescope.

"There is a man under the cliffs," he said, looking up into her face, as he handed her the glass.

"What?"

Trix lifted the glass quickly.

She put it down the next moment, white as a rose, every nerve strung tight.

"The tide is coming in! He is prisoned there! He will be drowned!" she said.

"If you please, mam'selle," trembled little Rosetta, at her elbow, "it's Mr. Le Blond. Mr. St. John sent him to the Corners this morning."

Trix turned and went bareheaded out of the house. Her young brother pressed at her side. She threw her long skirt over her arm and ran over the sharp rocks in her velvet slippers, swift as a deer, and Reginald followed close beside her. They reached a boat, cut the rope, and were afloat.

"Pull now, if you love me, Reggie!"

The boy did not need to be urged. He loved Paul.

Paul Le Blond, braced against the cliff, the water above his knees, saw the little boat come dancing over the high, sparkling water. The dory soon reached his side. A white, ringed hand was extended.

"You would have died if we had been five minutes later," said Miss St. John, in a shaking voice.

"That would not have mattered. It would have been in your service," he replied.

But he lay down in the boat, much exhausted.

"It was not in my service," Beatrix had replied. She looked with a hard glance at the school-books which he had laid at her feet, as she took up the oar again. And then she fixed her dark eyes firmly on Fairfields; but her heart bled.

The prostrate man in the boat turned over and kissed the little velvet shoe so near his face.

"Pardon," he said, for Reggie saw; "but the lowliest may kiss the foot of a queen."

But he held his hand up to Trix's sight, and she saw that blood had dripped upon it from her foot.

"The rocks—I needed to hurry," she stammered, blushing and confused; but in all her life she never forgot his gaze of adoration. "It is nothing."

They came to Fairfields.

"Forrest St. John," she said, to her cousin, "I have extended the hospitalities of my home to you for years by courtesy. It shelters you no longer. I will not abide a murderer under my roof."

Cowed, he went forth, and, in spite of his fierce vows to heaven, Trix married Paul Le Blond.

THE EXTENSION OF AMERICAN TRADE.

VISIT OF THE AMERICAN INDUSTRIAL DEPUTATION TO MEXICO.

(*Continued from front page.*)

The Exhibition was but a sorry affair at best, and when I came to consider what the United States could have displayed—what progress, what invention, what finish, what perfection in every known article, from a needle to an anchor—a feeling akin to irritated melancholy took possession of me, which clung like the shirt of Nessus. This was a chance thrown away. The Mexican Government, and through them, the Mexican people, had been led to expect great things. Our trumpet had been blown from Vera Cruz to the capital. The mountain in labor produced the ridiculous mouse. It was, as of the feast of the Barmecides, a starved, hungry meal, with a few pieces of meat to feed ravenous thousands. We displayed cheap drawings where we should have exhibited models; we showed patterns where pieces were absolute necessities. Mexico was prepared for an exhibit of American industries, on a small scale if you will, but with the exception of the goods of Messrs. Rogers, and one or two others here named, what did they behold? It was absolutely pitiful to see the bareness of the counters, the paucity of exhibits, even such as they were. If I dwell upon these unpleasant reminiscences it is for the purpose of affording the United States an opportunity of redeeming herself at the exhibition to be held in the City of Mexico in January next. I use the word advisedly, since the excursionists were, and still are, regarded by the masses as representing the commercial strength of this country. Every State, province, city and town in Mexico has joined hands in order to render the coming exhibition a success. It is a bold effort, and one that deserves to be sustained. It is a fact worthy of marked comment that all the goods brought by the deputation for exhibition in Mexico were disposed of, and that they sold well. American goods are gradually finding foothold in the capital, especially in the German and French stores, and from thence into the interior. The actual value of the foreign products sold annually in Mexico has been estimated at $45,000,000, the purchase being mainly in the hands of the German and French merchants, England having lost her grip. In fact, England is now represented by a bank and a single large concern. Of course the lion in the path of mercantile business is the tariff, which is both perplexing and paradoxical, but there is a free list on this tariff which embraces agricultural implements, engines and machinery, including all kinds of mining machinery, tools and supplies. To reduce this tariff and adjust it will be the inevitable outcome of this visit. Next will follow a revision of costs and charges for transportation; for if these costs and charges remain as they now stand, the Mexicans must be contented to use the agricultural implements in vogue on the plains of Asia 3,000 years ago. It would not pay to transport machinery, even though on the free list of the tariff. Vera Cruz, the only available Mexican port, is a hive of commission merchants, and these busy bees gather honey as best they can. All foreign goods must be regularly passed through its custom-house, twenty-four hours only being allowed to verify the invoice and manifest. This high pressure involves detailed expenses, at the top of which the commission merchant rides triumphant. After having run the gauntlet of Vera Cruz, the goods are subjected to another custom-house ordeal at Mexico, with all the attendant expenses and inconveniences. "The best thing the deputationists can do," said a Mexican merchant to me in an earnest tone that carried conviction with it, "is set fire to Vera Cruz when they are leaving it." Vera Cruz requires to be taken in hand, the tariff to be adjusted, and the customs to be overhauled, ere American traders, save in agricultural implements, can afford to test the value of commercial relations. The Mexicans are not wedded to their tariff, which is maintained rather for revenue than for protection, and they are, I am informed on good authority, willing to conclude a commercial treaty that will virtually supersede it.

The question of an international railroad exercises the thinking men of Mexico in no small degree. President Diaz is breast-high in its favor, and he is backed up by the calm intelligence of the country. It has become a clap-trap election cry, and when brought before Congress, the political agitators howl it down by "annexation." "It is very poor policy, very injudicious, to establish within our country a powerful American company," urges one. "It is a natural law of history that border nations are enemies," declares another. "We should always fear the United States," cries a third, while a fourth, Señor Chavero, recently wound up a powerful address in the following words: "You, the Deputies of the States, would you exchange your poor but beautiful liberty of the present for the rich subjection which the railroad could give you? Go and propose to the lion of the desert to exchange his cave of rocks for a golden cage, and the lion of the desert will answer you with a roar of liberty!" Is Mexico in a position to subsidize such a railroad? She declares that she is. She affirms that, released from her European pledges by the action of England, France and Spain in 1861-2, she can now do as she likes with her custom-house receipts, which were then hypothecated to the reduction of her European debt. Can she spare $15,000 a mile as a subsidy towards the construction of an international railroad?

Let us take a glance at her financial condition, as will be shown by the following tables, the estimates of the receipts and expenditures of the Federal Government for the coming fiscal year, compiled from the report which the Government submitted to Congress before the adjournment of that august body. The dollar here quoted is the Mexican silver, worth about 84 cents in American gold.

ESTIMATED RECEIPTS.

Import duties at Custom Houses	$10,561,007 82
Export duties—silver gold, and orchilla	930,415 59
Tonnage dues	45,678 04
Introduction and consumption duties of Federal Districts	1,109,920 00
Direct taxes, real estate, etc., Federal District	822,150 00
Product of stamp tax	1,800,000 00
Rent of Mints	242,014 87
Post Office—gross receipts	445,156 22
Lottery tax	259,408 68
Miscellaneous sources	270,802 38
Total receipts	$16,303,455 05

ESTIMATED EXPENSES.

The Legislative power	$979,962 00
The Executive office	43,572 40
The Judicial power	346,878 00
Department of Foreign Affairs	193,960 00
Department of Government	2,628,819 50
Department of Justice	1,230,992 20
Department of Public Works	3,642,380 00
Department of Finance	5,398,540 39
Department of War	8,661,312 45
Total expenses	$23,334,536 94

The foregoing tables show an increase in the estimates of expenses over those of the current year of $1,585,000. They also show that the total estimated receipts are $7,000,000 short of the estimated expenses.

This statement will scarcely reassure those who have based their calculations upon a subsidy of $15,000 a mile for and towards the construction of an international railway; but is Mexico the only country with the balance at the wrong side of the ledger at the commencement of the financial year? Certainly not. Can Mexico pledge her lands? This is a query that needs reply. Mr. George W. Allen, who accompanied the deputation, a son of the millionaire President of the Iron Mountain Road, made this offer to General Diaz: "If you build a railway from your side to the Rio Grande, I shall construct one from our side." In reply to a query whether he would prefer a line from the capital to the Pacific built in advance of that to the American frontier, Diaz replied that he earnestly desired to see both constructed, as one would promote the business of the other, and that Congress would have approved these lines at the last session if it had been assured that the promoters were then and there prepared to proceed with the work. If an American company could once see its way to a subsidy the question of international railway communication would be solved in a trice. Already have we virtually touched the Mexican frontier on the Pacific coast at Fort Yuma; and we are within 150 miles of the Rio Grande at San Antonio, Texas, while another line is in progress southward through New Mexico to connect the Mexican frontier with our central and northern cordon. Communication with Mexico by sea is maintained by a steamer from New York every two weeks, and one from New Orleans every three weeks, a steamer from San Francisco semi-monthly, and another every thirty-five days for Mazatlan. There are steamer lines from New York, New Orleans, Galveston and San Francisco. These steamers are subsidized by the Mexican Government, but they do not receive one cent by way of subsidy from the United States Government. Mr. Foster, our Minister, asserts that if the Post Office Department would expend $150,000 annually in the improvement of postal facilities to Mexico, the steam communication would be at once doubled. President Diaz, in referring to this subject, observed that America should lend a helping hand; that Mexico, since 1868, had paid $800,000 to American steamship lines, while not a dollar had been given by the United States Treasury to promote ocean communication with Mexico. The national dignity has been considerably ruffled by the order issued to General Ord with reference to the crossing of the Rio Grande, and many Mexicans with whom I came in contact alluded to it in a haughtily bitter tone. Mr. Fisk, our president, with a view to casting oil upon the troubled waters, telegraphed President Hayes to the effect that the removal of the order would facilitate the commercial relations between the two countries. As might naturally be supposed, Mr. Fisk's telegram influenced nobody's mind but his own. In saying this I am wrong, as it caused a fearful *emeute* amongst the deputationists, who "wanted to know, you know," why he (Fisk) dared send such a dispatch without consulting the deputation, individually and collectively, one irate personage giving vent to his feelings of wrath and indignation by a lengthy epistle to Mr. Rogers, Mr. Hayes's private secretary, in which he denounced Fisk by bell, book and candle-light. A meeting of the deputationists was held, resolutions were drawn up condemnatory of the luckless Fisk, and ordered to be forwarded to Washington forthwith.

As an outcome of this expedition we are promised a line of first-class steamers between Galveston and

Digitized by Google

Vera Cruz. By this line it is proposed to bring the city of Mexico within seven days of Chicago—a step in the right direction.

The Mexican exhibits at the Minería chiefly consisted of Puebla marble, onyx, the coffee plant with berries, from Orizaba and Cordoba; perfumery and transparent soap—this to cut out the French salt and carbonate of soda from the Guadalupe Works, situated about five miles from the city; olive oil, fibres and fruit pastes, sulphur from the top of Popocatapetl, and ore from the Pachuca Mines. Popocatapetl is a volcano 17,500 feet high, covered with a garment of perpetual snow. In and around the rim of its crater the volcanic action deposits the flour of sulphur, which needs no clarifying. The Indians descend into the crater by means of a windlass, and dig out about 400 pounds per diem, receiving as remuneration for their labor one cent per pound, the sulphur being worth ten cents per pound in the present market. The mode by which the sulphur is conveyed down the ice-covered side of the volcano is somewhat unique. An Indian clears a track in the snow, piling it up on either side so as to form a sort of wall. This track is sometimes 4,000 yards long. When he has collected a sufficient quantity of the sulphur he places it on mats, the aggregate weight being 12,500 pounds. There are twelve of these mats attached one to the other, just as railroad-cars are coupled. He seats himself on a skin in front of his cargo, and, taking a stick, plants it firmly between his legs, and then off he goes down the shiny, slippery steep like a flash, doing the four thousand feet in four or five minutes. The ease and dexterity with which he puts on his primitive break baffles all description. He glides from ice to ashes at just such a pace as may suit him. I shall have occasion further on to describe an ascent of this same Popocatapetl—no mean task, I assure you, and one that a member of the Alpine Club should approach with becoming reverence and respect. Fourteen diplomas of merit were awarded to the American exhibitors, the certificate being a very admirable specimen of Mexican engraving. If the paucity of American exhibits at the Minería have unfavorably impressed the Mexican mind, it is quite within our power to "astonish the natives" in January next, and it behooves the United States to lead all nations at the forthcoming exhibition.

The Plaza Santo Domingo is a remarkable portion of the City of Mexico. The old Church of Santo Domingo, with its pink walls, quaint entablature and glittering tiled dome, protects it on the north; on the east stands the School of Medicine—the curriculum is seven long years—and that terror to importers, the Custom House; and on the west an arcade, beneath whose shades perch elderly scriveners of cadaverous aspect, who for a medio will indite a love-letter or a cartel, an invitation, or an invoice. The building now occupied by the School of Medicine was formerly the Tribunal of the Inquisition, which was established in Mexico on the 4th of November, 1571, and suppressed by a decree of the Spanish Cortes on the 22d of February, 1813. It was then converted into a State Prison, and the notable "Yard of the Orange-trees" was situated within this Mexican bastile. It has since served as a lottery office, a barrack, and a House of Congress. In 1854 it was adapted to its present purposes, having been purchased for $50,286. The fountain, which we illustrate on our front page, has its history in the bloody annals of civil and internal strife. With their backs to the old church, the golden beams of the rising sun on their blanched features, many hundreds of patriots—"rebels," call them what you will—have leaned against the stone coping of the fountain till the gentle plashing of its waters was drowned in the roar of musketry that rang out their death-knell. It is the favorite resort of the *aguadores*, or water-carriers, who repair thither for the *agua dulce*, or pure water, their picturesque dresses consisting of a leather helmet, leather double apron, like a herald's tabard, white flowing drawers and *guaraches*, or sandals, imparting a quaint animation to the scene. I counted as many as twenty of these itinerant water-venders round the fountain at one time, their red earthenware vessels glistening in the sheen and dazzle of a vertical sunlight.

A CAUSE CÉLÈBRE.

TRIAL OF THE SUIT OF MRS. OLIVER AGAINST SIMON CAMERON.

THE case of Mrs. Mary S. Oliver, widow, against the venerable Simon Cameron, for breach of promise of marriage, was called for trial in the United States Circuit Court, at Washington, D. C., before Chief Justice Carter, on Monday morning, March 17th, Messrs. Peter and Darneille appearing for the plaintiff, and General Butler for the defendant. The prominence of the defendant and the repeated publication of the plaintiff's grievances have served to give considerable celebrity to the case for over a year. As Mrs. Oliver had signed a release in full of all claims, demands, etc., against the Winnebago Chief, and had agreed neither to write nor approach him nor send him any messages thereafter for any purpose, it was not believed that she would press the suit to trial; in fact, it was a matter of considerable surprise that she brought it at all. In consequence, the attendance on the opening day was quite small. On Tuesday, however, the court-room was crowded, and as the trial progressed the spectators so increased in numbers that strict orders had to be given to keep the room clear for the transaction of business.

On Monday morning Mrs. Oliver, accompanied by her friend, Mrs. Charlton, came into court and occupied a seat near her counsel. The widow looked unusually well. She was attired in a black velvet hat, and her heavy hair was arranged to show her round plump face to advantage. On her shoulders she wore a black cashmere cloak, trimmed with black velvet, the skirt of her dress being of the same material. Following Mrs. Oliver came General Butler and Mr. Cameron, who occupied seats adjoining Mrs. Oliver and her counsel. Mr. Cameron, after looking around the court and giving Mrs. Oliver a good scrutinizing, which was calmly met by the widow, who placed her bright blue eyes firmly upon him, the Senator removed his overcoat and sat down.

On the completion of the challenge a jury, consisting of ten white men and two negroes, was selected. Mr. Darneille opened the case for the plaintiff, and submitted letters purporting to have been written by Mr. Cameron, one commending her to Mr. Bristow, then Secretary of the Treasury, the other asserting, "You will be my wife." An attempt to introduce testimony showing improper liberties taken by the defendant with the plaintiff gave rise to a heated argument, during which the Court adjourned.

On Tuesday the Court decided to admit the testimony, and the plaintiff unblushingly gave it. When General Butler rose to begin the cross-examination, the room was as still as a churchyard. He drew from her a narrative of her early life, dwelling with curious interest upon a supposed husband in Kentucky. She admitted that she had lived as wife with a Mr. Oliver from 1854 until she believed that a divorce obtained from a previous wife separated her also from him. A photograph was shown her, when General Butler inquired if she recognized it as that of her husband? to which she replied, "That is not him." While endeavoring to explain a document purporting to be a decree of divorce, a stoutly-built man, about fifty years of age, smooth face, excepting a white moustache, and his head partly bald, the hair being gray, entered the court-room.

General Butler (turning towards him)—Is that Mr. Oliver?

Witness—Yes, that is Mr. Oliver; he has changed somewhat, but that is he.

As she spoke she arose and stepped towards him. This unexpected appearance of her husband produced a decided sensation in the chamber, but did not appear to embarrass the plaintiff seriously.

A number of letters alleged to be from the plaintiff to the defendant were next produced, and identified as genuine by the witness.

Mrs. Oliver explained the absence of letters from the ex-Senator by saying that at his request she was in the habit of replying to his notes on the same piece of paper, hence he had his own letters and all her answers to them. She narrated her efforts to secure counsel, and how one after the other deserted her, either abandoning her outright or going over boldly to the enemy. After reading one of the letters in which she offers to pray to God to have the Senator sent to England if he will marry her or provide for her as he would for a wife, as he had promised her, she laughingly said: "Well, General Butler, you can't blame me for wanting to stir the old man up and get him to marry me."

On Friday, after the two letters presented by Mrs. Oliver purporting to be in the handwriting of Mr. Cameron had been admitted in evidence, the plaintiff rested her case in chief. The question of the legitimacy of the plaintiff's marriage was raised, on which the Court reserved its decision. General Butler then called Thomas M. Oliver, who in his testimony gave a detailed biography of the plaintiff, covering the entire period of his acquaintance with her, and denying that he had ever considered or called her his wife. On his re-direct examination he expressed his belief that in appearing as a witness in the case he could show that the plaintiff was a blackmailer. She had annoyed and tormented his family for years, and if he could prevent any innocent person from becoming her victim he intended to do it.

Upon the conclusion of his testimony the case was adjourned until Monday, March 24th.

MRS. BELVA A. LOCKWOOD.

A VERY unusual scene was enacted in the chamber of the United States Supreme Court at Washington, on Monday morning, March 3rd, inst. It will be remembered by many that two years ago Mrs. Belle Lockwood, who had already gained much distinction as a lawyer, made application for admission to practice in the Supreme Court. At that time the motion was denied, not for any lack of experience study, or ability, but solely because the petitioner was a woman. In no way disheartened by this failure, Mrs. Lockwood resumed her practice, and devoted all the time not required by the interests of her clients to measures for securing success on a second application. These measures culminated in a Bill authorizing women to practice in the Supreme Court of the United States, which passed both Houses of the late Congress. Backed by this authority, Mr. Biddle, on the 3rd of March, moved the admission of Mrs. Lockwood to this high grade of legal practice, and, no objection being interposed, her name was enrolled as a regular practitioner. Last Fall, Judge Magruder refused her admission to practice in the Circuit Court at Baltimore. Mrs. Lockwood is the widow of a dentist, well-known for many years in Washington.

She says she has done all a woman could do, and has properly raised and educated her family. Her daughter is grown, having about four years since graduated with distinguished honors from one of the leading colleges in the country. She is the correspondent for several Western papers. Mrs. Lockwood thinks that the proper sphere for a woman is anything that is respectable and honest; that as her daughter has arrived at that age when she is supposed to be able to take care of herself, there is nothing unwomanly in her practicing law or any other profession. 'There is only one place open to women,' she says, 'if they have no family or husband to support, and that is teaching school. I have done that for years, but am too old to go at it again. Besides, it is not my choice, and, as every one who has tried it knows, it pays but little and is very hard work. Now, by practicing law I can clear, and have cleared, from $3,000 to $5,000 a year. Will any sensible person tell me, being, as there are, no home demands on me, that it is not my sphere to practice law if I choose to do so?' Mrs. Lockwood has as partners in the claim and collection business Mrs. Lavinia C. Dundore and Mrs. Marrilla M. Hicker. They live together and do a large pension and claim business. They are known in the departments and around the courts as "the three graces."

The Discovery of Matches.

THE story of this discovery has been told by Mr. Holden himself in the House of Commons before a Select Committee appointed to inquire into the working of the Patent laws. "I began as an inventor on a very small scale," said Mr. Holden, in the course of his evidence. "For what I know, I was the first inventor of lucifer matches; but it was the result of a happy thought. In the morning I used to get up at four o'clock in order to pursue my studies, and I used at that time the flint and steel, in the use of which I found very great inconvenience. I gave lectures in chemistry at the time in a very large academy. Of course I knew, as other chemists did, the explosive material that was necessary in order to produce instantaneous light; but it was very difficult to obtain a light on wood by that explosive material, and the idea occurred to me to put under the explosive mixture sulphur. I did that, and published it in my next lecture, and showed it. There was a young man in the room whose father was a chemist in London, and he immediately wrote to his father about it, and shortly afterwards lucifer matches were issued to the world. I believe that was the first occasion that we had the present lucifer match, and it was one of those inventions that some people think ought not to be protected by a patent. I think that if all inventions were like that, or if we could distinguish one from the other, the principle might hold good. If all inventions were ascertained and carried out into practice with as much facility as in this case, no one would perhaps think of taking out a patent. I was urged to go and take out a patent immediately; but I thought it was so small a matter, and it cost me so little labor, that I did not think it proper to go and get a patent, otherwise I have no doubt it would have been very profitable."

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

Camels Passing under the Koran.

This sketch depicts a curious ceremony gone through every Thursday evening, the Mussulman's Saturday night, by the camel-drivers of the camp at Jumrood. When the camels come back from grazing they are driven under the Koran, which is folded in a turban, and held up suspended between two lances. This is supposed to protect them from sickness and other evils. The drivers are most particular in seeing that no camel strays or otherwise avoids passing under the book.

The Forthcoming International Exhibition of Australia.

The building for the International Exhibition is now in course of erection in the Inner Domain, at Sydney, and will be worthy of the occasion and of the colony. The colony can afford to carry out this undertaking in a liberal and handsome manner. Its natural resources would not have been one whit the less at the close of the year if the Exhibition had not been held or thought of. But the Exhibition is intended to be, and ought to be, a means of promoting their development; and whilst on the one hand the speculation will pay for itself, even though the cost be large, if this end should be attained by it, the speculation would be a costly failure, however contracted the outlay, if, through petty economy, its influence were diminished and its main object were left without accomplishment.

Conference between the Kings of Portugal and Spain.

This conference, which the tongue of Rumor ascribed to matrimonial projects on the part of the young King of Spain, took place at Elvas, in a pavilion especially constructed for the purpose. The royal pavilion which was superbly and æsthetically fitted up, was divided into two spacious *salons*, one for the purpose of "interviewing," the other as a banqueting-hall. The King of Spain, who was received with all honor, wore the Grand Cross of Portugal, while S. M. Fedelissima D' Luis was attired in the uniform of an admiral, his breast being decorated with the Grand Cross of Spain. The two monarchs remained closeted for a considerable time, and if the subject of their conference was the delicate one ascribed by the court gossips, the said court gossips were not a whit the wiser when their Majesties condescended to stand revealed to the vulgar gaze. One thing is certain, that the utmost cordiality exists between the royal houses of Bourbon and Braganza.

Tirnova, the Capital of Bulgaria.

Tirnova, the ancient capital of the Bulgarian Czars, where the Bulgarian Assembly are now discussing their new Constitution, and preparing for the election of a prince, is a quaintly and romantically situated old town, filled with relics of the old Bulgarian Empire, which a long era of Turkish rule has failed to efface, as may be seen by our illustration, where are portrayed the ruins of the ancient cathedral and the palace of Bulgarian sovereigns. The ruins of the old palace are plainly visible, the walls, bastion, and gateway depicted on the hill being part of the old palace walls, guarding a steep and almost unscalable rock. On the summit of the isolated rock was situated the citadel, and there the Bulgarian kings were crowned. The mosque on the left was an old Christian church, now used as a Russian powder magazine, but which will be restored and reconsecrated in a short time. The causeway, three feet wide, leading from the citadel to the town, across is very good preservation, while on the extreme right lies the town itself, built on the shores of the Jantra. The Turkish quarter now is almost completely wrecked. The whole appearance of Tirnova and its surroundings is eminently picturesque, as the town clings in seven distinct divisions to the steep declivities and overhanging precipices caused by the sharply tortuous windings of the river Jantra in its passage through the most northerly chain of the Balkan hills.

The War in Zululand.

The capture of Sirayo's kraal on the 12th of January was not severely contested in fighting. But it was considered significant at the outset of the war, because one of the immediate complaints against the Zulu King was that two women, the unfaithful and fugitive wives of Sirayo, who is Cetewayo's brother, had been pursued over the frontier into British territory, and had been carried back into Zululand to be put to death. Lord Chelmsford, therefore, thought it desirable to punish the family and clan of Sirayo at once by capturing their cattle. Accordingly Colonel Glyn directed three companies 1-24th Regiment and the 1-3rd Regiment Natal Native Contingent to advance and capture the cattle, while Lieutenant-Colonel Russell, 12th Lancers, in command of the mounted portion of the force, was directed to continue along the wagon-track to the high ground above. By half-past eight in the morning the precipitous sides of the Nguta Mountain were occupied by the infantry, when fire was opened upon them by the Zulus, who were occupying very strong positions in the caves and rocks above. A fight ensued, which lasted about half an hour. The mountain-side was cleared, the cattle and horses were captured; the Zulus left behind to defend the cattle made, however, a stubborn resistance, and ten dead bodies were counted in the rocks, and nine prisoners taken, three of whom were wounded. The defense of the British commissariat post at Rorke's Drift, ten miles from Isandula, the scene of the massacre of the Twenty-fourth Regiment by the Zulus on January 22d, seems to have been a truly heroic action. In the afternoon of the 22d the two young officers, Lieutenant Gonville Bromhead, first battalion Twenty-fourth Regiment, and Lieutenant Chard, R. E., left in charge of the Drift with a company of the Twenty-fourth Regiment, first received intimation of the disaster from fugitives making for the Drift. Lieutenant Coghill had come from the fight at Isandula, by order of Colonel Pulleine, to summon reinforcements; and from Rorke's Drift he, with others, rode away to communicate with Helpmakaar, and was killed by Zulus in crossing the river. Seeing an attack imminent, a barricade was hastily thrown up, under Lieutenant Chard's direction, the men using for this purpose a number of bags, biscuit-tins, and other matters belonging to the commissariat stores, part of the time being under fire. The attack took place soon after dark by at least 3,000 Zulus. The fight was kept up the great part of the night. The Zulus six times got inside the barricade, and were as often driven out at the point of the bayonet. In the meantime another body of Zulu troops passed to the rear of the military hospital and set fire to it, killing five patients and destroying all the medical stores. At dawn the attacking force withdrew, for Lord Chelmsford's column was then seen approaching. Our illustration is from a sketch by Lieutenant-Colonel Crealock of Lord Chelmsford's staff. Figure 1 is the house of the Rev. Mr. Witt, with redoubt of meal-bags and biscuit-boxes; 2, the hospital burning; 3, the cattle kraal; 4, Tyana Mountain, and 5, Lieutenant Russell riding up to the beleaguered garrison. The artist writes: "About 6:30 A. M. we reached Rorke's Drift, and saw the smoke rising from the post. Too late! too late! But no—from amidst the smoke we saw some figures gesticulating; then a flag waved. Cheers out! They are red-coats. Russell and the mounted men are sent forward, plunge into the river, and, scrambling out on the opposite side, gallop up. . . . We are not too late. There were 351 dead bodies found lying around the house, and between it and the hill, and many around and in the burning hospital, which they had succeeded in firing."

AT HOME AND ABROAD.

—THE United States Senate since its organization has had but six secretaries.

—ST. PAUL'S CATHEDRAL, London, is to be surrounded with ornamental grounds instead of the great paved court around it now.

—THE finest wheat in the world is grown in Barbary and Egypt, a fact which has always existed and always will, on account of climatic influences.

—THE Sultan has issued his long-expected decree authorizing the conclusion of an arrangement with Austria on the Novi-Bazar question, and with Greece on the frontier limits.

—THE excavations at the supposed site of the hanging gardens of Babylon are said to have terminated. They have yielded many tablets from the time of Nabocidus to the Parthian era.

—IT is said that Nicaragua is raising extensive coffee plantations on the side of the volcano called El Viejo; 200,000 trees have been planted there, and next season will decide the feasibility of the project.

—THE Russian Commissioners at Philippopolis have received orders to avoid all unnecessary obstruction. The organic statute for Eastern Roumelia may consequently be completed before the end of the month.

—KANSAS now stands first among the wheat-producing States. In 1875 she was the eleventh State, in 1870 the nineteenth and in 1866 the twenty-fourth—a jump from the twenty-fourth to the first State in twelve years.

—A COMMITTEE of the Bulgarian Assembly is about to prepare a memorial to the Powers, asking them to modify the Treaty of Berlin. A deputation of Bulgarians, Roumelians and one Macedonian, will visit the several capitals to present it.

—BY a recent order of Prince Bismarck all public works in Germany are to be executed exclusively by Germans, and with German material, except in the case of articles not produced in that country. Foreign architects are excluded from all competition.

—IN Persia a girl is expected to yield her parents a good round sum at marriage, and the people of that country are indignant and horrified when told that in America daughters are given away in marriage, as though the parents considered them worthless trash.

—THE French Government has asked the Chamber to authorize it to spend 400,000 francs in cleaning up the furniture of the Elysée, and renewing part of it. Of this sum, 287,000 francs will be spent in table linen, glass, knives, forks, spoons and china. Since 1873 the wear and tear of the State chattels in the palace of the Executive has been very great.

—THERE is a German colony of 425 persons on the Pozuzo, on the eastern slope of the Andes. The colonists cultivate coffee, cocoa, tobacco, rice, Indian corn, sweet potatoes, sugar-cane and tropical fruits. They keep cows and pigs. Ants and cockroaches are the only insect plagues. The colony is prosperous, but its development is prevented by the want of roads.

—A MAN who wishes to become a medical practitioner in Germany is now obliged to pass, some time in the course of his third year's study, an examination in chemistry and physics, botany, zoology, anatomy and physiology, and at the close of his studies he has to devote as much as five months to passing a final examination in the practical departments of his profession.

—THE British Museum is said to possess a finer American library than any in the United States. Charles Leland is taking full advantage of it, reading up and collecting material for his life of Lincoln. Wirt Sikes, whose work on the Folk Lore of Wales is already attracting the attention of scholars, reads constantly at the museum when his leave of absence from his post permits.

—DURING the past year a new and valuable coral bed was discovered on the southwest of Sicily, between Sciacca and Porto Empedocle. The coral is not only abundant, but of excellent quality. One coral merchant of Torre del Greco, having fifty barks employed on the bed, secured in a few days ten tons of coral of the very finest quality. The Algerian coral grounds have been nearly deserted on account of the new finds.

—IN the Victorian colony, Australia, there is a total population of 849,870. Of this number 300,000 are adherents of the Church of England, 202,644 of the Church of Rome, 134,126 of the Presbyterian Church, 111,897 of the Wesleyan connection, 62,317 of other sects; 4,237 are Jews, and 20,807 pagans. The aborigines scarcely number 1,000. In spite of the influence of the churches, it is said that intemperance and cases of illegitimacy are increasing.

—THE revision of the English Bible now going on is conducted by committees in Britain and America, who exchange their results. In one case both the New Testament companies were at the same time on the same book. When notes were compared it was found that of 913 changes made by one party, 476 had been made by the other, acting independently. A similar coincidence was observed in the case of the Old Testament companies when they were at work independently.

—THE Berlin Exhibition of manufactures is to be opened on May 1st, and will remain open for five months. The buildings, which cover a superfices of 25,000 square metres, were to have been completed by the 1st of March, but owing to the severity of the Winter the contractors were allowed an extension of time. All the space is allotted. During the Summer evenings, bands will play in the grounds. The price of admission is said to be fixed at fifty pfennig (about ten cents), but on certain days a mark will be charged.

—THE Rev. W. E. Griffis, who has been Professor at the Imperial University of Tokio, states as evidence of progress in Japan since that country joined the postal union, that the number of letters sent through the post-office in 1877 was 23,647,052, of which not more than 140,631 were for foreign countries. The post-cards were 4,744,272, and newspapers 7,372,536. Of post-offices throughout the country there are 3,744, of receiving agencies 151, of stamp agencies 916, and of street letter-boxes 866. This shows that the Japanese were in earnest when they undertook to change their civilization for that of the Western World. And further, there are around the coast thirty-four lighthouses, three light-ships, sixteen buoys and five beacons.

—A MONUMENT to commemorate its triumph over Turkey has been ordered in France by the Russian Government. The design is by an aged artist of St. Petersburg, who took part in the campaign of the Napoleonic invasion. On the top of a truncated pyramid stands a Russian eagle, with his talons upon the crescent and the Turkish standard. On the four sides of the pyramid the most important events of the war are depicted in bas relief. Among the exploits to be represented are the crossing of the Danube, the blowing-up by torpedoes of a Turkish ironclad, the storming of Kars, the visit of the Czar to the hospital at Simnitza, and the encampment of the Russians before Constantinople. About the base of the pyramid captured Turkish cannon are to be grouped.

THE NIGHTINGALE AND THE FALCON.

A PERSIAN FABLE.

ONE time when June's meridian hour
With roses filled each Summer bower,
When rivulets ran with happy feet,
And all the fields and skies were sweet
With honeyed fragrance—when the air
No further charms or gifts could bear,
A Nightingale hung down his head,
And to the silent Falcon said:
"How is it, when all birds rejoice,
That you who never raise your voice
In heavenly concert, and can bring
No note to help the choir who sing,
Are held the first in love and worth
Of all the birds that skim the earth?
No matter what our virtues are,
Or what bright robes we chance to wear,
You stand in honor with the King
Above the sweetest ones that sing.
While you are dumb, your lips are kissed—
You sit upon the royal wrist,
And, from the favor of his plate,
Eat everything most delicate;
But I, who sing a thousand airs—
For me, not even a courtier cares;
Tue worm is all the food I get,
And for my house the thorn is set."

Then said the Falcon: "You shall hear
If you, for once, will be all ear.
Though I perform a hundred feats,
I utter self-praise; my tongue repeats
No word of them. I do what's fit,
And never stop to think of it.
But you who act no worthy part—
You get your lesson all by heart,
And sing between the earth and sky,
"See, what a clever chap am I!"

JOEL BENTON.

THE FALLEN LEAVES.

By WILKIE COLLINS.

CHAPTER XVI.—(CONTINUED).

LATE that night Amelius sat alone in his room, making notes for the lecture which he had now formally engaged himself to deliver in a week's time.

Thanks to his American education (as Rufus had supposed), he had not been without practice in the art of public speaking. He had learnt to face his fellow-creatures in the act of oratory, and to hear the sound of his own voice in a silent assembly without trembling from head to foot. English newspapers were regularly sent to Tadmor, and English politics were frequently discussed in the little parliament of the Community. The prospect of addressing a new audience, with their sympathies probably against him at the outset, had its terrors undoubtedly. But the more formidable consideration to the mind of Amelius was presented by the limits imposed on him in the matter of time. The lecture was to be succeeded (at the request of a clerical member of the institution) by a public discussion; and the secretary's experience suggested that the lecturer would do well to reduce his address within the compass of an hour. "Socialism is a large subject to be squeezed into that small space," Amelius had objected. And the secretary sighed, and answered, "They won't listen any longer."

Making notes, from time to time, of the points on which it was most desirable to insist, and on the relative positions which they would occupy in his lecture, the memory of Amelius became more and more absorbed in recalling the scenes in which his early life had been passed.

He laid down his pen, as the clock of the nearest church struck the first dark hour of the morning, and let his thoughts take him back again, without interruption or restraint, to the hills and vales of Tadmor. Once more the kind old Elder Brother taught him the noble lessons of Christianity as they came from the inspired Teacher's own lips; once more he took his turn of healthy work in the garden and the field; once more the voices of his companions joined with him in the evening songs, and the timid little figure of Mellicent stood at his side, content to hold the music-book and listen. How poor, how corrupt, did the life look that he was leading now, by comparison with the life that he had led in those earlier and happier days! How shamefully he had forgotten the simple precepts of Christian humility, Christian sympathy, and Christian self-restraint, in which his teachers had trusted as the safeguards that were to preserve him from the foul contact of the world! Within the last two days only he had refused to make merciful allowance for the errors of a man whose life had been wasted in the sordid struggle upwards from poverty to wealth—and, worse yet, he had cruelly distressed the poor girl who loved him, at the prompting of those selfish passions which it was his first and foremost duty to restrain. The bare remembrance of it was unendurable to him in his present state of mind. With his customary impetuosity, he snatched up the pen, to make atonement before he went to rest that night. He wrote in a few words to Mr. Farnaby, declaring that he regretted having spoken impatiently and contemptuously at the interview between them, and expressing the hope that their experience of each other, in the time to come, might perhaps lead to acceptable concessions on either side. His letter to Regina was written, it is needless to say, in warmer terms and at much greater length; it was the honest outpouring of his love and his penitence. When the letters were safe in their envelopes he was not satisfied even yet. No matter what the hour might be, there was no ease of mind for Amelius until he had actually posted his letters. He stole down-stairs, and softly unbolted the door, and hurried away to the nearest letter-box. When he had let himself in again with his latch-key, his mind was relieved at last. "Now," he thought, as he lit his bedroom candle, "I can go to sleep!"

A visit from Rufus was the first event of the day.

The two set to work together to draw out the necessary advertisement of the lecture. It was well calculated to attract attention in certain quarters. The announcement addressed itself, in capital letters, to all honest people who were poor and discontented. "Come, and hear the remedy which Christian Socialism provides for your troubles, explained to you by a friend and a brother; and pay no more than sixpence for the place that you occupy." The necessary information as to time and place followed this appeal; including the offer of reserved seats at higher prices. By advice of the secretary, the advertisement was not sent to any journal having its circulation among the wealthier classes of society. It appeared prominently in one daily paper and in two weekly papers; the three possessing an aggregate sale of four hundred thousand copies. "Assume only five readers to each copy," cried sanguine Amelius, "and we appeal to an audience of two million. What a magnificent publicity!"

There was one inevitable result of magnificent publicity which Amelius failed to consider. His advertisement was certain to bring people together who might otherwise never have met in the great world of London under one roof. All over England, Scotland and Ireland, he had invited unknown guests to pass the evening with him. In such circumstances, recognitions may take place between persons who have lost sight of each other for years; conversations may be held which might otherwise never have been exchanged, and results may follow for which the hero of the evening may be innocently responsible, because two or three among his audience happen to be sitting to hear him on the same bench. A man who opens his doors and invites the public indiscriminately to come in runs the risk of playing with inflammable materials, and can never be sure at what time or in what direction they may explode.

Rufus himself took the fair copies of the advertisement to the nearest agent. Amelius staid at home to think over his lecture.

He was interrupted by the arrival of Mr. Farnaby's answer to his letter. The man of the oily whiskers wrote courteously and guardedly. He was evidently flattered and pleased by the advance that had been made to him; and he was quite willing, "under the circumstances," to give the lovers opportunities of meeting at his house. At the same time, he limited the number of the opportunities. "Once a week, for the present, my dear sir. Regina will doubtless write to you when she returns to London."

Regina wrote by return of post. The next morning Amelius received a letter from her which enchanted him. She had never loved him as she loved him now; she longed to see him again; she had prevailed on Mrs. Ormond to let her shorten her visit, and to intercede for her with the authorities at home. They were to return together to London on the afternoon of the next day. Amelius would be sure to find her, if he arranged to call in time for five-o'clock tea.

Towards four o'clock on the next day, while Amelius was putting the finishing touches to his dress, he was informed that "a young person wished to see him." The visitor proved to be Phœbe, with her handkerchief to her eyes, indulging in grief, in humble imitation of her young mistress's gentle method of proceeding on similar occasions.

"Good God!" cried Amelius, "has anything happened to Regina?"

"No, sir," Phœbe murmured behind the handkerchief. "Miss Regina is at home, and well."

"Then what are you crying about?"

Phœbe forgot her mistress's gentle method. She answered, with an explosion of sobs, "I'm ruined, sir!"

"What do you mean by being ruined? Who's done it?"

"You've done it, sir!"

Amelius started. His relations with Phœbe had been purely and entirely of the pecuniary sort. She was a showy, pretty girl, with a smart little figure—but with some undeniably bad lines, which only observant physiognomists remarked, about her eyebrows and her mouth. Amelius was not a physiognomist; but he was in love with Regina, which at his age came to the same thing. It is only men over forty who can court the mistress, with reserves of admiration to spare for the maid.

"Sit down," said Amelius, "and tell me in two words what you mean."

Phœbe sat down, and dried her eyes. "I have been infamously treated, sir, by Mrs. Farnaby," she began—and stopped, overpowered by the bare remembrance of her wrongs. She was angry enough, at that moment, to be off her guard. The vindictive nature that was in the girl found its way outward, and showed itself in her face. Amelius perceived the change, and began to doubt whether Phœbe was quite worthy of the place which she had hitherto held in his estimation.

"Surely there must be some mistake," he said. "What opportunity has Mrs. Farnaby had of ill-treating you? You have only just got back to London."

"I beg your pardon, sir, we got back sooner than we expected. Mrs. Ormond had business in town, and she left Miss Regina at her own door, nearly two hours since."

"Well?"

"Well, sir, I had scarcely taken off my bonnet and shawl when I was sent for by Mrs. Farnaby. 'Have you unpacked your box yet?' says she. I told her I hadn't time to do so. 'You needn't trouble yourself to unpack,' says she. 'You are no longer in Miss Regina's service. There are your wages—with a month's wages besides, in place of the customary warning.' I'm only a poor girl, sir, but I up and spoke to her as plain as she spoke to me. 'I want to know,' I says, 'why I am sent away in this uncivil manner?' I couldn't possibly repeat what she said. My blood boils when I think of it!" Phœbe declared, with melodramatic vehemence. "Somebody has found us out, sir. Somebody has told Mrs. Farnaby of your private meetings with Miss Regina in the shrubbery, and the money you kindly gave me. I believe Mrs. Ormond is at the bottom of it; you remember nobody knew where she was, when I thought she was in the house speaking to the cook. That's guesswork, I allow, so far. What is certain is, that I have been spoken to as if I was the lowest creature that walks the streets. Mrs. Farnaby refuses to give me a character, sir. She actually said she would call in the police, if I didn't leave the house in half an hour. How am I to get another place, without a character? I'm a ruined girl, that's what I am—and all through you!"

Threatened at this point with an illustrative outburst of sobbing, Amelius was simple enough to try the consoling influence of a sovereign. "Why don't you speak to Miss Regina?" he asked. "You know she will help you."

"She has done all she can, sir. I have nothing to say against Miss Regina—she's a good creature. She came into the room, and begged, and prayed, and took all the blame on herself. Mrs. Farnaby wouldn't hear a word. 'I am mistress here,' she says; 'you had better go back to your room.' Ah, Mr. Amelius, I can tell you Mrs. Farnaby is your enemy as well as mine! You'll never marry her niece if *she* can stop it. Mark my words, sir, that's the secret of the vile manner in which she has used me. My conscience is clear, thank God. I've tried to serve the cause of true love—and I'm not ashamed of it. Never mind! my turn is to come. I'm only a poor servant, sent adrift in the world without a character. Wait a little! you see if I am not even (and better than even) with Mrs. Farnaby before long! *I know what I know.* I am not going to say any more than that. She shall rue the day," cried Phœbe, relapsing into melodrama again, "when she turned me out of the house like a thief!"

"Come! come!" said Amelius, sharply, "you mustn't speak in that way."

Phœbe had got her money; she could afford to be independent. She rose from her chair. The insolence which is the almost invariable accompaniment of a sense of injury among Englishwomen of her class expressed itself in her answer to Amelius. "I speak as I think, sir. I have some spirit in me; I am not a woman to be trodden underfoot—and so Mrs. Farnaby shall find, before she is many days older."

"Phœbe! Phœbe! you are talking like a heathen. If Mrs. Farnaby has behaved to you with unjust severity, set her an example of moderation on your side. It's your duty as a Christian to forgive injuries."

Phœbe burst out laughing. "Hee-hee-hee! Thank you, sir, for a sermon as well as a sovereign. You have been most kind, indeed!" She changed suddenly from irony to anger. "I never was called a heathen before! Considering what I have done for you, I think you might at least have been civil. Good-afternoon, sir." She lifted her saucy little snub-nose, and walked with dignity out of the room.

For the moment, Amelius was amused. As he heard the house-door closed, he turned laughing to the window for a last look at Phœbe in the character of an injured Christian. In an instant the smile left his lips—he changed color, and drew back from the window with a start.

A man had been waiting for Phœbe in the street. At the moment when Amelius looked out, she had just taken his arm. He glanced back at the house as they walked away together. Amelius immediately recognized, in Phœbe's companion (and sweetheart) a vagabond Irishman, nicknamed Jervy, whose face he had last seen at Tadmor. Employed as one of the agents of the Community in transacting their business with the neighboring town, he had been dismissed for misconduct, and had been unwisely taken back again, at the intercession of a respectable person who believed in his promises of amendment. Amelius had suspected this man of being the spy who officiously informed against Mellicent and himself; but, having discovered no evidence to justify his suspicions, he had remained silent on the subject. It was now quite plain to him that Jervy's appearance in London could only be attributed to a second dismissal from the service of the Community, for some offense sufficiently serious to oblige him to take refuge in England. A more disreputable person it was scarcely possible for Phœbe to have become acquainted with. In her present vindictive mood, he would be emphatically a dangerous companion and counselor. Amelius felt this so strongly that he determined to follow them, on the chance of finding out where Jervy lived. Unhappily, he had only arrived at this resolution after a lapse of a minute or two. He ran into the street—but it was too late; not a trace of them was to be discovered. Pursuing his way to Mr. Farnaby's house, he decided on mentioning what had happened to Regina. Her aunt had not acted wisely in refusing to let the maid refer to her for a character. She would do well to set herself right with Phœbe, in this particular, before it was too late.

CHAPTER XVII.

MRS. FARNABY stood at the door of her own room, and looked at her niece with an air of contemptuous curiosity.

"Well! You and your lover have had a fine time of it together, I suppose? What do you want here?"

"Amelius wishes particularly to speak to you, aunt."

"Tell him to save himself the trouble. He may reconcile your uncle to his marriage—he won't reconcile me."

"It's not about that, aunt; it's about Phœbe."

"Does he want me to take Phœbe back again?"

At that moment Amelius appeared in the hall and answered the question himself. "I want to give you a word of warning," he said.

Mrs. Farnaby smiled grimly. "That excites my curiosity," she replied. "Come in. I don't want you," she added, dismissing her niece at the door. "So you're willing to wait ten years for Regina?" she continued, when Amelius was alone with her. "I'm disappointed in you; you're a poor, weak creature, after all. What about that young hussy, Phœbe?"

Amelius told her unreservedly all that had passed between the discarded maid and himself; not forgetting, before he concluded, to caution her on the subject of the maid's companion. "I don't know what that man may not do to mislead Phœbe," he said. "If I were you, I wouldn't drive her into a corner."

Mrs. Farnaby eyed him scornfully from head to foot. "You used to have the spirit of a man in you," she answered. "Keeping company with Regina has made you a milksop already. If you want to know what I think of Phœbe and her sweetheart——" she stopped and snapped her fingers. "There!" she said, "that's what I think! Now go back to Regina. I can tell you one thing—she will never be your wife."

Amelius looked at her in quiet surprise. "It seems odd," he remarked, "that you should treat me as you do, after what you said to me the last time I was in this room. You expect me to help you in the dearest wish of your life, and you do everything you can to thwart the dearest wish of my life. A man can't keep his temper under continual provocation. Suppose I refuse to help you?"

Mrs. Farnaby looked at him with the most exasperating composure. "I defy you to do it," she answered.

"You defy me to do it!" Amelius exclaimed.

"Do you take me for a fool?" Mrs. Farnaby went on. "Do you think I don't know you better than you know yourself?" She stepped up close to him; her voice sank suddenly to low and tender tones. "If that last, unlikely chance should turn out in my favor," she went on; "if you really did meet with my poor girl, one of these days, and knew that you had met with her—do you mean to say you could be cruel enough, no matter how badly I behaved to you, to tell me nothing about it? Is *that* the heart I can feel beating under my hand? Is *that* the Christianity you learnt at Tadmor? Pooh, pooh, you foolish boy! Go back to Regina; and tell her you have tried to frighten me, and you find it won't do."

The next day was Saturday. The advertisement of the lecture appeared in the newspapers. Rufus confessed that he had been extravagant enough, in the case of the two weekly journals, to occupy half a page. "The public," he explained, "have got a nasty way of overlooking advertisements of a modest and retiring character. Hit 'em in the eyes when they open the paper, or you don't hit 'em at all."

Among the members of the public attracted by the new announcement, Mrs. Farnaby was one. She honored Amelius with a visit at his lodgings. "I called you a poor, weak creature yesterday" (these were her first words on entering the room). "I talked like a fool. You're a splendid fellow; I respect your courage, and I shall attend your lecture. Never mind what Mr. Farnaby and Regina say. Regina's poor little conventional soul is shaken, I daresay; you needn't expect to have my niece among your audience. But Farnaby is a humbug, as usual. He affects to be horrified; he talks big about breaking off the match. In his own self, he's bursting with curiosity to know how you will get through with it. I tell you this—he will sneak into the hall and stand at the back where nobody can see him. I shall go with him; and, when you're on the platform, I'll hold up my handkerchief like this. Then you'll know he's there. Hit him hard, Amelius—hit him hard! Where is your friend Rufus? Just gone away! I like that American. Give him my love, and tell him to come and see me." She left the room as abruptly as she had entered it. Amelius looked after her in amazement. Mrs. Farnaby was not like herself; Mrs. Farnaby was in good spirits!

Regina's opinion of the lecture arrived by post.

Every other word in her letter was underlined; half the sentences began with "Oh!"; Regina was shocked, astonished, ashamed, alarmed. What would Amelius do next? Why had he deceived her, and left her to find it out in the papers? He had undone all the good effect of those charming letters to her father and herself. He had no idea of the disgust and abhorrence which respectable people would feel at his odious Socialism. Was she never to know another happy moment? and was Amelius to be the cause of it? and so on, and so on.

Mr. Farnaby's protest followed, delivered by Mr. Farnaby himself. He kept his gloves on when he called; he was solemn and pathetic; he remonstrated, in the character of one of the ancestors of Amelius; he pitied the ancient family "moldering in the silent grave;" he would abstain from deciding in a hurry, but his daughter's feelings were outraged, and he feared it would be his duty to break off the match. Amelius, with perfect good temper, offered him a free admission, and asked him to hear the lecture and decide for himself whether there was any harm in it. Mr. Farnaby turned his head away from the ticket as if it was something indecent. "Sad! sad!" That was his only farewell to the gentleman Socialist.

Digitized by Google

On the Sunday (being the only day in London on which a man can use his brains without being interrupted by street music), Amelius rehearsed his lecture. On the Monday he paid his weekly visit to Regina.

She was reported—whether truly or not it was impossible for him to discover—to have gone out in the carriage with Mrs. Ormond. Amelius wrote to her in soothing and affectionate terms, suggesting, as he had suggested to her father, that she should wait to hear the lecture before she condemned it. In the meantime, he entreated her to remember that they had promised to be true to one another, in time and eternity—Socialism notwithstanding.

The answer came back by private messenger. The tone was serious, Regina's principles forbade her to attend a Socialist lecture. She hoped Amelius was in earnest in writing as he did about time and eternity. The subject was very awful to a rightly-constituted mind. On the next page, some mitigation of this severity followed in a postscript. Regina would wait at home to see Amelius, the day after his "regretable appearance in public."

The evening of Tuesday was the evening of the lecture.

Rufus posted himself at the ticket-taker's office in the interests of Amelius. "Even sixpences do sometimes stick to a man's fingers, on their way from the public to the money-box," he remarked. The sixpences did indeed flow in rapidly; the advertisements had, so far, produced their effect. But the reserved seats sold very slowly. The members of the Institution, who were admitted for nothing, arrived in large numbers, and secured the best places. Towards eight o'clock (the hour at which the lecture was to begin), the sixpenny audience was still pouring in. Rufus recognized Phœbe among the late arrivals, escorted by a person in the dress of a gentleman, who was palpably a blackguard, nevertheless. A short, stout lady followed, who warmly shook hands with Rufus, and said, "Let me introduce you to Mr. Farnaby." Mr. Farnaby's mouth and chin were shrouded in a wrapper; his hat was over his eyebrows. Rufus observed that he looked as if he was ashamed of himself. A gaunt, dirty, savage old woman, miserably dressed, offered her sixpence to the money-taker, while the two gentlemen were shaking hands, the example, it is needless to say, being set by Rufus. The old woman looked attentively at all that was visible of Mr. Farnaby—that is to say, at his eyes and his whiskers—by the gas-lamp hanging in the corridor. She instantly drew back, though she had got her ticket; waited until Mr. Farnaby had paid for his wife and himself, and then followed close behind them into the hall.

And why not? The advertisements addressed this wretched old creature as one of the poor and discontented public. Sixteen years ago, John Farnaby had put his own child into that woman's hands at Ramsgate, and had never seen either of them since.

(*To be continued.*)

THE VANDERBILT ELEVATORS.

INTERESTING FACTS ABOUT THE GRAIN-CARRYING TRADE.

THE history of the development of the grain-carrying trade to this and other seaboard cities is full of interest. In the early Spring of 1866 a large quantity of "hot" corn had accumulated in the Buffalo elevators. Navigation on the canal was not opened, and it was feared that this corn would be irretrievably ruined unless it could be got out of the elevators and sent forward to its destination. It was finally decided that if it could be placed in small bodies in cars and run through to its destination, further depreciation might be averted, as the corn would be cooled in the transit, and it could then be put upon the market and disposed of to advantage. This course was accordingly taken, and this was the beginning of the transportation of grain in bulk by railroad from the West to seaboard.

Previous to that event all the grain which had come to this or other markets other than by canal had been sent forward in bags, entailing such a great expense in the loss and damage to bags, and the cost of transportation back to the West empty, as to very greatly retard the movement of grain during the season of closed navigation on the canal, and from that time the business of carrying grain in bulk has been gradually developing on the railroads.

It was not, however, until some years later that the railroad companies began to generally recognize grain in bulk as a legitimate business, and they were only willing to take such freight when they could find no other. During all these years the methods employed in handing and delivering grain from the cars were of the most clumsy character, and none of the trunk lines in New York were able to deliver more than from eighty to one hundred cars per day, on the average. In the meantime elevators had been built at Boston, Baltimore and Philadelphia; but it was believed that the method of transferring freights in this harbor by lighters, growing out of the old system of the canal-boats placing their cargoes alongside of ships or stores located at Brooklyn, rendered elevators at this port unnecessary; and, indeed, the opposition to their introduction from various sources was so great that it was considered a bold undertaking on the part of any railroad company to build an elevator at the end of its road. But with the usual foresight of the management of the New York Central and Hudson River Railroad Company, it was seen that the great business of this country was the grain trade, and with their accustomed energy they determined to make preparations for doing it much more largely than they had ever done before, and much better, and a consequence was the erection of the large elevator at the foot of Sixty-second Street.

This building, with a capacity for storing one and one-half millions of bushels of grain, was supposed to be amply sufficient for all the business the road could get to it. But before its first year was ended the fact was developed that it would not accommodate more than one-half the business which was offering to the road; and as a result, during the last year a second building of like character has been erected with a capacity of one million bushels storage. The first building was erected on the line of the bulkhead; the second has been built upon a pier for the better transfer of grain to steamers and sailing-craft. In addition to the elevators, this company has at the foot of Fifty-ninth Street a large pier and storehouse; at the foot of Sixty-second Street is another pier, 600 feet in length by 150 feet in width, upon which has been erected a building two stories in height, provided with steam elevators, which will take flour from the lower to the upper story with the same celerity as the neighboring storehouses will take grain from the cars to their bins.

By all these appliances merchandise and grain may be transferred from cars to steamers and sailing craft, and sent on their way to foreign ports, almost without seeing daylight. It is the intention of this company to build additional piers and storehouses and other elevators for their vast and increasing business. Among their other terminal facilities are the immense stockyards and abattoirs; and at a safe distance from the other property are the terminal facilities for petroleum, by which pipes are put into the oil-tanks of the cars and pumped directly from those cars to Long Island in pipes passing under the East River. During the year ending September 30th, 1878, the New York Central Railroad received at this port about thirty-five million bushels of grain, which were carried in about eighty-one thousand cars. In addition to the grain brought to this city for that year were various other kinds of freight, something over *two hundred thousand carloads*.

In addition to the terminal facilities above noted, this company has also several piers and large warehouses at and near the foot of Thirty-third Street, North River. The old Thirtieth Street passenger depot grounds have been converted into a produce depot, at which alone were received last year nearly ten thousand carloads of potatoes. It has also its extensive St. John's Park freight depot, and another depot at the foot of Barclay Street, on the North River, and extensive warehouses and piers devoted to the flour trade on South Street, at the foot of Broad.

The illustration on page 76 shows only a small portion of the facilities possessed by this company. It is hoped at a future day to give further views of this character, that the public, and especially the people of the West, may see what facilities the port of New York is beginning to offer for the great trade of that section. It must be a great boon to the shipper of flour, grain, bacon and other products of the West, to know that he may put his freight into the car at his point of shipment with the knowledge that it may go to Liverpool, Havre, Bordeaux, Glasgow, Belfast, or any other port in the world, with but one handling.

The Unicorn Line of steamers run regularly from the Sixtieth Street depot, and, in addition, this company have close connections with the various foreign and domestic lines of steamers from this port, having its track laid upon the piers of several of the steamship lines, through the permission recently granted by the Board of Aldermen. As soon as certain improvements now being made by the Dock Department are completed, the New York Central and Hudson River Railroad Company will proceed to lay tracks on the dock of every steamer line from this city.

SEÑOR MIRANDA'S MONUMENT TO CERVANTES.

THE return from Spain of Señor Fernando Miranda, the well-known painter and sculptor, has revived the interest of Spanish and Spanish-American residents in New York in the project of erecting a monument in Central Park to the memory of the delightful author Cervantes. The design for the monument by Señor Miranda was adopted by the Committee before he went abroad. His chief object in revisiting Spain was to make studies in costume, armor and historical details for his great and patriotic work. Various papers in Spain have opened subscriptions. The King has promised through General Concha, Senator, to contribute to the fund, and the Government itself will aid the project. The Spanish Minister at Washington, Señor Mendez de Vigo, is much interested in the project, as was his predecessor, Marquis Mantilla de los Rios, and has promised his co-operation.

Señor Miranda, while at Madrid, submitted his design to the Academy of Fine Arts of San Fernando, of which he was a pupil, and it received the approval of the professors. He also ordered all the costumes, armor, arms and other accessories necessary for the work. The Church authorities and municipality of Alcala de Henares, the birthplace of Cervantes, have offered to send a properly attested parchment copy of the baptismal register of the famous Spaniard to be placed in the corner-stone of the monument.

Our illustrations represent the front and rear views of Señor Miranda's model.

Condition of the Lower Classes in Italy.

A BOOK on the condition of the lower classes in Italy has been published at Neuchâtel by Professor Umilta, a personal friend of Mazzini and a companion-in-arms of Garibaldi. The writer says that in northern and southern Italy the agricultural laborer has to work very hard, is ill fed, and is worse paid. Professor Villari, in his "Southern Letters" in the *Opinione*, showed last year that the day laborers in Apulia work fourteen hours a day for thirty-six cents, and the ex-Minister, Jacini, states that in the vicinity of Milan the "laborers are worse treated than dogs. We see here the greatest possible fertility in the soil combined with the greatest misery in its cultivators." M. Cardani, director of the Lombardian Institute for the Improvement of Agriculture, says that "in Lombardy the peasant is the poorest and most wretched of all laborers. He has no direct relations with the landowner, who farms out his estates. . . . His food is lamentably bad, and he scarcely ever tastes meat or wine." The ordinary wages of the father of a family "are under eighty cents a day; the women at thirty-five look sixty, and people die young in this world of misery." According to the official statistician, Boccardo, 70,000 hectares (two and a half acres each) of land in Italy still remain uncultivated, and the agricultural produce of Italy is relatively much less than that of other European countries. The total number of paupers in Italy is enormous; and, while it is very difficult to get work, the forced paper currency has greatly increased the prices of the necessaries of life.

ADVERTISERS will find in "Leading Newspapers," by H. P. Hubbard, of New Haven, Conn., of which a new edition has just been published, a very useful and trustworthy manual. The various lists are made up with care and good judgment, and acting upon the information which they furnish, the advertiser will have every reason to expect abundant and satisfactory returns for his outlay. In no department of business is ignorance more common or expensive than in that of advertising, and in none is there less excuse for it, when guide-books and manuals like Mr. Hubbard's are available.

SCIENTIFIC INTELLIGENCE.

A Great Deposit of mineral wax has been discovered in Southern Utah.

Piturl is the name of a narcotic indulged in by the natives of Australia.

Thousands of Patents have been taken out for automatic car-couplers, and applications still flow into the Patent Office.

Traces of Roman Civilization have been found in the Sahara Desert, and among them the remains of an amphitheatre like that in Rome.

The Coloring Matter of Red Cabbage.—According to Savigny and Collineau, two pounds of red cabbage are covered with six pounds of hot water and pressed. The blue liquid called carolin yields, with zinc salts, a blue, and with barium hydrate, a green precipitate. 10cc carolin, 7.99$_{00}$ boiling-hot water, and two grammes caustic magnesia, will impart a beautiful green color to any vegetables immersed in the hot liquid for a few moments.

Cleaning Steel.—Steel which has rusted can be cleaned by brushing with a paste made of half an ounce of cyanide of potassium, half an ounce of castile soap, one ounce of whiting, and water sufficient to form a paste. The steel should first be washed with a solution of half an ounce of cyanide of potassium in two ounces of water. To preserve steel from rusting, a good method is to paint it with melted caoutchouc, to which some oil has been added.

Tempered Glass.—Tempered glass has now fallen into disfavor. Its liability to explode is fatal to its general introduction, and unless some method of annealing it is discovered its manufacture must cease. The utility of the articles made of it is not greater than that of Prince Rupert's drops, from which they differ only in form. Lamp-chimneys explode spontaneously, and the least scratch will cause the total wreck of vessels made of tempered glass.

Preservation of Iron by Steam.—The Barff process consists in introducing iron into cylinders closed at both ends, and exposing it to the action of dry steam at a pressure of from two to two and a half atmospheres for five hours, the internal heat of the cylinder being kept in the meantime at a temperature of from 626° to 644° Fahrenheit. The iron becomes covered with a scale of black, magnetic oxide, which thoroughly protects it from further oxidation.

Welding Iron and Steel.—A new composition of iron and steel is described in the *Revue Industrielle*. A cast-iron mold is divided into two sections by means of a transverse plate of thin sheet-iron. The two metals are then poured into the respective compartments. The sheet-iron partition prevents the mixing of the metals and facilitates the welding by itself being brought into a state of fusion. It is said that the product is well adapted for safes, and that it resists drills.

Discovery of a New Mineral.—In examining a specimen of ore from the silver Islet Mine, on the north shore of Lake Superior, Professor Henry Wurtz discovered that it was a mineral unknown to the scientific world. He analyzed it and found it contained large proportions of silver and arsenic mixed with iron, zinc, cobalt and sulphur. Specimens of it were exhibited before the New York Academy of Sciences, and the name "Hunultite" has been given to it in honor of the distinguished geologist, Dr. T. S. Hunt, of Boston.

Submarine Lighting.—Submarine lighting has been effected by compressing pure oxygen into a reservoir of plate-iron, under a pressure of 420 pounds. This oxygen is supplied to a kind of alcohol lamp, provided with means for the escape of the gaseous products of combustion. The light is very good and lasts for four hours. Another plan consists in attaching to a diver's helmet a glass cylinder containing an electric lamp of polished copper, the carbons of which last for four hours without renewal. The light is intense and brilliant.

Frozen Fodder.—In order to convert a portion of the starch of roots and vegetables into grape sugar instead of treating them with dilute acids, they are now sometimes frozen. Before feeding them to animals, they should be thawed out by hot water or steam, but once thawed they will not keep any length of time owing to the rapid fermentation of the sugar. It would be dangerous to feed cattle with them after the putrefaction and fermentation has set in; but if they are kept in a frozen state and only thawed out when wanted, they prove to be very nourishing food.

Why Plants Follow the Sun.—The reason why certain plants, such as the sunflower and *heurseul*, appear to have the power of rotation, is due to the action of light in secreting certain matter on one side, thus causing an expansion, and the withdrawing of water on the opposite side, thus producing contraction; this unequal contraction and expansion rotates the plant at the same rate as the apparent movement of the sun. There is no question of instinct, sympathy, aspiration or any other feeling on the part of the plant; it is purely an operation of mechanics.

Heat as a Mode of Motion.—The celebrated memoir on the motive force of heat, published in 1824 by M. Sadi Carnot, at that time only twenty-eight years of age, has become so rare that his brother, a Senator of the house of peers of France, has decided to bring out a new edition, edited with explanatory notes. This memoir goes to show that Carnot, in his very short life, had glimpses of the true thermodynamic theory, and that he recognized that the work produced by a steam engine represented exactly the heat employed in generating the steam—in other words, he anticipated the magnificent discoveries of Mayer, Joule, Clausius, and Rankine.

The Electric Light in Mines.—The advantages of being able to introduce the electric light into mines are many and obvious. It would solve a most important problem affecting the lives of many persons now working in mines, and would greatly facilitate the out-put of mineral and coal. Electricity would give the men a light such as they have never dreamt of, enabling them to get a much larger quantity of coal in a given time than it is possible for them to bring down by the light of the dim lamp, which barely suffices to make the blackness of darkness more visible. It would also benefit both master and men, and greater safety would be insured, for explosions would be all but impossible, while the miners would be better able to guard against falls of roof and rock.

The Eye a Photographic Camera.—Sir John Herschell, in a paper printed in the Transactions of the Royal Society in 1842, drawing conclusions from some remarkable effects which he was then studying, states that in his opinion the phenomenon of vision has a photographic operation, the images of external objects being printed by the solar rays on the retina on the choroid coat of the eye. It appears from recent researches of Drs. Boll and Kühne that the theoretical assumption of Herschel is correct. These investigators have proved the existence of a purple pigment in the eye which is the sensitive agent by aid of which we are enabled to fix images on the retina. They have succeeded in rapidly dissecting an eye and of fixing the image long enough to study it and to take a copy of it by photography.

PERSONAL GOSSIP.

DR. VON DOLLINGER, the celebrated leader of the Old Catholics, has reached his eightieth birthday.

A COLOSSAL statue of Prince de Bismarck will be unveiled at Cologne on April 1st, the Chancellor's birthday.

DR. LIGHTFOOT will be consecrated Bishop of Durham April 25th, the delay being caused by the necessity of observing certain formalities.

THE Marquis of Normandy, who has been Governor at one time or another of half the British dependencies, has been appointed Governor of Victoria.

IT IS reported that Emperor William, addressing a high imperial functionary, said: "It is in Parliament that, for the first time, I have lost a battle."

GENERAL THOMAS W. SHERMAN, a hero of the Mexican and the last wars, died at Newport, R. I., March 16th, three days after the death of his wife.

MR. AND MRS. CYRUS W. FIELD will go to England in a few weeks, and it is understood that while in London they will be the guests of Dean Stanley.

KAISER WILHELM is advised by his physicians to avoid fatigue. Consequently the customary grand court reception on the imperial birthday will not be held.

THE Russian Geographical Society proposes to give its great gold medal to Professor Nordenskjold. The Berlin Geographical Society has given its gold medal to M. Prjevalsky.

THE Portuguese explorer, Pinto, has arrived at Pretoria, South Africa, with eight followers, all that remained of the four hundred with whom he set out on his expedition.

ONE of the social events of Eastertide will be the wedding on Governor's Island, New York, of General Hancock's niece and adopted daughter to Lieutenant Grifen, of the army.

MR. GLADSTONE was not invited to the Duke of Connaught's wedding. This omission has excited much comment in political circles, as Lords Granville and Hartington both received invitations.

MINISTER STOCKTON has been seriously affected by the severity of the Russian Winter, and has been obliged by his physicians to go to Southern Italy, where he will stay for several months.

THE wives and children of the officers killed at Isandula are in a condition of distress; and it has been suggested that some of the £70,000 of the Crimean Patriotic Fund should be given to them.

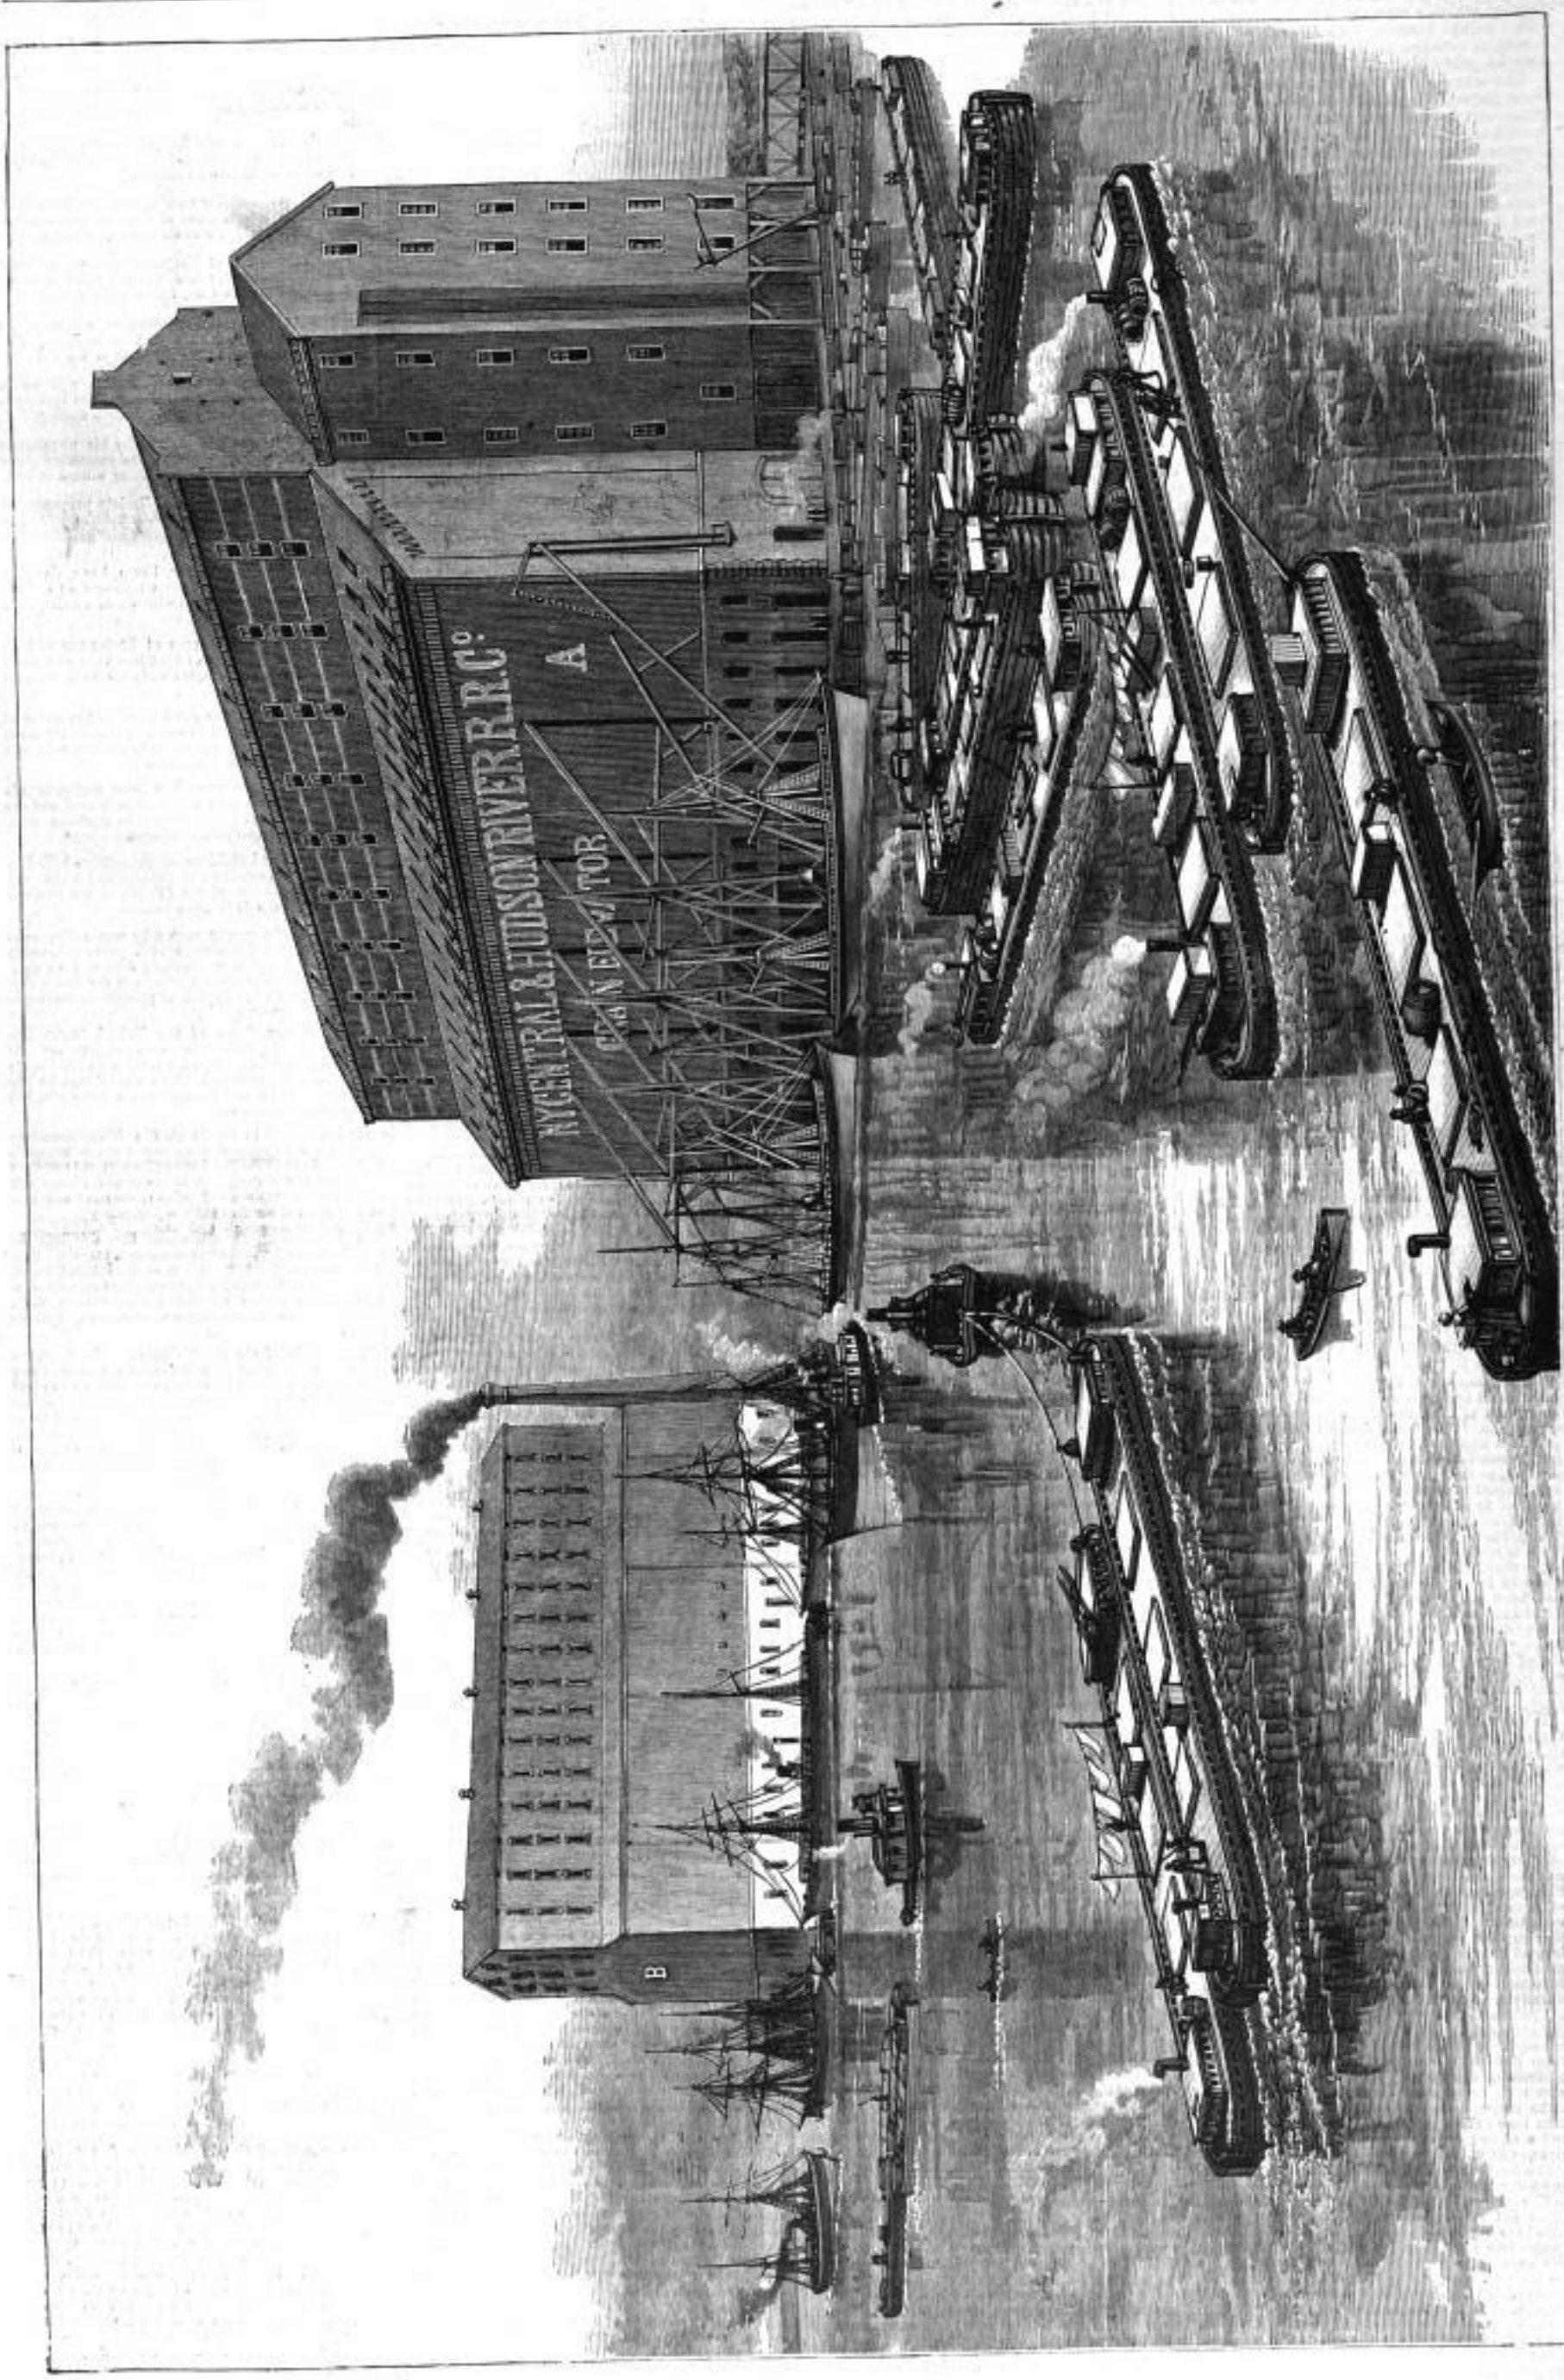
HARRON, the young man who was under sentence of death for the murder of a policeman, which crime Charles Pierce subsequently confessed he committed, has received a free pardon, and the Home Secretary promises to do all that is possible for his future welfare.

MR. JUSTICE HUNT of the United States Supreme Court, who was stricken with paralysis early in January, is improving, although there is no hope of his entire restoration to health. Within a few days he has been able to sit up, and can articulate a few words, but not connected sentences.

IT is rumored in Berlin that a friendly understanding will be announced on the Emperor William's birthday, whereby the Duke of Cumberland will renounce his claims to the throne of Hanover, and Prussia will give her consent to the abdication of the Duke of Brunswick in favor of the Duke of Cumberland.

A LONDON paper announces the marriage of Miss Theodosia Parnell, sister of the eminent Home Rule M. P., to Lieutenant Paget, son of Lord Alfred Paget, and brother of Captain Paget, who married Miss Stevens. Miss Parnell's mother, who resides at Bordentown, N. J., is a daughter of the late Commodore Stewart, of Rhode Island.

THE origin of the trouble between the Burmese and the British Resident at Mandalay is that the latter protects, and refuses to give up to slaughter, two royal princes and their families who have taken refuge at the Residency. The King of Burmah, who is said to be mad with drink, urged by lunatics and the Reactionary Party, threatens to force the Residency. Such a hostile measure on the part of the Government, it is believed, would be the signal for a general massacre of Europeans.



ADVICES from India report a circumstance of very rare occurrence, the conversion of a European to Buddhism. The person in question is an Austrian savant, and he obtained from the King of Siam permission to pass his noviciate in the magnificent temple attached to the palace. His reception gave rise to a most imposing ceremony. He will have to spend four years completely isolated from the world. The reasons which have induced him to take this step are said to be that he may the more readily study the Pali language, which is known to the Indian high priests only.

THE Rev. James De Koven, D. D., Dean of Racine (Wis.) College, died suddenly of apoplexy at the college on March 19th. In February, 1875, he was elected Bishop of Illinois, but failed to be consecrated in consequence of his extreme High Church views. He at one time received many votes for the Bishopric of Massachusetts, but was warmly opposed and defeated by the Low Church party. In April, 1878, Dr. De Koven was chosen assistant rector of Trinity Church, in this city, but he declined the position, which had been made vacant by the death of the Rev. Dr Ogilby. He was recently elected as rector of St. Mark's Church, Philadelphia, but declined the call the day before his death. He was in his forty-eighth year.

THE Emperor Napoleon III., during his visit to England, contrived to win the warm friendship of the Queen and Prince Albert, which, in the case of the former, has been extended to his widow and son. The young Louis Napoleon, before departing for the Zulu war, called upon the Queen to bid adieu, and, according to a London paper, she received him with the greatest cordiality, thanking him in a trembling voice for the courageous interest he evinced in her army and country. She seated him beside her on a sofa during the interview, and, as he rose to depart, she drew a ring from her hand, and placing it upon his finger, asked him to preserve it as a mark of her gratitude. The young man was visibly affected by the Queen's gift and words.

BY the will of the late Deacon Asa Otis, of Norwich, Conn., the American Board of Commissioners of Foreign Missions is made residuary legatee. Bequests, amounting to nearly $750,000, are as follows: Amherst College, $25,000; Yale College Theological Seminary, $25,000; Bulkeley High School of New London, $10,000; Bacon Academy of Colchester, Conn., $10,000; First Ecclesiastical Society of New London, $10,000; American Board of Commissioners for Foreign Missions, $10,000; American Home Missionary Society, $5,000; American Bible Society, $5,000; American Tract Society, $5,000. The balance of the property, amounting to over half a million, will go to the Foreign Missions. W. C. Crump, Peter C. Turner and William H. Chapman are appointed executors.

JOHN P. ST. JOHN, GOVERNOR OF KANSAS.—FROM A PHOTOGRAPH BY Q. T. BASTIAN.

HON. JOHN P. ST. JOHN, GOVERNOR OF KANSAS.

COLONEL JOHN P. ST. JOHN, the newly-elected Governor of Kansas, was born at Brookville, Ind., in 1833, and is in the full flush and vigor of manhood. He served through the war of the Rebellion, and earned his title of colonel in command of the 143d Illinois Volunteers. After the war he located in Jackson County, Missouri, an unpromising field for a Republican, won his way to a good position at the Bar, and was the standard-bearer of his party in his section. In 1868 he removed to Olathe, Johnson County, Kansas, and assumed political and professional prominence at once. He was elected to the State Senate in 1872, and was one of the leading debaters in that body. Colonel St. John's services to the Republican Party in Kansas have been conspicuous. In the famous contest between Cobb and Goodin, he made a protracted canvass at his own expense, speaking all over the district. At his home, Colonel St. John has no enemies. He is an excellent lawyer and a hard student. As a speaker he recalls the old days when oratory was in vogue, and the "stump" was far more of a power than it is now. His character is spotless as a citizen, a husband and father.

THE GRUSON SYSTEM OF REVOLVING TURRETS FOR COAST DEFENSE.

WE illustrate the Gruson system of iron cupolas or revolving turrets for coast defense as one of the results of the recent improvements in the size and effectiveness of artillery. Ironclad vessels with one-hundred-ton guns would soon demolish most forts. Spain has resolved to introduce, as a means of meeting these terrible engines of attack, a somewhat similar system of defense. The turret of Ericsson's monitor required weight and defense above. The almost spherical form here replaces the cylindrical, and the immense ball or shell, whether it descends from above or strikes horizontally, will glance off. To give sufficient power of resistance at the point of impact, a system of casting is adopted which gives the exterior the hardness of steel, while the interior, requiring inertia rather than tenacity, is of the ordinary density. The iron walls in the most exposed parts are three feet thick, less on the roof and safer portions. Every improvement has been introduced for facilitating the loading, aim and recoil of the gun. Each turret consists of pieces weighing from forty to forty-five tons of metal, so that the whole is at least 1,200 tons, and costs half a million of dollars. They can be used singly or in groups, and where a shore is lined by a succession of these the contest with an ironclad will be one in which accident alone, it would seem, could give an advantage, and any point of weakness in the ironclad will insure its destruction. As the turret revolves, each one can keep up its fire as the vessel approaches or passes, the rapidity of fire being insured by the machinery in the interior.

HON. JOHN W. HALL, GOVERNOR OF DELAWARE.

HON. JOHN W. HALL, recently inaugurated as Governor of Delaware, comes of a good and honorable stock. He was born on the first day of January, 1817, in Frederica, Kent County, in the State with whose interests he has always been identified. Having lost his parents early in life, and his guardian having failed a few years afterwards, he was at the age of sixteen thrown upon his own resources, and is thus, in the best sense, the architect of his own fortune. Spending his minority in a clerical capacity in a mercantile establishment and acquiring a substantial business character, he was able at the age of twenty-one to commence in a small way on his own account, and, gradually enlarging his business, prosecuted it for a period of twenty-nine years with great success. He has been for thirty-three years an active member of the M. E. Church, serving for a part of the time in an official capacity. In 1847 he engaged in ship-building, which is now his speciality, his sails being upon almost every sea, and his name being known far and wide as one of the largest vessel-owners in the country. He has been State Director in the Farmers' Bank of Delaware since 1861; from 1867 to 1871 was a member of the State Senate; and in 1876 was a delegate to the Democratic National Convention at St. Louis. In 1878 he was nominated by acclamation as the Democratic candidate for Governor of Delaware, and was elected by almost a unanimous vote. He was inaugurated at Dover on the 21st of January. He has lived in the same town all his life, except while receiving his education, and is now, in the sixty-third year of his age, still hale and vigorous.

THE NEW MUNICIPAL BUILDING IN BROOKLYN.

THE new Brooklyn Municipal Building, of which we give an excellent illustration, has two features which commend it to general attention. It was completed for less than the original appropriation, and is claimed by its constructors to be, for the money expended, the best public building in the country. It will accommodate several important departments of the City Government which have hitherto been quartered in leased buildings outside the City Hall, and by its excellent location and ample facilities will greatly advance the public business. The building, of which Mumford & Ditmars are the architects, is of the Renaissance, combined French and Italian, style of architecture, stands just west of the County Court House, facing on Joralemon Street, and is one of the most eligible locations in the city. The façade on Joralemon Street is of white Westchester marble from the Tuckahoe quarries of John M. Masterton, the extreme height of the central tower being 135 feet above the curb. A basement and four stories are afforded by the building in which the Departments of City Works, Health, Police, Excise and Collection will find ample and convenient accommodations. All the heating and ventilating apparatus, which is most thorough and complete, introducing the latest and most improved apparatus, was made by James, Jacobs & Co., 84 John Street, New York; the carpenter-work by John Fallen, 107 Manhattan Avenue, Brooklyn; the galvanized ironwork, of which a large amount was required, by John Setan, 329 Myrtle Avenue, Brooklyn; and the plastering by T. B. Watson, of Brooklyn. Through all the corridors of the building, beautiful English encaustic tiles have been laid by Miller & Coates, of New York; and the hardware for doors, windows, etc., is supplied by the Russell & Erwin Manufacturing Company of this city. Setan's patent skylights are used, giving an abundance of daylight in all parts of the building, which in all its details is well adapted to its purposes.

NEW YORK.—NEW BUILDING OF THE MUNICIPAL DEPARTMENT OF BROOKLYN.

JOHN W. HALL, GOVERNOR OF DELAWARE.—FROM A PHOTOGRAPH BY BROADBENT & PHILLIPS.

COLD WATER IN COLD WEATHER.

IT should not be forgotten that the sole use of cold water in cold weather is to stimulate the organism to increased activity. A great mistake is made when any part of the body is immersed in cold water, and left to part with its heat without any guarantee that the energy of heat-production so severely taxed can respond to the requirement.

It may easily happen that the internal calorific force—if we are at liberty to use that expression—will be exhausted; and if that occurs, harm has been done. The obvious principle of health preservation is to maintain the circulation in its integrity; and while the error of supposing that clothing can do more than keep in the heat generated within is avoided, it is not less needful to guard against the evil of depriving the body of the heat it has produced. The furnace should be well supplied with suitable fuel—that is, nutritious food; the machinery of heat production, which takes place throughout the organism, not in any one spot or centre, should be kept in working order, and nothing conduces to

VIEW OF THE EXPERIMENTAL BATTERY DURING CONSTRUCTION.

SECTIONAL VIEW OF THE COMPLETED BATTERY.

this end more directly than the free use of the cold douche and the shower-bath: but the exhibition of these popular appliances in all or any of their forms ought to be restricted to a few seconds of time, and unless the evidences of stimulation—redness, and steaming of the surface—are rapidly produced, the affusion should be laid aside. The use of cold water in cold weather is a practice which must be governed by rules special to each individual case. Whether the practice recommended be that of plunging the feet in cold water before going to bed, to procure sleep—a reckless prescription, founded on a physiological fallacy—or any other use of cold water, the only safe course is to seek the counsel of a medical man conversant with the patient's peculiarities; and particularly in the cases of children we urge that this precaution should be observed.

OUR PLACES OF AMUSEMENT.

ÆSTHETIC New York should be *en fête* on the evening of Thursday, April 10th, when the life of Charlotte Brontë, "that wee sma' Yorkshire violet," will be word-painted by Mrs. Laura C. Holloway, at the Chickering Hall. With the fair lecturer's mobile and expressive face, her subtle power of delineation, her womanly grace and tenderness, the subject is one that will not fail to interest for lack of dainty handling, while the theme, indomitable energy and heroic effect, is such as to afford Mrs. Holloway—herself thrust into the battle of life where the fight has to be fought, and fought gallantly—ample scope for a dramatic skill which has already gained for her a success that is hourly upon the increase.

"A Celebrated Case" nightly fills the Grand Opera House.

The comedy of "Whims" will shortly replace "Thro' the Dark" at the Fifth Avenue Theatre.

The "Banker's Daughter" will hold the boards at Union Square Theatre till the end of the season.

At the Lyceum "The Masked Ball," a comic opera, supersedes the "Sorcerer" and the ubiquitous "Pinafore."

At Booth's "The Little Duke" is delighting the true believers in Lecocq. This gifted composer has shelved bouffe for the finer article of comic opera.

"A Scrap of Paper" is driving all paper, in the shape of complimentary admissions, from Wallack's. This charming little piece is acted in such a manner as to forcibly remind one of the Comédie Française.

"Engaged" at the Park is a success, owing to the very perfect acting of Miss Agnes Booth. There is the spirit of true comedy in her every movement. The cake-eating scene is simply perfection. Why! oh, why those impossible Scotch?

Colonel Mapleson's engagement at the Academy of Music draws to a close. He sails with his aviary of singing birds on April 5th, to commence the London season. That he has fulfilled every promise goes without saying; that he has rendered yeoman's service to the cause of music at its best, is equally free from controversy; that he has won for himself the cordial esteem and goodwill of the music-loving people by the admirable manner in which he has catered for them, whether in regard to song, to orchestra, to ballet, to *mise en scène* and to appointments, are "fixed facts" so thoroughly established that he will scarcely realize the position until he is the recipient of the welcome which awaits him on his return to the States. We wish him and his talented company *bon voyage* and *à bientôt*.

FUN.

A SWEEPING reform—Spring cleaning.

BEHOLD how great a number of insurance-agents a little fire brings forth.

THE truly wise man leaveth all his money directly to the lawyers, and thus saveth them the labor of contesting the will to get it.

IN a family in which there are two boys of about the same age, it is pretty difficult to decide whose birthright it is to roll out the ash-barrel.

PIZARRO was the play. A verdant actor was cast for one of the smaller rôles. To him fell the line, "My lord, 'neath yonder palm we have captured a cacique. What is your pleasure?" The fellow, when his cue came, rushed upon the stage, exclaiming, "My lord, 'neath yonder palm we have captured a cask. What is your pleasure?" "Roll him in," howled the tragedian, "and let's bust in the bung!"

THERE was that bachelor over in Manchester, England, who had proposed to and been rejected by thirty different women. He died the other day, leaving his property to be divided equally among those who had jilted him. The reason for this bequest, which he stated in his will, was that he felt himself in their debt, for it was to their opportune refusals that he owed the peace which he enjoyed through life.

SOPHOCLES'S tragedy of "Antigone" was produced at the Theatre Royal, Dublin, once with Mendelssohn's music, and the "gods" were pleased, and, according to their custom, demanded a sight of the author. "Bring out Sapherclazo!" they yelled. The manager explained that Sophocles had been dead two thousand years and more, and could not well come. Thereat a voice shouted from the gallery, "Then chuck us out his mummy!"

A GOOD story is told of Rev. Hadley Proctor, who once preached in Rutland, Vt. One bitter cold day, when the church was but half warmed, Brother Proctor had for his text a very warm verse, addressed to those on the left hand, and he seemed to feel the antagonism between the weather and his subject. Just before the benediction he leaned forward and said to one of the deacons in front of the pulpit, in tones loud enough to be heard by all, "Brother Griggs, do see that this house is better warmed this afternoon—it's no kind of use for me to warn sinners of the dangers of hell when the very kiss of hell is a comfort to them."

MADAME C——, dressmaker, has a great deal of trouble with her sewing-girls. The other day one of them came to her to say: "Madame, I fear that I will not be able to work much longer. I think I am getting blind." "Why, how is that? You seem to get along pretty well with your work." "Yes; but I can no longer see any meat on my plate at dinner." Madame C—— understood, and the next day the young ladies were served with very large but very thin slices of roast. "What happiness!" exclaimed our miss. "My sight has come back. I can now see better than ever." "How is that, mademoiselle?" "Why, at this moment I can see the plate through the meat."

THURBER'S RELIABLE CANNED GOODS.

GREAT progress has been made within a few years in the art of Preserving Fruits, Vegetables, Fish and Meats in tins, and in consequence the consumption has largely increased. As yet, however, canned goods are not generally thought to be "fresh," and some brands are not, perhaps, entitled to be so considered. Those packed by us, however, are Hermetically Sealed at the sources of supply, when they are in the best possible condition, by a process which preserves the much-to-be-desired fresh, natural flavors; and they are really in better condition, fresher, more palatable and wholesome than many so-called "fresh" articles which are exposed for sale during considerable periods of time in city markets. All goods bearing our name are guaranteed to be of superior quality, and dealers are authorized to refund the purchase price in any case where consumers have cause for dissatisfaction. It is, therefore, to the interest of both dealers and consumers to use THURBER'S BRANDS.

H. K. & F. B. THURBER & CO.,

Manufacturers of and Dealers in Food Products, New York.

A WORLD-WIDE REPUTATION.

DR. R. V. PIERCE, having acquired a reputation in the treatment of Chronic Diseases resulting in a professional business far exceeding his individual ability to conduct, some years ago induced several medical gentlemen to associate themselves with him, as the Faculty of the World's Dispensary, the Consulting Department of which has since been merged with the Invalids' Hotel. The organization has now been completed and incorporated under statute enacted by the Legislature of the State of New York, under the name and style of the "WORLD'S DISPENSARY MEDICAL ASSOCIATION.

We clip the following from the *Buffalo Express*:

A branch of the "World's Dispensary Medical Association" is to be established in London, Eng., a step which the continually increasing European business of the Dispensary has been found to warrant, and next week Dr. R. T. BADOSTHA will sail for the great metropolis named, to superintend the organization of the new institution. This gentleman has been for some four years associated with DR. PIERCE in a position of responsibility, and is well qualified for the duty now intrusted to him. Heretofore the foreign business of the World's Dispensary has been transacted through the agency of prominent druggists, but it has assumed such proportions as to require more direct care. Dr. BADOSTHA will no doubt successfully carry out his mission, being a gentleman of excellent business abilities and pleasing address.

NOT DESERVING OF PITY.

BEGGARED spendthrifts, to whom money has no exchange value but pleasure.

Persons who will persist in dying by inches with dyspepsia and liver diseases, when Dr. Pierce's Golden Medical Discovery and Pleasant Purgative Pellets are unfailing remedies for these maladies.

Parents who spare the rod and ruin the child. Fast young men and women are generally spoilt children to begin with.

People who suffer from catarrh, when Dr. Sage's Catarrh Remedy is a safe, reliable, and well-tested remedy for this loathsome disease.

People who marry for money, and find too late that the golden glitter is all moonshine.

Women who suffer death every day of their lives, when Dr. Pierce's Favorite Prescription will effectually remove those painful weaknesses and impart a healthful tone and strength to the whole system.

People who live beyond their means and find that style and pride, like everything else in this world, unless placed upon a secure foundation, are subject to the law of gravitation.

Invalids who do more towards fostering disease by living and sleeping in the low, unventilated rooms of the ordinary house, than the best medicines can accomplish towards recovery, when at a moderate expense they can secure all the hygienic and sanitary advantages of the Invalids' Hotel at Buffalo, N. Y. Every physician knows how much recovery depends upon good nursing and the hygienic conditions of the sick-room. Chronic diseases are especially subject to these conditions.

IS CATARRH A CURABLE DISEASE?

THIS question has been settled by Dr. M. W. Case, a highly educated physician of many years' experience in treating catarrh and diseases of the throat and lungs. He has designed ingenious and scientific apparatus by which remedies in the form of vapor or smoke are carried directly to the seat of catarrh, consumption, bronchitis, etc., and into the blood through the lungs, with perfect ease and as little trouble as it is to breathe the air that surrounds us. The result of this treatment is an astonishing success. His Carbolate of Tar Inhalants have been indorsed by leading physicians, and their speedy cures in seemingly hopeless cases commend them to thousands who have tried other remedies in vain. The doctor stands high as an honorable and successful physician in his specialties of catarrh and consumption. All suffering with these diseases may with full confidence write to the doctor at southwest corner Tenth and Arch Sts., Philadelphia, Pa.

WE call the attention of our readers to the announcement of Messrs. John Wanamaker & Co., No. 818 and 820 Chestnut Street, Philadelphia. These gentlemen are well known to the public; their name has become a household word, and we advise our readers to send to them for estimates before purchasing clothing in the Spring. They are one of our largest and best concerns in this country, and make the very best of clothing.

THE aim of the proprietor of the "ST. NICHOLAS" HOTEL has always been to make this great New York institution the model house of the land. The verdict of the traveling public has sustained this ambition, and both single guests and families find in cuisine, apartments and general conveniences the very acme of all that is desirable. Prices have been reduced to a figure very moderate, measured by the superb accommodations given.

THE ticket which drew the second capital prize, $50,000, in the recent drawing of the Royal Havana Lottery, was held in this city, and sold by J. Duff & Co., of 42 Nassau Street, who now offer tickets in an extraordinary drawing, April 8th, with a capital prize of $1,000,000.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast-tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—See article in the *Civil Service Gazette*.

VITALIZED PHOSPHATES.

Debility and nervousness have their origin, to a great extent, in a weakened digestion. There can be but little mental activity with impoverished blood, and debility so induced leads to consumption and numerous other troubles that would never appear if the blood and nerves were nourished in a right degree. Physicians have prescribed 150,000 packages of Vitalized Phosphates preventing debility and nervous disease, curing indigestion, and re-vitalizing and invigorating thousands who were sick. It is a brain and nerve food, not a medicine.

CATARRH

Is a terrible disease. Its fearful effects are corruption running down the throat, weak eyes, deafness, loss of voice, loss of smell, disgusting odors, nasal deformities, and finally consumption. From first to last it is ever aggressive. Ordinary treatments are worse than useless. Thousands suffer with this disease without knowing its nature or the great danger in neglecting it. Many thousands are dying with consumption who a few years or months before had only catarrh. If neglected while a cure is possible, it may rapidly develop, and the symptoms of quick consumption announce that it is too late.

CONSUMPTION The terror of humanity that yearly carries thousands to an untimely grave, not sparing the young, talented, nor beautiful.

ASTHMA which makes life so miserable its victims almost WISH for DEATH. Minister's SORE THROAT, CATARRHAL DEAFNESS, and

BRONCHITIS the advance guard heralding the near approach of consumption. For those diseases the most thorough, successful and pleasant treatment is

CARBOLATE OF TAR INHALANTS Satisfaction always guaranteed. INHALANTS are more powerful than words can tell or pen express. *All Fatal Epidemics* are propagated by Inhalation. So potent for evil, it is now made most powerful for good. It does not require ten minutes to demonstrate the value of Carbolate of Tar, the most healing remedial agent known to science. Balsams and cordials of the most healing and soothing properties are so combined with Pine Tree Tar that the mere breathing converts them into a dense smoke or vapor. This is inhaled—taken right to the diseased parts. No heat, no hot water, simply inhaling or breathing it, and you feel its healing power at once. This treatment is endorsed by physicians everywhere, and highly commended by thousands who have used it with perfect satisfaction. "Your methods of treating catarrh and consumption are certainly very effectual. So-called 'hopeless cases' need not despair."—CHAS. HAMILTON CLARK, M. D., Louisville, Ky. "I am so well pleased with your Carbolate of Tar Inhalant that I would not part with it at any price."—J. J. BENNINGTON, 266 Elm St., Philadelphia.

HOME TREATMENT sent to any part of the United States or Canada, to be returned if not satisfactory. As the oils and balsams compounded and full. To consumptives beyond the possibility of cure the Inhalants always give great relief, and often cure cases considered hopeless. CATARRH, so very difficult to treat, and so seldom cured by other methods, readily yields to this painless and pleasant remedy. It is remarkable how quickly these ulcerated sensitive membranes are healed by breathing the vapor and forcing it into the diseased cavities of the head and out of the nose. Inhalation is the only method by which this terrible and almost universal disease can be permanently cured. Send for Circular and full particulars. When writing, please name this paper. Address

Dr. M. W. CASE, S. W. Cor. Tenth and Arch Sts., Philadelphia.

THE PEOPLE'S LIBRARY

IN ONE HUNDRED VOLUMES,

Embraces History, Biography, Travel, Natural History, Physiology, Physical Science, Fiction, Belles-Lettres, Religion, Political Economy, Geology, and other Important Subjects.

It supplies forty-three thousand two hundred pages of most instructive reading, from the best writers in the English language.
Sold upon terms which places it within the reach of all.
Its authors a guarantee of its excellence.

The Publishers, with a view to meet in some measure the growing demand among the people for good books, have prepared a library of standard literature under the title of "THE PEOPLE'S LIBRARY." In undertaking this important publication, the Publishers have endeavored to keep in view two permanent advantages:

COMPREHENSIVENESS AND CHEAPNESS.

First.—They have sought to make the library so comprehensive as to contain works upon all topics which the popular taste might reasonably be expected to embrace. That they have succeeded in this aim will be evident from the fact that within the Library are to be found only books of positive and sterling merit. The various works are from the pens of authors of acknowledged eminence, whose names, in many instances, are household words, and form a guarantee of the value and importance of this enterprise. Among other writers whose labors have contributed to the fund of popular instruction and entertainment embodied in The People's Library, are:

GIBBON, HUME, GEORGE ELIOT, CHARLES DICKENS, JACOB ABBOTT, THACKERAY, SCHILLER, MISS MULOCK, JOHN W. DRAPER, HUMBOLDT, WILKIE COLLINS, J. G. WOOD, G. L. CRAIK, JOHN S. C. ABBOTT, ANTHONY TROLLOPE, BULWER, MISS STRICKLAND, WILLIAM BLACK, MACAULAY, CHARLES READE, SAMUEL SMILES, CHARLOTTE BRONTE, CHARLES KINGSLEY, MARIA EDGEWORTH, GUIZOT, CHAS. NORDHOFF, J. W. DAWSON.

All of these hold the first rank in the departments of literature which they respectively represent. It will thus be seen that THE PEOPLE'S LIBRARY is fitted not only to convey to the people information upon great and interesting subjects, but also to introduce them to some of the best writers in the English language.

Second.—The Publishers desire to bring the Library within the means of the people at large. They accordingly offer it to the public at a price which is far below the aggregate price of the volumes of which it is composed, and they have full confidence in asserting that no other selection of books presents so varied and so large an amount of good reading matter, *for the money*, as THE PEOPLE'S LIBRARY.

Cheap as it is, however, it must be beyond the means of many individuals who would gladly avail themselves of its advantages; and accordingly the Publishers suggest that in such cases the co-operative plan of purchase be adopted.

IN EVERY VILLAGE AND COUNTRY DISTRICT

there are many who desire to form an acquaintance with such literature as this Library contains, but who are debarred from gratifying their desire by the expense. Such persons, by forming themselves into clubs or associations, may, by small individual contributions, purchase THE PEOPLE'S LIBRARY, and thus procure access to standard literary works at small cost. The expense to the individual will depend, of course, upon the number of members in the association to which he may belong; but it is believed that, in a great majority of instances, CLUBS OF ONE HUNDRED MEMBERS can be formed, so that each subscriber can have for one dollar the free use and part ownership of a library of one hundred volumes of instructive and entertaining reading.

THE PEOPLE'S LIBRARY

Provides most admirably for the diffusion of useful knowledge, and as an educator promotes permanent beneficial results. It supplies a demand that the intelligence of the people has created; it is a coadjutor of the public schools; its tendencies are elevating; its tone is pure. It presents a combination of works judiciously adapted to the public needs. It is a conscientious effort to promote a taste for the best class of literature, and will enable rich and poor alike to enjoy its advantages. It carries the possibilities of mental culture and recreation to the most remote districts. It is a valuable acquisition to

THE FAMILY, LITERARY SOCIETIES, ASSOCIATIONS AND CLUBS.

There is no individual who can afford to do without good books. The Professional man, the Student, the Teacher, the Mechanic, the Merchant, or the Family, will find the ownership of THE PEOPLE'S LIBRARY invaluable. In the education of the people, old or young, of either sex, the Library will, in the future as in the past, play a most important part.

CLUBS AND ASSOCIATIONS.

FIVE persons, paying $20 each, can secure The People's Library.
TEN persons, paying $10 each, can secure The People's Library.
TWENTY persons, paying $5 each, can secure The People's Library.
ONE HUNDRED persons, paying $1 each, can secure The People's Library.

THE PEOPLE'S LIBRARY is published by HARPER & BROTHERS, New York, exclusively for H. W. DERBY & Co., and sold only by them or their duly authorized agents.

It is elegantly and durably bound in cloth, in uniform or assorted colors, as desired, the various sizes and colors giving it a neat and elegant appearance.

Important to Mothers.

MRS. WINSLOW'S SOOTHING SYRUP is the only thing that mothers can rely upon for their children. It corrects acidity of the stomach, cures wind colic, regulates the bowels, and gives rest, health and comfort to mother and child. During the process of teething its value is incalculable. It softens the gums, reduces inflammation and allays all pain, thereby giving rest to the child and comfort to the mother.

25 CENTS A BOTTLE.

Horsford's
SELF-RAISING
Bread Preparation
The Healthful and Nutritious
Baking Powder,

Invented by E. N. Horsford, late Professor in Harvard University.

Better, Healthier and Cheaper than Ordinary Baking Powder.

BARON LIEBIG, the greatest chemist in the world, said: "I consider this invention as one of the most useful gifts which science has made to mankind."

Dr. M. H. HENRY, the celebrated Physician of New York, said: "The use of Horsford's Bread Preparation, offers admirable means for the introduction of a valuable element into the system."

Dr. J. C. BOOTH, the distinguished chemist of Philadelphia, said: "We have no hesitation in recommending your Preparation as new and valuable."

Prof. RODNEY WELCH, Lecturer at Hahneman Medical College of Chicago, said: "The greatest improvement ever made in raising bread without the use of yeast, is the process of Prof. Horsford."

The "Horsford Almanac and Cook Book," sent free on application.

ANNOUNCEMENT!

Eleven years ago we started the Chestnut Street Store to supply a better class of Clothing than had been made up to that time.

We put on our sign "THE FINEST CLOTHING," and we have not changed our plan or purpose, but from year to year have raised the standard higher and higher. We are now just as far ahead of others as ever in the style of goods we produce, and propose to keep in advance all the time in the character of our goods.

The people have patronized us well, and we have endeavored to reciprocate by serving them well.

The difference in our prices of really fine Ready-made Clothing and Clothes to Order is very small, and owing to the volume of work for our hands at all seasons of the year, we have advantages in prices which recur to our customers.

For the Spring of 1879 we excel with the best Ready-made Clothing. Nothing can be made to surpass it either in taste or fit.

In our Custom Department we show over a thousand different styles of Piece Goods, to be made up to measure.

We will do our best for Old and New Customers.

In Fine Furnishing Goods our well-known taste is acknowledged, and this year we lay ourselves out for the best season of all.

CAUTION.

Subscribers, in ordering our publications, should be careful to write the name of FRANK LESLIE *in full, and direct their letters to 53, 55 and 57 Park Place, New York, from which address all our publications are issued.*

THE CAUCUS SYSTEM.

WORCESTER, in his Dictionary of the English Language, gives the following definition of the word "caucus": "A cant term for a meeting of citizens or electors, held for the purpose of nominating candidates for public offices, or for making arrangements to secure their election." The etymological origin of this "low word," as Worcester calls it, has long been a matter of controversy, and still remains in dispute; but there can be no doubt that the lexicographer is entirely accurate in the brief statement he makes with regard to the historical origin and motive of this peculiar American institution. We regret to add, however, that he scarcely writes with the same accuracy when he proceeds to say that this word is "less used of late than formerly"; and we must confess that we have ourselves scarcely written with entire accuracy in referring to the caucus as an institution peculiar to American politics, for within the last two years an attempt has been made in England, among a branch of the Liberal Party at Birmingham and elsewhere, to engraft this same feature on the political customs of our Mother Country, so far, at least, as relates to the selection of available candidates to be supported by the adherents of that party in a few doubtful towns.

But within the last few years we have been called to witness in the United States an extension of the caucus system which, for usurpation and encroachment on the rights of private opinion and on the individual political freedom of the citizen, greatly transcends the inordinate claim of the original institute. We refer to the habit, which has now grown up in Congress, of deciding public measures of legislation, not by the free discussion which gives full play to the utterance and interchange of conflicting opinions among the majority who are responsible for the acts of legislation that shall be passed, but by remitting to the decision of a party caucus the nature and number of the measures which shall receive the united support of that majority, irrespective of the honest differences of opinion which may have obtained among its members before free thought had been stifled by the mandate of "King Caucus."

When the "Congressional Caucus" confined itself to the selection of Presidential candidates, as was done according to a custom long prevalent in the country, it degenerated into such a nursery of oppression and political "log-rolling" that the indignant public sense of the people called for its suppression. And it was in deference to this public sense that the modern "Nominating Convention" was substituted for the Congressional junta, whether with any advantage to public morals or to the personal political freedom of the citizen we must forbear to affirm; but it was at least hoped by the people that the country would be spared the mortification of seeing its chosen representatives in Congress descending to a practice which had originated among pot-house politicians, and which was therefore as little savory in its associations as it was far from being reputable in the uses to which it was commonly put.

But what would have been the surprise of the people who exclaimed against the old caucus system, as worked in Congress down to the times of President Jackson, if they could have foreseen that the breakdown of that system, as an expedient for the choice of Presidential candidates, would be followed by the installment of that system in Congress under the infinitely worse form which it has now come to assume, when it is worked as an expedient for determining the particular political measures to which all the adherents of a party shall give their unqualified adhesion, according to the vote of the majority? Such a custom has for its effect not only to destroy the representative character of our legislators, to coerce their consciences and to impair the personal freedom and independence of their opinions, but it also has for its necessary effect to rob their proceedings and debates of all that genuineness and sincerity which can alone procure the respect of the people for the acts and words of the men who profess and call themselves Senators and Representatives. Under the regimen of the caucus, who can be sure that he is learning the honest opinions of Senator Edmunds or of Senator Bayard upon a given measure of public policy? It is a matter of public notoriety that both of these eminent men are in the habit of attending "caucuses" called by their political confederates for the purpose of chalking out the political lines upon which their party, as represented in Congress, is expected to walk with the lock-step of a train band obeying the military order of a drill-sergeant.

That is a fine saying of Thucydides—we have cited it once before, but it can never be cited too often among a people which desires to remain worthy of parliamentary institutions and civil freedom—that "free discussion is the mold of all wise legislative measures." It is only by such a free discussion that the average of a sound public opinion can be reached, but it is precisely in order to suppress such free discussion that the party caucus, in its latest extension, has been invented and enforced among us with the moral right of the old Spanish Inquisition.

Events now passing before our eyes, in the attitude assumed by the Democratic majority in Congress upon the questions which threaten a deadlock between the Legislative and Executive Departments, are quite sufficient to illustrate the tyranny of the caucus system considered as the cast-iron mold of public measures, for it is well known that this attitude of the Democratic majority has not been taken in response to the better judgment of the wiser heads in the Democratic Party. But in so saying we are far from intimating that the Democratic Party is any more responsible for the abuse of this political institute than its Republican rival, remembering, as we do, that a caucus of Republican Senators once assumed, by its "moral pression," to coerce President Lincoln into the dismissal of Secretary Seward from his Cabinet, and recalling, as we do, the many extreme positions which the same party in Congress has taken as the result of caucus domination. It is against the whole caucus system, as an alien and offensive interpolation upon our political methods, that we utter a protest and publish a warning.

WEIGHTS AND MEASURES.

IT has long been matter of surprise to many that so practical a people as the Anglo-Saxon race generally have proved themselves to be should have so tenaciously adhered to the old-fashioned and, in many respects, inconvenient system of weights and measures. In spite of a progress which has been permeating and incisive in almost every direction, and notwithstanding the example which had been set by such nations as France, Germany, Belgium and Italy, our standards of weights and measures have remained what they were hundreds of years ago. Great Britain, indeed, still clings to the old money arrangement of pounds, shillings and pence. In this particular we have made a decided advance as compared with our trans-Atlantic cousins, but in regard to weights and measures we have proved quite as laggard as they.

It is not to be assumed, however, that the inconveniences of the old system have not been felt, or that there was no desire to introduce improvements. The fact is that both here and in Great Britain the desire for change has been often and loudly expressed. In Great Britain, as the result of a local agitation on the subject, Parliament last year passed an Act which, having received the sanction of the Queen, became law on the first of January, 1879. This Act does not abolish the old system, but it legalizes certain radical changes which must ultimately introduce an entirely new state of things. In the sale of all articles of produce, such as grain, flour, meal and such like, it substitutes one uniform standard, which is weight instead of measure; and it makes the imperial pound or pound avoirdupois the unit of all transactions by weight. It was left to the Board of Trade to decide what multiples of the pound should be adopted for the larger transactions. It was finally determined by that Board that the larger transactions should be indicated by the hundred pounds and by multiples thereof. On the recommendation of the Board of Trade, and in harmony with the provisions of the said Act of Parliament, Her Majesty in Council was pleased to approve of the "Cental or New Hundredweight" as a new denomination of standard, and to direct that the same be a standard of the Board of Trade, "in like manner as if it was contained in the second schedule of the Weights and Measures Act, 1878." The order in Council bears date 4th February, 1879.

Under the new system, the cental or new hundredweight being 100 pounds, not 112 pounds as formerly, the multiples of 100 pounds will be used in place of the multiples of the old 112 pounds, and the old divisions of 56, 28, 14 and 7 pounds will be supplanted by 50, 20, 10 and 5 pounds. It is to be borne in mind that the legalizing of the new standards does not abolish the old. Municipalities and other local centres are left free to adhere to the old or to adopt the new. The one thing which has been done is that the new standards have been legalized. Henceforward, therefore, whenever they are introduced, they will have the sanction of authority and the force of law. The larger number of the Boards of Trade throughout the United Kingdom are in favor of the change; and such are the superior advantages afforded by the new system that it is not doubted that, in a few years at most, the old system will have fallen into disuse.

Of the progress of the new movement in Great Britain the merchants and traders of New York have been properly observant, and in this triumph of the new principle they have naturally rejoiced. It was felt that the successful introduction of the new system on the other side would remove all prejudices against the change here. Nor was there any doubt among those who were friendly to the change that the new plan would succeed, for its superiority to the old had been abundantly demonstrated in Liverpool, where it had been in operation for a period of twenty years, and also in San Francisco, where its merits had long been tested. It is not wonderful, therefore, that the New York Produce Exchange should immediately have yielded to what we might call the necessity of the situation, and have put itself in communication with the different organizations of a similar kind throughout the country, advocating and recommending such immediate changes as shall bring about conformity with the new English system. Henceforward it is desirable that all international transactions be conducted in conformity with the new standard; and such being the case, it is of the utmost consequence that all the Exchange and Produce Boards throughout the country should be of one mind and act unitedly in the matter. We are gratified to be able to announce that the responses, with scarcely an exception, have been in the last degree favorable. It was contemplated at one time to lay the matter before Congress, but such a step is now considered unnecessary in view of the unanimity which prevails among the different Boards. It is confidently expected at the Corn Exchange that the new system, in international and wholesale transactions at least, will be in full operation by the beginning of June. Its introduction into the retail store will follow in good time and without much delay. It is admitted on all hands that it will greatly simplify large transactions, and that its introduction into the retail trade will be quite as much a gain to the consumer as it will undoubtedly be a convenience to the dealer.

THE NEW EXODUS.

THE newspapers chronicle a remarkable exodus of negro plantation-hands from Mississippi and other Southern States to Kansas. During the past two weeks, over 1,500 blacks have arrived at St. Louis, *en route* for their new home, many of them wholly destitute of means, but all eager to escape from their old surroundings. A St. Louis paper, speaking of the extent of the emigration movement, says that "at one landing in Louisiana, the other day, there were 900 people waiting for the boat to bring them to St. Louis. All along the banks of the river the negroes sit with their household traps around them. In the daytime they wave their hats to attract the attention of upward-bound boats, and at night they light fires and discharge fire-arms. The white people of Mississippi and Louisiana are naturally alarmed at the stampede. They are afraid that the muscle which has hitherto worked their plantations will desert them. In some counties and parishes negroes cannot be employed at double the usual rates." Ex-Governor Pinchback, in a recent letter, says that hundreds of negroes are leaving Madison Parish, in Louisiana; "every road leading to the river is filled with wagons loaded with plunder, and families who seem to think that anywhere is better than here. The entire congregations of two of the leading Baptist churches of this parish have already gone, and the estimate of the number that has left since the movement began is placed by the white planters as high as 1,500."

There must be some other reason for this condition of affairs than the mere nomadic instinct in the negro. The black is usually strong in his local attachments; even under the stimulus of the social and political changes produced by the war, the migratory tendency was but slightly developed. When we find them now, long after that stimulus has ceased to operate, moving away by thousands, and facing all the risks and uncertainties of a new life in new homes and an unfriendly climate, we must conclude that some motive of unusual force and urgency is at work, and that motive is quite probably to be found in the circumstance that, as they allege, they are subjected in Mississippi and Louisiana to indignities and injustice which are no longer endurable. It is no doubt true that while in Virginia, Georgia and other Southern States, the race antagonism has largely disappeared, there still exists in Mississippi a spirit of intolerance and an arrogant maintenance of the "color line" which practically excludes the blacks from the enjoyment of the privileges and opportunities to which the laws entitle them. If, as the result of this intolerant policy, the industries of that State and its general prosperity should now be crippled and arrested by an exodus of necessary labor, the retribution would not, perhaps, be regarded by the country at large as untimely or undeserved.

As to the wisdom of the migratory movement, and its probable results to the blacks themselves, there can scarcely be but one opinion. Neither Kansas nor any other Northwestern State will prove to be the Canaan, flowing with milk and honey, for which they look. Without resources of any kind, no attempts at colonization which they may make in any considerable numbers can succeed. The more intelligent and capable may be able to make their way, and be finally absorbed into the communities where they locate, but the great majority will not find their condition in the least degree improved, while very many will perish miserably. The real solution of this whole problem of the future of the Southern blacks, among whom the feeling of restlessness and discontent is every day broadening and deepening, lies not, as we think, in any such exodus as that now in progress, but in the gradual and healthful absorption of the moving mass into the population, and their employment in the purely physical industries of the country at large. They will migrate—that is inevitable, at least so long as they shall be denied fair play at the South; but their migration will be healthful and prosperous only as it follows natural lines and recognizes the laws of demand in labor and trade. The country is wide enough for all who choose to work, or honestly desire to better their condition, and in the vast agricultural regions of the North and Northwest, if nowhere else, the entire colored population of the South may in time find employment and comfort, and become ultimately important factors in the development and prosperity of communities and States. But the process must be gradual and natural, and not forced or artificial, to achieve these or any other satisfactory results.

LEGISLATION BY "RIDERS."

THE Democrats of the two Houses in Congress decided in caucus, March 26th, to attach to the Appropriation Bills all the political legislation which that party is anxious to secure. In accordance with this decision, the Army Bill, as introduced subsequently in the House, contains the prohibition of the use of the army at the polls, and the Legislative Appropriation Bill will contain a repeal of the statutory provisions relative to the test oath for jurors, and of those sections of the supervisor law which provide for the appointment of a chief supervisor and deputy marshals and give to supervisors and deputy marshals their police power. If these propositions should become law, while it would still be lawful to appoint two supervisors for every polling precinct in city and country, these officials would be entirely powerless to prevent fraud perpetrated in their presence. They might be refused admission to the polling-places, driven away from the polls, and denied all opportunity to perform any of the duties for which they were appointed, and still no statute of the United States would be violated. In short, what it is proposed to retain of the Federal Election laws would constitute no bar whatever, not even the flimsiest, against fraud and violence, and probably neither party would ever care to avail itself of the provisions which are left intact.

The objections to the policy of attaching political legislation to appropriation Bills have been repeatedly stated in these

Digitized by Google

columns. They are so obvious and forcible that we can only stand amazed at the partisan audacity which proposes to set them at defiance. The Democratic leaders announce that should the proposed measures be vetoed, they will adjourn Congress until December, leaving the Government without the means necessary for current expenses. The Republicans, in pursuance of a caucus decision, will vigorously oppose all attempts to fasten general legislation on the Army Bill, but it will no doubt pass both Houses as introduced. It appropriates, in round numbers, $27,750,000, and limits the number of enlisted men to 25,000.

IN THE OLD WORLD.

THE Russian proposal for a mixed occupation of Eastern Roumelia has been accepted by the Powers. The proposal is based upon the idea that the new constitution which is now being elaborated cannot be matured by the time fixed for the Russian evacuation of the province, and that there will be, in the absence of a local militia, no security for the maintenance of internal order as contemplated by the Congress. It is understood that the mixed occupation will be carried into effect by English, French, Italian, Austrian and Russian troops—though it is possible that France may decline to furnish a contingent.

Special dispatches, under date of March 26th, from Tashkend, in Turkistan, state that General Kauffmann, the Russian representative, has announced the suspension, for the time, of any plans that may have been entertained by Russia in respect to Afghanistan. "General Kauffmann is convinced that the Afghans are quite powerless to effect anything for themselves unaided, and that the ultimate success of the English is only a question of time and money." *Per contra*, the Viceroy of India telegraphs that Yakoob Khan has forwarded large bodies of troops to two towns on the road to Jellalabad, and the inference is drawn that the Ameer proposes to try conclusions with his foes in the field rather than wait for the siege of Cabul. This belief is, however, probably premature, as the British Government declares that it is not aware that negotiations with Yakoob Khan have failed or that orders have been issued for an immediate march on the Afghan capital. The passes are blocked with snow, and such an advance would be impossible at this moment.

The British House of Lords, by a vote of 156 to 61, rejected, March 25th, the motion of censure in regard to the Zulu war. A similar motion has been introduced in the House of Commons. A fresh financial flurry has been caused at London by the announcement on the part of the Oriental Bank Corporation of its heavy losses.

Emperor William of Germany was more seriously injured by his recent fall than was at first supposed. The ceremonies on his birthday were therefore brief. In his replies to the congratulations of foreign ambassadors, on that occasion, he declared his intention to pursue a pacific policy. At a banquet in St. Petersburg in honor of the day it was asserted that the relations between the Emperors of Germany and Russia are of the friendliest kind. The Czar proposes to be present in Berlin at Emperor William's golden wedding in June.

Russian Nihilism is persevering in its mad assassination policy, provoked thereto, indeed, by the Czar's extremely severe policy of repression. A general of gendarmerie has been fired at in his carriage, at St. Petersburg, and the assassination of a Government spy has led to a hundred arrests in Moscow. The worst feature about these Nihilist disorders is the prominent part played in them by ladies of high rank, wives and daughters of princes, generals and imperial councilors.

A revolutionary outburst at Milan, in Italy, has been promptly suppressed, and has caused the disbanding of a republican society there. The German Reichstag has adopted unanimously a motion in favor of an autonomous Government for Alsace-Lorraine. Prince Bismarck expresses his confidence in the success of the project, the details of which will be matured as speedily as possible.

The French Chambers are deliberating about the question of returning to Paris. The Republicans are not unanimous on this point, and Bonapartist votes must partly decide it. Paul de Cassagnac, who out-Bonapartes the Bonaparte family itself, favors the return to Paris on the ground that it would be an act of suicide on the part of the Republic. Another rising question, which is likely to provoke bitter strife, is that of the removability of the magistrates. A Bill has been introduced in the Chamber of Deputies requiring all magistrates to be reinvested by the Republic.

Queen Victoria left England on the 25th ult. for her Continental tour. Although Her Majesty travels *incognita*, under the title of Countess of Kent, the attentions due to her exalted rank cannot be wholly avoided. Her reception at Paris of Grévy, MacMahon and Waddington, President, ex-President and Premier of the French Republic, was far more than a mere ceremony. It was a recognition before Europe of a fact already patent to the world—the existence of a French Republic that cannot be ignored by any European sovereign or nation. In England, where, up to the day of this reception, there were more Bonapartists than in France, it will have a converting effect on Her Majesty's subjects similar to that formerly produced by Queen Victoria's reception of Napoleon III. at Windsor Castle and her own visit to him at Paris. English Philistines had previously looked upon Napoleon the Little as what he called himself when he was about to be married—a *parvenu*, an upstart. Thereafter, in their eyes, he was an Emperor, because his title had been, as it were, indorsed by their Queen.

The death of Madame Musard, a leader in certain circles of fashion at Paris during the latter part of the Second Empire, has recalled the memory of her diamonds and equipages in the Bois de Boulogne, her luxurious toilets in the Avenue de Jena, her romantic freaks at the Grand Opera, and her royal style of living at Villequier, her country-seat. Her petroleum well in America yielded her a yearly revenue of a million francs. The report of the insanity of Mario, the great tenor, is contradicted.

THE Supply Bill, passed by the State Assembly, at Albany, appropriates some $800,000 less than last year's Bill. Part of this decrease is due to cutting off any appropriations for the new Capitol, and part to a denial of many requests for appropriations. Thus the insane asylums of the State were refused some $300,000 that they desired. Other openings for expenditures were sternly closed. The charitable institutions were not treated in a niggardly fashion, however, ample provision being made for the enlargement and repair of several of them.

THE appointment of President Andrew D. White, of Cornell University, as Minister Plenipotentiary to Germany, will prove eminently satisfactory to the country. Mr. White is a man of broad attainments, is vastly more familiar with public affairs than his immediate predecessor at Berlin, and possesses withal tastes and sympathies which will command for him a hearty welcome and an undoubtedly successful career at the Court to which he is accredited. He is already known favorably to many of the prominent personages in Germany, having spent three years there in attendance at the University of Berlin.

AT the beginning of the present year, the amount of taxes remaining unpaid in this city, covering the period from 1871, was $7,682,571. The total amount returned to the Bureau of Arrears during the seven years closing with 1877 was $23,667,928, so that the amount remaining unpaid is equal to one-third of the aggregate of arrears. This condition of affairs is no doubt largely due to the business depression and financial derangement of the last few years, but it is also true, we suspect, that many neglect to pay their taxes who could easily do so if they chose, and in these cases the authorities should show no indulgence.

SENATOR PENDLETON has revived his proposition to provide seats in Congress for Cabinet officers. A Bill introduced by him in the Senate last week provides for the attendance of the heads of departments two days of the week in each House, and requires them to answer any questions or give information called for by resolution, under proper rules and regulations. At the session of the Thirty-eighth Congress, a report and Bill on this subject was presented, but was crowded aside by more urgent matters. Under proper restrictions and rules of proceeding, the system proposed would no doubt tend to greatly facilitate legislation.

THE pedestrian business is overdone. The sorry spectacle of a dozen or so females walking at Gilmore's Garden during the past week, exposed to the insults and jeers of rude spectators, has given it a set-back from which it cannot easily recover. Pedestrianism, under proper restrictions and in conformity with sound physical laws, is in every way commendable, but when it degenerates into a mere gambling or immoral show, without any reference whatever to the illustration of the qualities of manly endurance and the influence of training upon the bodily health and strength, the sooner it is abandoned the better for the public morals.

A LARGE shipment of American exhibits for the International Exhibition at Sydney, Australia, will be made from this port during the present month. Among the exhibits will be stoves, carriages, agricultural implements, organs, rubber goods, oils, ironware, pumps, clocks, school furniture and car wheels. One acre of space has been reserved for Americans in the Exposition building, and more than half of this has been applied for. This utilization of a rare opportunity to exhibit American products and manufactures can scarcely fail to result advantageously in the extension of our Australian trade, which ever since the Centennial Exposition has been steadily growing.

IT is estimated that it will cost $4,000,000 to complete the new Capitol at Albany, and with a view of procuring means for that purpose a Bill providing for the taxation of all corporations has been introduced in the State Senate. The Bill provides that the stockholders of every corporation chartered under any general or special laws of this State shall hereafter be assessed and taxed on the market value of their shares of stock therein, the sum total and the value thereof being determined by the Comptroller, at the same rate per cent. as other property of the State is taxed for State purposes, and the sum thereof, adding thereto the necessary expenses for collection, shall be payable annually on the 1st of October, and such companies shall not be taxed elsewhere for State purposes.

THE Directors of the New York Elevated Railroad have done wisely in deciding to do away with all necessity for crossings, by operating their branch lines as independent roads. It is to be presumed that, having come to this decision, the New York Elevated Company will insist that the proposed crossing of the two elevated roads in Chatham Square shall not be made on the level, but either above or below. Mr. Cyrus W. Field, we observe, has declared emphatically that the laws in force in England, prohibiting the crossing of the tracks of one road by another, should be in force here, and, being a man of resolute purpose, it can scarcely be otherwise than that he will insist upon his convictions being respected, notwithstanding the probable opposition of the President of the Metropolitan Road, who seems to think that switches and crossings are among the chief benefactions of modern scientific progress.

WHILE American merchants supply the hostile Indians with the weapons which they employ to slay our soldiers, British merchants are charged with furnishing the Zulus with the guns used by them in the present war. The London *Week*, commenting on the fact, says: "We are true free-traders when a nation or people are at war with us, all striving for the honor of being the first to supply the enemy with arms. If Yakoob Khan happened to want any breechloaders, and our merchants could get them to him without risk to themselves, he would have no reason to complain of a deficient supply. Lord Cadogan promises that all possible measures will be taken to 'remedy the evil so justly complained of.' Unfortunately, the Zulu King has already an ample stock of arms and ammunition, and his followers seem to know how to make use of them. There are some few respects in which we could desire that our enterprise in trade were slightly less than it is."

A GREAT sensation has been produced in Ohio by the report of a Legislative Committee appointed to inquire into the management of the Longview Insane Asylum. The examination was induced by charges of mismanagement and of cruelty to the unfortunate patients, and the testimony more than sustains the truth of all the charges. Some fifty witnesses were examined, and it was found that the patients had been subjected to severe punishments, such as ducking in cold water, that the sick had been forced to work in rooms where the temperature was 110 degrees, and, upon their refusal to do so, had been stripped of their clothing and scourged with wet towels as whips—a punishment described as very painful, especially to females, to whom it was chiefly applied; that the male patients had been subjected to gross brutality, offenders having in some cases been knocked down, gagged, and kept in that condition until the face became purple, etc. The report further adds that kicking, and other acts of cruelty were found to have been carried on. A dissecting-room was also fitted up in the asylum, where the unfortunate victims furnished material for the practice of amateur surgeons. The sanitary condition of the asylum was found to be most horrible. Some of the rooms were infested with loathsome vermin, the bedding and patients being covered with them. Evidence of drunkenness on the part of the superintendent also came to light. It is understood that the Legislature will proceed at once to reorganize the institution in which these shameful practices have been carried on; but it should do something more than this. The officials who have been guilty of the brutalities disclosed to public view should be made to suffer, in some way, the extremest penalty due their crime against humanity and the spirit of the age.

NEWS OF THE WEEK.

Domestic.

GENERAL GRANT and party will visit Siam, upon invitation of the king.

THE evidence in the Oliver-Cameron trial, at Washington, closed March 28th.

A DEFALCATION of $100,000 has been discovered in San Francisco in connection with certain street bonds.

CORNELIUS A. LOGAN, of Illinois, has been nominated Minister Resident to the Central American States.

THE Massachusetts Senate has passed, by a vote of 24 to 11, a Bill granting women the right to vote for school committees.

AN urgent effort will be made in Congress for further legislation to prevent the introduction of yellow fever into the country.

BY the will of the late Asa Otis, of New London, Conn., the American Foreign Mission Board receives the handsome sum of $267,629.

AT a sale of 100,000 tons of coal in this city, March 25th, the prices realized were the lowest ever known. Stove coal brought only $2.50 a ton.

AMONG recent deaths is that of James Stuart, senior partner of the old and well known firm of J. & J. Stuart & Co., bankers, of this city, aged 77 years.

ALFRED W. CRAVEN, well known in this city as the chief-engineer for several years of the Croton Aqueduct Department, died in London, March 27th.

THE members of the Executive Committee upon the World's Fair proposed to be held in New York are in favor of opening the fair in Central Park in May, 1883.

JUDGE ISAAC EDWARDS, Dean of the Albany Law School, committed suicide, March 26th. The act was caused by mental aberration produced by overwork. He was 60 years old.

THE findings of the advisory Military Commission in the Fitz John Porter case have been transmitted to the President, and are said to be in the nature of a complete exoneration.

THE Minnesota Legislature has passed a Usury Law, which establishes seven per cent. as the legal rate of interest, except in cases of special contract, when the rate may be as high as ten per cent.

LITTLE WOLF'S band of Cheyennes, who escaped from Fort Robinson, and have for over two months been a terror to settlers on the Plains, have at last been compelled to surrender by the pursuing body of troops, who captured their arms and 250 ponies.

J. D. MCINTIRE, of Pekin, Ill., known as the King of the Whisky Ring, pleaded guilty in the United States Court at Springfield, Ill., March 26th, to all the indictments against him. He was fined $1,000 and his distillery forfeited to the Government.

THE Court of Appeals has decided that the City of New York must pay her share towards the construction of the Brooklyn Bridge until that structure is completed. The amount to be paid at once is $1,000,000, and work on the bridge will be at once resumed.

GENERAL SHERIDAN, who has recently visited in the Indian country, regards the fears of a general Indian uprising in the Summer as almost wholly without foundation. He characterized Sitting Bull as a petty chief without influence and greatly overrated as a warrior.

JUDGE JOHN M. ELLIOTT, of the Kentucky Court of Appeals, was assassinated, March 26th, in Frankfort, by Thomas Buford, a litigant against whom the Court had rendered a decision. The murdered official was one of the ablest and most popular men in the State.

MR. GEORGE C. GORHAM, late Secretary of the United States Senate, testified the other day before the Senate Investigation Committee that, during the Congressional campaign of 1878, about $100,000 was raised for Republican campaign purposes, of which $93,000 came from Federal officials and employés of all grades, the remainder being derived from friends of the party not holding office.

THE recent conflict between Mayor Cooper and County Clerk Gumbleton has led to the introduction in the State Legislature of a Bill to modify the power of the Mayor in regard to removals, and directing that all charges shall be referred to three judges of the highest courts, who will be at liberty to stay proceedings or to report to the Mayor that the complaint has been proved. Mr. Gumbleton has addressed a memorial to the Legislature asking an investigation of the Governor's action in removing him.

Foreign.

AMNESTY has been granted to 100 more French Communists.

PRINCE WALDEMAR, a son of the Crown Prince of Germany and a grandson of Queen Victoria, is dead.

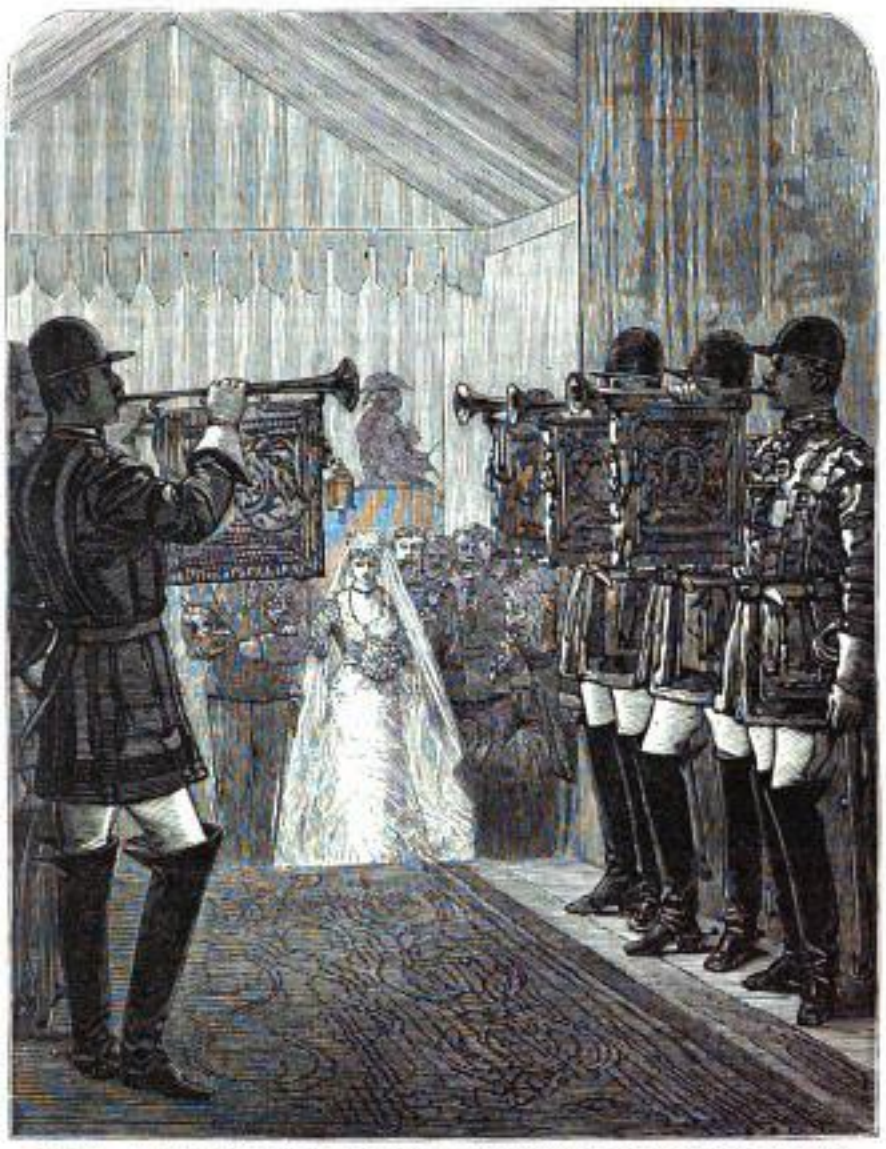
IT is said that 18,000 Roumelian refugees are about to enter Bulgaria and many thousands more are expected to follow.

AN earthquake in Northern Persia, March 23d and 24th, totally destroyed two villages. Nearly 1,100 persons are said to have perished.

THE Bishop of Grenoble, France, has been sharply censured by the Minister of the Interior for stirring up strife against the Government in a pastoral letter.

CARDINAL MANNING will soon leave Rome for England. No arrangement has been made for the establishment of official relations between England and the Holy See.

A BILL has been introduced in the British House of Commons authorizing the raising of $50,000,000 in England for the Indian service, for the ordinary expenses of the current year. It is feared that, although a loan has been announced in India, a sufficient amount cannot be raised.



HEAVY gales, with snow, hail and sleet, visited England and the coasts of Ireland last week, and the temperature was unusually low. Hunting was suspended on account of frosts and snow, and the severity of the weather added considerably to the prevailing distress in town and country.

PRINCESS CHRISTINA, daughter of the Duke of Montpensier, is dangerously ill of malignant fever at Seville. Señor Ulloa, a former Spanish Minister of Foreign Affairs, and a distinguished member of the Sagasta Party, died in Madrid, March 26th. Count Joseph Valery, a member of the French Senate, died lately at Florence.

A CONSTANTINOPLE dispatch says the Turkish Treasury will not receive any large amount of taxes until May. The money in hand is barely sufficient for ten days, and no one can say how the Government can be carried on. Merchants refuse to accept the Government paper money. The Sultan has sent a portion of his plate and jewelry to be melted for the use of the Treasury.

THE MARRIAGE OF THE DUKE OF CONNAUGHT.

THE BRIDE'S TROUSSEAU.

THE wedding *trousseau* of her Royal Highness Princess Louise Margaret of Prussia for her marriage to the Duke of Connaught, on March 13th, was furnished to her parents, Prince and Princess Frederick Charles, by a Berlin establishment. The bridal dress is made of thick white satin, the waist trimmed with lace 4 inches wide, the skirt also trimmed with lace 12 inches deep, and bunches of myrtle. The train is 13 feet long, with a rich lace flounce 3¼ feet wide, upon which is laid a branch of myrtle. The evening dress is of sea-green satin, with dark-green velvet stripes and damask satin. The promenade dress is described as "mode-colored," with dark-mode silk stripes, and bow of the same color; the buttons mother-of-pearl. The lace which adorns the dresses was made to order from designs selected by the bride by a firm which has introduced lacemaking of a superior quality into Germany. The articles supplied upon this occasion consisted of a lace flounce, demitoilo monchoir, fan-cover, and a bridal vail, richly decorative, of real point-de-gaze lace, ornamented with flowers, crown, and the royal arms of Prussia, in relief, all worked in real white lace. The order was given at the beginning of July last, and the work was done by the hands of three hundred peasant girls in the mountains of Silesia.

The dresses of the bridesmaids, eight young English ladies of rank, were all supplied by a London house. These dresses were composed of rich white satin, "duchesse," and silk, with draperies of mousseline-de-soie, elegantly embroidered with wild-roses, buds and foliage; flowers of special design, combining the emblems of England, Prussia, Scotland and Ireland, were charmingly arranged with the same. The heading consisted of wild-roses, England's emblem; from these depended the cornflower of Prussia, the white heather and stag-moss of Scotland, and the shamrock of Ireland. The dresses fully merited the high praise unanimously bestowed on them, being most elegant in arrangement, artistic in design, and suitable in the minutest details to the occasion of this royal wedding. The hair was taken rather high off the forehead, and arranged in loops and small curls at the back, some wearing fringes, some crêpes, a little tulle ruche of lace round the throat, and very long gloves. They each had a bracelet on the right arm, presented by the bridegroom.

THE BRIDAL DRESS OF PRINCESS LOUISE MARGARET OF PRUSSIA, DUCHESS OF CONNAUGHT.

THE "HOME OF INDUSTRY" FOR THE RECLAMATION OF CONVICTS.

NO. 304 WATER STREET is a small two storied house, modest, neat and unpretentious. Its walls are whitewashed to a glare; its floors scrubbed till they resemble the deck of a man-of-war. A board hangs by the door, with these words imprinted thereon: "MICHAEL DUNN'S HOUSE OF INDUSTRY, No. 304 WATER STREET." Who is Michael Dunn? I will tell you. He is an ex-convict. Out of a life of fifty-three years he has spent thirty-five in prison. He has had short terms and long terms, but stands the grim and ghastly fact that the flower of his days has been wasted in incarceration. Why did he return to jail over and over again? Because when his term expired he had no home, no occupation, no refuge. Friends turned their backs upon him, work was denied him. Michael Dunn, many years ago, discovered crime to be a mistake. He has now quitted its tortuous paths for ever and aye. Since his emancipation from Sing Sing fifteen months ago he has struggled manfully to keep on the straight path. He has succeeded—the felon's cell recalls him no more. Michael Dunn, of his terrible experience, knows what it is to face a stern and icy world whose right hand is raised in menace. He felt the necessity that existed for a home—a shelter—for those who, like himself, had served a term in Prison.

On the 13th of January, in this year, he opened the institution in Water Street, his capital, cash contributions from earnest workers in the vineyard, $61.75. None may know the pinching, the starving, the heart-burning, the soul-sickening it cost this man, with the taint of prison upon him, to scrape this money together. The Home has lived; upwards of seventy convicts have passed through it, some to sea, some to agricultural labor; some to various handicrafts—all, save in one or two instances, to honest labor; all to fight the good fight faithfully, boldly and well. There is not a prisoner now expiating his crime in the jails of this vast empire who does not know of No. 304 Water Street, New York, and many, let us earnestly trust, look to it as a haven of refuge and as a safe and assured temporary resting-place on the high road to honesty.

I visited the Home one day last week. I was received by a bright-eyed, intelligent man, an ex-convict, who cheerfully volunteered to show me over the institution. In the front room or hall, on the walls of which hang illuminated Scriptural texts, three men were seated. These were claimants for relief, seeking Michael Dunn. "There are eleven of us here," my conductor said, "and there are ever so many trying to get in, but we have no room, and we have no funds. We rise at half-past five and make up our beds. Then we have prayers, each of us reading a verse in turn. Our breakfast is bread and coffee, and sometimes when the funds are low there is more coffee than bread. All hands then clean up house. Then we go to work, some of us to tailoring in the shape of making sailors' pants and shirts. We do a lot of crochet-work at ladies' shawls and tidies. A sewing-machine has been donated; a woman runs it, making the garments, and we sew buttonholes or such rough work. We dine at twelve o'clock on soup and bread. There is always a pot of soup and coffee ready for any person who comes with a ticket."

"What ticket?" I asked.

"Mr. Dunn has tickets which he sells at ten cents each to any charitable person that will buy them. The charitable person, when asked for alms, need only give one of these tickets, and if the party is really in want he will come here."

The ticket is yellow; on it are inscribed the words, "GOOD FOR ONE MEAL OR BED AT MICHAEL DUNN'S."

I ascended a steep stairway and found myself in Michael Dunn's room. This apartment contained a chest of drawers, two or three deal tables, a clock, a large Bible and a few periodicals. On the largest table lay the books of the Home. At the request of my conductor I looked through them. They are kept by one of the inmates in a manner that would reflect credit upon a banking establishment. I found in the donation-book donations from 25 cents up to $20—the latter anonymously. I found Miss Linda Gilbert's name down for $11. The furniture has been purchased on the instalment system, and up to the present Michael Dunn has paid his way. The household expenses for each week average according to the cash in hand. The founder will not go into debt. If he has money he will spend it in relieving destitute ex-convicts; if he has no money the inmates of the Home are put upon half, or even quarter, rations. I found that in one week Dunn

expended $20.40, while in another the expenditures only reached the modest figure of $2.55—the average output being about nine dollars per week. A daybook is also kept, together with a book for entering worsted, thread, and articles to be used in the manufacture of shawls and tidies. The daybook is a sort of diary, devoted exclusively to the *personnel* of applicants for admission, observations upon their conduct, etc., etc. Some of the entries read quaintly enough. I suppress all names. "He is a fraud; I found him out in five minutes." "A good boy—goes to sea as a cabin-boy." "Will not work outside of prison." "Willing to do anything to earn an honest living." "This man has turned out a drinking bummer." "Working steady." One entry tells its own tale. "While he was serving his sentence out, he accidentally came across the life of Jerry McAuley, a reformed river-thief, and it so impressed itself on his mind that he asked me to tell him where McAuley lived, so that he might have some conversation with him. I hope," adds Dunn, "the good seed has taken root in his heart. Very despondent lately." The kitchen is a neat, cheery little apartment. It is here that the inmates take their meals. The rent of the Home is $30 a month, and it contains eight rooms.

"We need books and papers badly," observed my conductor. "There are times when a book or a paper saves one from thinking of what might have been. I was in Sing Sing when FRANK LESLIE'S ILLUSTRATED NEWSPAPER gave us the prison life of Sing Sing. It was splendidly done, and there was the greatest anxiety amongst us all to get it to read. We were real crazy for that paper."

I visited in turn every apartment in the Home. I saw men cheerily working at shawl-frames and tidies, at tailoring, at shoemaking. I tasted the soup in the neat little kitchen; it would not have reminded a London alderman of green turtle. I conversed with the inmates. Their tone was thorough. There was nothing of that hunted-down, mute terror about them which one meets inside of the prison wall. Hope and courage seemed to fill every man's heart. Is not this institution worthy of support, worthy the attention of those who would put the erring on the right path? This is what Michael Dunn says: "I should hate to give up my 'Home' more than I can tell, but there is only one thing to do, and that is to turn the boys out and shut up the place unless I can get help from somewhere. I will starve myself before I become a thief again; but these men here, and those who are coming from prison daily, what are they to do but to go right at it again. If I can be helped so as to keep them here, with what they can do themselves, until I can find them work, that is all I ask; I want no pay." This is what Michael Dunn says, the man who has seen the error of his ways, the man who for fifteen months has been simply keeping body and soul together in a supreme effort to aid and succor those whose desperate need he knows so well. This is what Michael Dunn says. Shall his appeal remain unresponded to?

THE ROMANCE OF CAMPTOWN STEEPLECHASE.

THUS far Bub Fortescue's running for the Goodwood Lily, as Colonel Goodwood's only daughter was significantly called, had been rather shaky, and in a fit of desperation he had put himself up to ride at the Spring races, swearing to win something, the Goodwood Lily, or the Goodwood Cup, or break some bones in the attempt.

Bub, it is true, could scarcely be counted in with the racing brotherhood, as his stables held nothing really to the purpose, but in the course of this distracted wooing of his it came about that there were days when something to conquer was a sort of desperate necessity, and to that end he had picked up a little animal that had for its recommendation only a red coal of temper in its eye, and a satin coat of silver-gray hair, which developed a fund of unsuspected profanity in its groom, but was no unhandsome thing to look at in the crisp sunlight of a fresh morning.

There had been a good deal of chaff blown across the club table when it was known that Bub had entered his unknown hack, Fleur-de-lis, for the steeplechase, and that he proposed to ride her himself. He had to stand a good deal of sarcasm respecting the pedigree that had never been recorded, and the record that had never been scored; but somehow Bub had got his head down, and no amount of ridicule served to turn him from his purpose; therefore, the card for the last day's meeting was out, and coming in modestly at the tail-end of the closing event was the cabalistic announcement:

"Mr. Fortescue's g. m. Fleur-de-lis, violet and white, owner."

Naturally there was a way of accounting for Bub's absurdity, but as it was not a tradition of the club, we must, to get at it, go back a bit to an idle morning in the boudoir of the Goodwood Lily, where we may find the colonel and his daughter holding at bay the pack of admirers that in one way and another were manifesting their pretensions to the favor of the favorite, and at the same time giving encouragement to the open discussion of the important and significant matrimonial question. The subject, as it stood at the critical moment upon which Bub Fortescue's madness hinges, was the dilemma in which a man like the colonel, with a marriageable daughter like the Lily, must be placed to fit himself with a son-in-law in a case where there were no elections and the favorite sold with the field.

"I think she would have to go with the Goodwood Cup sweepstakes. Catch Weights and owners!" said the colonel.

"And you, Miss Lily? How should you regard this fashion of settling a perplexing business?" asks little Tommy Goitt, the crack light-weight of the club, with an ounce more of unconcern—being already, it was whispered, an engaged man, and so thought out of the running—than any of the half dozen other men in attendance could well have mustered.

"Only one thing in life ever brought me to covet man's estate," answers the Lily, "and that is to jockey a race. I adore a winner But, that the Goodwood Cup has never before been ridden for by owners, I think I should have begged to go with the cup in any event!"

"And now the suggestion comes too late!" says gallant little Tommy; "the stakes are made and the fellows may only sulk over the 'might have been's!"

But was it too late? Something in the Lily's drooping eyes, as he caught their glance through the white azalea-bush, behind which he stood in the bowed window, fired Bub Fortescue's heart with a mad hope to which he dared not give form or name, and from that moment it was settled that Fortescue should enter for the Spring meeting, although he should have ridden Don Quixote's wooden steed and drowned ignominiously in the first water-break.

Had there been time, Bub would have ruined himself and his credit for all time to come in scouring the earth for a winner, but not even one day's grace was given him; the books were closing, he must name his horse or make a forfeit. Wherefore Fleur-de-lis was nominated and took her place bashfully at the foot of the card to be pinholed by the betting men and secretly mourned over by her owner, although there was something encouraging in the way that the little beast took to her work, and in the fact that her trainer would have given her an Irish sire and an Arabian dam on the strength of it, but that she carried a forlorn hope which might not be built up with straws.

Some slight encouragement came to Bub, by the way, but only a Malvolio could have made so much of it as this lover of ours contrived to. Nevertheless, there was some little interest and somewhat of generalship compelled to the service of the Goodwood Lily in that she found out the secret bit of ragged ground where Fleur-de-lis was being coached for her work, and sent the good natured colonel to take observations.

The colonel was not a diplomat. He stated that he had broken in upon the privacy of the training because the Lily had taken it into her pretty head that steeple-chasing might be dangerous and the new horse not quite the thing; and having been in his day something of a cross-country rider, after giving Fleur-de-lis a critical inspection by parts, he pressed his own big-boned hunter, and, putting him at a small ravine, waved Bub to follow.

The jump was no great thing for the colonel's blooded English horse, but for Bub's raw Canadian it meant something respectable. However, the mare was a plucky little beggar, and, following the lead, sent it across in fine style, whereupon the colonel delivered judgment.

"Good. There is blood in the little gray's ancestry somewhere, and you know how to ride her!" Then trotted off to his breakfast in high good humor, leaving the aspiring jockey in a glow of exultation that lasted up to the very morning of the race, much to the glorification of Fleur-de-lis and the private disgust of her groom.

Not to have located one's story is an offense to the established laws of polite romancing; but having made this oversight in the beginning, and a race being a race the world over, it is as well, perhaps, to assume the neglect, and merely state that the scene of struggle for the Goodwood Cup was a sandy plain in the rear of Camptown, without any especial qualifications for the sport except its contiguity to the club-house of its projectors and supporters, and being entirely a gentleman's affair, it may therefore be exempt from the natural criticism which turfmen could have made to it.

The steeplechase was a new feature of the meeting, it having been pinned on to the usual flat-racing events by the ambition of a couple of the club men, who between them had become joint proprietors of an aged favorite, known to be sure of her fences if only her legs held out; and the transfer of the Goodwood Cup to this race, in addition to the club stakes, had made the entries comparatively numerous. All of which, as Fortescue listened to the comments on the six runners and found Fleur-de-lis selling lowest in the pool on the fateful morning, produced corresponding consequent depression in the mercury of his mental barometer. Nevertheless, the day was fresh, the sky cloudless, and the Goodwood Lily smiling down upon him from the front row in the grand stand, and he cannot help noticing that her gown is purple and her hat white—his own colors—which circumstance stiffens him mightily, and he leaves the quarter-stretch with the air of a man who has work to do, and means to do it.

At the last moment it was discovered that there were only three horses to run, the other two having for one reason and another been withdrawn.

The mysterious horse that was the first cause of the trouble and entered as Lady Golightly, proved a ragged, hipped beast, with bent knees and back sinews clad in elastic stocking, but showing undeniable blood and power for all that. She had sold second in the pool; but little Tommy, in his faded brown and top-boots, had to take considerable chaff as she was led out for her preliminary canter, walking a trifle lame and taking her paces in a fashion suggestive of age and hard work. This the champion light-weight and winner of numberless flat races took with a philosophy that brought out the betting-books of the knowing ones, and caused Fortescue to turn to the favorite with a premonitory shiver. He scarcely knew which to fear most, little Goitt's riding or the horse Resolve, a beautiful chestnut Arabian that came out of the paddock, taking the first fence in a burst with the grace of a deer, amid the enthusiastic shouts of the multitude. Fortescue saw something hopeful in the impetuous action which nearly unseated the rider in a frantic endeavor to get its head; but the crowd was evidently with the favorite, which seemed not unreasonable as the beautiful creature tossed its shapely neck, bounding as if ready to jump out of its glossy skin, and in telling contrast to the ancient mare and the little gray that the groom is still leading quietly up and down over the velvet turf of the saddling inclosure.

The steeplechase course had been extended beyond the usual one, diverging at the quarter-mile post and closing again at the distance post, making a run in of parallels upon which the fences could be set without interfering with the flat-racing to precede it. The flat course thus intervening was still no obstruction to the view from the grand stand, it being a narrow course at best and perfectly level. The running was from right to left, with nine jumps altogether. First two hedges, next a mud wall with a little grip on the far side, then another hedge, then a hedge ditched on either side, a ditch with a bank beyond, then two hurdles, and lastly the water-break—a stiff, low bank, with a topping brush and shallow trench, broad and nasty.

The first horse over this would probably win the race, as the winning-post was only a fifty-yard field away. Out in the crowd the betting ran freely, the odds laying heavy against little Tommy and Fleur-de-lis out of the trick; but Colonel Goodwood, standing beside the little gray, patting her silvery neck as Bub mounted, had insinuated that the Lily was in for no end of gloves should the horse and its rider come to grief, and adding with the characteristic instincts of a turfman:

"It's a beastly course, Bub, with all that level stretch of sand on every side inviting a horse to swerve from its fences that stand up bare and naked in the way!"

However, there was evidently something in this that Bub had counted on, for he laughed lightly, looking away to the favorite still working for its head in the inclosure, then to the fair face in the centre of the grand stand, and said:

"Tell Miss Lily that we are going for the stakes!" and rode away.

And now the three horses were drawn up at the starting-post. Resolve is a little unsteady, but the start is soon made, and they are off breast and breast followed by a little cloud of dust. In a few seconds it is clear to all that Resolve is, like all chestnut horses, hard to hold. He crushes through the first hedge without attempting to rise to it, and with his nose in the air gets through the second the same way. Lady Golightly follows the lead, but the little gray clears the *débris* in her stride, causing a small shower of hats to darken the air in the stable-yard quarter.

The mud wall is not to be taken in the same way, although the favorite charges at it blindly and rolls heavily over it, crushing his rider under him as he falls.

Fortunately it is only a broken limb for the gentleman jockey, but Resolve is clearly out of the race, and the cup is between little Tommy on his ancient racer and Bub Fortescue's pluckily ridden, raw-mettled gray. It would almost have seemed that Fleur-de-lis had an intelligence beyond her kind, so gallantly did she pick up the running. They are over the wall—the next fence is nothing; the double-ditched hedge is more formidable, but they get safely over; then Tommy pulls the old girl up to an easy canter for the ditch and bank, which she scrambles cleverly up. But Bub cannot afford to take it in the same way lest he shall give the Lady too clear a lead, and so Fleur-de-lis takes it also in her stride. Still Tommy has the lead by some lengths, and the prospect is bad for the gray, until fortune comes to the rescue.

There is only a quarter of a mile to go, and if Tommy keeps the old Lady to her jumps she is sure to win. Thus far her legs have shown no signs of weakening, but she has run in a flat-race the day before, and now at the distance-post she turns into that course and goes a length on the wrong side. It is but a momentary advantage, for the Lady is warming to her work and realizing old traditions, but Bub makes the most of it, and feels that if he can hold the lead to the water-break the race is his.

The pace now is tremendous; the last and biggest jump is just in front. Bub would have liked to pull up and lift it quietly, but the Lady was thundering up, barely four lengths behind, and there is nothing to do but cram on and put the little gray at it as hard as he can.

In gamy style Fleur-de-lis clears the fence, but fails to cover the ditch. Her fore-feet double under as she falls. Something sharp strikes Bub in the temple. He feels the plucky little beast gather and himself borne as on a whirlwind over the springy turf in a vague, far-off way. Then there is a tremendous shout that rends the air; he sees the foam-flecked nostrils of Lady Golightly pressing upon the little gray's quarters, then strong arms pull him from the saddle, and he knows no more until he opens his eyes to find a medical man with finger upon his pulse, and a group of anxious faces, in the midst of which shone that of the Goodwood Lily, bending over him.

"The race!" he gasps, the hot blood surging up from his heart and choking his utterance.

"The cup is yours, old man!" answers little Tommy, who stands by Miss Goodwood's side, sucking the handle of his riding-whip. "That little beggar of yours made the pluckiest run on record, and I'm proud to come in second—since it's only the cup!" this last in a lower tone, close to the Lily's shell tinted ear.

"Only the cup!" echoed Bub, who caught it, still weak from the blow on his head, and looking at the violet gown and white hat.

"It was a cropper, boy!" said the colonel, returning from an anxious inspection of Fleur-de-lis, whose groom was lavishing upon her silver coat all the remorseful affection for past unmerited slights that a groom's heart may hold. "It was a cropper, sure enough, but the little nag is all right as a trivet, except a little bit of hair wanting on the left knee, but that will come again with care, and the race was the prettiest thing I've seen on the turf!"

"Papa, Mr. Fortescue seems badly shaken up—we must insist on taking him home in the carriage!" said the Lily, looking tender and gently flushed as an Italian sky.

"Surely—surely!" answers the colonel. "I'll order it at once, and do you keep perfectly still, Fortescue, and let my daughter take care of you!" then bustled away.

"Let my daughter take care of you!" She take care of him! There was something in the thought that set Bub's heart to thumping inside his jacket in a suffocating way. He wondered that Tommy Goitt did not hear the noise of it as he stood between them, dancing first on one foot and then on the other, twiddling his riding-whip and talking of everything in the same breath. Did the Lily understand that, as he looked up into her beautiful face, he was thinking each bone in his body cheaply fractured to have purchased the blessing of her care? Well, perhaps! Anyway, Bub dreamed that she did, and was supremely happy as he found himself at her side bowling home over the hard, smooth road, and heard the colonel say that:

"Lily screamed like a seagull when the little gray fell. You could have heard her across the course."

At his own door he managed to whisper as he bowed over the Lily's hand:

"May I hope for more than the Goodwood cup?"

"Pray speak to papa," is the coy reply, and Bub goes off to his bed to lay all night in a fever of joy, dreaming in his uneasy sleep of a fair young face under a white hat, and a tantalizing purple veil that the wind blows ever between them as his lips seek the kiss for which he hungers.

It is two days before Bub is again on his pins, and the third dawns before he succeeds in laying his case before Colonel Goodwood.

The old man looks at him for a moment in silent dismay. He wipes his spectacle-glasses several times in a helpless way, and then it comes.

"Why, bless my soul, Fortescue, Lily is engaged to little Tommy Goitt. I thought you knew how it was!"

Well, Bub Fortescue is no longer a light-weight, and Fleur-de-lis has gone the way of all silver grays, blooded or common stock, but Robert Fortescue, banker, sometimes looks with a sigh at the Goodwood silver which adorns his sideboard, and wonders if the Lily would have faded so soon had she gone with the cup to the winner of that first Camptown Steeplechase.

THE NEW EL DORADO.

LEADVILLE, THE GREAT MINING CENTRE OF COLORADO.

TEN thousand two hundred feet above the level of the sea, or nearly two miles high in air, stands Leadville, the Mecca towards which all true believing miners are now engaged in making pious pilgrimage. This wondrous town—wondrous from the fact of its having sprung into existence no one can exactly tell how—is situated 140 miles from Denver, Colorado, and numbers 20,000 inhabitants, with 1,200 houses. Fifteen short months ago it mustered but seven log cabins, and three hundred miners. What a Brobdingnagian mushroom!

The excitement in Denver having risen to white heat, I resolved upon a visit to Leadville. The time to see this seventh wonder of the world at its best is from Saturday afternoon to Monday morning, when the miners swarm in the streets, having come in from the mountains to spend their eighteen or twenty dollars per man at faro, or in the saloons. The most popular route to Leadville is by way of Colorado Springs through Pueblo, by the Atchison and Topeka Railroad. The last forty miles of the road would shiver springs even if constructed of Toledo blades—the ruts are thick as leaves in Vallambrosa, "deep as draw-wells, and wide as church-doors." The road, too, save in certain trysting-places, is merely wide enough for one team, and we were delayed for several hours while little difficulties as to cornerage were being adjusted, and the vexed problem of the inside track solved to the satisfaction of scores of drivers of scores of prairie-schooners.

I have done a good deal of mountain travelling, both in this country and in Europe, and never had so much as a nerve wrung; but during my passage upwards to Leadville there were moments when my heart beat backwards as the vehicle inched over a yawning precipice of fathomless depth, or crushed against a grim, gray wall of solid rock ascending sheer to the sky-line. Again, too, the mules would become unmanageable, and, taking head, dash onwards, till, turning some acute angle of rock, the carriage would seemingly be whirled into space, while in front and in rear were other teams equally full of the "excelsior" as our own. In addition to this, our way was barred by enormous and cumbrous pieces of machinery being conveyed to El Dorado, the long strings of tugging mules completely blocking the indented road; and should a trace, or strap, or bolt yield, down would inevitably thunder the iron avalanche to our utter and total annihilation.

As we approached the town through the gulch, we could perceive, so clear and rarefied is the atmosphere, the mountain sides beyond to be burrowed by the mineral-seeking moles.

As nearly as can be ascertained, some fifty of the mines in the Leadville district are now producing mineral at the average rate per day in tons as follows:

Little Pittsburg Company	80
Borden, Tabor & Co.	60
Argentine Group	30
Iron Mine	20
Adelaide	20
Little Chief	20
Double Decker	6
Dyer	5
Climax	3
Other mines	75
Total	309

At a low calculation the ore is worth $100 per ton, making the average yield of the operating mines $31,900 per day, or $223,300 per week. At this rate the product for the year will be $11,543,500, or over $2,000,000 more than the product of the entire State of Colorado for any previous year. If the other portions of the State yield as they did previous to the discovery of the Leadville deposits, the yield for the State for the current year will be almost $20,000,000, placing Colorado second only to Nevada as a precious mineral producer.

There is not a foot of ground within four miles of Leadville, in the direction where ore has been

Digitized by Google

'ound, that is not now taken up. The region is one of extraordinary richness. There seems to be no limit either to the extent of the veins or to their inexhaustible value. New lodes are discovered nearly every day in the week, and fortunes are made as if by magic. Within five miles of Leadville over two hundred "prospect holes" are being sunk, every one of which has turned up a yield, and it is believed that, so soon as the snow disappears, rich deposits will be discovered all over the place.

About five years ago three miners struck upon an extraordinary "find," but from lack of means were unable to work the vein. They solicited the keeper of a grocery-store in Leadville to assist them, offering him one-third as his share. The grocer had no money, but, on condition of receiving one-third, gave them provisions to the amount of $17.50. A Californian recently offered $1,200,000 for this mine, and the offer was refused. The mine yields eighty tons of ore per day, at not less than $100 a ton. The fortunate grocer is now Lieutenant-Governor of the State, Mayor, and millionaire.

I arrived at Leadville about four o'clock on Sunday. The town was literally swarming with men, in the rough but picturesque costume of the mines, many wearing blood-red sashes round their waists. From the hotel window I counted eighteen saloons in one block. The crowd seemed both good-natured and jovial; almost everybody had plenty of money, and those who were without it knew that it lay within five miles of them, on deposit in its earthen bank.

The wages paid to miners is $4 per diem, and the arrivals are averaging 700 per week; rents are very high; a store-room, 25x50, on a main street, commands from $300 to $400 per month, while an office, 10x15, readily rents for $40 per month. The rudest, most uncomfortable log or slate cabin finds a ready occupant. Real estate, of course, is held at fabulous rates. A lot twenty-five by eighty feet on any of the main streets will sell for $1,000 to $1,500. A corner lot bought some time ago for $2,000; before the deed was drawn a Denver firm bought it from the purchaser at the price of $6,000, and it is now held at $10,000. The population is of the usual mixed character of mining towns. There are lawyers, doctors, clerks, bookkeepers, mechanics, laborers, men of every class and condition. Mechanics of all kinds are finding ready employment at round figures, ranging from three and a half to five dollars a day.

At Leadville night is turned into day. I could not sleep one wink for pistol-shots—the miners use their revolvers to express joy, sorrow, anger, surprise—singings and shoutings. It is but just to say that very few murders are committed; this I attribute to the paramount influence of the Mayor, who is hail fellow well met with all his loyal burgesses.

The mine belonging to Mr. Stevens is in admirable order, and so well walled by boards that a lady can pass through it without so much as soiling a skirt. Considerable difficulty is experienced in "placing claims." When a miner strikes a vein he is compelled to file his claim at the proper office. Any informality may lead to some unscrupulous persons "jumping the claim," or taking the vein unto himself in the absence of the original discoverer. Miners go prospecting for a month. They take pots, pans, etc., and sling them upon the back of a mule, balancing them by flitches of bacon and blankets. They are thorough practical geologists, are these men, and I will back them to "spot" ore against any of the most learned professors in our universities.

The water in Leadville is so bad that a supply has to be procured from some distance. The prevalence of diphtheria and pneumonia is ascribed to the impure condition of the water.

It amused me intensely to hear this sort of thing repeated from rosy morn to dewy eve.

"How is business?" a newcomer asks. "Business is fine," is the reply; "come and take a drink." This sort of business, with eighteen saloons to one block, requires a head of hard quartz to carry it on.

The ore found at Leadville is richer than that at the Black Hills. A miner will drive in his pick and a piece a yard square will roll to his feet, containing sometimes as high as ninety-five per cent. of ore. There is no difficulty experienced in separating the ore from the clay—the whole mass crumbles in the hand. There are several milling and melting establishments in full blast, and others are in course of erection. A miner told me the best kit for a man coming here to buy is a blue shirt, a pair of overalls and a blanket, naively adding, "We don't wear white shirts here, *for they shoot at them.*"

Leadville is very wicked; vice in its most civilized and most repugnant form is everywhere rampant. No woman is safe from insult if she walks about after dark. Leadville is a big bonanza to the tourist, while the surrounding country, to hunters and disciples of Izaak Walton, is, as it is to the toilers for wealth, a veritable El Dorado.

THE TRIAL OF REV. T. DE WITT TALMAGE.

THE trial of Rev. T. De Witt Talmage before the Brooklyn Presbytery, sitting as an ecclesiastical court, on charges of falsehood and deception, commenced in the Second Presbyterian Church of Brooklyn, on Monday, March 24th. Great interest has manifested in the proceedings. The seats from the middle aisle of the church were reserved for members of the Presbytery, the chancel being filled with the counsel on both sides, the defendant and one or two of his friends, and the newspaper reporters. The Moderator and the Stated Clerk sat in the pulpit, and not only was every seat in the church filled, but the aisles were crowded, and every available space was occupied. The table assigned to Rev. Arthur Crosby and Mr. McCullough, the prosecutors, was fixed at the Moderator's right, in the chancel. To the Moderator's left, still in the chancel, there were gathered around a small table Rev. Dr. Talmage, Major Corwin, Rev. Mr. Millard and Rev. Dr. Spear, counsel for Mr. Talmage. Mrs. Talmage and several lady friends, as usual, occupied the front pew on the left. A large number of the other seats were occupied by ladies.

Moderator Rev. James M. Ludlow opened the trial with a short prayer, saying that the Presbytery had "met as a court of Jesus Christ," and invoking a spirit of brotherly love on all its proceedings. After the roll-call, which showed a large attendance of members of the Presbytery, the Moderator said: "We are assembled to try Rev. T. De Witt Talmage on certain charges and specifications. Is it your will that we should proceed with the trial?" Counsel on both sides signified their readiness, and the clerk of the court then read the specifications of the charges of falsehood and deceit. When asked how the accused would plead, Dr. Spear read Talmage's answer, which stated that he was not guilty of the charges, and that he expected to show his innocence to the satisfaction of the Presbytery. He also moved to strike out certain of the specifications, but this motion, after a long debate, was voted down. During the debate, Mr. Talmage said: "I demand an investigation on all the specifications—wherever they may reach to. The great mass of the people have no interest in the Book of Discipline. They want to know facts. If I wake up in the night and find assassins in my room I have no interest in knowing how they got in, but I want to put my hand on the assassins. It is known all over the world that there are assassins against my character, and that daggers are lifted, and it is of no interest to know whether they came in the front door of the church or the back door. All I want to know is who are the assassins, that I may arrest them. Although I have regard for the Presbytery, I have also great regard for public opinion. No one can be indifferent to that great court. It wants facts, and it shall have them, either through the Presbytery or the Kings County Grand Jury."

On the second day of the trial, the opening address for the prosecution was made by the Rev. Arthur Crosby, who indicated the character of the testimony to be presented. Testimony in reference to Mr. Talmage's retirement from the editorship of the *Christian at Work* was given by two witnesses. The proceedings on that and subsequent days were marked by a good deal of confusion, and considerable violence of feeling was at times displayed by the persons engaged in the trial. "The case is still on."

Famine in Egypt.

RECENT correspondence from Arment, Upper Egypt, gives a heartrending account of the condition of the population of the Nile Valley. The scenes described resemble those in India during the recent famine. In some of the villages the people are past help, sitting naked like wild beasts, eating roots, and suffering with the endurance of despair. The madness worked on by famine stamps such a brand on the starving fellahs as cannot be easily described. In one town women and children fought over scraps of bread like wild animals. The case is believed to be still worse in the inland hamlets, where the villagers are said to be starving like dogs.

Longfellow's Birthday Chair.

PROFESSOR BENRY W. LONGFELLOW, whose seventy-second birthday occurred on February 27th, was the recipient of a testimonial of regard from the children of Cambridge, which was a gratifying surprise to the venerable poet. When Brattle Street, in Cambridge, was widened a few years ago, it became necessary to remove the old horse-chestnut-tree, in the shade of which stood the smithy, celebrated in the "Village Blacksmith." The wood of the tree was preserved by the city, and from a portion of this has been wrought an elaborately carved chair, which was sent to the residence of the poet, who was at a loss to divine the source from which it came, but on raising the cushion the following inscription, on a brass plate, furnished the desired information:

To
THE AUTHOR
of
THE VILLAGE BLACKSMITH
This chair, made from the wood of the spreading
chestnut-tree,
is presented as
An expression of grateful regard and veneration
by
The children of Cambridge,
who with their friends join in best wishes and
congratulations
on
This anniversary,
February 27th, 1879.

The design of the chair is very pleasing and seems to be in perfect keeping with the origin of the material and the subject which it commemorates. The heavier parts are all made large, which is partly owing to the nature of the wood, so that the chair has the appearance of solidity, and at the same time is not denied whatever contributes to an appearance of comfort and utility. The color is a dead black, an effect produced by ebonizing the wood. The upholstering of the arms and the cushion is in green leather. The castors are glass balls set in sockets. In the back of the chair is a circular piece of exquisite carving, consisting of horse-chestnut leaves and blossoms. Horse-chestnut leaves and burrs are presented in varied combinations at other points. Around the seat, in raised German text, are the following lines from the poem:

"And children coming home from school
Look in at the open door,
And catch the burning sparks that fly
Like chaff from a threshing floor."

Hungarians and Roumanians.

THE Hungarians, as all who have traveled on the Danube know, are dandies in their own fashion. They delight in clean shirts, richly embroidered in red and black, in cotton drawers or trowsers, edged with lace and crochet-work, such as our English ladies affect upon their clothes, and in magnificent Hessian boots, which are brushed to brightness at least once a week. The male Roumanian, on the other hand, is dirty and careless in his attire. A filthy sheepskin jacket, swarming with fleas, is his chief garment; short trowsers, of leather or the coarsest cloth, and the everlasting conical woolen cap, together with some minor articles, among which the pistol or knife, stuck in the waist-belt, must not be forgotten, completing his attire. But when we turn from the man to the women, we find that the comparison is reversed. Nothing can well be more wretched than the dress of the Hungarian women on the banks of the lower Danube. At Mohacs, for example, one saw them marching down to the river to get water, clad in a pair of their husband's enormous boots, a short petticoat, scarcely reaching to the knees, and a sheepskin jacket that also was evidently the property of their better half. Again, at the frontier station, just before entering Roumania, my sensibilities were somewhat shocked at seeing a girl of seventeen busily engaged in sweeping the veranda, clad in nothing but a linen undergarment of very moderate dimensions, and this in spite of the fact that at least a dozen soldiers were lounging about close to her. In Hungary, in short, while the man is well dressed, his wife or daughter is clad like a savage. In Roumania, on the other hand, the dress of the woman is decidedly better than that of the men, and offers a most favorable contrast to that worn by their Hungarian sisters. In fact, after crossing the frontier, I saw no dresses which were not at least decent and sufficient, according to the Western standard, which is more than can be said of my experiences in some parts of Hungary.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

The Royal Marriage at Windsor.

The procession from Windsor Castle to St. George's Chapel was divided into three parts. On the arrival of the guests at the west entrance of the chapel, they were received by the Lord Steward and Vice-Chamberlain and conducted to seats upon the dais. The marriage ceremony was performed by the Archbishop of Canterbury, assisted by the Bishops of London, Winchester and Oxford, and others, at about one o'clock. The bride was given away by her father. At the conclusion of the service the choir sang the "Hallelujah Chorus," and Mendelssohn's "Wedding March" pealed forth as the bride and bridegroom left the chapel, while in the long walk a salute of guns announced the termination of the ceremony. The royal family and guests left the chapel in the reverse order in which they entered. All the royal personages returned to the Queen's entrance to the Castle, where the Registry of Marriages was signed in the Green Drawing-Room, and duly attested by the Queen and other distinguished personages invited to attend for that purpose. In the quadrangle opposite the principal entrance to the Castle a guard of honor of the Second Battalion of the Coldstream Guards was mounted.

The Zulu War.

Our illustration of the scene of the battle of Isandula, with Lord Chelmsford's advancing column, gives an excellent view of the precipitous country, and of the manner in which the British commander-in-chief hurried forward his troops after hearing of the massacre. The engraving is well described in Lord Chelmsford's official dispatch. "On the arrival of Colonel Glyn and his force I at once formed them up into fighting order—guns in the centre, on the road, with three companies second battalion Twenty-fourth Regiment on each flank in front; Native Contingent battalions, one on each flank of the second battalion Twenty-fourth Regiment in line, Europeans and natives, armed with guns, forming a third rank in front; Mounted Infantry on the extreme right, Natal Mounted Volunteers on the extreme left, Mounted Police in reserve. We advanced in this order across the plain with great speed and in excellent order, but could not reach the neighborhood of our camp until after dark. The artillery came into action on the road and shelled the crest of the narrow neck over which our line of retreat lay, while the left wing, under Major Black, second battalion Twenty-fourth Regiment, moved forward to seize a small stony hill on the left of this neck, the occupation of which would secure our left flank. Major Black seized the position without opposition, and the right wing then advanced and occupied the neck in question, the right flank being protected by the precipitous sides of the Isandula Hill." Figure 1 is the scene of the conflict; 2, Mounted Infantry; 3, Native Contingent; 4 and 6, two companies of the Twenty-fourth Regiment; 5, four guns; 7, company of Twenty-fourth Regiment under Major Black. At the last moment in the battle of Isandula, the officers in command charged two young subalterns, Lieutenants Coghill and Melvill, to save the colors. Horses were given to them, and they cut their way through the ranks of the Zulus, bearing the sacred symbols. They were probably wounded in this noble feat of arms, to which an eye witness has borne testimony. They succeeded, however in making their way to Rorke's Drift, which they must have found surrounded by 4,000 Zulus. It is possible they were again attacked, and again cleared themselves of their foes. They ultimately reached the Buffalo River, and swimming their horses across it, gained British territory. It is presumed that the wounds of Coghill necessitated dismounting. The other, sending him with all the care of a comrade, must have witnessed his death. He himself too, spent with loss of blood, could not remount, and, with the colors wrapped round him, sank down to die, happy in the soldierly conviction that honor was saved. Much comment has been made upon the part the French Prince Imperial designs to play in the present campaign; and upon his departure for Africa from Southampton on the 27th of February, the ex-Empress walked on board the *Danube* leaning on her son's arm. She was dressed in partial mourning, and looked anxious and careworn. In her hand she carried a bunch of violets. As she stepped on the deck two young ladies each tendered her a bouquet, but as her hands were already full, the Prince, who was in private clothes, received them on her behalf, and raising his hat in recognition of the cheers which went up on all sides, expressed his thanks in the best of English.

The Military Orders of Spain in Solemn Chapter at Ciudad Real.

Spain, though all her feudal institutions have vanished and her grandees play little part in the Government, clings to her royal and military Orders, so full of reminiscences of her former years of battle with the Moor. Our illustration represents a curious scene enacted recently at the Church of Santa Maria del Prado at Ciudad Real, where King Alfonso, as perpetual Grand Master and Administrator of the Military Orders of Santiago, Calatrava, Alcantara and Montesa, surrounded by the Knights, took possession of the district where, by a special concordat with the Holy See, he is to exercise the special spiritual jurisdiction granted in early times to the knights in the territories which they wrested from the Moors. In this district the king is subject only to the Pope, appointing bishops, priors, parish priests and other ecclesiastical functionaries, who enter on their duties without any further approbation of the Holy See. A solemn Te Deum was chanted, and this is the moment when the curious grouping in the ancient church was caught by the pencil of the artist.

An Australian Vineyard.

The vineyard belonging to the Hon. J. G. Francis, M.L.A., at Sunbury, Victoria, was formed in 1866, and is nearly thirty seven acres in area. It is situated on slopes facing N.W., W., and S.W., having a frontage to that part of the Macedon River known as Jackson's Creek. The ground was originally rocky spurs of the Mount Macedon range, and the formation cost in some parts of the vineyard as much as $500 per acre. The kinds of vines originally planted were Hermitage, Chasselas, Mataro, Reisling, and other varieties in smaller quantities, and the experience gained proves that the four sorts named are those best adapted for the site. About ten men are employed on the average, and twice as many boys and girls in the vintage season. As the vineyard is now nearly in full bearing, the crop yields about 250 gallons of wine per acre. The clarets and hocks from this vineyard have been declared by an experienced wine-taster, the late F. C. Klemm, to have retained more fully than most other colonial wines the bouquet and flavor of the wines from the Rhine and Bordeaux districts. The cellars, erected close to the homestead, are of massive bluestone and thoroughly finished, being capable of storing 100,000 gallons of wine. Considering that the colony has been formed such a short time, vine culture has made great progress in it. By the published Agricultural Statistics to March 31st, 1878, it is shown that there were 4,418 acres of vines planted, and that the last vintage produced 458,952 gallons of wine, the total weight of grapes gathered being 87,726 cwt.

AT HOME AND ABROAD.

—THE City of Lexington, Ky., celebrates its centennial on Wednesday, April 23d.

—THE constitutional convention of Louisiana will meet in New Orleans April 21st.

—THE old custom of burying suicides at midnight and without religious ceremonies is still followed in England.

—THE expenses of the late Paris International Exposition were $11,020,000, and the receipts $6,020,000.

—THE fourth centenary of the creation of the University of Copenhagen is to be celebrated during the month of May.

—GERMANY is using her influence to arrange an understanding between the Powers for the settlement of the Greek question.

—AN anti-pistol-carrying revival is going on all over the South, the newspapers, judges of courts and preachers conducting the exercises.

—A COMPLETE list of delegates elected to the Louisiana Constitutional Convention shows 94 Democrats, 33 Republicans and 7 Fusionists and Nationals.

—IT is almost decided that the Paris Exhibition building and all its annexes will be entirely demolished, and the Champs de Mars relegated to its old occupation as a drilling ground.

—SCHOOL COMMISSIONER ORR, of Georgia, is canvassing the State and inducing grand juries to report in favor of a dog law and Moffet register law, the proceeds to go to the school fund.

—THE French Chamber of Deputies, by a vote of 330 to 131, has resolved that the Senate and Chamber meet in Congress for the revision of the Constitution, enabling the Legislature to sit at Paris instead of Versailles.

—THE Connecticut Senate has postponed indefinitely the Bell-punch Bill. Virginia still uses the punch, Louisiana has just abandoned it. Texas is about to try it, and Alabama, Florida and North Carolina have decided against it.

—IT is reported that negotiations are in progress between the courts of St. Petersburg and Madrid for the cession by purchase to Russia of the Ladrone Islands in the North Pacific. These would constitute a magnificent base for cruiser operations in the Chinese seas.

—A MINISTER in the Italian Chamber, speaking on the subject of capital punishment a few years ago, remarked that Italy was the country in which they killed most and hanged least, while England was the country where they killed least and hanged most.

—JAPAN threatens to include the Loo Choo Islands as a department of the Empire, instead of a tributary dependency. The Islands have appealed to China and foreign powers. The Loo Choo Islands are in the Pacific Ocean, about thirty miles southeast of Japan.

—ALL the space of the International Exhibition at Sydney, Australia, next August, will be free. There will be no charges or commissions of any sort. Exhibitors will pay freight. The exhibition promises to be successful. It is hoped that America will be well represented. The Executive Commissioner offers to reserve for her 30,000 feet on the floor of the main building, and also half as much more space for machinery.

—SENOR CASTELAR and 103 former Deputies of the Cortes have issued a manifesto to the Democratic Party of Spain. They announce as their programme a sincere return to the Constitution of 1869, which proclaimed religious and educational liberty, freedom of the press, and liberty of meeting and association. The manifesto also declares in favor of universal suffrage, inviolability of Spanish territory, and payment of the interest on the public debt, and recommends a policy avoiding alike reactionary excesses and demagogic Utopias.

—INTELLIGENCE has been received from India of an important geographical discovery. The course of the Sanpo, or great river of Tibet, has been surveyed, by one of the native explorers attached to the Indian Survey, for a distance of 200 miles eastward of Chetang, the furthest point to which it had hitherto been traced in that direction. It then turned southward into some hills which the explorer was unable to penetrate. This settles a vexata quæstio which has long exercised the minds of geographers as to the identity of the Sanpo and the Brahmaputra.

—THE royal plate at Windsor is reported to be worth £1,800,000. It includes a gold service ordered by George IV., which will dine 140 persons, and the same monarch added to the collection one of the finest wine-coolers in the world, a shield formed of snuff boxes worth £9,000, and thirty dozen plates worth £10,000. There was also a variety of pieces brought from abroad and from India; the latter include a peacock of precious stones of every kind, worth £30,000, and Tippoo's footstool, a tiger's head with crystal teeth, and a solid ingot of gold for his tongue. George IV. was a great benefactor to this collection, as whenever he was angry with the Ministers he ordered some plate, well knowing that they must find the money to pay for it.

—IT is asserted that a citizen of Connecticut has furnished the necessary case upon which to test the constitutionality of the reissue of greenbacks. The gentleman, probably a friend of Mr. Calstenden, owing $5,000 to a citizen of New York, tendered payment in greenbacks issued since January 1st, after being once redeemed. The creditor refused to accept the tender, and will bring suit in the United States Circuit Court in that State probably before the April term. It is said that General Butler will appear for the defendant and Mr. William Allen Butler for the plaintiff. Whatever the decision may be, an appeal will be taken to the United States Supreme Court, and thus a final decision be reached upon the important question of the legality of legal-tender issues in time of peace.

—THE new Supreme Court of Judicature for the German Empire comes into operation next Autumn, and an estimate for the salaries of the Judges and other expenses, for the six months from October 1st, 1879, to March 31st, 1880, has been laid before the Reichstag. The Court will consist of sixty-eight judicial members—viz., a President of the Imperial Court, seven Presidents of Divisions, and sixty "Councilors," or Puisne Judges. This staff is distributed among eight Divisions, or "Senates" as they will be styled, five for civil causes and three for criminal business. Each of the Civil Senates will consist of seven Judges and a President; two of the Criminal Senates will have each eight Judges and a President, while the third will have nine Judges and will be presided over by the President of the Supreme Court himself. The salary of this President is fixed at $6,250, besides a free residence and servants. The salaries of the Divisional Presidents will be $3,500 each, and of the "Councilors," or Puisne Judges, $2,500. There will also be an Imperial Attorney-General, with a salary of $3,750, and three Deputy Attorneys General at $2,500 each.

JAQUEMINOTS AND VIOLETS.

YOU always sent me jaqueminots
Red as the Gascon wine,
Color as fervent as your love,
And deep and true as mine.
I always sent you violets—
For so your fancy ran—
The flower of fame to woman came,
The violets to the man.

It was the quaint old sentiment
That flowers have language true,
The violets imaged a recluse,
The roses were like you.
As perfume from those velvet deeps,
Your loving words would flow,
A constant rift of royal gift,
You were the jaqueminot!

And though unequaled in its pride
Is this imperial rose,
Yet all can breathe its choicest breath,
Its beauty each one knows.
Though all can praise its glorious hue
And test its fragrance rare—
On loving heart its petals start
And glow beyond compare.

But in its quiet pastures hid,
The violet, pale blue,
Had but one claim, the incense breath
Which upward went to you.
They were our types, we interchanged,
Not caring what they proved,
And, mingling, told the story old,
How man and woman loved.

THE FALLEN LEAVES.

By WILKIE COLLINS.

CHAPTER XVII.—(CONTINUED).

ENTERING the hall, Mr. Farnaby discovered without difficulty the position of modest retirement of which he was in search.

The cheap seats were situated, as usual, on that part of the floor of the building which was furthest from the platform. A gallery at this end of the hall threw its shadow over the hindermost benches and the gangway by which they were approached. In the sheltering obscurity thus produced, Mr. Farnaby took his place, standing in the corner formed by the angle at which the two walls of the building met, with his dutiful wife at his side. Still following them, unnoticed in the crowd, the old woman stopped at the extremity of the hindermost bench, looked close at a smartly-dressed young man who occupied the last seat at the end, and who paid marked attention to a pretty girl sitting by him, and whispered in his ear, "Now, then, Jervy! can't you make room for Mother Sowler?"

The man started and looked round. "You here!" he exclaimed, with an oath.

Before he could say more, Phœbe whispered to him on the other side, "What a horrid old creature! How did you ever come to know her?" At the same moment Mrs. Sowler reiterated her request in more peremptory language. "Do you hear, Jervy—do you hear? Sit a little closer."

Jervy apparently had his reasons for treating the expression of Mrs. Sowler's wishes with deference, shabby as she was. Making abundant apologies, he asked his neighbors to favor him by sitting a little nearer to each other, and so contrived to leave a morsel of vacant space at the edge of the bench. Phœbe, making room under protest, began to whisper again. "What does she mean by calling you Jervy? She looks like a beggar. Tell her your name is Jervis." The reply she received did not encourage her to say more. "Hold your tongue; I have reason for being civil to her—you be civil, too."

He turned to Mrs. Sowler, with the readiest submission to circumstances. Under the surface of his showy looks and his vulgar facility of manner, there lay hidden a substance of callous villainy and impenetrable cunning. He had in him the materials out of which the clever murderers are made, who baffle the police. If he could have done it with impunity, he would have destroyed without remorse the squalid old creature who sat by him, and who knew enough of his past career in England to send him to penal servitude for life. As it was, he spoke to her with a spurious condescension and good humor. "Why, it must be ten years, Mrs. Sowler, since I last saw you. What have you been doing?"

The woman frowned at him as she answered: "Can't you look at me, and see? Starving!" She eyed his gaudy watch and chain greedily. "Money don't seem to be scarce with you. Have you made your fortune in America?"

He laid his hand on her arm, and pressed it warningly. "Hush!" he said, under his breath. "We'll talk about that after the lecture." His bright, shifty black eyes turned furtively towards Phœbe—and Mrs. Sowler noticed it. The girl's savings in service had paid for his jewelry and his fine clothes. She silently resented his rudeness in telling her to "hold her tongue," sitting sullen, with her impudent little nose in the air. Jervy tried to include her indirectly in his conversation with his shabby old friend. "This young lady," he said, "knows Mr. Goldenheart. She feels sure he'll break down; and we've come here to see the fun. I don't hold with Socialism myself—I am for what my favorite newspaper calls the altar and the throne. In short, my politics are Conservative." "Your politics are in your girl's pocket," muttered Mrs. Sowler; "how long will her money last?" Jervy turned a deaf ear to the interruption. "And what has brought you here?" he went on, in his most ingratiating way. "Did you see the advertisement in the papers?" Mrs. Sowler answered loud enough to be heard above the hum of talking in the sixpenny places. "I was having a drop of gin, and I saw the paper at the public-house. I'm one of the discontented poor. I hate rich people; and I'm ready to pay my sixpence to hear them abused." "Hear, hear!" said a man near, who looked like a shoemaker. "I hope he'll give it to the aristocracy!" added one of the shoemaker's neighbors, apparently a groom out of place. "I'm sick of the aristocracy," cried a woman with a fiery face and a crushed bonnet; "it's them as swallows up the money; what business have they with their palaces and their parks, when my husband's out of work, and my children hungry at home?" The acquiescent shoemaker listened with admiration. "Very well put," he said—"very well put."

These expressions of popular feeling reached the respectable ears of Mr. Farnaby. "Do you hear those wretches?" he said to his wife.

Mrs. Farnaby seized the welcome opportunity of irritating him. "Poor things!" she answered. "In their place, we should talk as they do."

"You had better go into the reserved seats," rejoined her husband, turning from her with a look of disgust. "There's plenty of room. Why do you stop here?"

"I could not think of leaving you, my dear! How do you like my American friend?"

"I am astonished at your taking the liberty of introducing him to me. You know perfectly well that I was here incognito. What do I care about a wandering American?"

Mrs. Farnaby persisted as maliciously as ever. "Ah, but you see, I like him. A wandering American is my ally."

"Your ally! What do you mean?"

"Good heavens, how dull you are! Don't you know that I object to my niece's marriage engagement? I was quite delighted when I heard of this lecture, because it's an obstacle in the way. It disgusts Regina, and it disgusts you—and my dear American is the man who first brought it about. Hush! here's Amelius. How well he looks! So graceful and so gentlemanlike," cried Mrs. Farnaby, signaling with her handkerchief to show Amelius their position in the hall. "I declare I'm ready to become a Socialist before he opens his lips!"

CHAPTER XVIII.

THE personal appearance of Amelius took the audience completely by surprise. A man who is young and handsome is not the order of man who is habitually associated in the popular mind with the idea of a lecture. After a moment of silence, there was a spontaneous burst of applause. It was renewed when Amelius, first placing on his table a little book, announced his intention of delivering the lecture extempore. The absence of the inevitable manuscript was in itself an act of mercy that cheered the public at starting.

The orator of the evening began:

"Ladies and gentlemen, thoughtful people accustomed to watch the signs of the times in this country, and among the other nations of Europe, are (so far as I know) agreed in the conclusion that serious changes are likely to take place in present forms of government, and in existing systems of society, before the century in which we live has reached its end. In plain words, the next revolution is not so unlikely, and not so far off, as it pleases the higher and wealthier classes among European populations to suppose. I am one of those who believe that the coming convulsion will take the form, this time, of a Social revolution, and that the man at the head of it will not be a military or a political man—but a great citizen sprung from the people, and devoted heart and soul to the people's cause. Within the limits assigned to me to-night, it is impossible that I should speak to you of government and society among other nations, even if I possessed the necessary knowledge and experience to venture on so vast a subject. All that I can now attempt to do is (first) to point out some of the causes which are paving the way for a coming change in the social and political condition of this country; and (secondly) to satisfy you that the only trustworthy remedy for existing abuses is to be found in the system which Christian Socialism extracts from this little book on my table—the book which you all know under the name of the New Testament. Before, however, I enter on my task, I feel it a duty to say one preliminary word on the subject of my claim to address you, such as it is. I am most unwilling to speak of myself—but my position here forces me to do so. I am a stranger to all of you; and I am a very young man. Let me tell you then, briefly, what my life has been, and where I have been brought up—and then decide for yourselves whether it is worth your while to favor me with your attention or not."

"A very good opening," remarked the shoemaker.

"A nice-looking fellow," said the fiery-faced woman. "I should like to kiss him."

"He's too civil by half," grumbled Mrs. Sowler; "I wish I had my sixpence back in my pocket."

"Give him time," whispered Jervy, "and he'll warm up. I say, Phœbe, he doesn't begin like a man who is going to break down. I don't expect there will much to laugh at to-night."

"What an admirable speaker!" said Mrs. Farnaby to her husband. "Fancy such a man as that being married to such an idiot as Regina!"

"There's always a chance for him," returned Mr. Farnaby, savagely, "as long as he's not married to such a woman as you!"

In the meantime, Amelius had claimed national kindred with his audience as an Englishman, and had rapidly sketched his life at Tadmor in its most noteworthy points. This done, he put the question whether they would hear him. His frankness and freshness had already won the public; they answered by a general chant of applause.

"Very well," Amelius proceeded; "now let us get on. Suppose we take a glance (we have no time to do more) at the present state of our religious system first. What is the public aspect of the thing called Christianity in the England of our day? A hundred different sects all at variance with each other. An established church, rent in every direction by incessant wrangling—disputes about black gowns or white; about having candlesticks on tables or off tables; about bowing to the east or bowing to the west; about which doctrine collects the most respectable support and possesses the largest sum of money, the doctrine in my church, or the doctrine in your church, or the doctrine in the church over the way. Look up, if you like, from this multitudinous and incessant squabbling, among the rank and file, to the high regions in which the right reverend representatives of state religion sit apart. Are they Christians? If they are, show me the bishop who dares assert his Christianity in the House of Lords, when the ministry of the day happens to see its advantage in engaging in a war! Where is that bishop, and how many supporters does he count among his own order? Do you blame me for using intemperate language—language which I cannot justify? Take a fair test, and try me by that. The result of the Christianity of the New Testament is to make men true, humane, gentle, modest, strictly scrupulous and strictly considerate in their dealings with their neighbors. Does the Christianity of the churches and the sects produce these results among us? Look at the staple of the country, at the occupation which employs the largest number of Englishmen of all degrees—look at our commerce. What is its social aspect, judged by the morality which is in this book in my hand? Let those organized systems of imposture, masquerading under the disguise of banks and companies, answer the question—there is no need for me to answer it. You know what respectable names are associated, year after year, with the shameless falsification of accounts, and the merciless ruin of thousands on thousands of victims. You know how our poor Indian customer finds his cotton-print dress a sham that falls to pieces; how the savage who deals honestly with us for his weapon finds his gun a delusion that bursts; how the half-starved needlewoman who buys her reel of thread finds printed on the label a false statement of the number of yards that she buys; you know that, in the markets of Europe, foreign goods are fast taking the place of English goods, because the foreigner is the most honest manufacturer of the two—and, lastly, you know, what is worse than all, that these cruel and wicked deceptions, and many more like them, are regarded, on the highest commercial authority, as "forms of competition" and justifiable proceedings in trade. Do you believe in the honorable accumulation of wealth by men who hold such opinions and perpetrate such impostures as these? I don't! Do you find any brighter and purer prospect when you look down from the man who deceives you and me on the great scale, to the man who deceives us on the small? I don't! Everything we eat, drink, and wear is a more or less adulterated commodity; and the very adulteration is sold to us by the tradesmen at such outrageous prices that we are obliged to protect ourselves on the Socialist principle, by setting up co-operative shops of our own. Wait! and hear me out, before you applaud. Don't mistake the plain purpose of what I am saying to you; and don't suppose that I am blind to the brighter side of the dark picture that I have drawn. Look within the limits of private life, and you will find true Christians, thank God, among clergymen and laymen alike; you will find men and women who deserve to be called, in the highest sense of the word, disciples of Christ. But my business is not with private life—my business is with the present public aspect of the religion, morals and politics of this country; and, again I say it, that aspect presents one wide field of corruption and abuse, and reveals a callous and shocking insensibility on the part of the nation at large to the spectacle of its own demoralization and disgrace."

There Amelius paused, and took his first drink of water.

Reserved seats at public performances seem, by some curious affinity, to be occupied by reserved persons. The select public, seated nearest to the orator, preserved discreet silence. But the hearty applause from the sixpenny places made ample amends. There was enough of the lecturer's own vehemence and impetuosity in this opening attack—sustained as it undeniably was by a sound foundation of truth—to appeal strongly to the majority of his audience. Mrs. Sowler began to think that her sixpence had been well laid out, after all; and Mrs. Farnaby pointed the direct application to her husband of all the hardest hits at commerce, by nodding her head at him as they were delivered.

Amelius went on.

"The next thing we have to discover is this: Will our present system of government supply us with peaceable means for the reform of the abuses which I have already noticed? not forgetting that other enormous abuse represented by our intolerable national expenditure, increasing with every year. Unless you insist on it, I do not propose to waste our precious time by saying anything about the House of Lords, for three good reasons. In the first place, that assembly is not elected by the people, and it has therefore no right of existence in a really free country. In the second place, out of its four hundred and eighty-five members, no less than one hundred and eighty-four directly profit by the expenditure of the public money; being in the annual receipt, under one pretense or another, of more than half a million sterling. In the third place, if the assembly of the Commons has in it the will, as well as the capacity, to lead the way in the needful reforms, the assembly of the Lords has no alternative but to follow or to raise the revolution which it only escaped by a hair's-breadth, some forty years since. What do you say? Shall we waste our time in speaking of the House of Lords?

Loud cries from the sixpenny benches answered No; the hostler and the fiery-faced woman being the most vociferous of all. Here and there, certain dissentient individuals raised a little hiss—led by Jervy, in the interests of "the altar and the throne."

Amelius resumed.

"Well, will the House of Commons help us to get purer Christianity, and cheaper government, by lawful and sufficient process of reform? Let me again remind you that this assembly has the power—if it has the will. Is it so constituted at present as to have the will? There is the question! The number of members is a little over six hundred and fifty. Out of this number, one fifth only represent (or pretend to represent), the trading interests of the country. As for the members charged with the interests of the working class, they are more easily counted still—they are two in number! Then, in heaven's name, you will ask what interest does the majority of the members in this assembly represent? There is but one answer—the military and aristocratic interest. In these days of the decay of representative institutions, the House of Commons has become a complete misnomer. The Commons are not represented; modern members belong to classes of the community which have really no interest in providing for popular needs and lightening popular burdens. In one word, there is no sort of hope for us in the House of Commons. And whose fault is this? I own it with shame and sorrow—it is emphatically the fault of the people. Yes, I say to you plainly, it is the disgrace and the peril of England that the people themselves have elected the representative assembly which ignores the people's wants! You voters, in town and country alike, have had every conceivable freedom and encouragement secured to you in the exercise of your sacred trust—and there is the modern House of Commons to prove that you are thoroughly unworthy of it!"

These bold words produced an outbreak of disapprobation from the audience, which, for the moment, completely overpowered the speaker's voice. They were prepared to listen with inexhaustible patience to the enumeration of their virtues and their wrongs—but they had not paid sixpence each to be informed of the vicious and contemptible part which they play in modern politics. They yelled and groaned and hissed—and felt that their handsome young lecturer had insulted them.

Amelius waited quietly until the disturbance had worn itself out.

"I am sorry I have made you angry with me," he said, smiling. "The blame for this little disturbance really rests with the public speakers who are afraid of you and who flatter you—especially if you belong to the working classes. You are not accustomed to have the truth told you to your faces. Why, my good friends, the people in this country, who are unworthy of the great trust which the wise and generous English constitution places in their hands, are so numerous that they can be divided into distinct classes! There is the highly-educated class which despairs, and holds aloof. There is the class beneath—without self-respect, and therefore without public spirit—which can be bribed indirectly, by the gift of a place, by the concession of a lease, even by an invitation to a party at a great house which includes the wives and the daughters. And there is the lower class still—mercenary, corrupt, shameless to the marrow of its bones—which sells itself and its liberties for money and drink. When I began this discourse, and adverted to great changes that are to come, I spoke of them as revolutionary changes. Am I an alarmist? Do I unjustly ignore the capacity for peaceable reformation which has preserved modern England from revolutions, thus far? God forbid that I should deny the truth, or that I should alarm you without need! But history tells me, if I look no further back than to the first French Revolution, that there are social and political corruptions which strike their roots in a nation so widely and so deeply, that no force short of the force of a revolutionary convulsion can tear them up and cast them away. And I do personally fear (and older and wiser men than I agree with me), that the corruptions at which I have only been able to hint in this brief address, are fast extending themselves—in England, as well as in Europe generally—beyond the reach of that lawful and bloodless reform which has served us so well in past years. Whether I am mistaken in this view (and I hope with all my heart it may be so), or whether events yet in the future will prove that I am right, the remedy in either case, the one sure foundation on which a permanent, complete, and worthy reformation can be built—whether it prevents a convulsion or whether it follows a convulsion—is only to be found within the covers of this book. Do not, I entreat you, suffer yourselves to be persuaded by those purblind philosophers who assert that the divine virtue of Christianity is a virtue which is wearing out with the lapse of time. It is the abuse and corruption of Christianity that is wearing out—as all falsities and all impostures must and do wear out. Never, since Christ and His apostles first showed men the way to be better and happier, have the nations stood in sorer need of a return to that teaching, in its pristine purity and simplicity, than now! Never more certainly than at this critical time was it the interest as well as the duty of mankind to turn a deaf ear to the turmoil of false teachers, and to trust in that all wise and all-merciful Voice which only ceased to exalt, console, and purify humanity when it expired in darkness under the torture of the cross! Are these the wild words of an enthusiast? Is this the dream of an earthly Paradise in which it is sheer folly to believe? I can tell you of one

Digitized by Google

existing community (one among others) which numbers some hundreds of persons, and which has found prosperity and happiness by reducing the whole art and mystery of government to the simple solution set forth in the New Testament—fear God, and love thy neighbor as thyself."

By these gradations Amelius arrived at the second of the two parts into which he had divided his address.

He now repeated, at greater length and with a more careful choice of language, the statement of the religious and social principles of the Community at Tadmor, which he had already addressed to his two fellow-travelers on the voyage to England. While he confined himself to plain narrative, describing a mode of life which was entirely new to his hearers, he held the attention of the audience. But when he began to argue the question of applying Christian Socialism to the Government of large populations as well as small—when he inquired logically whether what he had proved to be good for some hundreds of persons was not also good for some thousands, and, conceding that, for some hundreds of thousands, and so on until he had arrived, by dint of sheer argument, at the conclusion that what had succeeded at Tadmor must necessarily succeed on a fair trial in London—then the public interest began to flag. People remembered their coughs and colds, and talked in whispers, and looked about them with a vague feeling of relief in staring at each other. Mrs. Sowler, hitherto content with furtively glancing at Mr. Farnaby from time to time, now began to look at him more boldly, as he stood in his corner with his eyes fixed sternly on the platform at the other end of the hall. He too began to feel that the lecture was changing its tone. It was no longer the daring outbreak which he had come to hear, as his sufficient justification (if necessary) for forbidding Amelius to enter the house. "I have had enough of it," he said, suddenly turning to his wife; "let us go."

If Mrs. Farnaby could have been forewarned that she was standing in that assembly of strangers, not as one of themselves, but as a woman with a formidable danger hanging over her head—or if she had only happened to look towards Phœbe, and had felt a passing reluctance to submit herself to the possibly insolent notice of a discharged servant—she might have gone out with her husband, and might have so escaped the peril that had been lying in wait for her from the fatal moment when she first entered the hall. As it was, she refused to move. "You forget the public discussion," she said. "Wait and see what sort of fight Amelius makes of it when the lecture is over."

She spoke loud enough to be heard by some of the people seated nearest to her. Phœbe, critically examining the dresses of the few ladies in the reserved seats, twisted round on the bench, and noticed for the first time the presence of Mr. and Mrs. Farnaby in their dim corner. "Look!" she whispered to Jervy, "there's the wretch who turned me out of her house without a character, and her husband with her."

Jervy looked round, in his turn, a little doubtful of the accuracy of his sweetheart's information. "Surely they wouldn't come to the sixpenny places," he said. "Are you certain it's Mr. and Mrs. Farnaby?"

He spoke in cautiously lowered tones; but Mrs. Sowler had seen him look back at the lady and gentleman in the corner, and was listening attentively to catch the first words that fell from his lips.

"Which is Mr. Farnaby?" she asked.

"The man in the corner there, with the white-silk wrapper over his mouth, and his hat down to his eyebrows."

Mrs. Sowler looked round for a moment, to make sure that Jervy's man and her man were one and the same.

"Farnaby?" she muttered to herself, in the tone of a person who heard the name for the first time. She considered a little, and, leaning across Jervy, addressed herself to his companion. "My dear," she whispered, "did that gentleman ever go by the name of Morgan, and have his letters addressed to the George and Dragon, in Tooley Street?" Phœbe lifted her eyebrows with a look of contemptuous surprise, which was an answer in itself. "Fancy the great Mr. Farnaby going by an assumed name, and having his letters addressed to a public-house!" she said to Jervy. Mrs. Sowler asked no more questions. She relapsed into muttering to herself, under her breath. "His whiskers have turned gray, to be sure—but I know his eyes again; I'll take my oath to it, there's no mistaking *his* eyes!" She suddenly appealed to Jervy. "Is he rich?" she asked. "Rolling in riches!" was the answer. "Where does he live?" Jervy was cautious how he replied to that; he consulted Phœbe. "Shall I tell her?" Phœbe answered petulantly, "I'm turned out of the house; I don't care what you tell her!" Jervy again addressed the old woman, still keeping his information in reserve. "Why do you want to know where he lives?" "He owes me money," said Mrs. Sowler. Jervy looked hard at her, and emitted a long, low whistle, expressive of blank amazement. The persons near, annoyed by the incessant whispering, looked round irritably, and insisted on silence. Jervy ventured, nevertheless, on a last interruption. "You seem to be tired of this," he remarked to Phœbe; "let's go and get some oysters." She rose directly. Jervy tapped Mrs. Sowler on the shoulder as they passed her. "Come and have some supper," he said; "I'll stand treat."

The three were necessarily noticed by their neighbors as they passed out. Mrs. Farnaby discovered Phœbe—when it was too late. Mr. Farnaby happened to look first at the old woman. Sixteen years of squalid poverty effectually disguised her in that dim light. He only looked away again, and said to his wife impatiently, "Let us go, too!" Mrs. Farnaby was still obstinate. "You can go, if you like," she said; "I shall stay here."

(*To be continued.*)

CONDENSED MILK.

WHAT IT IS, AND HOW IT IS MADE.

TO one concerned in our peculiarly American industries, a visit to the factory of the Borden Condensed Milk Co., at Brewster's Station, on the line of the New York and Harlem Railroad, some fifty-two miles from this city, will prove of genuine interest, affording, as it will, a knowledge of the manufacture of this important article which can nowhere else be so easily obtained. A correspondent, who has given the subject close personal attention, furnishes the facts herewith given.

Borden's Condensed Milk was first introduced to the public in the year 1858, under the superintendence of Mr. Gail Borden, then the president of the company (now deceased), who was the inventor of the process of condensing milk, and to whom numerous patents have been issued extending as far back as August, 1856. In addition to the factory at Brewster's Station, there are also operated by the New York Condensed Milk Co. two other factories, all of which are under the general management of Mr. John Gail Borden, son of the inventor, who succeeded his father in the presidency of the company, and whose life has been spent in perfecting the manufacture by the various improvements in machinery and apparatus introduced by him.

At the Brewster's Station factory is manufactured condensed milk both for immediate use, as served by the company's wagons in New York City, Brooklyn, Williamsburgh, Jersey City and other places, and also in its preserved form, known all over the world as the "Gail Borden Eagle Brand Condensed Milk."

The condensed milk made by this company is simply pure cows' milk, from which 75 to 80 per cent. of water is evaporated in vacuo. The preserved milk known as the "Gail Borden Eagle Brand" is condensed milk combined with the best refined sugar, and its uniform excellence has brought it into general use for every purpose where ordinary milk is used, whether for the table, for cooking, for children's food, or for the traveler on sea or land.

The greatest care is exercised *before* receiving the fluid milk at the factory, and absolute conformity is required upon the part of the dairymen to the stipulations set out in their contracts with the company, regulating the feeding of the cows, straining and cooling the milk, conditions of the cans, etc., etc., and on its receipt at the factory it is subjected to the most critical examination, a test of the milk being made immediately upon its delivery by the farmer and a record preserved in regard to it.

It may be stated further, for the satisfaction of consumers of Borden's condensed milk, that the moment the fluid milk is received at the factory it is immediately drawn into the vacuum cylinder, from which it is drawn into the forty-quart cans, without being handled or exposed in any way, and forwarded to New York.

In order to insure perfect cleanliness to the dairyman's cans, the company takes upon itself the task of thoroughly cleansing them by the application of a jet of steam before they are allowed to leave the factory. To those not accustomed to the handling of milk, and unfamiliar with its peculiarities and perishable nature, such extreme precaution would seem useless; but to the care of details of this kind is attributed much of the success and popularity which Borden's condensed milk has attained.

Another point which especially arrested our attention was the extreme neatness observable *everywhere* in this establishment. It might readily be imagined that where milk is received and handled in such quantities, some untidiness might follow, instead of which so thorough a system of cleanliness is the *rule* here, that in the afternoon, when the process of condensation is finished, not a sign of milk is to be seen anywhere. Cleanliness without qualification was a requirement absolutely insisted upon by Mr. Gail Borden, and it is with this idea the present managers and employés are thoroughly imbued. In so brief an article as this it is impossible to enumerate the details of a manufacture so complex and intricate. We give, however, on page 92, illustrations of some few of the points of interest to be found in this factory, which will furnish a comparatively complete idea of the entire process.

Borden's condensed milk has maintained the confidence of the public for over twenty-one years. The reasons for this continued popularity are obvious. In the first place, it is owing to the fact that the promise made at the very inception that it is *pure milk, "nothing added and nothing but water removed"* (in the preserved the best refined sugar is employed), has never been deviated from in a single instance in all this period. The fastidious neatness and cleanliness observed in every department, its great economy, and its perfect purity, all combine to commend it to the use of every family, while as a healthful diet for infants and children, either as served for daily use or in the preserved form (Gail Borden Eagle Brand), it is pre-eminent.

The distributing depots are located at 227 and 229 East Thirty-fourth Street, New York City, and 98 to 106 Sterling Place, Brooklyn, from which the wagons deliver daily, except on Sunday, which is avoided, as the milk will remain good for two or three days with ordinary care. The main office and wholesale department for the preserved milk, Gail Borden Eagle Brand, is at Nos. 60, 62 and 64 Park Place.

An Enormous Lathe and Monster Crane.

AN enormous lathe is being constructed for Woolwich Arsenal in the Royal Gun Factories, for turning a 160-ton gun, an order for the manufacture of which has been expected consequent on the success of the 80-ton gun. The foundation beds of the new lathe are in three pieces, the head stock weighing 40 tons, and the poppy head about 12 tons. A 1,000-ton crane—the largest of its kind in the world—designated the "Revolving Traveler," is also being constructed in the Royal Arsenal, and will be available for manipulating and shipping the heaviest ordnance which may be manufactured for a century hence. Immense as are the resources of the Royal Arsenal, they are at the present time inadequate to grapple with the rapid strides made in modern heavy gunnery, and the War Department has determined not only to construct a crane which will meet the requirements of the proposed 160-ton gun, but also to leave a large margin of lifting power which may be available for any future contingencies. The foundation plate of the new monster crane is composed of forty segments of 7 tons each, and the total iron in the crane when completed will be 700 tons. Several portions or pieces already constructed weigh 20, 18, 15, and 12 tons respectively. The "Revolving Traveler" will not be finished for a couple of years.

SCIENTIFIC INTELLIGENCE.

Madame Sarah Bernhard, the celebrated actress, has published a volume on her captive balloon ascents.

The Death is announced at Berlin of the well-known chemist, Professor Sonnenschein. He had reached the age of sixty-two.

Mr. A. Craig-Christie, F. L. S., lecturer on botany, Edinburgh, is a candidate for the Chair of Botany in the University of Edinburgh.

Professor Virchow intends, on the close of the current semester, to accept an invitation of Dr. Schliemann to join him in some excavations at Troy.

It is Proposed to open in July, in the Palais de l'Industrie, Paris, an exhibition of scientific applications, "an important corollary of the Universal Exhibition of 1878."

The Emperor of Austria has bestowed upon Dr. Meyer, the director of the Royal Zoological Museum of Dresden, the well-known New Guinea traveler, the Order of the Iron Crown.

Mr. Milman, who for some years has acted as Assistant-Registrar, has been appointed to succeed Dr. Carpenter as Registrar of London University. It is stated that Mr. H. N. Moseley is a candidate for the Assistant-Registrarship.

Further Experiments have been made in lighting the British Museum reading-room with the electric light. The result showed that, by proper arrangement and at a comparatively moderate cost, there is good reason to believe that the end desired can be obtained.

Professor Virchow, in a recent address on the Oriental plague to the Berlin Medical Society, drew the attention of his hearers to a method of disinfecting advocated by Balard, who asserts that if infected articles are plunged into cold water during some hours, the contagious germs will invariably be destroyed.

The Services Rendered to Meteorology by the observatories of Puy-de-Dôme and Pic du Midi are so great that it is proposed to establish two others, one on the top of Mont Ventoux, in the south of France, and the other on the top of Ballon de Servance (altitude 1,189 metres) in the department of Vosges.

In his Last Report on the trade and commerce of New Caledonia, Mr. Consul Layard states that he has observed there a great variety of apparently valuable fibres, woods and oils, which have yet to be developed. He also notes the discovery of a large deposit of good guano on some islands in the prolongation of the reef at the northern end of the island.

The French Geographical Society has determined to appoint a committee with a view of promoting exploration in Africa, the main object being to dispatch three expeditions simultaneously from Algeria, the Senegal, and the Niger, which would all meet at Timbuctoo. It is hoped that all the other geographical societies will co-operate by appointing delegates to represent them on the committee.

In his Just-published Trade Report, the British Consul at Islay, Peru, mentions that some very rich lodes have been discovered at Caylloma, a district about thirty leagues to the north of where the railway passes at Pampa de Arriero, on the road from Arequipa to Puno. Several parties have surveyed them, and they are supposed to be equal in riches to the famous Caracoles mines in Chile, which created so much excitement a few years back.

Mr. W. E. Garforth has exhibited before the Manchester (England) Geological Society an arrangement for employing compressed air, at a pressure of 8,000 pounds and upwards to the square inch, instead of gunpowder, for blasting in mines. Experiments had been made at Wigan with considerable success, and the hope was expressed by many experienced coal-miners that the use of gunpowder in firing mines might be abandoned.

The New Serres Museum seems to be doing its utmost to afford valuable instruction to those interested in studying the history and the progress of ceramic art. During the last few months a methodical classification of all the examples exhibited has been accomplished, and each one is classed according to its historical and geographical position as well as with regard to its technical worth. For this purpose labels are attached to all the pieces, giving the date and place of manufacture and the marks on various pieces; so that a wide knowledge can often be gained of a subject merely from studying these labels, four thousand of which have lately been affixed.

Analysis of Drinking Water.—Professor Tidy, of London, has made careful comparative analysis of 1,600 waters in order to test the accuracy of the various methods employed by chemists. He finds the ammonia process to yield results of singular inconstancy; the combustion process has all the evils of evaporation to encounter without any corresponding advantage; the permanganate-of-potash process avoids the errors incidental to evaporation and gives constant and extremely delicate results; it draws a short line between the putrescent or probably pernicious and the non-putrescent or probably harmless organic matter; by the permanganate process a bad water can never be passed as good. It is true that the combustion process gives results closely concordant with those obtained by the use of permanganate, but it requires greater skill and more time, and can scarcely be recommended for any other purpose than to serve as a control in an exhaustive investigation.

Fish Preserved by Salicylic Acid.—Professor Eckart, of Munich, has invented a method of preserving fish in a very simple and economical manner, which can be applied to any quantity large or small, and will keep them in their original freshness for several days. The proceeding consists in impregnating the fish, by means of hydraulic pressure, with a weak solution of salicylic acid. They are then packed in boxes and barrels and covered with gelatine, which prevents them from drying. When they have reached their destination, a short soaking in water is said to restore them to their original freshness. Preserved in that way, fish will retain their flavor for ten days or more, and can be sent on goods-trains to a considerable distance. The inventor has already managed to prepare 3,000 pounds of fish per day, and as he could send the merchandise by slow trains, a material saving of expense was effected. Salicylic acid is now made in large quantities from the Meadow Queen, and also from willow bark, and is much cheaper than formerly.

Professor Langley's Contributions to Science.—Professor S. P. Langley, Director of the Allegheny Observatory, has been busily engaged in completing a direct experimental comparison between the heat of the sun and the highest temperature attainable in the arts. The results indicate that the sun's intrinsic heat is almost beyond comparison greater than that of any blast furnace, and far larger than was reckoned by the French physicists. Professor Langley has also nearly finished a memoir embodying great numbers of measurements and drawings at the extreme lower end of the solar spectrum, particularly the A group. These are parts of a research supported by the Rumford fund, requiring also a new study of the distribution of energy in the spectrum, as shown by the thermopile. Rutherfurd's gratings are used to supply the spectra. A great improvement has been made by Professor Langley in the accessories of the diffraction spectroscope, by means of which the use of collimators of extraordinary length will become practicable.

PERSONAL GOSSIP.

SENATOR WADE HAMPTON is much better, and it is thought that a second amputation will not be necessary.

U. S. COMMISSIONER DAVID C. WINSLOW died at the age of sixty years at his residence in Brooklyn, March 27th.

FISK UNIVERSITY, at Nashville, has received a contribution of $50,000 from Mrs Daniel P. Stone, of Malden, Mass.

PROFESSOR A. K. YANCEY, Jr., of Virginia, has been chosen President of the Alabama Female College, at Tuscaloosa.

M. HERR, President of the Swiss Confederation in 1876, and a jurist of considerable note, died recently in his fifty-fourth year.

MILANESE ladies are to present a gold medal to Queen Margaret in compliment to her presence of mind on Passannante's attack on King Humbert.

THE CZAR and the Empress of Russia will leave St. Petersburg for the Crimea about the middle of April. The Empress's state of health, it is announced, renders the change desirable.

THERE are fourteen ex-Governors in the new Senate — Messrs. Anthony, Booth, Burnside, Coke, Garland, Groome, Grover, Hamlin, Hampton, Harris, Houston, Kellogg, Kirkwood and Vance.

MME. MARIE ROZE-MAPLESON is in great demand in society now that the time for her return to Europe draws near, and she finds it very difficult to arrange to accept all the invitations she receives.

THE Marquis Tseng, the new Chinese Ambassador to England and France, speaks and writes English fluently, and has some knowledge of French. He has been accompanied to London by his wife and three children.

THE will of Samuel Adams, late of Castine, Me., contains bequests amounting to $10,000, including $800 each to the Seamen's Friends Society, the American Bible Society and the American Missionary Association, all of New York City.

M. LEPÈRE, the new French Minister of the Interior, is the sixteenth man who has filled that post since the fall of the empire, without reckoning twice over the Ministers who, like M. de Marcère, have had more than one term of office.

THE will of Henry J. Williams, the late distinguished lawyer of Philadelphia, leaves eight acres with suitable buildings and $20,000 to found a home for destitute children. Other bequests, in some of $5,000 each, are left to various charitable societies.

THE sister of the wealthy Mrs. J. W. Mackey, who spends her Occidental money in Paris, is about to make a European marriage. The bridegroom is a rich Austrian, Count Tellenor. He is a naturalized Italian citizen, and has a palace in Rome, where the wedding is to be.

PROFESSORS KUNDEMANN and Makart, the architects Streit and Wagner, and the painter Scheleher will have charge of the arrangement of the grand medieval procession in Vienna on the occasion of the celebration of the silver wedding of the Emperor and Empress of Austria.

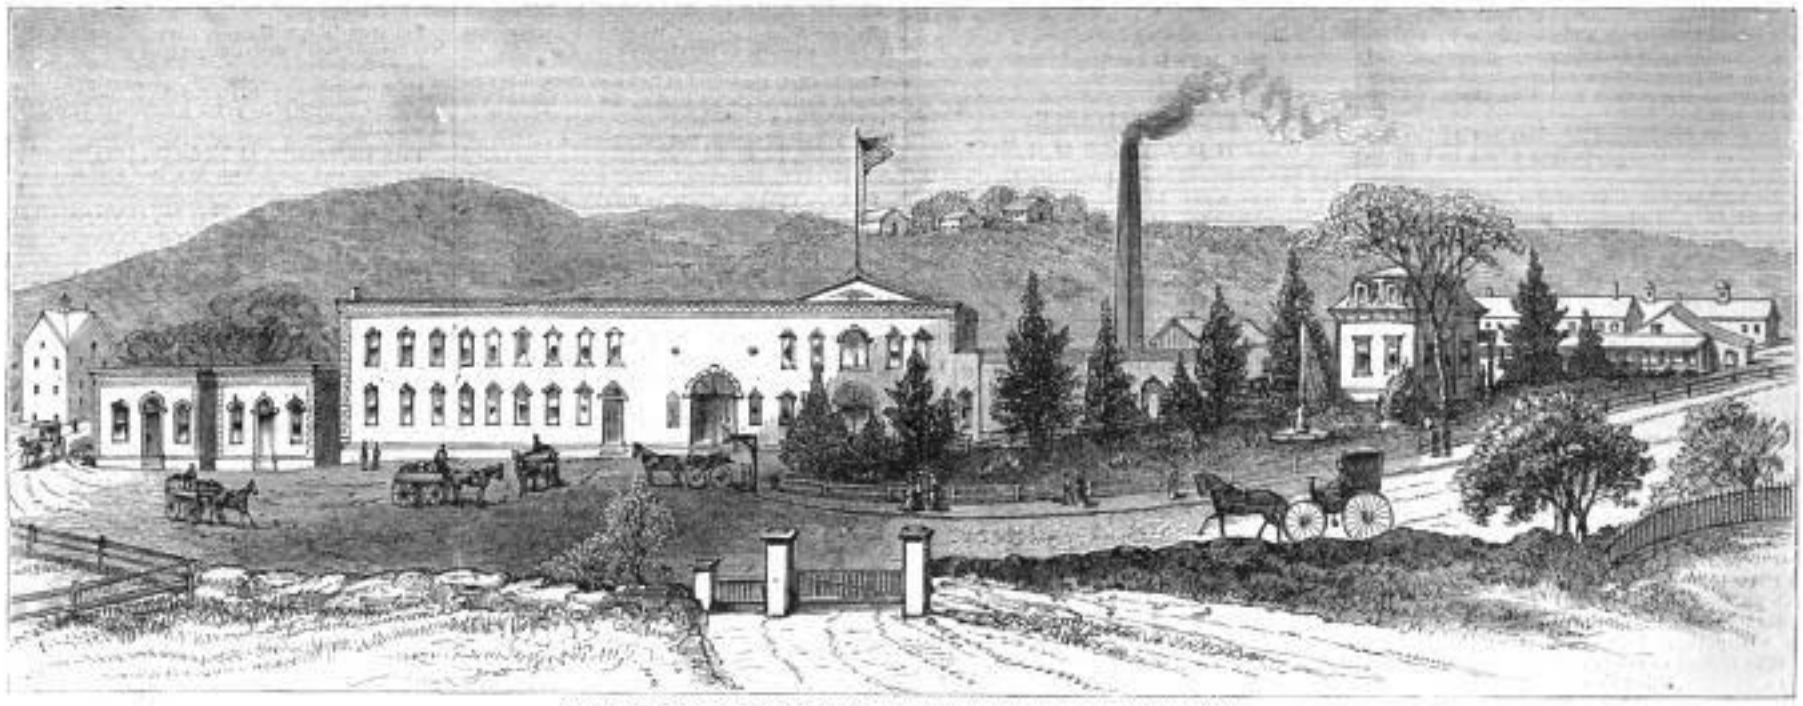
GENERAL GRANT had an exceedingly pleasant time in Bombay. Sir Richard Temple, the Governor, invited the general to occupy his house at Malabar Point; the British officials all came to the landing to meet the Americans, and state dinners and receptions have been given for the party.

REFERRING to the rumor that Prince Leopold, Victoria's youngest son, entertains the desire of taking holy orders, a correspondent notes the curious fact that hitherto no legitimate son of an English monarch has entered the ecclesiastical profession, or even been suspected of an inclination therefor.

MR. CARLYLE'S house in Chelsea will by-and-by become the scene of a honeymoon. Miss Mary Carlyle Aitken, the daughter of his sister, a young lady who has long been the old philosopher's caretaker, is to be married to her cousin, the son of his brother. The young couple will thereafter live with their uncle.

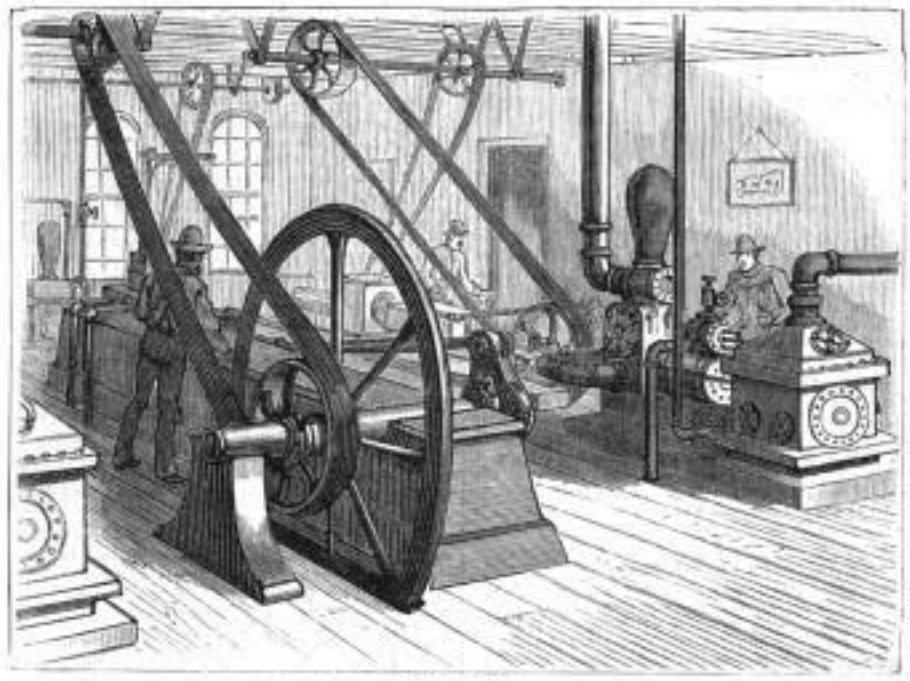
GOVERNOR FREMONT is extremely enthusiastic concerning his Territory of Arizona. He talks of its wonderful mineral wealth, its rich soil, its timber, its excellent grazing regions, and its delightful climate, with great pride. He thinks that Tucson is to become the great railway station for business between this country and Mexico.

THE present Duke of Newcastle will be a rich man, with something like £70,000 or £80,000 a year, when he comes of age, as the heavy charges on the Worksop property are nearly paid off. He is a cripple owing to an accident when a child, which the nurse unpardonably kept from the knowledge of his parents, and the injured leg had to be rebroken and set.



PROFESSOR THOROLD ROGERS, in addressing the English constituency of Southwark, thus discussed public affairs: "Our Government had blacked the boots of Russia, and picked the pocket of Turkey; it was true, only of a dirty pocket-handkerchief, namely, the Island of Cyprus, but even dirty handkerchiefs did not always come amiss to an Israelitish receiver."

COLONEL JOHN C. BURCH, the new Secretary of the United States Senate, is a native of Georgia, fifty-one years of age. He was graduated from Yale College in 1851, in the same class with B. Gratz Brown, of Missouri. In 1852 he established himself at Nashville, Tenn., and immediately took an active part in politics. He was a Union man until the State seceded, and then entered the Confederate service, and was adjutant-general at different times on the staff of several prominent Southern military leaders. After the war he returned to Nashville, and in 1869 took charge of the Nashville *American*.



HOWARD MALCOM, President of the Hahnemann Medical College of Philadelphia, Honorary President of the American Baptist Historical Society, Honorary President of the American Peace Society, and Senior Vice-President of the Pennsylvania Bible Society, died at Philadelphia March 25th, aged seventy-nine years. He was born in Philadelphia, was graduated from Princeton Theological Seminary, preached in Boston and Philadelphia, and became President of the College at Georgetown, Ky., and afterwards President of the University at Lewisburg, Pa. He was one of the founders of the American Tract Society, and has written a considerable number of religious works.

THE Emperor of Germany's fall has not had any evil consequences. It was due to a fainting-fit, and as he was alone with the Empress he remained on the floor for five minutes without consciousness; for her Majesty's presence of mind completely forsook her, and she was at first unable to call for assistance. The Imperial reception-rooms, which have hitherto been without carpets, will in future have them. The Emperor has always disliked them, as he found they got in his way directly he left the parquet to which he was accustomed; but the physicians now think it dangerous that a man of his Majesty's age should walk up and down constantly (which is his habit) on a shining and slippery floor.

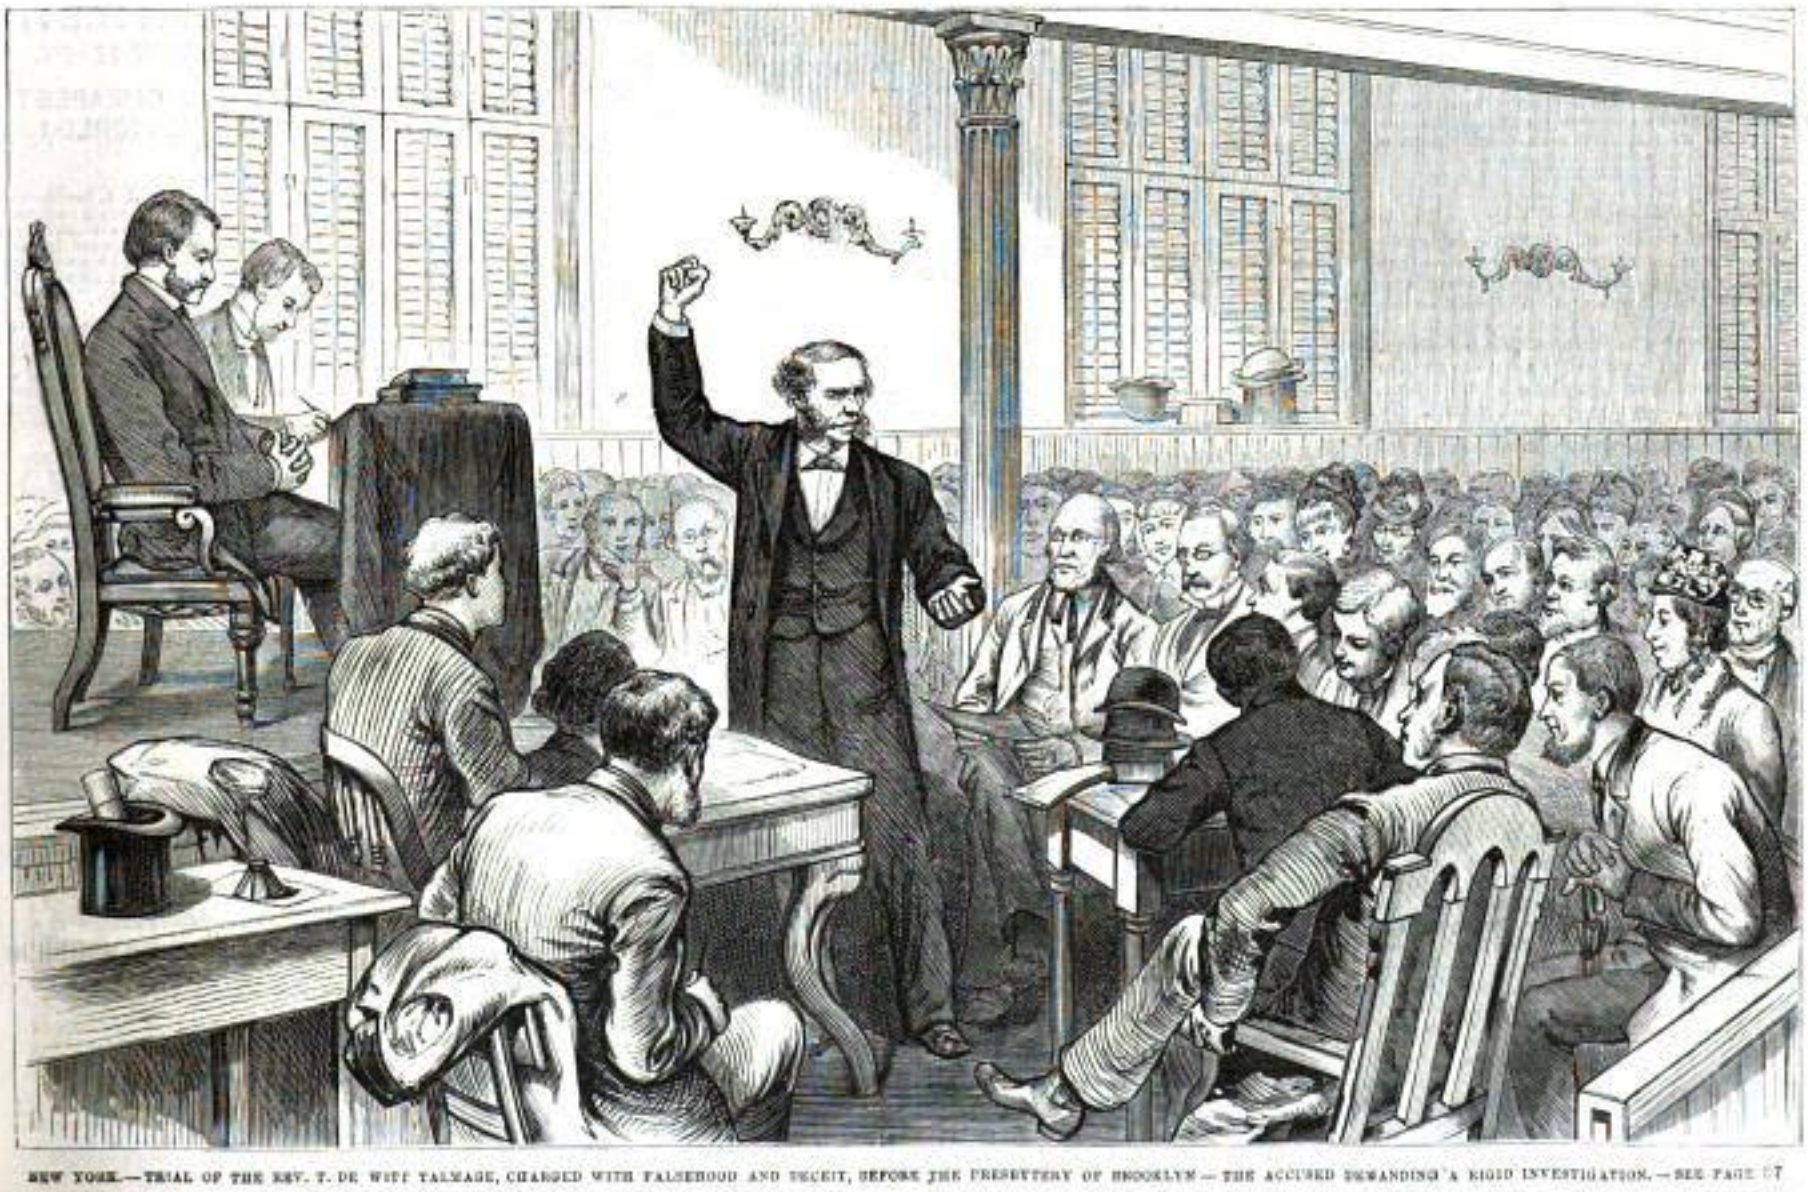
NEW YORK CITY.—COLLISION OF TRAINS ON THE EAST SIDE LINE OF THE NEW YORK ELEVATED RAILROAD, AT FORTY-SECOND STREET, MARCH 25TH.



ACCIDENT ON THE NEW YORK ELEVATED RAILROAD.

A COLLISION of trains on the east-side line of the New York Elevated Railroad occurred on March 25th, at the Forty-second Street station, which produced a profound sensation throughout the city. The collision was caused by the misplacing of a switch. Seven persons were injured, two of them seriously and the others slightly. One of the locomotives was damaged to a considerable extent. The other motor was not so disabled that it could not be run to the repair-shops. The front of one car was smashed in, and the trusses over which the accident occurred received a severe strain. In consequence of the accident all trains were stopped one hour and twenty minutes.

The collision affords a striking illustration of the great peril of constructing elevated railways in such a manner as to admit of the junctions and crossings tolerated on surface roads, and of depending upon the vigilance of employés to prevent accident with trains passing once every twenty seconds. Both the trains concerned in the collision were through trains, and both were due at Forty-second Street at the same hour and minute, the two trains passing each other on the east and west tracks at that point. The train from South Ferry to the Grand Central Depot, in Forty-second Street, leaves the most easterly through track about 150 feet south of the station, runs the few feet intervening between the two main tracks in a diagonal direction, and crosses the westerly (or main down-town) track about 100 feet to the south of the station for down-town passengers. Up trains for the Grand Central Depot are run once every six minutes, and the switch by means of which they are turned off the main route has to be opened and closed once in every such interval from 6:30 o'clock in the morning until about midnight. The Grand Central train passed about three minutes before the accident occurred, and, either from inattention on the part of the switch-tender or from some defect in the lock, which is a drop of the ordinary self-acting type, the switch was left open. The result was one unavoidable under the circumstances; the two trains going in different directions at the rate of about seven miles an hour met midway between the two main tracks on the cross track appropriated to the

HERRESHOFF TORPEDO LAUNCH.—SEE PAGE 94.

Digitized by Google

Grand Central train, crashing together with a momentum that lifted the two engines into the air, and tore off masses of the heavy wooden guard-rail for the space of about twenty feet. The latter, happily, being of new timber, withstood the shock, and the engines settled back into place without dropping to the street. Fortunately, the collision did not occur at an hour when travel is heavy, or in the tumult that instantly supervened, and the wild rush to escape, the passengers must have trampled upon each other, and some have fallen to the street in disembarking upon the open roadway. The three cars going south contained, according to the statement of the station-agent, not more than thirty to fifty persons, and the number on board the train bound for Harlem was even less, being stated by eye-witnesses of the collision at possibly thirty. All of them sadly shaken, and some of them bruised and apparently bewildered, most of the passengers escaped from the two trains and picked their way along the track to the station-platforms a few feet distant, a few, with more presence of mind than their fellows, remaining to care for several ladies who had fainted at the moment of the shock, but were safely removed after the cars had been towed into the floored lay-off between the stations. With a single exception, all the passengers left the station-house without assistance. The conductor of one of the trains, a brakeman, and the switch-tender, sustained slight injuries. The switchman, conductor and a fireman were subsequently dismissed from the company's service.

Warned by this catastrophe of the perils attending the old system of switches and crossing, the Directors of the New York Elevated Road, at a meeting held March 22th, resolved that hereafter trains shall be run only upon the main line, and all branches shall be operated independently. The Purchasing Committee, with the chief engineer and consulting engineer, are directed to provide, as soon as possible, at junction points, suitable platforms and conveniences for the transfer of passengers between the main line and junction trains, and until such arrangements for transfer are made the operation of such branches will be suspended.

THE HERRESHOFF TORPEDO LAUNCH.

THIS novel vessel, which now belongs to the British Navy, was built, in fulfillment of an order from the Lords of the Admiralty, in Bristol, and it arrived in the Thames on New Year's Day, having crossed the Atlantic on the deck of the National Line steamer *Denmark*. The boat is 59 feet 6 inches long, with 7 feet 6 inches beam, and has a composite hull of wood and steel. She is propelled by an engine of the compound condensing type, the boiler, patented by Messrs. Herreshoff, consisting of a coil of wrought-iron piping, two inches in diameter, and about 300 feet long. The screw is placed beneath the centre of the boat, and is worked by a steeply inclined shaft. The balanced rudder is also below the bottom of the boat, and the steering wheel is situated immediately beneath a small conning tower which rises from the roof. One condition of the contract was that the hull should be strong enough to be slung from a ship's davits without bending or "springing," and our engraving represents the vessel being lifted by the big crane at the Victualing Yard, Deptford, fully manned and equipped, her weight in that condition being about eight tons. The First Lord of the Admiralty was present, accompanied by Admirals Hood, Wellesley, and Sir Houston Stewart, the Comptroller of the Navy, and Mr. Barnaby, the Chief Constructor. The vessel was then lowered into the water, and steam got up, in five minutes after lighting the fire. The great handiness of the boat, and her powers of rapid stopping, starting and turning were next shown. She was stopped from full speed in a distance of one-third her length, and immediately went astern at a rate nearly equal to her forward speed. She then, at full speed, turned in complete circles of a diameter of three times her length, and this either going ahead or astern. Her guaranteed speed is sixteen knots an hour, and this, it is stated, she attained, with two tons of coal on board, on the occasion of her official trial over the two-knot course in Long Reach. Altogether the Herreshoff torpedo launch promises, from its powers of manœuvring and the great rapidity with which it can be got ready for sea, to form an important addition to British naval resources, while its numerous special features give it particular interest from a mechanical point of view.

Cremation in Germany.

AT the cremation chapel in Gotha, the only public place for cremation in Germany, the remains of one Stier were burned on December 10th, in accordance with his last will and testament. The burial service of the Protestant Episcopal Church was performed, as prescribed by the Church authorities in Gotha. The body was first conveyed to a sort of chapel or hall and placed over a particular spot. A hymn was then sung, a sermon preached, and a chorale chanted by a choir of boys, after which the body was lowered into the furnace to slow music, the clergyman pronouncing a blessing. "Earth to earth," was, of course, not recited. Friends of the deceased were allowed to make speeches. The vault, a low and narrow apartment, filled with gas previously ignited, was heated to an extraordinary degree. In an hour and a half the coffin and body were consumed. In another two hours the vault had sufficiently cooled down to allow of the mourners entering and collecting the ashes in urns, which were deposited in an adjoining columbarium. In the funeral sermon the clergyman declared that there could be no objections to cremation on the part of the Protestant Church, although it was true that the custom ceased and burial took its place when Christianity began to prevail, about a thousand years ago.

The Plant-producing Caterpillar of New Zealand.

AMONG the many curious forms of animal and vegetable life at the Antipodes perhaps none is more remarkable than the Aweto, or vegetable caterpillar, which is found in considerable numbers in certain parts of New Zealand, and less frequently, in a somewhat different shape, in New South Wales. In the body of this caterpillar literally grows the root of a species of rush or reed, whose stem, growing upwards in the ordinary manner above ground, is the perfect stem of a leafless vegetable with a head somewhat resembling the head of a bulrush. The heads, or seed vessels of the plants, are eaten by the Maoris, and, when burnt, are employed as a coloring matter; the plant, when roasted, emits a strong animal smell. The natural history of this curious organism is briefly as follows: The caterpillar known as the "Aweto," or *Hipialus virescens*, when burrowing underground previous to its metamorphosis to the chrysalis state, collects one or more of the seeds of a parasitic fungus (*Sphæria Robertsii*) in the joints of its neck, where, nurtured by the warmth of the body, they quickly germinate, the roots pressing downwards and completely filling the skin of the caterpillar's body, and the stem springing upwards through the light, rich soil till it attains a height of some eight or ten inches. The caterpillars seldom or never exceed three to four inches in length, and the root of the plant appears invariably to confine itself to the shell of the insect, which preserves its outward form intact, the feet, eyes and scales appearing perfect. Wherever the club-shaped heads of the plant are seen, its caterpillar-root may easily be found by digging carefully downwards to a distance of several inches. This remarkable instance of a caterpillar, naturally destined to develop into a gaudy butterfly, transforming itself into an integral and radical portion of an insignificant plant, seems like a protest against the ravages which these larvæ usually commit on the produce of the vegetable kingdom.

Sailors' Superstitions.

SAILORS have always had their prejudices with regard to certain days of the week. As everybody knows, Friday was, and is still considered by some mariners, a blank day for sailing. The *Wellesley*, bearing the flag of the Earl of Dundonald, on leaving Plymouth for the West Indies, got under way on Friday, March 24th, 1848, and after she had got outside the breakwater she was recalled by the port admiral, and did not leave again until the following day. The object of this delay was to send the mail-bags; but the seamen firmly believed that the gallant admiral left something behind, purposely to avoid going to sea on Friday. A Cornish saying places Candlemas Day as ill-omened for sailing. Bishop Hall, speaking of a superstitious man, says: "He will never set to sea except on Sunday." At Preston Pans the clergyman of the town was said to have preached against the fishermen for casting their nets on the Sabbath; and they, to prevent any ill befalling them in consequence, made a small image of rags and burnt it on the top of their chimneys. In his discovery of a new world, Columbus had fearful conflicts with the elements. In one particular instance, on his return to Europe, he was exposed to a tremendous storm. Seeing all human skill baffled and confounded, he endeavored to propitiate heaven by solemn vows and acts of penance. By his orders a number of beans, equal to the number of persons on board, were put into a cap, and on one of these was cut the sign of the cross. Each of the crew made a vow that, should he draw forth the marked bean, he would make a pilgrimage to the shrine of Santa Maria di Guadalupe, bearing a WAX taper of five pounds weight. The admiral was the first to put in his hand, and the lot fell upon him. From that moment he considered himself a pilgrim bound to perform a vow. The tempest still raging, the admiral and sailors made a vow that, if spared, wherever they first landed, they would go in procession, barefooted, and in their shirts, to offer up thanks and prayers in some chapel dedicated to the Virgin. In another danger the whole crew made a vow, in case their lives were spared, to fast upon bread and water for a few days.

FUN.

WEATHER report—Thunder.

BABY mine—A foundling hospital.

"COME, gentle Spring; diphtherial mildness come."

You can't expect a witticism from a man unless the wit is in him.

SMALL boys know by instinct when a watermelon is ripe enough to steal.

A YEAR has only one Fall, while a banana-skin is good for at least a dozen.

A GENTLEMAN addresses another gentleman, whom he doesn't know, at a party: "This affair is awfully stupid—let's go out and take a drink." "I would like to do it," was the reply, "but I can't leave very well." "Why not?" "Why, you see, I am the one that is giving the party."

TWO LADIES, both of them a little dull in the hearing, were in church one day, when the minister had for his text, "Except ye repent ye shall all likewise perish." They listened patiently enough, but when they got out the one said to the other: "Jenet, wasna you an awfu' text the minister had the day?—'Except we pay our rent, we're a' to be putten out o' the parish.'"

IT is singular how easy some people "dash off" an item for the paper; let them tell it. The fact is, they lock themselves up in a quiet room, gather their senses together, and with one eye on the dictionary and the other on the main chance of making the item grammatical, sweat over it for an hour. Then, after the editor has knocked out the superfluous adjectives, and braced up his limping punctuation, the writer is universally pleased with the "exactness with which his copy has been followed."

A GENUINE Yankee in San Francisco, having bored a new-comer with every conceivable question relative to his object in visiting the gold country, his hopes, his means and his prospects, at length asked him if he had a family. "Yes, sir; I have a wife and six children and I never saw one of them." After this reply, the couple sat a few minutes in silence; then the interrogator again commenced: "Was you ever blind, sir?" "No, sir." "Did you marry a widow, sir?" "No, sir." Another interval of silence. "Did I understand you to say, sir, that you had a wife and six children living in New York and had never seen one of them?" "Yes, sir, I so stated it." Another and a longer pause. Then the interrogator again inquired: "How can it be, sir, that you never saw one of them?" "Why," was the reply, "one of them was born after I left."

TWO rival land-agents were staying at the same hotel in a village where they were disposing of "locations" for their respective companies. One of them, from Colorado, had publicly run down the quality of the land vended by the other, who was from Kansas. He related how a friend and he were out prospecting once in a "putty tough" bit of country, and how they came across a man who comported himself like an escaped lunatic. This man was described to be "as lean as a Spring bear," and as preoccupied as "a team of oxen turned loose on buffalo-grass." Not noticing the travelers, he went on loading and discharging a double-barreled gun, always aiming at some crevice or opening in the rocks, which lay in great profusion around. Firmly convinced that he was a lunatic, the travelers determined to treat him as such—and that was "mighty civil." "Good-day, stranger," they said. The man looked up, but said nothing. "Plenty o' shootin' round here, I s'pose?" Still no answer. "Why, what d'ye find to kill there?" was asked, as the man let off another shot. "Kill be blowed!" said the man. "I'm plantin' wheat. Don't ye see that all the silk in this section is between the cracks o' the rocks, and I hev to shoot in the seed!"

THURBER'S RELIABLE CANNED GOODS.

GREAT progress has been made within a few years in the art of Preserving Fruits, Vegetables, Fish and Meats in tins, and in consequence the consumption has largely increased. As yet, however, canned goods are not generally thought to be "fresh," and some brands are not, perhaps, entitled to be so considered. Those packed by us, however, are Hermetically Sealed at the sources of supply, when they are in the best possible condition, by a process which preserves the much-to-be-desired fresh, natural flavors; and they are really in better condition, fresher, more palatable and wholesome than many so-called "fresh" articles which are exposed for sale during considerable periods of time in city markets. All goods bearing our name are guaranteed to be of superior quality, and dealers are authorized to refund the purchase price in any case where consumers have cause for dissatisfaction. It is, therefore, to the interest of both dealers and consumers to use THURBER'S BRANDS.

H. K. & F. B. THURBER & CO.,

Manufacturers of and Dealers in Food Products, New York.

A WORD TO DOUBTERS.

THERE is a good old English maxim that teaches us to "believe every man honest until we know him to be a villain." American custom seems to have reversed this law and appears to make every man a villain until he has proved himself an honest man. As with people, so with things. Every article placed in our markets can lay claim to popular favor upon intrinsic merit and value alone. Continued popularity, therefore, is proof positive of intrinsic excellence. Dr. Pierce's Family Remedies are far more popular to-day than ever before. The people have tested them and know them to be genuine remedies for the diseases they are recommended to cure. The Golden Medical Discovery and Purgative Pellets are the most alterative, tonic, and cathartic remedies that can be used in chronic diseases of the stomach and liver. The world-wide popularity of the Favorite Prescription, as a never-failing remedy for Female Diseases, would have alone secured to its discoverer the fame he has so richly won. Dr. Sage's Catarrh Remedy, of which Dr. Pierce is also proprietor, is recommended by those who have tested its virtues as a safe and reliable remedy for catarrh in its worst forms.

INDIGESTION, DYSPEPSIA, nervous prostration, and all forms of general debility relieved by taking MENEHAN'S PEPTONIZED BEEF TONIC, the only preparation of beef containing its *entire nutritious properties*. It is not a mere stimulant like the extracts of beef, but contains blood-making, force-generating and life-sustaining properties; is invaluable in all enfeebled conditions, whether the result of exhaustion, nervous prostration, overwork, or acute disease; particularly if resulting from pulmonary complaints. CASWELL, HAZARD & CO., Proprietors, New York.

A HOUSEHOLD PERFUME.—Every family able to appreciate and enjoy the pleasure afforded by a really healthful and delicious perfume, should supply themselves with the genuine MURRAY & LANMAN'S FLORIDA WATER. It is the most delightful and most lasting of all fragrant waters.

AMONG American hotels, the ST. NICHOLAS, of New York, stands in the very highest rank. The proprietor has the most thorough knowledge of the art of hotel-keeping, and a wide acquaintance with the tastes of the most refined classes. The terms now are only $3.50 per day.

Blair's Pills.—Great English Remedy for Gout and Rheumatism. All Druggists have them.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast-tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—See article in the *Civil Service Gazette*.

Sold only in soldered tins, labeled,

Genuine registered in Patent Office; all others counterfeit and infringement. Manufactured only by C. E. HIRES, Philadelphia.

W. H. SCHIEFFELIN & CO., Agents for New York.

A BRAIN AND NERVE FOOD.

Vital force in the brain is mind force, in the nerves, nerve force, but both brain and nerves need their appropriate nourishment or there is nothing to sustain vital force. Vitalized Phosphates feed the brain and nerves, as they are composed of the vital or nerve sustaining principles of the ox brain and wheat germ similar to that which sustains the human brain and nerves. Physicians have prescribed 100,000 packages, restoring lost energy in all weakness of mind or body, relieving debility and nervousness and preventing consumption.

CHIMNEY CORNER.

The Most Popular Illustrated Family Paper.

The SUCCESSFUL RIVAL of ALL THE WEEKLIES for THIRTEEN YEARS past.

The CHIMNEY CORNER presents a constant succession of brilliant attractions.

The Best Writers in the country contribute to its columns; and new serial stories of the most absorbing interest, of great power, true to life, and embracing a wide range of subjects, are constantly appearing.

The Continued Novels are by such eminent writers as John Habberton, author of "Helen's Babies"; N. Robinson, author of "That Mother-in-Law of Mine"; Etta W. Pierce, Christian Reid, Mrs. Victoria Victor, M. T. Calder, Frank Lee Benedict, J. W. De Forest, and others equally celebrated.

Short Stories are completed in each number; and the miscellaneous contents embrace Biographies, Adventures, Essays, Travels, Curiosities of Foreign Life, Marvels in Nature and Art, Legends, Anecdotes, Poetry, etc.

Beautiful Steel Engravings are frequently presented to the subscribers, far exceeding in value the price of a year's subscription.

Published every Monday, and for sale by all newsdealers. price 10 cents. Annual subscription, $4. Three months, $1. Sent postpaid.

"Mr. Garrison, the President of the Metropolitan "L" road, when he was asked about the switch and signal system in use on his road, said that it was absolutely safe."—*New York Herald, March* 28th.

WHAT MAY BE EXPECTED IF THE THEORY OF THE PRESIDENT OF THE METROPOLITAN ELEVATED RAILROAD IS CARRIED INTO PRACTICE.

Important to Mothers.

MRS. WINSLOW'S SOOTHING SYRUP is the only thing that mothers can rely upon for their children. It corrects acidity of the stomach, cures wind colic, regulates the bowels, and gives rest, health and comfort to mother and child. During the process of teething its value is incalculable. It softens the gums, reduces inflammation and allays all pain, thereby giving rest to the child and comfort to the mother.

Horsford's
SELF-RAISING
Bread Preparation

The Healthful and Nutritious

Baking Powder,

Invented by E. N. Horsford, late Professor in Harvard University.

Better, Healthier and Cheaper than Ordinary Baking Powder.

BARON LIEBIG, the greatest chemist in the world, said: "I consider this invention as one of the most useful gifts which science has made to mankind."

DR. M. H. HENRY, the celebrated Physician of New York, said: "The use of Horsford's Bread Preparation, offers admirable means for the introduction of a valuable element into the system."

DR. J. C. BOOTH, the distinguished chemist of Philadelphia, said: "We have no hesitation in recommending your Preparation as new and valuable."

Prof. RODNEY WELCH, Lecturer at Hahnemann Medical College of Chicago, said: "The greatest improvement ever made in raising bread without the use of yeast, is the process of Prof. Horsford."

THE POLITICAL GAME.

WHEN King Solomon wrote that "the beginning of strife is as when one letteth out water, therefore leave off contention before it be meddled with," he gave expression to a maxim of conduct which holds good as well in the forum of politics as in the intercourse of daily life. For the want of giving due heed to this rule of adagial wisdom, the Democratic majority in both Houses of Congress have not only been unfortunate in selecting the time and topics and mode of their pending political controversy, but have also incurred the additional misfortune of stimulating their Republican rivals into an exhibition of bad temper which might have been readily foreseen as the natural and normal result of an untoward political issue.

It will be remembered that at the close of the last session, Mr. Garfield and others in the House of Representatives offered, on behalf of their Republican associates, to unite with the Democrats in repealing the "test oath" discrimination against Southern jurymen, and in repealing the law which permits the presence of Federal soldiers at the polling-places, provided the Democrats would allow the Supervisors' Act and its kindred measures to stand as they are on the statute-book. Instead of accepting this reasonable compromise, the Democratic majority in the House and the Democratic minority in the Senate preferred to risk the failure of two Appropriation Bills and to take the chances of procuring all three of their desiderata at the extraordinary session made necessary by their persistency; and, in further indication of their set purpose, they allowed certain leaders to announce that they would block the wheels of government if the President should interpose a veto in obstruction of their designs.

Though it is perfectly natural, it is none the less a matter of regret that this exacting course of the Democrats at the last session should have had an exasperating effect on the temper of the Republicans at the present session. At the threshold of the latter, Mr. Conger announced, on behalf of his Republican allies, that they would not allow any one of the proposed measures to be brought forward in separate Bills, but would insist that the legislation of the extraordinary session should be confined to the perfection and passage of the two Appropriation Bills which had lapsed in the last Congress. As the rules of the House of Representatives enable a determined minority to resist the introduction of new business beyond the said Appropriation Bills, the Democrats were compelled, by this contumacious attitude of their opponents, to entrench themselves in the position they had taken at the late session—that of carrying all three of their points as "riders" on the Appropriation Bills. And in further exhibition of the intractable temper into which they had been brought by the inopportune beginning of the Democratic strife at the last session, the Republicans proceeded to take a hostile attitude even on those measures to which they had yielded assent as a matter of public justice and of political compromise.

This latter decision having been taken in obedience to the mandate of a "Republican Caucus," we can well understand that, as the New York *Tribune* correspondent has phrased it, "the Republicans are a little embarrassed by the fact that they expressed a willingness at the last session to concede the legislation now under consideration." The fact is a "little embarrassing" if measures of public policy are to be approved or rejected on grounds of public right and of public utility irrespective of partisan advantages and of partisan competitions. But if the pending legislation in Congress is a mere "game in politics," we can understand why the Republicans of the present Congress should play "a different hand" from that which they held to be eligible and proper at the previous session.

To those who look beneath the masks behind which the two parties in Congress are now masquerading before the country, it is plain that they are both engaged at playing a game of politics under the guise of passing laws or preventing the passage of laws in the public interest. The occasion seized by the Democrats for precipitating a needless issue, and the revolutionary intemperance with which some of the Democratic leaders professed a willingness to pursue that issue, have combined to prove that "politics" and not public duty was at the bottom of their untimely agitation. With just as little reason can we defend the attitude now assumed by the Republicans in making a hard bed for themselves to lie on because they wish to spite their adversaries. In so acting they do more despite to themselves than to the enemy whom they seek to embarrass, for political consistency is not a jewel to be contemptuously tossed away in the strife of public debate. It does not lie in the mouths of Republican orators to inveigh against the tacking of "riders" on Appropriation Bills, seeing that they have heretofore set some very bad precedents in this direction. Even in the matter of the Army Appropriation Bill the country cannot forget that it was by a "rider" on such a Bill that President Johnson was stripped of his constitutional command of the army of the United States, and that he was coerced into signing a measure which he honestly disapproved, but which he preferred to sign rather than, as he explained, "to defeat the necessary appropriations" for the support of the army. Where the public record of a party, on the score of consistency, is so defective as this, that party should not aggravate the public sensibilities by opposing to-day what it was willing to accept only three weeks ago. Even in the game of politics it is not wise to play "fast and loose" after this fashion.

THE NATIONAL FINANCES.

SECRETARY SHERMAN'S administration of the national finances is proving eminently successful. Up to the 1st of April, he had sold $350,000,000 of the four per cent. bonds, and with the means thus obtained had redeemed an equal amount of the six per cents., saving thereby to the Government $7,000,000 a year in interest. On the 4th instant, the miscellaneous subscriptions to the four per cents. aggregated $6,502,750, and were followed by the enormous subscription of $40,000,000 from the National Bank of Commerce of New York, leaving but $13,000,000 to be sold on account of the five-twenty consols of 1867 and 1868. This balance was at once taken by the First National Bank of New York, thus closing out the two series, leaving no other bonds subject to call at the present time except the 10-40 five per cent. bonds of 1864, which will next be called and redeemed in the proceeds of the sales of the ten-dollar redemption certificates and additional sales of four per cent. bonds. The outstanding 10-40 bonds amount to $194,566,300. About $264,000,000 six per cent. bonds will be subject to call June 30th, 1881. The 10-40s, amounting to $194,566,300, will doubtless be refunded in the interim.

The amount of work performed by the Treasury Department in connection with the four per cent. loan is very great. In the payment of the April interest alone, 35,000 checks have been drawn by the United States Treasurer and transmitted by him to the payees. With each holder of registered certificates, now about 73,000, a ledger account is opened, requiring now twenty-five volumes. The dividend schedule prepared in the loan division of the Register's office is an abstract of these credit balances which in aggregate must agree with the amount outstanding. The present schedule contains about 1,700 closely printed pages. Since the 1st of January the daily subscriptions for bonds have averaged nearly $5,000,000, and the limited force of the division of issue has been taxed to its utmost in filling orders and the posting of over 1,000 pages of journal entries, the latter requiring four relays working the entire day and night.

As to the financial outlook, Secretary Sherman expresses himself with a good deal of confidence. In a recent interview he said:

"The appropriations somewhat exceed the revenue, but that can be met by spending only what is received. Our revenues are increasing now, and after this month, I believe, will be sufficient to meet every proper demand. If the present financial laws are undisturbed by Congress I feel absolutely sure that, with the usual crop, we will have a marked revival of business, when every man willing to work can get employment. There are two questions which must come up upon which honest men may fairly differ. These are the silver question and the national bank question, and these, I believe, are capable of a fair adjustment. If our silver dollar was made equal to the gold dollar we could safely coin twice fifty millions, or more, and there is now a better hope for an international ratio than ever before. As for the national banks, they should be left alone until 1883, when the first bank charter expires, and when public opinion will settle the question of their continuance."

Mr. Sherman's confidence as to "a fair adjustment" of the "silver question," may not be altogether justified by the result, but there can be no difference of opinion as to the great ability he has displayed in his management of the grave matter of resumption, and in history his administration will deservedly rank with that of our foremost Ministers of Finance.

METROPOLITAN HINDRANCES.

ACCORDING to the Federal census, the population of this city grew from 515,547 souls in 1850 to 805,651 in 1860, a gain of 56.27 per cent. during the decade. Could this ratio of increase have been kept up during the past and present decades, the population of New York would now be crowding hard upon two millions of inhabitants. But it is officially shown that the rate of increase from 1860 to 1870 was only 16.96 per cent., the population in the latter year being returned as 942,292. The State census of 1875 gave this metropolis a resident population of 1,046,037, but this included the annexed portion of Westchester County, with about 20,000 people. The whole gain from 1870 to 1875, the latter year inclusive, was only 11 per cent., being an average of 2 1-5 per cent. per annum. If it be assumed that the yearly increase since 1875 has been at this latter rate, then the present population, all told, cannot be in excess of 1,077,160.

When it is considered that New York enjoys natural advantages possessed by no other city in the Union; that her port, by choice, is the great *entrepôt* for the commerce of all nations; that financially she is the grand regulator of the whole country, and that her business men are second to none in point of ability and public spirit, it would seem that a period of quite thirty years should have produced larger results in the way of growth than a mere doubling of the number of inhabitants. Why New York should have made such giant strides in population during the ten years ending with 1860, and such extremely slow progress since that date, is worthy of more than a passing thought.

It will be urged, and quite properly, that the peculiar conformation of Manhattan Island and a want of rapid transit has had something to do with retarding growth during the decade ending with 1870, and since. It will also be said that other operative causes are to be found in expensive government and high rates of taxation—that such causes enhance the cost of living, and that prudent people flee from taxation equaling thirty dollars per capita per annum as they would from a prevailing epidemic. But rapid transit is now an accomplished fact, and, in time, by persistent action, our people may secure the blessings of economical public expenditure and moderate taxation.

It should be understood, however, that while rapid transit is needed as a convenience to the individual citizen, and the public good can best be promoted by a wise administration of the city's finances, the growth of New York in wealth and population, after all, is contingent upon her ability to be and remain the great trade distributor of the country. Her road to greatness lies through her trade. As that increases or decreases, so will her fortunes rise or fall. The business men of this city are keenly alive to this view of the case. Ask a New York merchant why the city has not made the same progress since 1860 as before, and he will reply that the reason is to be found in the discrimination of gigantic railway monopolies against our trade interests. In this, more than anything else, is to be found the solution of our sluggish growth. The great bulk of the national imports and exports passes in and out of this port, but, mainly owing to the impositions of the trunk lines of railway, our merchants do not profit thereby. Prior to 1860 the foreign trade of the country was largely in the hands of New York's merchant princes. Since the war it has passed under the control of railway capitalists who use and abuse the acquired right without acknowledging responsibility to any one outside of their own organizations. As a result of this change, west-bound freights are carried cheaper from this point for citizens of foreign countries than for citizens of this city and State. Thus, an English merchant is given a rate from Liverpool to Chicago somewhat less than the combined ocean rate to New York and the rail rate to Chicago, and there have been times when freight has actually been carried from Liverpool to inland points in this country, one thousand miles distant from New York, at a cheaper rate than the same ocean lines would deliver it on the wharves of this city, the railways accepting their *pro rata* share of the through charge. From this it will be seen that the railways undertake to haul a car-load from a foreign vessel at a less cost to the owners of the merchandise than they will grant when the same class of goods are taken from the drays of a New York merchant. This is the sort of warfare which is being waged against the growth of this metropolis.

Again, the trunk lines make an enormous difference between the charges on through freights eastward and those westward-bound. With a full traffic the charge on fourth-class goods from Chicago to New York is now eighteen cents per 100 pounds, while with two-thirds of the cars running empty on the return trip, the rate is forty cents per 100 pounds on the same class of goods, which is practically prohibitory as against New York. Once more: Chicago shippers send grain to New York at a charge of eighteen cents per 100 pounds, and, in special instances, at even a lower rate, while the farmers of this State are charged high rates for one-third to one-quarter the distance, amounting, when measured by length of transportation, to five or six times as much as the Western men are required to pay. The manufacturers of this State also are subjected to the same rank injustice, and, without a speedy remedy, will find it to their advantage to locate in States further West.

The policy of the trunk lines towards this city has already led to enormous changes in the drygoods, grocery, hardware and other leading trades. At the present time the majority of New York jobbing houses are doing business on unsatisfactory margins. The discrimination against them in freights compels this state of affairs. In a recent address presented by a Committee of the Chamber of Commerce to a Legislative Committee appointed to investigate the railway service of this State, we find the following deliberate expression of opinion:

"The railroads apparently care nothing for the jobbing trade of New York, so long as they can secure the large export and import trade, and also charge the present enormous local rates to the people of this State; but this policy is most detrimental to New York City, and the lack of prosperity for this city means a poorer market for the producers of this State, and an inability on its part to contribute $1,000,000 per annum more than its *pro rata* share to maintain the public schools of this State."

With these facts before us there can be no difficulty in understanding why the rapid growth of New York has been arrested. If the evil stated is to remain unchecked, the natural result will be to drive our merchants to the establishment of branch houses in other seaboard cities. Our trade will necessarily seek other channels of distribution. Then will come a further depreciation of real estate, a lowering of rentals to a point less than remunerative, and a forced reduction in taxation, the effect of which may be to impair ability to pay interest on municipal securities, large amounts of which have been purchased by savings banks with the funds of their depositors. The people *en masse* should second the endeavors of our merchants to secure justice to this city and State.

THE LIFE-SAVING SERVICE.

THE United States Life-saving Service now has upon the seaboard and lakes a total of 148 stations, of which thirty-nine are on the coast of New Jersey, and thirty-six on the coasts of Long Island and Block Island, these two districts being deemed the most dangerous and important. During the last year there were in the districts covered by the service 171 disasters to vessels, on board of which there were 1,557 persons and property to the amount of $2,624,735. The number of lives lost was 226, 183 of which perished in the *Huron* and *Metropolis* disasters, nearly all of whom could probably have been saved had there been a lifeboat near at hand, manned by a trained crew. The necessity for an increase in the service is shown by the fact that in no former year have the disasters to vessels reached more than 134. Of the two principal wrecks, that of the *Huron* occurred before the time fixed for the opening of the stations, and that of the *Metropolis* between two stations at such a distance from either as to greatly embarrass successful operations. There were also four other wrecks, involving the loss of ten lives, which occurred when the stations were closed, and one, involving the loss of four lives, which happened at a distance from the station which made prompt assistance impossible. There can be no doubt that the stations should be nearer together, and in exposed positions, such as the whole

Digitized by Google

coasts of New Jersey and Long Island, should be kept open and supplied with competent crews the whole year round. When it is understood that on some parts of the coast the distance between the stations is from ten to sixteen miles, it can only excite surprise that the service is as efficient as it has proved to be. The entire cost of the service is $200,000 a year. In view of the vast interests with which it has to do, this sum can only be considered as ridiculously meagre; and it would seem that if Congress can afford to waste millions in "improving" trout-streams and creeks and rivers on which a vessel will never float, it ought to be able to deal a little more generously with a service which every year saves millions of property and hundreds of lives. It is to the credit of the recent Congress that it took a step in the right direction by providing for thirty-seven new stations and considerably extending the district embraced by the service.

IN THE OLD WORLD.

THE Nihilists in Russia continue their war upon the Government, and there are some indications of a growing popular sympathy with their views. Within the last fortnight great excitement and indignation have been produced by the announcement that during a period of four months two hundred out of four hundred prisoners, confined in a Government prison on suspicion of being identified with the revolutionary movement, have died — many, as is intimated, as the result of revolting cruelty.

Recent disclosures show that among the Nihilist conspirators are large numbers of gentlemen and ladies of high rank. Among those arrested within the last few days is the great-granddaughter of Count Panin, who was Chancellor to Empress Catharine. Another is a daughter of a well-known Senator, who is a personal favorite of the Czar; and still another, a niece of a famous general in the army. In connection with this subject the following from the *Whitehall Review* has a curious interest:

"It is said that the Czarowitch is so popular with the Revolutionary Party in Russia that he never receives any of the warnings or menaces with which the Emperor and his Ministers are inundated. The Revolutionary chiefs supply him regularly with all their newspapers, pamphlets, proclamations and publications, and to the fact that the Czarowitch reads these and takes an interest in them may be traced the unpleasantness which exists between him and the Czar. So liberal is the heir-apparent in his opinions that we are assured that his succession to the throne would be followed by the immediate suppression of the tyrannical Third Department and the possible exile of General Drenteln to Siberia. Between the Grand Duke and the chief of the political gendarmerie the bitterest hatred exists, partly because the Prince disapproves of his despotic proceedings, and also because Drenteln keeps his eye upon the intercourse between the heir-apparent and the Revolutionary chiefs. The latter hold a higher position in society than is generally imagined, and there are very strong reasons for believing that one of the closest companions of the Czarowitch was concerned in the Mezentzoff murder."

Beaconsfield has again, in the Budget, submitted to the House of Commons on the 3d instant, given the people of Great Britain a surprise. The public generally had anticipated a heavy deficit and an increase in taxation, which, in the depressed condition of the trade and industries of the Kingdom, would be extremely onerous, and the pressure of which would cause a serious exasperation against the Administration, and probably the return of the Liberals to power. When, therefore, the Chancellor of the Exchequer announced that last year, despite all the adverse circumstances, the expenditures exceeded the revenue by only £2,241,000, and that no considerable increase of taxation would be necessary, the satisfaction was profound and universal. The estimated expenditures for the coming year will be £81,153,573, and the estimated revenue will be £83,055,000, leaving an excess of £2,901,427, which can be applied to the expenses of the Zulu war and the redemption of the outstanding exchequer bills. The only article upon which increased taxation is recommended is one of luxury, and that recommendation was at once adopted, the duty on cigars being increased four cents per pound. The Government has evidently by this stroke of policy recovered all the prestige which it lost by the vote in the House of Commons on Sir Charles Dilke's motion of censure as to the Zulu war. This vote, which stood 306 to 246, while numerically favorable to the Government, was regarded generally as a moral defeat, and but for the subsequent surprise in the announcement of a satisfactory fiscal policy, Beaconsfield would have been in some danger of losing his hold on the country.

British laborers begin to see that strikes are inopportune. The statement at a recent meeting of Blackburn cotton operatives that half of them were starving is an effective eye-opener. After long opposition the Blackburn operatives have unconditionally accepted a reduction in wages. They will, very properly, ask for an increase when trade improves. According to cotton-brokers in Liverpool, the visible supply of cotton is 350,000 bales below that of last year. Whether there will be a reduction in consumption will depend on the action of the Government upon silver and Eastern exchange. English monetary troubles seem to be thickening. They have been aggravated by the misfortunes of the directors of the Chartered Mercantile Bank of India, London and China, closely following those of the Oriental Bank Corporation. The large balance of American trade against England was pointed out the other night by Lord Cotterioe, in moving, in the House of Lords, for an official return of the British trade with the United States. Mr. David McIver, one of the proprietors of the Cunard Line of steamships, and Member of Parliament from Birkenhead, has written to the London *Times*, declaring that from his personal experience as a carrier he does not know of any nation whose trade prospects at present are so gloomy as Great Britain's. He says that the depression in the United States and elsewhere does not at all approach the depression in England. But, notwithstanding all this financial and industrial gloom, stout-hearted old England is very far from being bankrupt. She looks confidently forward to a happy issue out of her present temporary difficulties. And, perhaps, after having demonstrated for the hundredth time her prodigious recuperative powers, she may yet learn not only how to create wealth, to a degree unsurpassed by any other nation, but also how to use her surplus capital more wisely than ever.

The British troops have won decisive victories over the Zulus, and their wily king Cetewayo is now suing for peace and his army is said to have been disbanded. In London, public interest seems to be divided between the suspected murderers of Mrs. Thomas, whose mutilated remains, wrapped up in paper, were found floating on the Thames about a month ago, and the competing crews of the University boat-race of the 5th instant. Queen Victoria has received a half-hour's visit at Baveno from Prince Amadeus of Italy, and it is said that General Garibaldi will also pay Her Majesty a visit there. The Italian Government was informed by an anonymous letter that a plan had been formed to assassinate the British Queen between the frontier and Turin. It is likely that the only object was to embarrass the Government, but all precautions were taken against so diabolical an attempt. Queen Victoria will return to London for the purpose of holding two drawing-rooms in the month of May. American ladies ambitious of being presented at the British Court need not leave New York for the purpose before the latter part of April.

Matters in Afghanistan remain without essential change. Intelligence, by way of Turkestan, is to the effect that Yakoob Khan has decided to carry out the intentions of his father, and will prosecute the war against the English to the last extremity. But, on the other hand, it was announced in the British Parliament, April 4th, that negotiations with the Ameer are still in progress, with the hope of a favorable issue.

It is now denied that the Emperors of Russia, Germany and Austria are to meet at the golden wedding of Kaiser William, in June, at Berlin. The birthday of Prince Bismarck, April 1st, brought to the grim old Chancellor an unexpected number of congratulations, some even from the Liberal press. At the banquet in Cologne on occasion of the inauguration of Bismarck's statue, 30,000 marks were collected for a statue of Count Moltke. The German Reichstag has adjourned to April 28th. The French Chambers have postponed until after the Easter recess the debate on holding their sessions at Paris instead of Versailles. The elections of the 6th of April, were rendered necessary in five of the twenty-one districts by the death of their representatives; in fourteen, to replace deputies of the Left elected Senators; in one, on account of M. Andrieux's nomination as Prefect of Police; and, finally, in another, on account of the elevation of M. Grévy to the Presidency of the Republic. The conflict was no longer between friends and foes of the Republic, but simply between men who all respect the form of the present Government although they differ as to the consequences that should result from the great Liberal victory. Princess Christina, daughter of the Duke of Montpensier, is recovering. Couture, the painter of that famous picture, the "Décadence des Romains," is dead. Some of his American pupils will remember how angry poor Couture once got with Huntington, and how hard it was to explain to his satisfaction why the future President of the National Academy of Design was conscientiously opposed to fighting a duel with him or with anybody else.

The Pope has summoned to the Vatican several ecclesiastics who had been punished in Germany for infractions of the May laws. The object of His Holiness is, by minute inquiries into the various cases, to find a line of conduct by which a conflict with the laws may be avoided. A contribution of 20,000 francs has been made to Peter's Pence by the Count and Countess of Chambord. The brother of the Pope will be created a Cardinal at the next Consistory. The King of Italy, accompanied by the Duke d'Aosta and General Medici, honored with his presence the races especially organized in Count Telfener's park, outside the Salara Gate, on the occasion of the count's recent marriage with Miss Ada Hungerford, sister of the Bonanza Queen, Mrs. Mackay.

It is both affirmed and denied that the Porte has accepted the mixed occupation of Roumelia, subject to certain reservations, and that the scheme will now be carried out by the Powers. It is feared that the presence of Turkish troops, as part of the corps of occupation, will lead to disturbances, and it is possible that the scheme will be modified if not wholly reconsidered. There are intimations that a Reform Ministry in Turkey may be the outcome of intrigues now in progress.

Official reports show that 10,000 persons have perished from the famine in Upper Egypt. An Egyptian force sent to break up the slave-depots in the province of Kordofan, late in December, routed and dispersed an army of 11,000 men, led by Suleiman, one of the chief slave-traders.

THE movement in this city for the relief of the sufferers by the inundation of Szegedin, in Hungary, appeals to the sympathies of all humane citizens, and the contributions will no doubt be worthy of the metropolis which has always been foremost in assisting the unfortunate and necessitous. If all give who can afford to do so, the aggregate will be a contribution which will go very far towards satisfactorily relieving the distress.

THE charge of Judge Cartter to the jury in the Oliver-Cameron breach of promise case was one of the briefest recorded in judicial annals. It was in these words: "Gentlemen of the jury, take this case and dispose of it. Mr. Clerk, pass the papers to the foreman." The jury promptly complied with the judge's instructions, and in two hours and a half returned a verdict for the defendant. There will be little if any difference of opinion among right-thinking people as to the propriety of this verdict.

THE annual report of the Bureau of Statistics shows that the excess of imports of merchandise into this country over exports of merchandise from it amounted, from 1860 to 1873 inclusive, to $1,117,000,000. In 1873 and 1874 the imports and exports of merchandise are about equal. From 1875 to 1878 inclusive the exports exceeded the imports by $489,000,000; and during the whole nineteen years, from 1860 to 1878, the exports of specie exceeded the imports by $895,000,000. By these figures it appears that this country has paid off all its foreign debts contracted since 1860, and $209,000,000 on account of the debts previously existing.

THE work of the American Society for the Prevention of Cruelty to Animals has attained a scope and proportions greatly exceeding the general estimate. Thus the society investigated 3,660 cases of cruelty during last year, securing 882 convictions, making 16,857 cases since its organization thirteen years ago. The work of the society has been prosecuted in the face of obstacles and discouragements which nothing but the most inflexible resolution, based on lofty conscientiousness of purpose, could have overcome. Mr. Bergh for a long period carried on the struggle with the prejudices, the selfishness and brutality of the vicious and depraved classes, absolutely single-handed, and even now, when all right-thinking men are rallied to his side, his energy and zeal constitute the main impulse of the society's varied operations. He has not labored for applause, but he is sure of a higher place in the esteem of posterity than thousands who have struggled and hungered for the world's acclaim. A significant proof of the growing popular sympathy with the work of the society is furnished in the fact that it has received in bequests over one million of dollars.

MR. BENNETT'S expedition in search of the Northeast Passage will sail from San Francisco for Behring Straits about the 1st of June. Of 350 men who have volunteered for the expedition, the commander has selected those of the most experience in the Polar regions and greatest capacity for endurance, having an eye also to general intelligence and accomplishments in the seaman's line. Supplies will be carried for a three years' cruise, with all the necessary equipments for Arctic exploration. It is understood that Mr. Bennett will accompany the vessel as far as Alaska. He will pay the entire expenses of the expedition; but in order to increase the discipline, and give the exploration a national character, as well as to secure the services of responsible officers and seamen from the United States Navy, Congress has authorized the vessel to be placed under the control of Secretary Thompson, and he is permitted to detail officers and seamen to man her. The Government will be at no expense, except to pay the salaries of about thirty-five men, who would be carried on the naval pay-roll all the same whether engaged on this or any other service.

NEWS OF THE WEEK.

Domestic.

THE New York Elevated Railroad has declared a dividend of five per cent.

THE State Senate has killed the Bills reducing the salaries of State officers.

THE Iowa Democratic State Convention will be held at Council Bluffs on May 21st.

THE Democrats and Nationals of Cleveland have combined and nominated a city ticket.

ROWELL, the pedestrian, sailed for Europe on the 2d instant with the Astley belt and $20,000.

ON the night of April 3d a heavy frost in South Carolina and Georgia greatly injured the early vegetable crops.

THE House of Representatives was occupied during the whole of last week in the discussion of the Army Bill.

OVER five hundred Canadian emigrants, with their baggage, filling forty-eight cars, have just left Ontario for Manitoba.

THE last of the suits against Mr. William H. Vanderbilt, in the matter of his father's estate, was discontinued on April 4th.

AT the State election in Rhode Island, April 2d, the Republican ticket for State officers was elected by an average majority of 4,000.

CORRESPONDENCE just published show that the German Mission was, in December last, offered to Mr. Whitelaw Reid, and declined.

A NUMBER of houses in Brown's Summit, N.C., were blown down by a tornado on April 3d. One person was killed and a number seriously injured.

GOVERNOR MARKS has signed the Bill providing for the settlement of the Tennessee State debt at fifty cents on the dollar and four per cent. interest.

THE Greenback members of the House of Representatives have resolved to resist the introduction of political legislation into the Appropriation Bills.

FEDERAL officials have captured in the mountains of Eastern Kentucky during the past two weeks fourteen moonshiners, and destroyed a number of stills.

LEXINGTON, Ky., celebrated the hundredth anniversary of its founding, April 2d. Governor McCreary, Leslie Coombs and William Breckenridge were the orators.

THE Senate has confirmed Hon. Andrew D. White as Minister to Germany, Cornelius A. Logan as Minister to Central America, and Francis A. Walker as Director of the Census.

THE April elections in Wisconsin show large Republican gains. In Chicago ex-Congressman Carter Harrison, Democrat, has been elected Mayor by 4,900 plurality. The Democrats elected their ticket in St. Louis.

THE season of the Maplesons opera troupe in this city closed by a benefit to Colonel Mapleson on April 5th, and the following day eighty of the singers sailed for England. Colonel Mapleson has leased the Academy of Music for three years.

THE trial of Rev. T. De Witt Talmage by the Brooklyn Presbytery was continued during last week. A number of witnesses testified as to the charges of falsehood and deception. The proceedings have been marked by a good deal of contention and disorder.

AT the women's walking match at Gilmore's Garden, which terminated April 3d, Miss Bertha von Berg, of Rochester, N. Y., was the winner of the belt and first prize of $1,000. Miss "Belle" Kilbury, of Hoboken, won the second prize of $500, and Mrs. Ada Wallace, of this city, the third prize of $250.

THE United States Senate has passed the Bill appropriating $200,000 for fitting up a steel refrigerator ship to be used for the disinfection of vessels and cargoes in times of yellow fever and other epidemics. The Legislative Appropriation Bill, appropriating between $15,000,000 and $16,000,000 as reported to the House of Representatives, repeals several parts of the Revised Statutes relating to elections, and provides new methods for drawing jurors.

Foreign.

GENERAL GRANT and party have sailed from Singapore for Siam and Hong Kong.

THE rinderpest has spread to a hundred villages in Bohemia. The infected points have been surrounded by military forces.

IT is announced that Austria, England, Russia, Turkey and Italy have agreed to take part in the mixed occupation of Eastern Roumelia.

MR. JUSTIN MCCARTHY has been elected member of the British House of Commons for the County of Longford by the Home Rulers, without opposition.

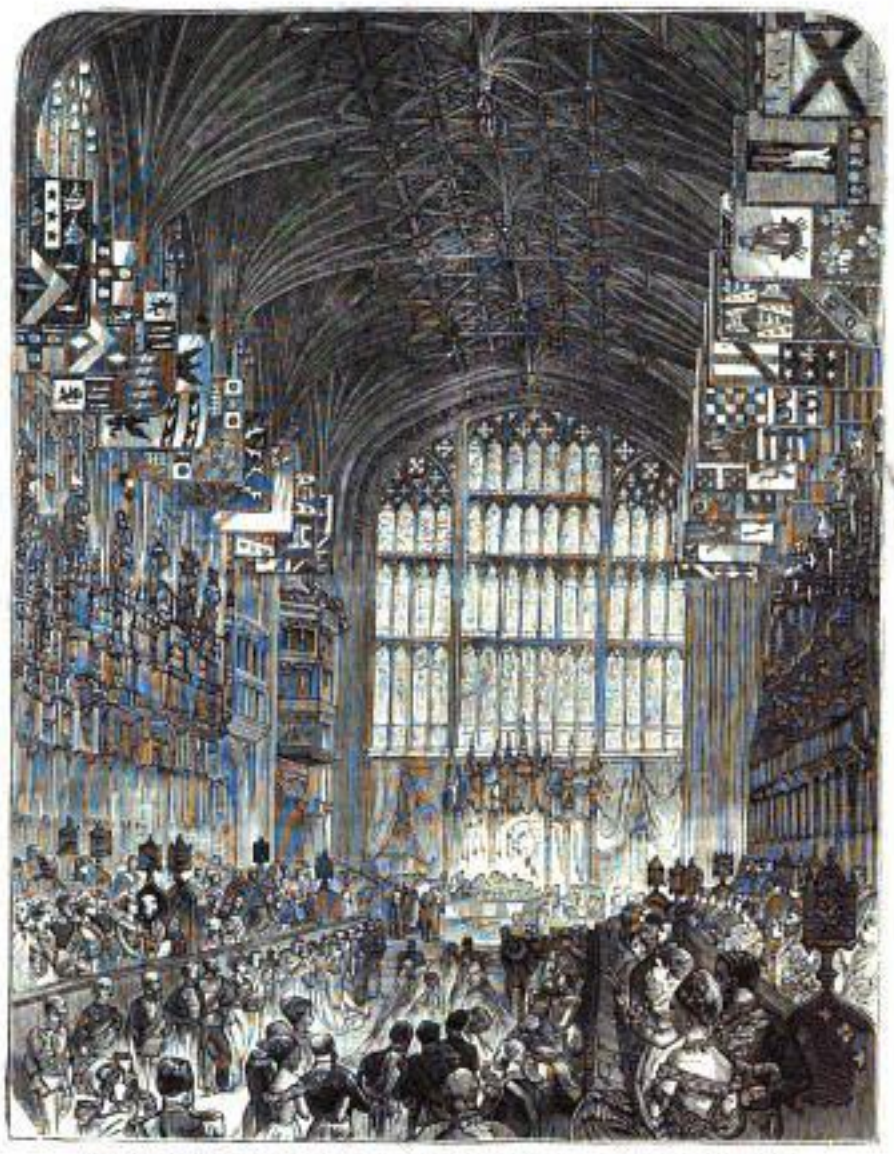
TWO THOUSAND French Communists will return from New Caledonia, while probably fifteen hundred, who were condemned in contumaciam, will be amnestied.

THE thirty-sixth race between the eight-oared crews from Oxford and Cambridge, rowed on the Thames on April 5th, was won by the Cambridge crew by two lengths.

IT is reported that a great Catholic bank, with a directorate in London and Paris, is to be established which shall unite in financial matters Catholics all over the world.

THE French Cabinet has decided to retain the façade of the main building of the Exhibition facing the river. The remainder of the site will again become a military drill ground.

A MADRID dispatch announces that the coalition for the electoral campaign of the Constitutionalists, Progressists and Republicans, professing the views of Señor Castelar, is an accomplished fact.



MANY members of a revolutionary committee have been arrested at Warsaw. The prisoners had revolvers in their possession when taken. Other arrests have been made elsewhere, making in all 300.

THE Haytian City of Miragoane, with a population of 6,000, was destroyed by fire on the 16th of March. The loss is put at over $1,000,000. Among the merchandise destroyed was between 2,000 and 3,000 bags of coffee and 1,500,000 pounds of logwood.

THE petty dispute between Chili and Bolivia in regard to the confiscation of certain nitrate works owned by a Chilian company has assumed grave proportions, inasmuch as Peru has concluded an alliance with Bolivia, and both nations have declared war against Chili.

HON. ANDREW D. WHITE.

PRESIDENT WHITE, of Cornell University, whose appointment as United States Minister to Germany was confirmed by the Senate in executive session on April 2d, is a son of Horace White, of Syracuse, and was born at Homer, N. Y., November 7th, 1832. He was graduated from Yale College in 1853, being the valedictorian of his class. The few following years he spent in Europe. While there he was, for several months, an *attaché* of the United States Legation in Russia, and in the season of 1854-55 he studied at the University of Berlin. Returning home, he became in 1857 professor of history and of English literature in the University of Michigan. He remained five years in Ann Arbor, and in 1863 visited Europe again, but only for a brief period.

In the Fall of 1863 Mr. White was elected from the Syracuse District to the State Senate, and there met the late Ezra Cornell, who afterwards founded the University which bears his name. The acquaintance grew out of Senator White's interest in educational matters and Senator Cornell's desire to found a collegiate institution where, to use his own words, "Any person can find instruction in any study." Mr. White had introduced the Bill which codified the school laws and that which created the new system of normal schools. His advocacy of these measures led Mr. Cornell to disclose to him his plan for a liberal institution of learning, and in 1865 Mr. White introduced the Bill which incorporated Cornell University. In 1866 he was chosen first president of the University, and soon afterwards he visited Europe to study modern educational methods and to purchase for it books and apparatus. After its founder, the University has been indebted to no one so much as to President White, who, to a very large degree, has formed and directed its system and character. From his own private fortune he has constantly given to it books, objects of art and sums of money. The handsome residence for the president of the University, on the University grounds, was built by him. The total amount of his gifts would probably reach fully $100,000. Besides his work as president, he has filled the chair of modern history, and his lectures on the history of France—especially the period of the great Revolution—has always been one of the most popular courses in the curriculum.

President White was a warm supporter of President Grant, and in 1871 he went to Santo Domingo as one of the commissioners sent to report on the question of annexation. In 1872 he was a delegate to the State Convention which met at Syracuse, and was made by the Conkling influence in it both temporary and permanent president. Two years ago he visited Europe for his health, and was appointed by President Hayes one of the Commissioners to the Paris Exhibition, and as such received the decoration of the Legion of Honor. President White's private library is one of the finest in the country, being especially rich in works pertaining to French history. He has published several addresses, essays and reports, and a volume of lectures on medieval and modern history. The new Minister speaks German and French fluently.

HON. ANDREW D. WHITE, UNITED STATES MINISTER TO GERMANY.—FROM A PHOTOGRAPH BY SARONY.

A SANITARY RAID UPON THE FRATERNITY OF TRAMPS.

THE month of March is a particularly busy one for the vaccinating corps of the New York Board of Health, as it is then that the greatest precautions are taken to prevent an epidemic of small-pox. Believing that many of the diseases that break out in various parts of the country are occasioned by the presence of tramps who carry the germs in their toes and filthy clothing, and knowing that early in the Spring the fraternity start out upon their nomadic career, the authorities wisely concluded that all tramps who could be caught in the city should be vaccinated. Accordingly, the assistant sanitary inspectors were detailed to precinct work all over the city, and on the 27th ult. made a simultaneous attack upon the arms of all tramps who had sought shelter in the police stations. Seizing an arm, the physicians made light cuts with their lancets, just drawing the blood. Then a point was rubbed over the little wound until the blood had washed off the vaccine matter, and the job was done. One point was used on each arm. The lancet was carefully wiped after each operation. Nearly two hundred males and females were vaccinated that night, and the visits of the physicians were continued night after night until more than one thousand had been treated. In some instances, notably among the women, vigorous objection was raised to the operation; but in the majority of cases the tramps submitted good-naturedly.

THE GRAY MATTER OF THE BRAIN.

A FRAGMENT of the gray substance of the brain, not larger than the head of a very small pin, contains parts of many thousands of commingled globules and fibres. Of ganglion-globules alone, according to the estimate of the physiologist Meynert, there cannot be less than 600,000,000 in the convolutions of a human brain. They are, indeed, in such infinite numbers that possibly only a small portion of the globules provided are ever turned to account in even the most energetic brains. In one particular passage of his book, Dr. Maudsley finds occasion to contrast the 15,000 words which Shakespeare employs for the expression of his ideas with the hundreds of millions of brain globules that must have been concerned in the production of this intellectual harvest.

BARB'S SECRET.

THE crape had not been removed from the door of the Lindens, and the will had not been read. It was only that morning that the body of the mistress had been laid in the tomb. Now a large party had returned to the house to dine, and, with a few exceptions, were decorously enjoying the choice repast prepared by Mrs. Northrup's old servants—or "Virginia's servants," some said. Since she was an only child she would inherit the Lindens, of course.

She sat at the head of the table now, a strikingly handsome girl, though but sixteen. Barbara Carr sat at the foot, white as marble. Virginia's face was suffused from violent weeping, but Barbara had not been seen to shed a tear.

"Strange," more than one of the company remarked. "One would expect her to show some feeling at the death of Mrs. Northrup, who was her best friend; adopted her from a foundling asylum when a child, and has always given her a good home, treating her as one of the family. But Barbara has always been a strange girl."

She was not pretty like Virginia, who resembled her father, the general, with her handsome eyes of cobalt-blue and fluffy golden hair. Barbara was slight and plain, with a thick white skin like a magnolia leaf and purple-black hair, always bound tightly away from her temples. She was the same type of woman as Mrs. Northrup—quick, proud, resolute. You could not say wherein exactly her charm lay, but she always impressed you with her individuality.

A move was made at last to rise from the table. There was no need for Allan Neale to speak to the company. "My friends, we will assemble in the drawing-room and hear the will read." Most of the company, having satisfied their appetites, were ready and eager for the event.

The drawing-room, with its frescoed ceiling, black velvet sofas and gilded chairs, was elegant and costly, like the rest of the mansion. It was said that Mrs. Northrup had brought the general the money with which it had been purchased. The present guests soon settled themselves and subsided into silence as Mr. Allan Neale rose to read the will.

It chanced that he stood between the two girls, as fine-looking a young man as ever did credit to the best of advantages. Of fine scholarship, good family, handsome personal presence, he had, from a boy, been a friend of Mrs. Northrup, and during the past five years had been her lawyer. Some said that he was engaged to Barbara Carr. Certain it was that he made no disguise of loving her.

His cultured enunciation broke the silence as he began to read the will. After making bequests to old servants and personal friends and dependants, the estate of the Lindens and all remaining property was bequeathed to Virginia, with the exception of fifteen hundred dollars bequeathed to Barbara, with a proviso that she was always to have a home at the Lindens.

There was a murmur of approval through the room. But Allan Neale, who had seemed to read with difficulty, after a little put the paper from him upon a table.

"I have reason to know," he said, "that there was another will than this."

There was a breathless silence in the room.

"I have known Mrs. Northrup long," continued Allan Neale, "and I do not think that this was her final decision in regard to her property."

As he finished speaking, he turned and looked sharply down upon Barbara, but she sat unresponsive to his questioning glance.

"In case I am mistaken," he said, evidently making an effort to control his impulsive nature, "I must congratulate Miss Virginia upon her ample fortune."

The young girl blushed vividly as he took her hand, and then turned with quickened breathing to receive the congratulations of her other friends. After a moment, Allan Neale stepped back and looked again at Barbara. She appeared conscious of his gaze, yet would not meet it. Rising at last, she left the drawing-room by the lower door. Passing quickly forward, he emerged from the door at the foot of the front stairs and confronted her.

Proud as a princess, she seemed to shrink and tremble before him.

"Barb," he said, reproachfully. "Stop," he added, as she put her slim white hand on the carven post, and essayed to pass him. "What does this mean?"

"What is wrong?" she asked, faltering. "Virginia is Mrs. Northrup's daughter——"

His eyes seemed to pierce her through.

"You are bound to keep your secret," he said, then; "but remember that it is no secret to me. I talked with Mrs. Northrup a long evening before she was sick, and she made a confession to me. I was her legal adviser; she knew she had not long to live, and she was in such trouble regarding the final disposition of her wealth, she told me of this will which I have read to-day; but a month later she pointed to her writing-desk, and said, 'You will find my will there when I am gone.' I have every reason to believe that she made another and far different one. You know why she should, Barb."

His words, voice and act seemed to plead with her, as he took her hands, and would have drawn her to his breast.

"I know why I should keep another's fame fair," she answered.

Saying this, she eluded him, and ran quickly up the stair

She gladly escaped from an observation to which he was indifferent, for people were passing in and out of the hall. He drew a deep breath, and turned to look for his hat and cane.

Henceforth, a slight defiance mingled in Barb's air towards him. Sometimes his glance reproached her. But he came and went, henceforth, silent on the subject; and Virginia trembled like a leaf at his approach.

At length Allan Neale asked Barb to see her alone. It was late in the Fall. The roseberries were red in the garden.

"Will you fix our wedding-day, Barb? Long ago you promised me that some time you would be my wife."

"You wished it, knowing all, Allan?"

"I wished it, knowing all, Barb."

"And I consented," she added, absently.

"Yes," regarding her downcast face with a sudden alarm.

She looked up at last.

"I promised you then, Allan. I consented to be your wife, after long talk, you remember. But——"

"But what, Barb?"

"There is a bar between us now, and we had better not marry. You would never be satisfied."

"Dear Barb, I do not care for the money."

"But you think me wrong. You would always think so. Oh, it is hard!" and she broke out crying.

He walked the floor in great agitation.

Barb grew calm.

"A thousand times it would come up in the future, in a thousand ways, and I might give way," her voice breaking again.

He came and stood before her.

"Barb, I love you. No other woman could ever be to me what you are. Because you are so true and noble in yourself, I can overlook——"

"Yes," she interrupted, with tightening lips.

"I can overlook freely," he continued, hastily, "a fact which you made a bugbear, secretly, for a long time, denying me hope. You were morbid, dear; you did yourself injustice," hurriedly finishing the subject. "I say again, I love you, Barb, and here I promise, if you will become my wife now, to keep silent on this subject for ever more."

He paused.

"That would effect nothing," she said, sadly. "It would have its weight, its bearing on our lives just the same. No, we had better remain apart. I can bear my burdens alone."

She was not unwise, for Allan Neale showed himself not perfect. A spirit of resentment took possession of him.

"I shall plead with you no more," he said, at last, in anger—took his hat and departed.

In two days Barb had gone South for the Winter.

Still Allan Neale came and went at the Lindens, occupied in settling the late Mrs. Northrup's affairs. Before Christmas he discovered a change in Virginia. She had lost the infantile roundness of cheek, the timid air of girlhood. More, she was ill; the blue eyes and the blue-veined temples were hollow. Her manner was languid and weary; yet, when he came to know the truth, he never dreamed what anguish the passionate, indulged girl suffered.

"You live like a nun," he said to her, "away from all the occupations and pleasures of youth. Do you care for none of these?"

"For none of these."

"Why are you so melancholy? What do you wish for, Virginia?"

"For you," she confessed. "I have worshiped you from a child. I hoped you would come to love me; but you are to marry Barb."

For an hour the man was tempted. Here was youth, beauty, wealth; why long for that proud white face he had banished? But Allan Neale was essentially noble, therefore he conquered.

"I do not love you, Virginia, as one should love the woman he marries. Years ago I gave my heart to Barb; she has it."

A few weeks later he telegraphed to Barb:

"Will you come home to Virginia? She is ill—dying."

Barbara immediately terminated her visit. She was ten years older than the young girl, and had always been kind and sisterly. She came to the Lindens, and had an early interview with the family physician.

"A tendency to consumption," said Dr. Thorp. "But she could throw it off if she would. She will not try."

No, Virginia would not try to get well. All her young sky was darkened, and she could not see beyond it. She had no depth of charter with which to combat such a disappointment, and so she died.

People said, "Barbara was a strange girl, she wept so bitterly. The Lindens were hers now; and, besides, Virginia was not her sister."

Allan Neale kept aloof from both. At last, when Barb was all alone, he came back.

"I have behaved very badly," he said, penitently.

"I tried you too hard, Allan, but I will marry you now since I may be mistress of the Lindens without revealing to a censorious and curious world that I, too, am Mrs. Northrup's daughter."

DIAZ AT HOME.

PRIVATE AND OFFICIAL LIFE OF THE MEXICAN PRESIDENT.

PRESIDENT DIAZ honored us—the artist and myself—with an invitation to visit him at his private residence, naming 8 A. M. for early breakfast, the habit in Mexico being to take chocolate or coffee, with oranges, eggs and sweet rolls, between seven and eight o'clock. At noon comes *almuerzo*, an elaborate *déjeuner à la fourchette*, consisting of seven or eight courses, heading off with soup, and winding up with black Cordoba coffee. Fruit is eaten in quantities at this meal, especially the *granadita*—lemon-sized, lemon-shaped, hard-shelled, the interior full of sweet seeds in a thick, gummy liquid, unpleasantly reminding of frogs' spawn. This fruit is considered especially wholesome, and is "operated" by means of a spoon, the shell being cracked like that of an egg. At half-past six o'clock *comida*, or dinner, is served. This is the great event of the day; the removes mount up to fifteen or sixteen, the *frijoles*, or black beans, making their appearance rather far down on the list. At a very elegant *petit dîner* given by Mr. and Mrs. George W. Allen, of St. Louis, at the Café de Paris, the courses numbered eighteen, including the muchly-vaunted and muchly-coveted "La Mancha" oysters. This bivalve is very small, very black, very snail-like and repulsive-looking. It inhabits a dingy, dinted, ragged shell, but its flavor, although delicate, is exceedingly attractive. While on the subject of "the dine," I submit the bill of fare of a small dinner given in honor of a very select few of the deputationists by Señor Riva Palacio, Minister of Public Works, at his palatial residence, Calle Marascala:

POTAGES.
Rabioles à la Mexicaine, Arroz à la Paisana.

RELEVES.
Filete à la Criolla, Hauchinango à la Holandesa
Bacalao à la Vizcaina, Camarones Frescos.

ENTREES.
Volovants à la Financière,
Codornices à la Provençal, Foies Gras,
Patas à la Veracruzana, Croquetas à la Duquesa,
Punch à la Romaine.

LEGUMES.
Esparrajos.

ROTIS.
Roast Beef, Ensalada,

ENTREMETS.
Jelatinas, Pudding, Cremas, Helados.

DESSERT.
Quesos, Frutas, Pastelas,
Dulces Surtidos à la Mexicaine,
Café de Cirnapan, Te.

At the Fonda del Gillow we indulged in a Mexican dinner, pure and simple. Every dish was at white heat with chili, and, when all was over, our throats felt as though torch-light processions had passed down them. The fish never follows the soup; it appears at a portion of the dinner when, according to our ideas of set dinners, its presence is by no means desirable. They have red mullet in perfection, and a white lake-fish, small and flat, possessing a delicious flavor—a cross between that of whiting and black sole.

To return to our visit to the President. The hour of eight was booming from out the clock in the tower of the grand old Cathedral as we crossed the Plaza Mayor, and at two minutes past, we found ourselves opposite a huge gateway in the western wing of the palace. Passing beneath an archway, we stepped into a small courtyard, a blaze of sunlight, and glowing with flowers. A soldier, minus his Remington, was sitting upon the balustrade of the stone steps leading to the President's apartments, and as he smoked his cigarette he gossiped with a retainer, engaged in washing a very elegantly appointed double brougham. A sort of major-domo, in plain clothes, made his appearance, who begged of us to follow him; and ascending the steps, we passed along the gallery into an extensive low-ceilinged apartment—a drawing-room—furnished—well, *not* after the fashion of a "symphony" in sage-greens, or an "arrangement" in steel-grays. Leaning against the wall was a life-size portrait in oil of the President's only son, a boy of five years, seated upon a sinewy little pony, gorgeous in filigree leopard-skin housings and those picturesque trappings without which no *caballero* appears upon the Paseo. This portrait has been presented to General Diaz by the Army, and it is a gift of which he is intensely proud.

While we are "in waiting" I shall say a few words about our august host. Porfirio Diaz is forty-seven years of age. He was born at Oaxaca and was a soldier from his cradle. In 1854, when but two-and-twenty, he took a very active part in the Revolution in favor of reform. He was severely wounded at Ixcapa, being then—1856—a captain in the National Guards, and at Oaxaca he carried by assault a trench that was defended to desperation. In 1858, as military commander of the Department of Tehuantepec, he, with a very insignificant force, routed the enemy and succeeded in establishing peace. This victory gained for him his lieutenant-colonelship. During the year 1859 he was perpetually in the field. In 1861 he became Deputy in the National Congress, when Leonardo Marquez attempted to take possession of the capital. Putting himself at the head of a company of troops from his native town Oaxaca, he drove Marquez from the city, thereby winning his major-generalship. When the French broke the compact of Soledad, General Diaz, with a small army, flung himself between the legions of the Gaul and the retiring forces of Zaragoza. On the 5th of May, 1862, he covered himself with glory by the admirable manner in which he conducted the pursuit of the French, and again at the siege of Puebla, where he fought with pre-eminent valor. Later on, he endeavored to defend Oaxaca without siege-guns against several thousand French troops, and was compelled to surrender. He was made prisoner and sent to Puebla, from whence he contrived to effect his escape. He afterwards campaigned in the States of Guerrero and Oaxaca, and on the 15th of October, 1866, fought and won the famous battle of Carbonera, where he took five hundred Austrian prisoners, all the Austrian artillery, together with seven hundred rifles. He then marched on the city of Puebla, assaulted and captured it, turning to give battle to Marquez who was in pursuit of him, and to besiege and finally capture Mexico. In the revolutions which he led in 1872 and in 1876, his abiding desire was the establishment of the principles of no re-election to the Presidency, a system which has been found to work so well, that General Diaz may be safely congratulated upon having achieved his purpose. This valiant warrior was proclaimed Constitutional President of the Republic of Mexico on the 5th of May, 1877, to continue in office until the 30th of March, 1880.

The President received us with a quiet cordiality that instantly placed us at our ease. He was pleased to see us, and his manner betrayed his gratification. Brusque but gentle, outspoken but cautious, he gives one the idea of possessing an inexhaustible fund of bodily and mental energy. When excited, his dark-brown eyes literally flash, but when in repose they are soft, and gentle, and appealing, as those of a hind's. "Come into my sanctum," he said; "you may find something there that will amuse you."

This apartment bespeaks the soldier. It bristles with insignia of the "pomp and circumstance of war." Deadly implements meet you at every turn. On the left is a stand from which hang suspended half a dozen swords, conspicuously, that presented to him by the army, hilted with diamonds, and the sword, the gift of the City of Mexico, hilted with emeralds. His own trusty blade, service-worn and bearing "dent of bloody field," modestly hangs in the background. Proudly enfolding the sabres is the flag of the regiment of Oaxaca, the corps in which he won his spurs, and in which he still feels the deepest interest. A water-color drawing upon one of the walls represents a soldier of the Oaxaca in a semi-kneeling posture engaged in adjusting his *guaraches*, or sandals, and the pleased expression on the President's face, as he explained the different points in the soldier's uniform—differing as it does in some particulars from that of the remainder of the army—revealed his earnest satisfaction with the theme. A magnificent flag, bearing the words "The 5th of May" upon it, also decorates the sword-stand. On a round table in the centre of the apartment is a stand of arms in miniature—but all made to scale, from the old flint musket to the latest improvement in Peabody-Martini. The merits of these toy guns were collectively and individually explained to us by the President, who handled each Lilliputian weapon with the touch of an expert. General Diaz swears by the Remington. "After ten years' experience, I have only had ten per cent. rendered unfit for use," he said, "against ninety per cent. of other makers."

On the centre table are miniature cannon made to scale by his own hands.

"I am rather proud of this," he exclaimed, banging the standing desk with his clinched right hand. "I made this desk, and a bed for my wife, while I was waiting for a decision about the lease of a sugar-plantation;" adding, with a smile, "I was very near exchanging the sword for the hoe."

"But had you done so, Cincinnatus-like, you would have returned from the plow."

"I suppose the trumpet *would* have spoiled the sugar-cane," he laughed.

A very fine map of the battle-field of Puebla adorns one of the walls, and it was intensely interesting to go over it with the man who waded every inch "fetlock high in blood." General Diaz was good enough, for my edification, to fight his battle o'er again, and as each remembered incident sped across his memory, his eye flashed, his nostrils expanded, and he looked as though the very blast of war was being sounded in his ears.

On the desk lay a copy of the Chicago *Western Watchman*, "done" into Spanish; and the manner in which this commercial periodical was gotten up must, of a surety, have given the Mexicans a pleasing idea of the enterprise of American journalism. I encountered Mr. Coyne's publication everywhere, from the sanctum of Señor Riva Palacio to the impenetralia of the Mexican Mint, and everywhere were its pages thoroughly dogs-eared, so anxious do the Mexicans appear to be, to investigate the inner life of American commerce.

A picture of the steamship *City of Havana* hangs in bold relief. It was from a stateroom-window of this vessel that Diaz plunged into the Gulf of Mexico to swim for liberty and life, the purser, who was in his confidence, spreading the intelligence that the plunge meant suicide. When Diaz came into power he did not forget the man who stood so loyally by him at such a momentous crisis in his destiny.

The President is an accomplished numismatist and a skilled conchologist. The facile manner in which he pronounced the jaw-breakers appertaining to the nomenclature of his collection of shells impressed me with a feeling akin to awe. His collection of coins is a very valuable one, whilst its arrangement would do honor to the Society.

On a small table lies the hammer with which he drove in the first nail of the railroad between the City of Mexico and Toluca, with a piece of the rail burnished bright as silver. A model of a Mexican house and Anciendo, constructed by his own hands, also forms a prominent feature in the apartment.

"This is an article that I value very much," he observed, as he handed me for inspection a very stout walking-cane of, to me, unknown wood, surmounted by a gold knob. "It is the cane used by General Antonio Leon, who was shot at the battle of Molino del Rey."

A bookcase, containing a small military library, occupies one wall. I glanced at the books. They all breathed of grim-visaged war, from Julius Cæsar's invasion of Gaul to the latest edition of Fritz's *kriegspiel*.

A Mexican saddle is a thing of beauty, mounted as it is with elaborate silver ornaments, silver embroidery, silver braid and leopard-skin, with silver-tipped girths and silver stirrups. The President has a different saddle for every special occasion, some of these "leathern conveniencies" being of considerable value. He keeps his state saddles, numbering about a dozen, in a small ante-chamber adjoining his study. Here, also is a case containing a collection of marbles from his beloved valley of Oaxaca, and a model of the Cathedral, executed with Chinese faithfulness, in cork-wood.

Digitized by Google

After having courteously conducted us all through his house, and, Mexican fashion, requested us to make it our own, we were duly presented to Señora Diaz, a lady whose beauty, grace and dignity reflect lustre upon the exalted position won for her through the sterling honesty, the signal valor, and recognized ability of a husband whose name is a talisman through the length and breadth of the land. With Thackeray I hold the mahogany to be inviolable, but one little incident that occurred during breakfast craves narration. An obstinate cork refused to be coaxed from the neck of a bottle containing a precious vintage. One servant tried it, then another, and yet a third. The corkscrew was a patent one, and this may explain the difficulty. The President sprang from his chair, the spirit of the mechanic strong within him, and that which these experts failed to do, he achieved after one careful glance at the mechanism of the corkscrew. I should mention that Señor Davis, a most accomplished English scholar, was also a guest of the President upon this occasion. General Diaz rises at 5 o'clock, rides on horseback to Chapultepec, six miles, takes a bath, returns for early breakfast; reads from 9 to 10:30, meets the Cabinet from 10:30 to 12:30; then comes *almuerzo*, after which he receives till 6 o'clock, at which hour he accompanies La Señora in a carriage ride on the Paseo till dinner, and from 8 to 10 he is "at home" for society visitors. Verily, Porfirio Diaz encompasseth a long day's work. Before taking leave, General Diaz begged of me to express to Mr. Leslie the debt of gratitude that he, as the representative of the entire Mexican nation, and as speaking the sentiments of his people, felt under for Mr. Leslie's special recognition of Mexico, in sending two of his staff to illustrate the proceedings of the American Industrial Deputation.

"I know your journals well," he said, "and the United States has just reason to be proud of an institution such as that of which Mr. Leslie is proprietor."

Upon the following morning we paid a visit, by the President's invitation, to the palace. When we arrived, he was attending a meeting of the Cabinet, and by grace especial we got a peep behind the scenes. The Ministers were seated around a large oval table, covered with a scarlet cloth, each Minister having his portfolio placed opposite to him. The President sat at the right-hand middle, his Cabinet in the following order: Foreign Affairs, Finance, Home, War, Justice, Public Works. The President's portfolio is of Russia leather, with his monogram gilt in relief. The chairs are of carved oak with high backs and cane bottoms. The carpet and curtains are crimson. Blue books lay about in hopeless confusion, and in ebony bookcases stood a set of the national decrees. A great red silken cord hung dangling from the roof, this to call the guard.

From the apartment containing these potent grave and reverend seigneurs we passed to the President's official bureau. This chamber is oaken-roofed, the beams being gilt, and it is lighted by two windows. The furniture is rosewood, upholstered in green silk, the curtains of crimson silk, and the Turkey carpet of every color in the rainbow. It boasts two shabby mirrors, a rare Louis XIV. clock, and a silver flower-stand. Against the northern wall stands the President's desk of ebony, quaintly carved, beside it a telephone, and beside the telephone a bell-rope communicating with the guard.

During our visit to the palace the President showed us two very remarkable chairs of the Cortez period, the frames of carved oak, black as ebony from age, the upholstery of a rich brocade, such as Isabella the Catholic might have worn in her royal train. A pair of Venetian mirrors of the same date are also amongst the curio of the palace.

TROUT-FARMING ON LONG ISLAND.

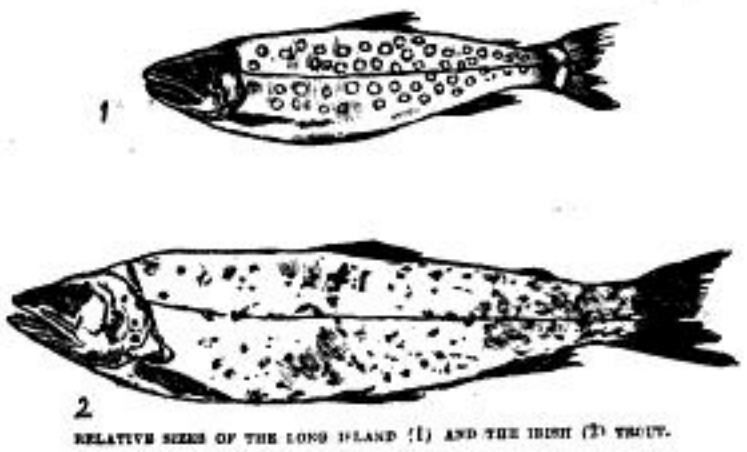
IT was the 1st of April—the opening day—and enthusiastic trout-fishers, rod and basket in hand, thronged the cars of the Long Island Railroad *en route* to the happy fishing-grounds for which the island, thanks to the science of pisciculture, is now so rapidly becoming famous. I did not join these expectant disciples of Izaak Walton, having no ambition to prove an April fool at one end of the rod, but, diverging a little from the beaten track, alighted at Roslyn, and, trudging past the picturesque home with a letter of introduction from the eminent pisciculturist, Mr. Eugene Blackford, of Fulton Market, whose exhibition of trout, on the 1st, proved so startling a success, the artist and writer were received by Mr. Clapham *con amore*.

We found him in his hatching-house, a long, low wooden building, built over a crystal brook, lined with golden sand. Great bars of sunlight flung themselves on the rippling water through chinks and crannies, to reveal, swimming in twelve inches of water, and thick as leaves in Vallambrosa, hundreds of trout aged eighteen months, and weighing about half a pound each.

"I raise my trout in these troughs," laying his hand upon a long, shallow, gravel-lined trough. "I first take the fish, male and female, and, squeezing their spawn and smelt respectively into a tin dish, add water and gently shake till impregnation takes place. No fish, comparatively speaking, has larger spawn than the trout. The eggs are about the sixteenth of an inch in diameter, and resemble amber beads. The spawning time is from the 18th of October to the 1st of January, but, strange to say, one of my boys caught a trout yesterday in the brook, full of spawn. After washing and impregnation I place the eggs in this screen"—a small, gauze-wire screen, 12 inches long by 8 broad—"and lay the screen in this trough. You will perceive that about a quarter of an inch of water is perpetually passing over the eggs. I leave the spawn in the seine from 35 to 45 days, according to certain conditions of the temperature, and until the yolk-sack is absorbed. Then I turn out the fry by degrees, and place them in small ponds, an operation I shall have the pleasure of showing you presently."

"What percentage of the eggs do you lose?" I asked.

"About ten per cent. I feed my trout—I mean the larger fish—after a fashion of my own," he continued. "For six months I give them boiled clams. At first they refused the food, but having acquired the taste, they became crazy over it. Trout as a rule is somewhat insipid in flavor, and needs strengthening. This food imparts a sea flavor much prized by *gourmets*. I also grow cress at the upper end of the brook, both in the open and under glass. Cress breeds a peculiar description of animalculæ that the trout feed on. I use salt-water minnows in large quantities for feeding purposes. Seventy-five cents per pound for trout all the year round is Long Island price, but some farmers have received as high as a dollar-twenty-five."



From the nursery, the artist and I accompanied Mr. Clapham to a point in the brook where he dexterously launched a few thousand fry into freedom, there to grow, and fatten and batten until deemed worthy of transfer to a large pond, and from thence to the table.

Mr. Clapham experiences some difficulty in keeping his one-pound trout in bounds, as they will jump anything under two feet high. To behold them flinging themselves up a miniature waterfall that spans the brook is one of the sights of Troutbeck. Mr. Clapham is about to extend his operations in trout-farming. May his efforts be crowned with success.

General Grant in India.

THE accounts from Calcutta represent that extraordinary attentions and honors were paid to General Grant on his arrival there. On his landing at the port, which extends ten miles along the Hooghly, and which was crowded with men-of-war and merchant-ships, he was received by the representative of the Viceroy and conducted to the official residence. Every attention that could be paid a crowned head or a most distinguished statesman was extended to the general. After being entertained at dinner in the Government House, and having a night's rest, he was escorted through the city and shown the memorable historical sights, as well as the present commercial and governmental institutions of the Indian capital. The eminent native Indian citizens, as well as the English officials and prominent citizens, vied with each other in doing honor to the American general.

At Bombay, General Grant resided at the Government House, which is thus described: "The house is a group of houses. As you drive in the grounds through stone gates that remind you of the porter's lodges at some stately English mansions, you pass through an avenue of mango-trees, past beds of flowers throwing out their delicate fragrance on the warm morning air. You come to a one-storied house surrounded with spacious verandas. There is a wide state entrance covered with red cloth. A guard is at the foot—a native guard wearing the English scarlet, on his shoulders the number indicating the regiment. You pass up the stairs, a line of servants on either side. The servants are all Mohammedans; they wear long scarlet gowns, with white turbans; on the breast is a belt with an imperial crown for an escutcheon. They salute you with the grave, submissive grace of the East, touching the forehead and bending low the head, in token of welcome and duty. You enter a hall and pass between two rooms—large, high, decorated in blue and white, and look out upon the gardens below, the sea beyond and the towers of Bombay. One of these rooms is the state dining-room, large enough to dine fifty people. The other is the state drawing-room. This house is only used for ceremonies, for meals and receptions. You pass for one hundred paces under a covered way over a path made of cement and stone, through flower-beds and palm-trees, and come to another house. Here are the principal bedrooms and private chambers. This also is one story high and runs down to the sea, so that you can stand on a balcony and throw a biscuit into the white surf as it combs the shore. These are the apartments assigned to General Grant and his wife. There are drawing-rooms, ante-rooms, chambers, the walls high, the floors covered with rugs and cool matting. As you pass in, servants, who are sitting crouched around on the floors, rise up and bend the head. You note a little group of shoes at the door, and learn that in the East custom requires those in service to unslipper themselves before entering the house of a master. Another hundred paces and you come to another house, with wide verandas, somewhat larger than the general's. These are the guest-chambers, and here a part of our party reside."

RELATIVE SIZES OF THE LONG ISLAND (1) AND THE IRISH (2) TROUT.

that is to know William Cullen Bryant never again, found myself after a brisk "three miler" at Troutbeck, the trout farm of Mr. Thomas Clapham.

"If shad," quoth I, "has been transferred from the table of Dives to the board of Lazarus through the instrumentality of pisciculture, why not trout, especially as the artificial fecundation of the eggs of the latter can be so easily effected?"

Troutbeck is a charming nook—all trees, and flowers, and dells, and brooklets, with a distant glimpse of the blue waters of the Sound, and a lordly dwelling-house perched high upon a headland, of which Mr. Clapham is also the proprietor. Armed

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

The Last Royal Wedding.

Our present illustrations give further views of the marriage of the Duke of Connaught to the Prussian Princess Louise Margaret in St. George's Chapel, Windsor, on March 13th, of which we have given a full description. The new residence of the royal couple at Bagshot Park, Surrey, is built in the Tudor style, freely adapted to the requirements of the present day. The principal materials used are red brick facings from Bracknell and Portland stone dressings; the roofs are covered with Delabole slates, of a pleasing gray color. The front, facing north, has a tower covered with a pyramidal roof rising behind an embattled parapet, and there is an oriel window over the principal entrance doorway. As the bedrooms on the second floor of the mansion are contrived in the roof, this has necessitated the introducing dormer windows of lofty proportions. On the south side, on the first floor, is the Duchess's boudoir, with a projecting oriel window, forming a picturesque feature on that front. The large window lighting the principal staircase, on the west side of the building, is the only one which is traceried; this will be filled with glass displaying heraldic devices and other ornaments. But the windows in general are square-headed, with stone mullions and transoms, glazed with plate-glass. In plan, the main part of the house may broadly be described as consisting of a vestibule, in the lower part of the tower, with the master of the household's room at the side; and a large central saloon, lighted by a lantern, out of which the principal rooms on ground and first floor open. The staircase-hall adjoins this, and extends to the height of two stories of the building. The oak staircase and saloon walls will have a wainscot dado, and, when complete, will be very effective. The servants' offices are in a wing on the east side of the mansion, the kitchen having a lofty open timber roof, with a lantern. Owing to the considerable fall of the ground on the site, a high terrace on the south side has been formed, and advantage taken to have an extensive vaulted basement for cellarage. The terrace will be hereafter prolonged, and, when completed with their balustrades and steps, will have a good effect.

The Plague in Russia.

That the plague has raged in Astrakhan there is no doubt, for Count Loris Melikoff would not have been sent to the province, armed with unlimited powers, had the danger not been very great. We are now told that the plague has been in reality stamped out, but that it is not improbable that it may again appear in the infected districts. The suspected houses were isolated from the others by a cordon of soldiers, who only allowed the priests to pass. At such times, when all intercourse with the deceased was prohibited, the last sacrament was administered by means of a rod, which the priest held out to the communicant. The wretched creatures who act as croque-morts, or burial-men, were recruited from amongst the convicts, those who survive being granted their liberty at the expiration of the plague. These men naturally avoided contact with the corpses as much as possible, and employed cords and hooks for removing the victims; also they were expected to reside at a distance from other people, and to avoid meeting persons in the streets. The destruction of rookeries in large cities and towns cannot fail to be of great advantage, especially as being likely to diminish the prevalence of epidemic disorders. It is impossible to say how many people have fallen victims to this dreadful disease, the Russian official journal giving the number as 208, and other informers stating it to be 2,000.

The Revolt in New Caledonia.

Every nation that has to deal with wild tribes, whether on this continent, Africa, or the islands of the Pacific, finds the task a difficult one. The French in New Caledonia have been as much troubled as the English with the Zulus or we ourselves with the Cheyennes. All resort to one plan, and that is to use native against native, wisely or unwisely. Our illustration shows Lieutenant Serran, of the French Navy, leading over the mountain ridge of the island a war party of two hundred warriors of the Canala tribe, commanded by their chiefs, Kake and Gelima. The fellows may be all faithful for the time, but it required some nerve for a man to commit himself alone into their hands as commander.

Dahomey Priest Spinning Sacred Cotton.

It may seem strange to those persons who connect priestcraft with idleness and ignorance that a Dahomey priest should know how to spin cotton or do anything useful; but in that land of the fetich, the skull and the human sacrifice, it does not necessarily follow that a priest should not always be a tradesman. The Dahomey priest can work for his own living with his own hands. Among the gods of Dahomey, a high place is assigned to lofty and beautiful trees, among which the silk cotton is the most revered. The ordinary way of gathering and spinning it is thus described: It is gathered and picked and spread out on mats to dry in the sun; when wanted it is placed in little heaps, and a small bow is used to separate the fibres and give it a fluffy appearance. It is then fastened to a stick about a foot long and is ready for spinning. The instrument for this purpose is a thin slip of bamboo, stuck through a heavy round piece of clay, which acts as a fly, and the whole is then twisted by the fingers, the weight of the fly generating sufficient momentum to keep it in motion for a considerable time. The end of the thread twisted from the bundle of cotton to the distaff is attached to this, and as it twists round, the cotton is disengaged with the right hand, and when a thread of sufficient length to allow the spinner to touch the ground has been spun off, it is wound round the spindle stick, hitched over its top, and the operation is continued.

The Warrior's Return.

The subject of this sketch is the return of a Ghoorkha warrior to his native land. True, he has no wounds to show, no medals decorate his sturdy breast, no spoils has he of the defeated enemy. Still, if fortune had given him the chance, there is no doubt that the possession of all these would have been his. He is surrounded once more by the natives of his own land. He explains, with much satisfaction to himself and his hearers, the new rifle with which he is armed. A Parsee examines the "kookerie," thinking with horror what execution it would effect on his stout person if engaged in hand-to-hand conflict with its owner. The Bombay policeman stands aloof, smiling complacently on a scene which he, from his military position, patronizes with some condescension.

AT HOME AND ABROAD.

—THE receipts from internal revenue for March were $7,305,130, and from customs, $12,899,902.

—THE question of re-establishing capital punishment in Switzerland must be referred to a popular vote.

—THERE is talk in New Orleans of establishing a line of cattle-carrying steamers from that port to Liverpool.

—BIRMINGHAM, England, is importing hay-forks, clocks, apple-parers and clothes-pins from Philadelphia.

—A RECENT census shows that Portland, Oregon, has 17,225 inhabitants, and that 1,832 of them are Chinese.

—THERE are 240 acres of strawberries in and around Charleston, S. C. The yield, it is estimated, will be over 700,000 quarts.

—THE Canadian lumbermen say the past Winter has been one of the most favorable on record for getting out timber and saw logs.

—BEFORE leaving Adrianople General Skobeleff exhorted the Bulgarians to obey the Sultan, and is stated to have departed amid cheering.

—KING HUMBERT of Italy has commuted the death sentence of Giovanni Passannante, who attempted to assassinate him, to penal servitude for life.

—MOST of the carragreen or Irish moss used for cooking purposes in this country is gathered at Scituate, Mass., where about 150 families are engaged in that labor.

—THE Tennessee Legislature has passed a Bill authorizing the State Board of Health to establish quarantine whenever and wherever it may deem it advisable to do so.

—THE French have an ingenious air-meter by which the amount of air a person breathes can be accurately measured. The average amount of air required by an adult is 185 cubic inches per minute.

—THE greatest depth yet discovered in the Atlantic is 3,875 fathoms, at a point north of the Virgin Islands, between St. Thomas and the Bermudas. The mean depth of the Atlantic is a little over 2,000 fathoms.

—THE German Department of Public Health has declared its opinion that since the plague in Russia is non-contagious the removal of the prohibition against the importation of many articles except rags is permissible.

—THE Tennessee State Senate has concurred in the House Amendment to the Bill to compromise the State debt at fifty cents with four per cent. interest, to be submitted to the people for ratification, if the bondholders accept the proposition.

—THE German Protectionist Party are now assailing the present coinage system. They condemn the pure gold standard as hurtful to the interests of Germany, and recommend a return to the small-notes system and the issue of plenty of paper money.

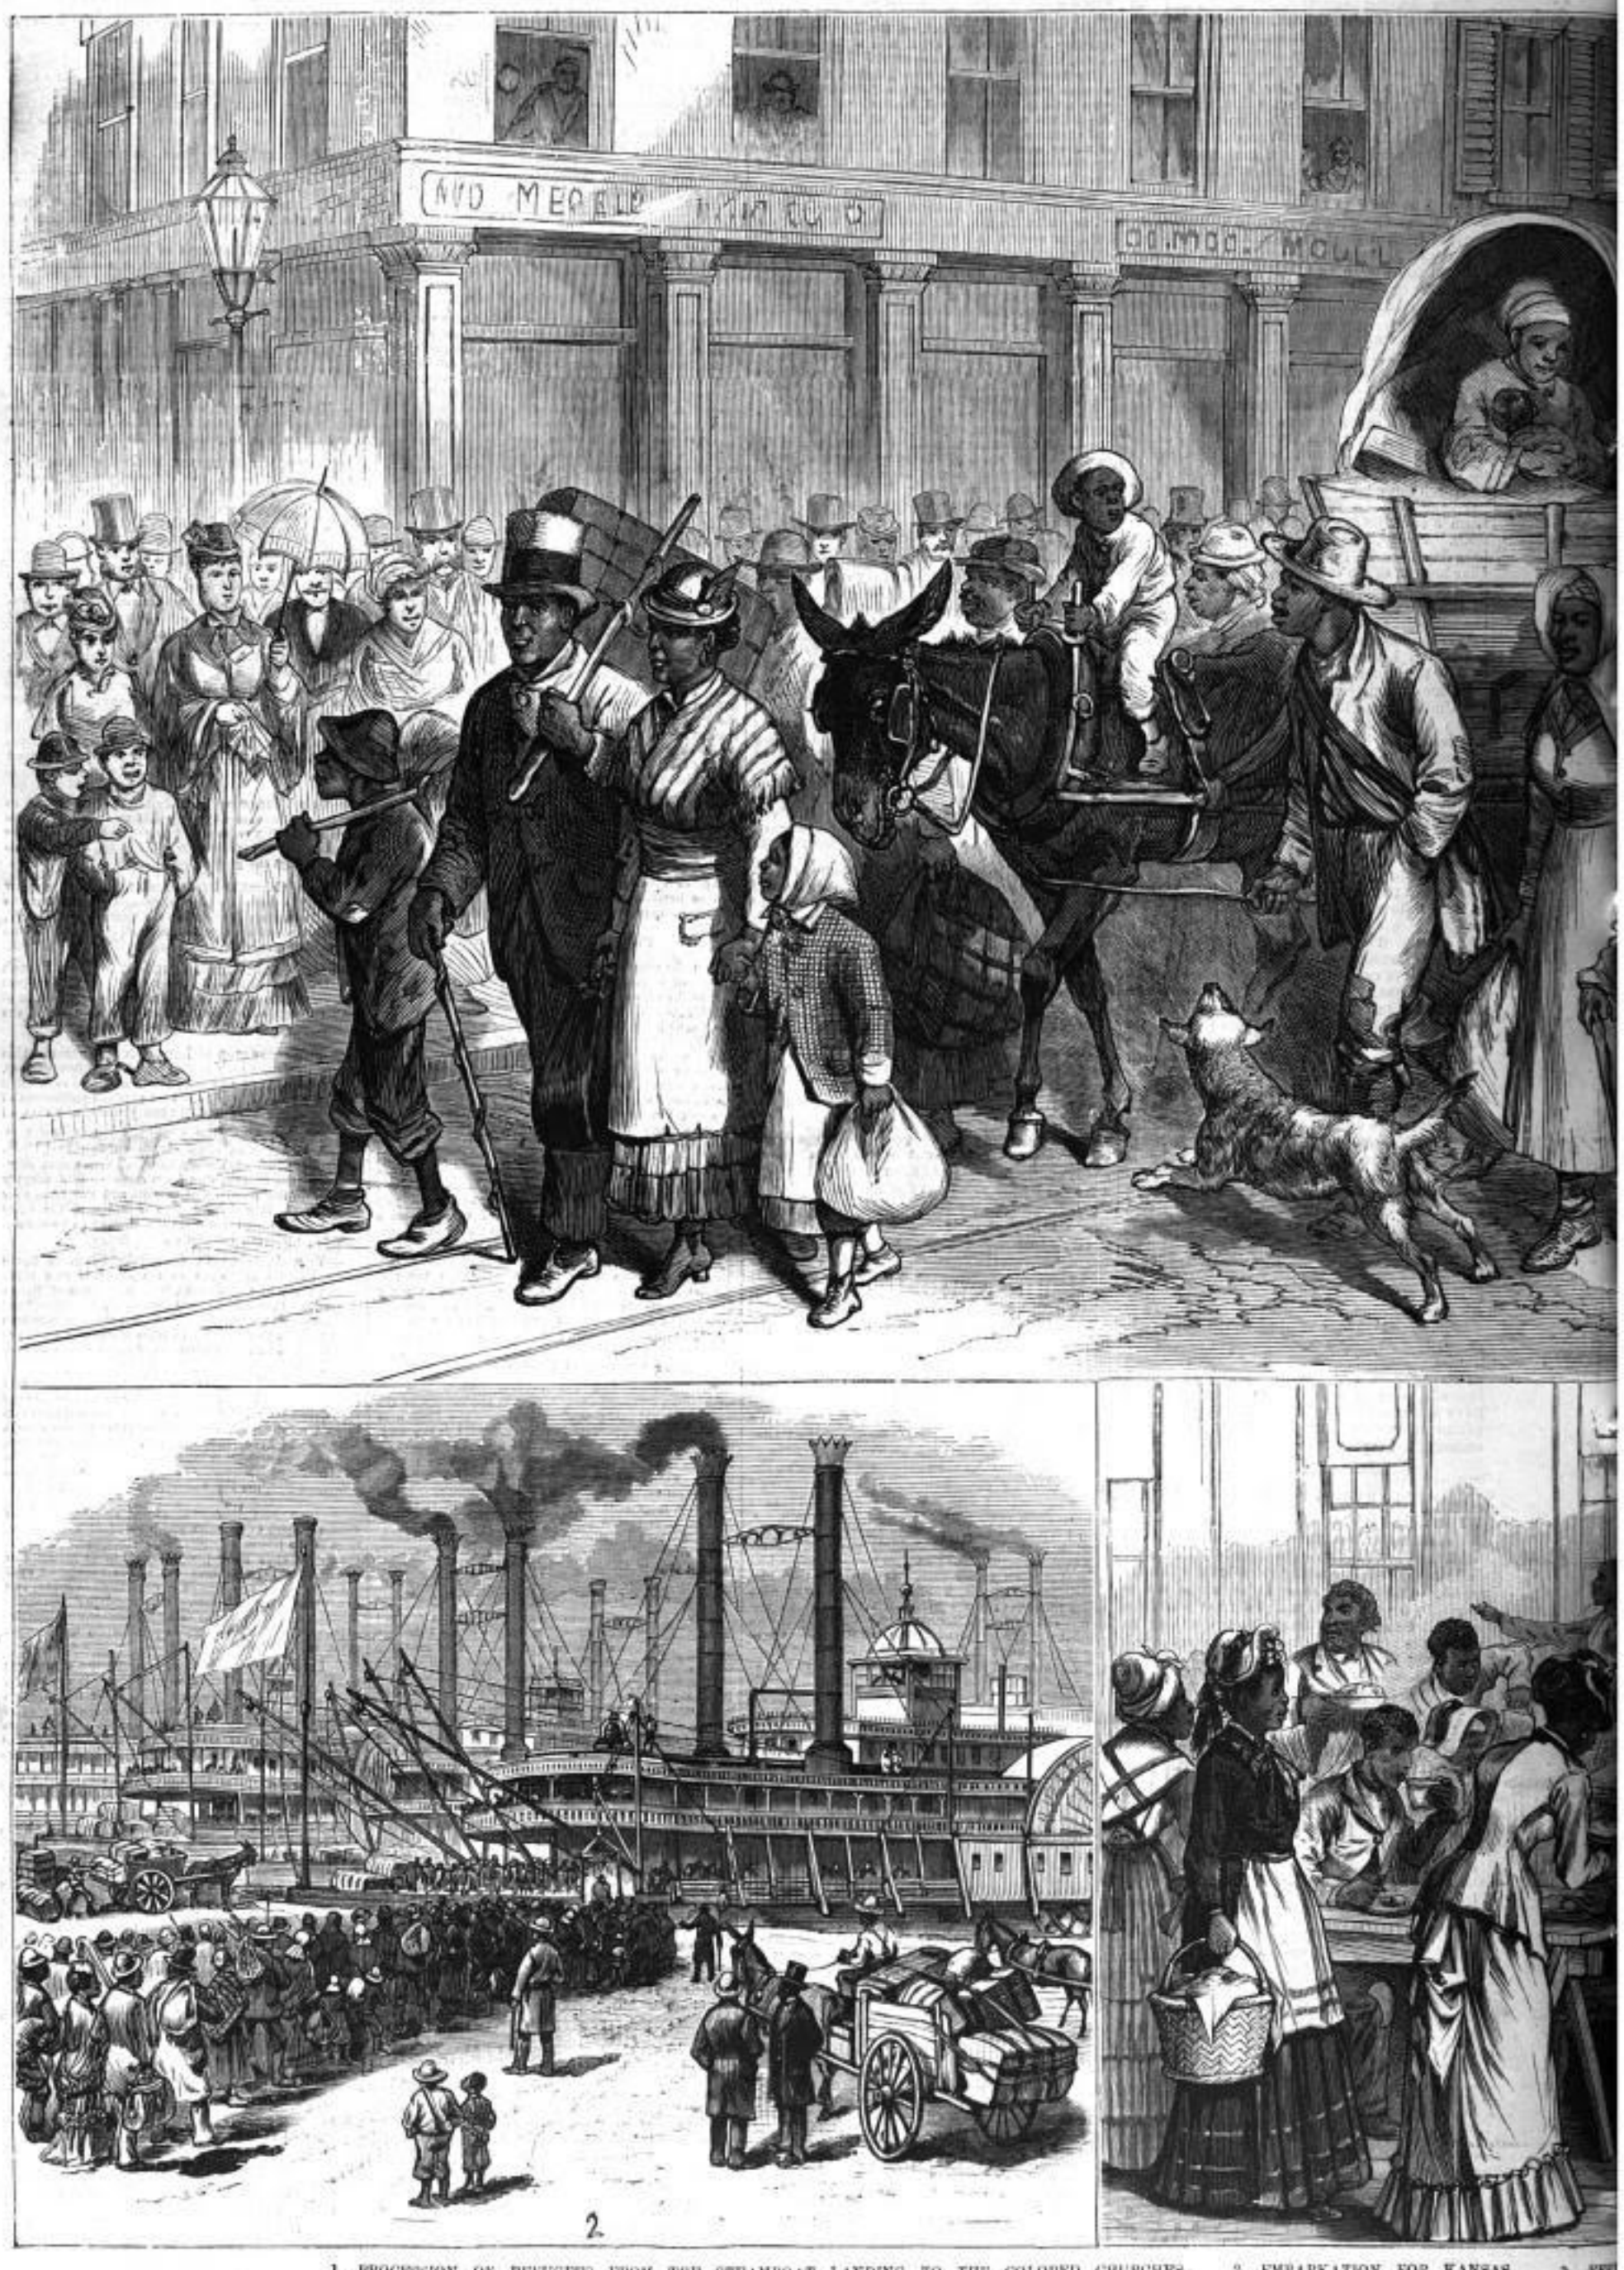
—M. WADDINGTON, President of the French Council, is preparing a dispatch to the Powers in support of the demands of Greece concerning the rectification of the Turko-Grecian frontier in accordance with the thirteenth protocol of the Congress of Berlin.

—THE sugar crop of Louisiana will amount this season to 225,000 hogsheads, or 250,000,000 pounds, worth $14,625,000, and the yield of molasses to 300,000 barrels, worth $3,000,000. Last year the production of sugar was less than 150,000,000 pounds, and that of molasses in proportion.

—A MEMBER of the Chinese Educational Commission at Hartford, Kwong Ki Chin, writes that nine-tenths of the Chinese who have come to this country came from the province of Canton, and the remainder from the province of Fookin. The people of the other provinces of China have always showed an unwillingness to go to foreign countries.

—THE Appalachian Mountain Club, in three years, had marked eight or ten miles of new paths among the White Mountains, including those of Mount Adams and Carter Dome, and has established signals and guide-boards at many points. This year the members hope to cut a new bridle-path from Waterville to Crawford Notch, and a path from Baker River Valley to Profile Notch.

—THE total receipts from the various sources of revenue of the United Kingdom for the financial year now closed were £82,116,972, which amount is £114,028 below the estimate. The receipts from customs show a deficiency of £184,000; from excise, £200,000, and from stamps, £200,000. The other branches of revenue show an increase of receipts. The net increase of revenue as compared with the last financial year is £3,352,673.



—THE so-called "Horse Communities" of Russia flourish in all cities where there are universities. Most of the poorer students, who are free from prejudices, live upon horse-flesh, which can be procured at one-fifth the price of beef. It is the custom of such students to board in parties of from five to twenty, and hence the name of "Horse Communities." So many Nihilists have been found in these communities that the horse-meat eaters are liable to prosecution by the Government.

—LITTLE pigs in gold and silver are now worn by everybody in Vienna as jewelry. Pins, charms, bracelets, stick-handles—everything is for the moment porcine. The Court began, and the rest of the world naturally followed the lead. The fashion has come from Germany, and was introduced to commemorate the happy escape of the Emperor William from all the risks and dangers he has lately run, and his "Schweins' gluck," or pig's luck—meaning splendid luck—as the German phrase goes, in coming out of it all so well.

—DURING a terrific storm at Venice recently, the square of St. Mark's, the piazetta, and principal streets were completely inundated by the high tide. A large number of people were held captive in restaurants and in small by-streets, so elevated as not to be covered by water, while in the flooded parts masked revelers wading about bare-legged, noisy urchins and porters conveying on their back women fresh from balls, and dressed in all sorts of finery and toggery, presented an amusing spectacle. Travel on the canals was suspended, as the gondolas could not pass under the bridges, and considerable damage was caused on all sides.

—THE Cherokees, with a population of 19,000, support two seminaries, male and female respectively, an orphan asylum, a deaf and dumb asylum, and seventy-four common schools, having in all 3,000 pupils. They annually expend for purposes of education $79,020. The seminaries and asylums are in brick buildings, with three stories and a basement, and are quite handsome and commodious. They were erected at a cost of $40,000 each. The Creeks number 14,200, have twenty-eight public schools and two mission schools, with 1,200 pupils, costing $21,000. The Choctaws, numbering 16,000, have fifty-five schools and one academy, costing $29,000, with 1,200 pupils. The Chickasaws, numbering 5,800, have twelve public schools and one academy, costing $21,000, with 400 pupils. The Seminoles have five schools, with an attendance of 180, for which they pay annually $2,810.

A WOMAN'S GLOVE.

A LITTLE, flimsy, faded thing,
Half worn, with both the buttons gone,
A woman's scented, silken glove—
This was the prize we lighted on,
Stowed in his musty office drawer,
Among his blanks and bills and checks—
Poor Jack, who long was famous for
His hatred of the gentle sex.

We did not laugh—we scarcely smiled—
The tears came crowding to my eyes,
I thought how little do we guess
Where tender romance hidden lies;
Beneath the rust and dross of life,
Yet making sweet its common place—
Even as the little fragrant glove
Had perfumed all that dusty space.

What use to wonder, or to guess?
For in the darkened room above
Dear Jack lay dead, and on his breast
We hid the little scented glove,
Half worn, with both the buttons gone;
And somehow, o'er his quiet face
There seemed to steal a friendly smile,
As if he thanked us for the grace.

MADELINE S. BRIDGES.

THE FALLEN LEAVES.

BY WILKIE COLLINS.

CHAPTER XIX.

"THREE dozen oysters, bread-and-butter, and bottled stout; a private room and a good fire." Issuing these instructions on his arrival at the tavern, Jervy was surprised by a sudden act of interference on the part of his venerable guest. Mrs. Sowler actually took it on herself to order her own supper!

"Nothing cold to eat or drink for me," she said. "Morning and night, waking and sleeping, I can't keep myself warm. See for yourself, Jervy, how I've lost flesh since you first knew me! A steak, broiling hot from the gridiron, and gin-and-water, hotter still—that's the supper for me."

"Take the order, waiter," said Jervy, resignedly; "and let us see the private room."

The tavern was of the old-fashioned English sort, which scorns to learn a lesson of brightness and elegance from France. The private room can only be described as a museum for the exhibition of dirt in all its varieties. Behind the bars of the rusty little grate a dying fire was drawing its last breath. Mrs. Sowler clamored for wood and coals, revived the fire with her own hands, and seated herself shivering as close to the fender as the chair would go. After a while the composing effect of the heat began to make its influence felt; the head of the half-starved wretch sank; a species of stupor overcame her—half-faintness and half-sleep.

Phœbe and her sweetheart sat together, waiting the appearance of the supper, on a little sofa at the other end of the room. Having certain objects to gain, Jervy put his arm round her waist, and looked and spoke in his most insinuating manner.

"Try and put up with Mother Sowler for an hour or two," he said. "My sweet girl! I know she isn't fit company for you—but how can I turn my back on an old friend?"

"That's just what surprises me," Phœbe answered. "I don't understand such a person being a friend of yours."

Always ready with the necessary lie, whenever the occasion called for it, Jervy invented a pathetic little story, in two short parts. First part: Mrs. Sowler, rich and respected; a widow inhabiting a villa-residence, and riding in her carriage. Second part: a villainous lawyer; misplaced confidence; reckless investments; death of the villain; ruin of Mrs. Sowler. "Don't talk about her misfortunes when she wakes," Jervy concluded, "or she'll burst out crying to a dead certainty. Only tell me, dear Phœbe, would you turn your back on a forlorn old creature because she has outlived all her other friends, and hasn't a farthing left in the world? Poor as I am, I can help her to a supper, at any rate."

Phœbe expressed her admiration of these noble sentiments by an inexpensive ebullition of tenderness, which failed to fulfill Jervy's private anticipations. He had aimed straight at her purse—and he had only hit her heart! He tried a broad hint next. "I wonder whether I shall have a shilling or two left to give Mrs. Sowler, when I have paid for the supper?" He sighed, and pulled out some small change and looked at it in eloquent silence. Phœbe was hit in the right place at last. She handed him her purse. "What is mine will be yours when we are married," she said; "why not now?" Jervy expressed his sense of obligation with the promptitude of a grateful man; he repeated those precious words, "My sweet girl!" Phœbe laid her head on his shoulder—and let him kiss her, and enjoyed it in silent ecstasy with half-closed eyes. The scoundrel waited and watched her, until she was completely under his influence. Then, and not till then, he risked the gradual revelation of the purpose which had induced him to withdraw from the ball before the proceedings of the evening had reached their end.

"Did you hear what Mrs. Sowler said to me just before we left the lecture?" he asked.

"No, dear."

"You remember that she asked me to tell her Farnaby's address?"

"Oh, yes! And she wanted to know if he had ever gone by the name of Morgan. Ridiculous—wasn't it?"

"I'm not so sure of that, my dear. She told me, in so many words, that Farnaby owed her money. He didn't make his fortune all at once, I suppose. How do we know what he might have done in his young days, or how he might have humbugged a feeble woman. Wait till our friend there at the fire has warmed her old bones with some hot grog—and I'll find out something more about Farnaby's debt."

"Why, dear? What is it to you?"

Jervy reflected for a moment, and decided that the time had come to speak more plainly.

"In the first place," he said, "it would only be an act of common humanity, on my part, to help Mrs. Sowler to get her money. You see that, don't you? Very well. Now, I am no Socialist, as you are aware; quite the contrary. At the same time I am a remarkably just man, and I own I was struck by what Mr. Goldenheart said about the uses to which wealthy people are put by the rules of Tadmor. 'The man who has got the money is bound, by the express law of Christian morality, to use it in assisting the man who has got none.' Those were his words, as nearly as I can remember them. He put it still more strongly afterwards; he said, 'A man who hoards up a large fortune, from a purely selfish motive—either because he is a miser, or because he looks only to the aggrandizement of his own family after his death—is, in either case, an essentially un-Christian person, who stands in manifest need of enlightenment and control by Christian law.' And then, if you remember, some of the people murmured; and Mr. Goldenheart stopped them by reading a line from the New Testament, which said exactly what he had been saying—only in fewer words. Now, my dear girl, Farnaby seems to me to be one of the many people pointed at in this young gentleman's lecture. Judging by looks, I should say he was a hard man."

"That's just what he is—hard as iron! Looks at his servants as if they were dirt under his feet, and never speaks a kind word to them from one year's end to another."

"Suppose I guess again? He's not particularly free-handed with his money—is he?"

"He? He will spend anything on himself and his grandeur, but he never gave away a halfpenny in his life."

Jervy pointed to the fireplace, with a burst of virtuous indignation. "And there's that poor old soul starving for want of the money he owes her! Damn it, I agree with the Socialists; it's a virtue to make that sort of man bleed. Look at you and me! We are the very people he ought to help—we might be married at once, if we only knew where to find a little money. I've seen a deal of the world, Phœbe, and my experience tells me there's something about that debt of Farnaby's which he doesn't want to have known. Why shouldn't we screw a few five-pound notes for ourselves out of the rich miser's fears?"

Phœbe was cautious. "It's against the law—ain't it?" she said.

"Trust me to keep clear of the law," Jervy answered. "I won't stir in the matter till I know for certain that he daren't take the police into his confidence. It will be all easy enough when we are once sure of that. You have been long enough in the family to find out Farnaby's weak side. Wouldn't it do, if we got at him, to begin with, through his wife?"

Phœbe suddenly reddened to the roots of her hair. "Don't talk to me about his wife!" she broke out fiercely; "I've got a day of reckoning to come with that lady." She looked at Jervy and checked herself. He was watching her with eager curiosity, which not even his ready cunning was quick enough to conceal.

"I wouldn't intrude on your little secrets, darling, for the world!" he said, in his most persuasive voice. "But, if you want advice, you know that I am heart and soul at your service."

Phœbe looked across the room to Mrs. Sowler, still nodding over the fire.

"Never mind now," she said; "I don't think it's a matter for a man to advise about—it's between Mrs. Farnaby and me. Do what you like with her husband; I don't care; he's a brute, and I hate him. But there's one thing I insist on—I won't have Miss Regina frightened or annoyed; mind that! She's a good creature. There, read the letter she wrote to me yesterday, and judge for yourself."

Jervy looked at the letter. It was not very long. He resignedly took upon himself the burden of reading it.

"DEAR PHŒBE—Don't be down-hearted. I am your friend always, and I will help you to get another place. I am sorry to say that it was indeed Mrs. Ormond who found us out that day. She had her suspicions, and she watched us, and told my aunt. This she owned to me with her own lips. She said, 'I would do anything, my dear, to save you from an ill-assorted marriage.' I am very wretched about it, because I can never look on her as my friend again. My aunt, as you know, is of Mrs. Ormond's way of thinking. You must make allowances for her hot temper. Remember, out of your kindness towards me, you had been secretly helping forward the very thing which she was most eager to prevent. That made her very angry—but, never fear, she will come round in time. If you don't want to spend your little savings, while you are waiting for another situation, let me know. A share of my pocket-money is always at your service. Your friend, REGINA."

"Very nice, indeed," said Jervy, handing the letter back, and yawning as he did it. "And convenient, too, if we run short of money. Ah, here's the waiter with the supper, at last! Now, Mrs. Sowler, there's a time for everything—it's time to wake up."

He lifted the old woman off her chair, and settled her before the table, like a child. The sight of the hot food and drink roused her to a tigerish activity. She devoured the meat with her eyes as well as her teeth; she drank the hot gin-and-water in fierce gulps, and set down the glass with audible gasps of relief. "Another one," she cried, "and I shall begin to feel warm again!"

Jervy, watching her from the opposite side of the table, with Phœbe close by him as usual, had his own motives for encouraging her to talk, by the easy means of encouraging her to drink. He sent for another glass of the hot grog. Phœbe, daintily picking up her oysters with her fork, affected to be shocked at Mrs. Sowler's coarse method of eating and drinking. She kept her eyes on her plate, and only consented to taste malt liquor under modest protest. When Jervy lit a cigar, after finishing his supper, she reminded him, in an impressively genteel manner, of the consideration which he owed to the presence of an elderly lady. "I like it myself, dear," she said, mincingly; "but perhaps Mrs. Sowler objects to the smell?"

Mrs. Sowler burst into a hoarse laugh. "Do I look as if I was likely to be squeamish about smells?" she asked, with the savage contempt for her own poverty which was one of the dangerous elements in her character. "See the place I live in, young woman, and then talk about smells if you like!"

This was indelicate. Phœbe picked a last oyster out of its shell, and kept her eyes fixed modestly on her plate. Observing that the second glass of gin-and-water was fast becoming empty, Jervy risked the first advances on his way to Mrs. Sowler's confidence.

"About that debt of Farnaby's?" he began. "Is it a debt of long standing?"

Mrs. Sowler was on her guard. In other words, Mrs. Sowler's head was only assailable by hot grog, when hot grog was administered in large quantities. She said it was a debt of long standing, and she said no more.

"Has it been standing seven years?"

Mrs. Sowler emptied her glass, and looked hard at Jervy across the table. "My memory isn't good for much at my time of life." She gave him that answer, and she gave him no more.

Jervy yielded with his best grace. "Try a third glass," he said; "there's luck, you know, in odd numbers."

Mrs. Sowler met this advance in the spirit in which it was made. She was obliging enough to consult her memory, even before the third glass made its appearance. "Seven years, did you say?" she repeated. "More than twice seven years, Jervy! What do you think of that?"

Jervy wasted no time in thinking. He went on with his questions.

"Are you quite sure that the man I pointed out to you at the lecture is the same man who went by the name of Morgan, and had his letters addressed to the public-house?"

"Quite sure. I'd swear to him anywhere—only by his eyes."

"And you have never yet asked him to pay the debt?"

"How could I ask him, when I never knew what his name was till you told me to-night?"

"What amount of money does he owe you?"

Whether Mrs. Sowler had her mind prophetically fixed on a fourth glass of grog, or whether she thought it time to begin asking questions on her own account, is not easy to say. Whatever her motive might be, she slyly shook her head, and winked at Jervy. "The money's my business," she remarked. "You tell me where he lives, and I'll make him pay me."

Jervy was equal to the occasion. "You won't do anything of the sort," he said.

Mrs. Sowler laughed defiantly. "So you think, my fine fellow!"

"I don't think at all, old lady—I'm certain. In the first place, Farnaby don't owe you the debt by law, after seven years. In the second place, just look at yourself in the glass there. Do you think the servants will let you in when you knock at Farnaby's door? You want a clever fellow to help you—or you'll never recover that debt."

Mrs. Sowler was accessible to reason (even half way through her third glass of grog), when reason was presented to her in convincing terms. She came to the point at once. "How much do you want?" she asked.

"Nothing," Jervy answered; "I don't look to you to pay my commission."

Mrs. Sowler reflected a little—and understood him. "Say that again," she insisted, "in the presence of your young woman as witness."

Jervy touched his young woman's hand under the table, warning her to make no objection, and to leave it to him. Having declared for the second time that he would not take a farthing from Mrs. Sowler, he went on with his inquiries.

"I'm acting in your interests, Mother Sowler," he said; "and you will be the loser if you don't answer my questions patiently, and tell me the truth. I want to go back to the debt. What is it for?"

"For six weeks' keep of a child, at ten shillings a week."

Phœbe looked up from her plate.

"Whose child?" Jervy asked, noticing the sudden movement.

"Morgan's child—the same man you said was Farnaby."

"Do you know who the mother was?"

"I wish I did! I should have got the money out of her long ago."

Jervy stole a look at Phœbe. She had turned pale; she was listening, with her eyes riveted on Mrs. Sowler's ugly face.

"How long ago was it?" Jervy went on.

"Better than sixteen years."

"Did Farnaby himself give you the child?"

"With his own hands, over the garden-paling of a house at Ramsgate. He saw me and the child into the train for London. I had ten pounds from him, and no more. He promised to see me, and settle everything, in a month's time. I have never set eyes on him from that day, till I saw him paying his money this evening at the door of the hall."

Jervy stole another look at Phœbe. She was still perfectly unconscious that he was observing her. Her attention was completely absorbed by Mrs. Sowler's replies. Speculating on the possible result, Jervy abandoned the question of the debt, and devoted his next inquiries to the subject of the child.

"I promise you every farthing of your money, Mother Sowler," he said, "with interest added to it. How old was the child when Farnaby gave it to you?"

"Old! Not a week old, I should say!"

"Not a week old!" Jervy repeated, with his eye on Phœbe. "Dear, dear me, a new-born baby, one may say."

The girl's excitement was fast getting beyond her control. She leaned across the table, in her eagerness to hear more.

"And how long was this poor child under your care?" Jervy went on.

"How can I tell you at this distance of time? For some months, I should say. This I'm certain of—I kept it for six good weeks, after the ten pounds he gave me was spent. And then I——" she stopped, and looked at Phœbe.

"And then you got rid of it?"

Mrs. Sowler felt for Jervy's foot under the table, and gave it a significant kick. "I have done nothing to be ashamed of, miss," she said, addressing her answer defiantly to Phœbe.

"Being too poor to keep the little dear myself, I placed it under the care of a good lady, who adopted it."

Phœbe could restrain herself no longer. She burst out with the next question, before Jervy could open his lips.

"Do you know where the lady is now?"

"No," said Mrs. Sowler, shortly; "I don't."

"Do you know where to find the child?"

Mrs. Sowler slowly stirred up the remains of her grog. "I know no more than you do. Any more questions, miss?"

Phœbe's excitement completely blinded her to the evident signs of a change in Mrs. Sowler's temper for the worse. She went on headlong.

"Have you never seen the child since you gave her to the lady?"

Mrs. Sowler set down her glass, just as she was raising it to her lips. Jervy paused, thunderstruck, in the act of lighting a second cigar.

"*Her*?" Mrs. Sowler repeated slowly; her eyes fixed on Phœbe with a lowering expression of suspicion and surprise. "HER?" She turned to Jervy. "Did you ask me if the child was a girl or a boy?"

"I never even thought of it," Jervy replied. "Did I happen to say it myself, without being asked?"

Jervy deliberately abandoned Phœbe to the implacable old wretch, before whom she had betrayed herself. It was the one likely way of forcing the girl to confess everything. "No," he answered; "you never said it without being asked."

Mrs. Sowler turned once more to Phœbe. "How do you know the child was a girl?" she inquired.

Phœbe trembled and said nothing. She sat with her head down, and her hands, fast clasped together, resting on her lap.

"Might I ask, if you please," Mrs. Sowler proceeded, with a ferocious assumption of courtesy, "how old you are, miss? You're young enough and pretty enough not to mind answering to your age, I'm sure."

Even Jervy's villainous experience of the world failed to forewarn him of what was coming. Phœbe, it is needless to say, instantly fell into the trap.

"Twenty four," she replied, "next birthday."

"And the child was put into my hands sixteen years ago," said Mrs. Sowler. "Take sixteen from twenty-four, and eight remains. I'm more surprised than ever, miss, at your knowing it to be a girl. It couldn't have been your child—could it?"

Phœbe started to her feet, in a state of fury. "Do you hear that?" she cried, appealing to Jervy. "How dare you bring me here to be insulted by that drunken wretch?"

Mrs. Sowler rose, on her side. The old savage snatched up her empty glass—intending to throw it at Phœbe. At the same moment, the ready Jervy caught her by the arm, dragged her out of the room, and shut the door behind them.

There was a bench on the landing outside. He pushed Mrs. Sowler down on the bench with one hand, and took Phœbe's purse out of his pocket with the other. "Here's a pound!" he said, "towards the recovery of that debt of yours. Go home quietly, and meet me at the door of this house to-morrow evening at six."

Mrs. Sowler, opening her lips to protest, suddenly closed them again, fascinated by the sight of the gold. She clutched the coin, and became friendly and familiar in a moment. "Help me down-stairs, deary," she said, "and put me into a cab. I'm afraid of the night air."

"One word more before I put you into the cab," said Jervy. "What did you really do with the child?"

Mrs. Sowler grinned hideously, and whispered her reply in the strictest confidence.

"Sold her to Moll Davis, for five-and-sixpence."

"Who was Moll Davis?"

"A cadger."

"And you really know nothing now of Moll Davis or the child?"

"Should I want you to help me if I did?" Mrs. Sowler asked, contemptuously. "They may both be dead and blind, for all I know to the contrary."

Jervy put her into a cab, without further delay. "Now for the other one!" he said to himself, as he hurried back to the private room.

CHAPTER XX.

SOME men would have found it no easy task to console Phœbe, under the circumstances. Jervy had the immense advantage of not feeling the slightest sympathy for her; he was in full command of his large resources of fluent assurance and ready flattery. In less than five minutes, Phœbe's tears were dried, and her lover had his arm round her waist again, in the character of a cherished and forgiven man.

Digitized by Google

"Now, my angel!" he said (Phœbe sighed tenderly; he had never called her his angel before), "tell me all about it, in confidence. Only let me know the facts, and I shall see my way to protecting you against any annoyance from Mrs. Sowler in the future. You have made a very extraordinary discovery. Come closer to me, my dear girl. How did it happen?"

"I heard it in the kitchen," said Phœbe.

Jervy started. "Did any one else hear it?" he asked.

"No. They were all in the housekeeper's room, looking at the Indian curiosities which her son in Canada had sent to her. I had left my bird on the dresser—and I ran into the kitchen to put the cage in a safer place, being afraid of the cat. One of the swinging windows in the skylight was open; and I heard voices in the back room above, which is Mrs. Farnaby's room."

"Whose voices did you hear?"

"Mrs. Farnaby's voice and Mr. Goldenheart's."

"Mrs. Farnaby?" Jervy repeated, in surprise. "Are you sure it was *Mrs?*"

"Of course I am! Do you think I don't know that horrid woman's voice? She was saying a most extraordinary thing when I first heard her—she was asking if there was anything wrong in showing her naked foot. And a man answered, and the voice was Mr. Goldenheart's. You would have felt curious to have heard more, if you had been in my place, wouldn't you? I opened the second window in the kitchen, so as to make sure of not missing anything. And what do you think I heard her say?"

"You mean Mrs. Farnaby?"

"Yes. I heard her say, 'Look at my right foot—you see there's nothing the matter with it.' And then, after a while, she said, 'Look at my left foot—look between the third toe and the fourth.' Did you ever hear of such an audacious thing for a married woman to say to a young man?"

"Go on! go on! What did *he* say?"

"Nothing; I suppose he was looking at her foot."

"Her left foot?"

"Yes. Her left foot was nothing to be proud of, I can tell you! By her own account she had some horrid deformity in it, between the third toe and the fourth. No; I didn't hear her say what the deformity was. I only heard her call it so—and she said her 'poor darling' was born with the same fault, and that was her defense against being imposed upon by rogues—I remember the very words—'in the past days when I employed people to find her.' Yes! she said '*her*.' I heard it plainly. And she talked afterwards of her 'poor lost daughter,' who might be still living somewhere, and wondering who her mother was. Naturally enough, when I heard that hateful old drunkard talking about a child given to her by Mr. Farnaby, I put two and two together—— Dear me, how strangely you look! What's wrong with you?"

"I'm only very much interested—that's all. But there's one thing I don't understand. What had Mr. Goldenheart to do with all this?"

"Didn't I tell you?"

"No."

"Well, then, I tell you now. Mrs. Farnaby is not only a heartless wretch, who turns a poor girl out of her situation, and refuses to give her a character—she's a fool besides. That precious exhibition of her nasty foot was to inform Mr. Goldenheart of something she wanted him to know. If he happened to meet with a girl, in his walks or his travels, and if he found that she had the same deformity in the same foot, then he might know for certain——"

"All right! I understand. But why Mr. Goldenheart?"

"Because she had a dream that Mr. Goldenheart had found the lost girl, and because she thought there was one chance in a hundred that her dream might come true! Did you ever hear of such a fool before? From what I could make out, I believe she actually cried about it. And that same woman turns me into the street to be ruined, for all she knows or cares. Mind this! I would have kept her secret—it was no business of mine, after all—if she had behaved decently to me. As it is, I mean to be even with her; and what I heard down in the kitchen is more than enough to help me to it. I'll expose her somehow—I don't quite know how, but that will come with time. You will keep the secret, dear, I'm sure. We are soon to have all our secrets in common, when we are man and wife, ain't we? Why, you are not listening to me. What *is* the matter with you?"

Jervy suddenly looked up; his soft insinuating manner had vanished; he spoke roughly and impatiently.

"I want to know something. Has Farnaby's wife got money of her own?"

Phœbe's mind was still disturbed by the change in her lover. "You speak as if you were angry with me," she said.

Jervy recovered his insinuating tones with some difficulty. "My dear girl, I love you! How can I be angry with you? You've set me thinking—and it bothers me a little, that's all. Do you happen to know if Mrs. Farnaby has got money of her own?"

Phœbe answered this time. "I've heard Miss Regina say that Mrs. Farnaby's father was a rich man," she said.

"What was his name?"

"Ronald."

"Do you know when he died?"

"No."

Jervy fell into thought again, biting his nails in great perplexity. After a moment or two an idea came to him. "The tombstone will tell me," he exclaimed, speaking to himself. He turned to Phœbe, before she could express her surprise, and asked if she knew where Mr. Ronald was buried.

"Yes," said Phœbe, "I've heard that. In Highgate Cemetery. But why do you want to know?"

Jervy looked at his watch. "It's getting late," he said; "I'll see you safe home."

"But I want to know——"

"Put on your bonnet; and wait till we are out in the street."

(*To be continued.*)

THE GREAT NEGRO EXODUS FROM THE SOUTH TO THE WEST.

ATTENTION was called in an editorial column last week to the large migration of colored people from the Southern States, particularly from Mississippi, to the new regions of the West and North, which has recently been going on. The movement, within the last fortnight, has attained remarkable and unexpected proportions, and may now be said to amount to a genuine exodus, it being estimated that up to this writing at least 5,000 blacks have left nine parishes in Louisiana and Mississippi. At present the most marked features of the movement are seen in these two States and South Carolina, but letters from the Southern and Western counties of Tennessee show that it is making rapid progress there also. In South Carolina there is a strongly organized movement on foot among the better classes of the colored people. For the last four years there has been a marked desire among the most enterprising negroes in the black counties of Georgia to get away to Texas. So extensive has this been, that the Georgia Legislature has prohibited agents from inducing laborers to leave the State. In South Carolina Messrs. Rainey, Cain, Smalls, Nash, and most of the prominent colored leaders, are in sympathy with the emigration scheme. In Louisiana, Pinchback, Menard and others, support it. Senator Bruce lends it his countenance in Mississippi.

The first appearance of the negroes at St. Louis, which was made the general rendezvous, was on Sunday, March 20th, when a steamboat-load was landed. The news of their arrival and miserable condition having been made known at the different colored churches, it was decided to invite these wretched refugees to a shelter in the basements of three large churches in the lower part of the city. The pastors of the churches, accompanied by others, went down to the wharf, extended the invitation, and soon a motley procession was filing through the streets, following these truly Christian leaders.

In the basements of these churches all who arrived during the ensuing week, numbering over 2,500, were temporarily accommodated. Beds were made in the pews and on the floor, and conveniences for cooking were improvised. Here they were visited by a very few white people and by hundreds of their colored brethren from the city. In appearance they looked like any ordinary congregation of colored people, with the exception that they were most wretchedly clad, especially the men, and that there was a large proportion of small children and very old people.

They said they heard that there was Government land in Kansas, and they thought it would be better to go there and get it than to pay $10 an acre where they were. Every suggestion of returning to the South was indignantly rejected. They were informed that the Anchor Line of steamboats would take them back free, but they spurned the idea. They seemed afraid, also, of any other place than Kansas. Word was received from Iowa that several hundred could get employment as railroad hands in building a new road, but they were afraid Iowa was down South. Kansas they knew was the friend of the colored people. Most of them were very ignorant, very few being able to read. Hundreds had not a cent of money, and when asked what they were going to do, generally replied "Donno."

James T. Smith, a prominent and highly respected colored citizen of St. Louis, said to an inquirer, "You can tell in a moment every colored man or woman who belongs to St. Louis from those who have come from the South, just by their appearance. It is certainly proof to my mind that the colored people are much worse off down South than those who have come North; therefore they are justified in seeking to better themselves."

Saturday, March 29th, was a busy one on the levee among the colored emigrants. Early in the morning those who were making their quarters at St. Paul's Chapel, Eleventh and Christy Avenue, were busily at work getting their plunder together and loading it into the furniture-vans and baggage-wagons to be taken to the foot of Olive Street. About four o'clock in the afternoon the emigrants were ordered to go on to the sidewalk. There they were formed into procession by the committees and Rev. John Turner. The command to march was given by a score or more of self-constituted leaders and the crowd started off. It was a large crowd—a dirty, a motley and a curious crowd; there were in it men, women and children, of all sizes, ages and colors; some were nearly white, some coal-black, some interesting and others repulsive. All were not very clean, and as they marched along few persons cared to come in contact with them. All this was not their fault, but their misfortune. There were just 155 adults in the crowd, and probably there were two-thirds as many more children. As they proceeded to the levee they attracted no little attention. When they arrived close to the Anchor Line wharfboat they cheered—harsh, shrill, weak, strong and every other known kind of a voice lending its strength to the common cause. They were answered but faintly by about 250 emigrants already on the wharfboat, and with whom they were soon mingled. Some of these latter, about 100, had been on the wharfboat for two or three days. They had come up on the *Belle of Memphis* or other boats, and after making inquiries had concluded to remain near the river until the arrival of the steamer *E. H. Durfee*, which touched post Saturday morning, the officials of the Anchor Line kindly permitting them to do as they wished. But there were 150 persons crowded on the wharfboat whose coming had not been expected. They arrived at ten o'clock in the morning on the steamer *John A. Scudder*. Forty of them boarded the boat at Point Pleasant, Miss., and sixty at Chism's Landing, Miss., both of which places are a short distance north of Vicksburg. Few of them left their home with more than sufficient money to defray their expense in coming to St. Louis.

On Sunday, as the church bells were ringing over the metropolis, the *Grand Tower* proclaimed its arrival by three long, successive snorts, and by half-past ten o'clock the elegant steamer ran alongside her wharf, discharging 300 families of colored emigrants, *en route* for Kansas. It was a strange but a pitiable sight presented on the levee, at the foot of Chestnut Street—300 families, with all their worldly goods and chattels, a bedstead, some little bedding and a bundle of clothing, strewn along the shore, gathering at fitful intervals the full benefit of a St. Louis sirocco, a sun-bath with all the blinding and smothering properties of superior lime-dust.

St. Paul's A. M. E. Church, or Chapel, as it is best known, has been impoverished almost by reason of old debt and those contracted to aid the emigrants who have been living there. In order to aid the congregation in its present struggle to save the church property, a grand Methodist reunion presentation, concert and festival was tendered by prominent citizens of both colors, and took place on April 3d. Four colored clergymen of St. Louis, with J. Milton Turner, ex-Minister to Liberia, have issued an appeal for contributions of money and clothing in aid of the destitute negroes who are flocking from the South to seek homes in Kansas.

What the outcome of this hegira will be, time only can determine. In Kansas, there is scarcely a field for the employment of all the labor now seeking that State, but it is said that some 2,000 men will be at once employed on the Utah Central and the Central and Southern Pacific Railroads, and it is thought that Arizona will furnish work for several thousand more to replace the Chinese. The Indian Territory, if open to settlement, would afford available homes for thousands. There are nearly 12,000 people of color, formerly their slaves, citizens of or residents in the various Indian nations. The Atchison, Topeka and Santa Fé Railroad has also indicated a purpose to employ in New Mexico a large force of colored laborers. Cheap rates of fare are announced on the Pacific roads for the benefit of all colored emigrants bound for either Southern California or Arizona.

As to the effect of the emigration upon the South, it is safe to say, that should it continue, it will prove very disastrous to the planting interests. Laborers and agriculturists for years have been in high request in Louisiana—there was an ever-present need for them; but white men, as a rule, shunned the country. As the normal laboring force in the country is necessary to a respectable yield on the plantations, it will be apparent that any emigration of this class must be a public misfortune. The New Orleans *Times* says, in illustration of this fact:

"The trouble will not be confined to one or two plantations, but threatens to affect the whole State, and the sugar region must suffer when the cotton region is overgrown with cottonwood-trees and weeds. Not a week ago came an extensive planter to this city to arrange for advances on his coming crop. He made satisfactory arrangements, and was on the point of returning home, when there arrived a telegram telling him his hands had left. In consequence, his arrangements had to be canceled and he is a ruined man. Every day the same scene is enacted in this city. The cotton-planter wishes advances; the commission merchants ask what are his prospects. What, indeed, are his prospects under the present condition of things? As a last recourse, something must be done to persuade the negroes to move into the sugar region, where tranquility reigns and the laborer not only gains but receives his hire. It is understood that an organization is being made for this purpose, and that everything will be tried to keep the negroes from entirely quitting the State. For it is conceded by the wise that the negroes are the best field-workers in existence, and that this State will go to the dogs without them. This is the truth, although it does hurt the pride of the average country politician to admit it. This great change in the population of this State is going on now, and there is no time to lose if a good result is to be obtained. The danger is one of the present moment, and the remedy must be applied at once or not at all."

SCIENTIFIC INTELLIGENCE.

M. Argout, long resident in Egypt, has taken paper impressions of the whole of the tomb of Seti I. at Thebes.

A Test for Free Acid.—The yellow color of acetate of iron is immediately removed in any liquid in which a free acid is present.

M. Stephan has been elected a Corresponding Member in the Astronomical Society of the Paris Academy, in place of the late Dr. Hansen, of Gotha.

Atomic Weight of Iridium.—G. Seubert, after having prepared and analyzed a great number of iridium compounds, comes to the conclusion that the atomic weight of the metal is 192·7.

A Committee has been organized to obtain subscriptions for erecting a statue to Nicephore Niepce, the inventor of photography. A circular has been published and will be sent to all scientific societies over the world.

Use of Refuse Cacao.—The refuse is digested in water for several days, then treated with a 35 per cent. soda lye and finally boiled. From the filtered liquid a beautiful brown precipitate falls, on addition of an acid, which is admirably adapted for a pigment.

The British Naval Authorities have been making experiments for some time, with the view of testing the power of resistance to heavy shells of coals in the bunkers of men-of-war. The latest tests at Portsmouth seem to indicate that loose coal is the most effective means of protection yet discovered.

Recent Explorations of the lake dwellings of the Lake of Geneva prove that they were destroyed by fire during a Spring, when the waters of the lake stood at the same level as now. A layer of charcoal from the burnt dwellings is to be found along the whole coast, beneath a layer of sand and gravel.

Zinc-white.—If the precipitate produced from the sulphate or chloride of zinc by the sulphides of calcium, barium or sodium, be heated to redness in a current of air, a white color results, which, when mixed with oil, proves to be equal to the best zinc-white. It is a mixture of sulphide of zinc with the oxide.

A Quicksilver Motor.—Th. A. Shinn proposes to drive the vapors of mercury into an upper chamber from which, after condensation, it can flow over a wheel and thus drive machinery. This is very much like pumping water with a steam engine in order to propel a water-wheel. It can be done, but the economy of the operation may be brought in question.

Faraday has recorded a curious experiment on the resonance of flames. A tuning-fork struck upon the table, and then held till its sound was inaudible, was placed in the tip of the flame of a Bunsen burner. The sound came out again loud enough to be heard at some distance. The flame acts as a resonator, owing to the difference in the density of the gases which it contains.

Remains of Lake Dwellings of the highest scientific interest have been discovered by members of the Donaueschingen Historical Society under the guidance of Dr. B. Spuren. The dwellings are situated in the so-called Pfohreser Ried, near Donaueschingen. Numerous objects have been brought to light, such as remains of textures and implements dating from the stone, bronze, and iron ages.

A New Book about Thibet.—This mighty upland still belongs to the least-known portion of our globe, and the little that has appeared about it is so rarely seen that new works were strongly demanded. The want has been supplied by Dr. Gansenmüller, of Stuttgart, who has collected and edited in an agreeable form all that has been hitherto published in reference to Thibet. The work treats of the physical and political geography of the land, its climate, products, transportation, commerce, as well as its population in ethnographical and historical relation, including a brief history of the nation. The value of the work is increased by a critical and suggestive introduction from the pen of the celebrated traveler, Herman von Schlagintweit.

PERSONAL GOSSIP.

MRS. DANIEL P. STONE of Malden, Mass., has given $50,000 to Fisk University at Nashville, Tenn.

THE Pope has sent a circular to the Spanish Bishops warmly advocating allegiance to King Alfonso.

M. LÉON SAY, the French Minister of Finance, has been nominated to the first class of the Order of the Crown of Prussia.

PASSANANTE, the would-be assassin of King Humbert, who has had his sentence commuted, has been exiled to the Island of Elba for life.

KING KALAKAUA of Hawaii has knighted Claus Spreckles, of San Francisco City, for his services in developing the resources of the Hawaiian Islands.

SURGEONS have succeeded in painlessly extracting a grain of powder which had remained in Emperor William's head since Nobiling's attempt on his life.

THE Hon. John K. Porter has accepted the honorary Chancellorship of Union University for 1879, and will give the Chancellor's oration at Commencement.

GOVERNOR FENTON is still in Rome, having been detained there by the illness of his daughter, who at last accounts was slowly recovering from an attack of intermittent fever.

MR. CHARLES DICKENS is compiling a "Dictionary of London," which aims at presenting, in a concise form, an intelligible epitome of every kind of practical information about London.

M. ERNEST RENAN was formally received as a member of the French Academy on April 3d. The foreign representatives and a distinguished company were present at the ceremonies.

UNITED STATES MINISTER NOYES has presented to President Grévy a letter from President Hayes replying to M. Grévy's letter announcing his elevation to the Presidency of the French Republic.

GENERAL GARIBALDI has embarked on a steamer at Caprera, but even his friends are unaware of his destination. There are many rumors afloat, even including a report that he has gone to Athens to organize an expedition.

THE Government of the French Republic has decided to present the Prince of Wales with a service of Sèvres china, in commemoration of the great services he rendered as President of the British section of the Exhibition of 1878.

ROBERT BROWNING has accepted the presidency of the new Shakespeare Society, which was left vacant at the time the Society was founded, and was not to be filled "till one of the greatest living poets sees that it is his duty to take it."

—His little Imperial Highness the Grand Duke Michael Alexandrowitsch of Russia is, considering his age (four months), an expensive person. He has a household of fifteen people, and 18,126 roubles are allowed for His Highness's table.

RUDOLPH, future Emperor of Austria, desires to speak the language of every race he will one day have to rule over, and is now studying Turkish. He speaks ten languages already, seven or eight of which are used in the Austro-Hungarian Empire.

ON April 3d the Senate confirmed Clarence King to be Director of the Geological Survey. The greater part of the executive session was devoted to the appointment, Messrs. Logan and Teller making speeches against confirmation, and Messrs. Conkling, Voorhees and Blaine supporting it.

BOTH Mr. and Mrs. Gladstone are reported to be indisposed. Latterly the ex-Premier has been subject to severe attacks of influenza in its worst form, accompanied with sore throat and general debility. He has been confined to bed for nearly a week and so prostrate that all his correspondence fell to the amanuensis of his daughter.

MR. WILLIAM MORRIS, poet and upholsterer, is now busy in practicing the art of weaving. Not only is he endeavoring to carry out practically some of his own designs, but in order to secure the tints he requires, and to be certain the colors he obtains are permanent, he has set to work to dye his own fabrics, and to study exhaustively the nature of dyes.

PROFESSOR MARK W. HARRINGTON has been appointed Professor of Astronomy and Director of the Observatory at Michigan University, in place of Professor James C. Watson, resigned. Two years ago Mr. Harrington received the appointment of Professor of Astronomy in the Imperial University of China and Director of the Chinese Meteorological Survey, with a salary of $4,000 a year, but resigned recently on account of ill-health.

ACCORDING to the marriage treaty, the Duchess of Connaught is to have $7,500 yearly for her own sole and separate use, and if she becomes a widow, she is then to have an annual allowance of $30,000. On the other hand, she brings a dowry, guaranteed by the Emperor of Germany, of 300,000 marks. She renounces in favor of the male line of the Royal Prussian Margravine-Brandenburg family all contingent hereditary rights thereto appertaining.

GENERAL FITZ JOHN PORTER, whose military conduct in 1863 has been completely vindicated by a special Board of Inquiry, is in Washington, the guest of Senator Randolph. Although appearing but little in public, he is being overwhelmed by congratulations in person and by mail and telegraph over the full verdict in his favor. The record of the case will be sent to Congress and the proper legislation upon it will probably be enacted at the present session.

JUDGE JAMES A. STEWART, Chief Judge of the First Judicial Circuit, and an Associate Judge of the Court of Appeals of Maryland, died at his residence at Cambridge, Dorchester County, on the Eastern Shore, April 3d, of cancer in the face. He was a prominent citizen of the State, and for many years in public life. He had been a member of the State Legislature, and also of the Thirty-fourth, Thirty-fifth and Thirty-sixth Congresses, and was in the seventy-second year of his age.

DR. CHARLES JEWETT, the well-known temperance lecturer, died in Norwich, Conn., April 3d, in his seventy-second year. Dr. Jewett was born in Lisbon, Conn., and began his temperance work in Rhode Island in 1829. Since then he has been almost constantly engaged in it, having held the State agencies of the temperance societies of Connecticut, Rhode Island, Massachusetts and New Hampshire. He has lectured in nearly every State of the North and West. His death was caused by heart disease, which had prevented him from working during the past Winter.

MADAME PATTERSON-BONAPARTE, the legitimate widow of Jerome Bonaparte, brother of the First Consul, died in Baltimore on April 4th, in the ninety-fifth year of her age, after an illness of several weeks. There were present at her deathbed her physician, Dr. J. S. Mackenzie; her grandsons, Colonel Jerome Napoleon and Charles Joseph Bonaparte; Mrs. George Patterson, widow of her brother, the late George Patterson, and Mrs. Clark, a relative, who has been a faithful attendant and nurse for the past ten years or more. Madame Bonaparte left an estate valued at more than $1,500,000.

PRESIDENT DIAZ AT HOME—THE COLLECTION OF MODELS IN HIS PRIVATE OFFICE.

GOVERNOR JOHN H. KINKEAD, OF NEVADA.

THE new Governor of the Silver State is a native of Fayette County Pa., where he was born, December 10th, 1826. Two years later his parents moved to Zanesville, Ohio, and, not realising their expectations, went to Fairfield County, in the same State. When eighteen years of age John went down the river to St. Louis and engaged in mercantile pursuits, and five years later he settled in Salt Lake City, Utah, where he remained five years, going thence to California, and investing his capital in mining operations. In 1860 he settled in Washoe County, Nevada. When the Territorial Government was organized, with J. W. Nye at its head, he was appointed Treasurer, and held the office until the formation of the State Government, serving in the meantime as a member of the Constitutional Convention. Shortly after the adoption of the Constitution he left Nevada, and spent two years in Sitka, Alaska, carrying on a successful business. He then returned to Nevada, and became a resident of Humboldt County. He was elected Governor of the State last Fall, and then took up his residence in Carson City. His early education was strictly commercial, and when not engaged in such pursuits, his chief labor has been mining and milling.

THE PRESIDENT'S DESK AT THE NATIONAL PALACE.

HON. JOHN HENRY KINKEAD, GOVERNOR OF NEVADA. FROM A PHOTOGRAPH BY C. A. MARSTON.

J. H. HAVERLY.

THE name of Mr. J. H. Haverly has, within a few weeks, assumed an importance in metropolitan theatrical circles as marked as it is sudden. Until within a very short time he was known only in professional circles as a marvelously successful and wonderfully energetic Western manager, who had brought to the theatrical and minstrel business untiring energy and industry, coupled with novel and effective methods of arresting public attention and always satisfying his public when he had once reached them.

The announcement made a few weeks ago that Mr. Haverly would assume the risks of the provincial trip of Colonel Mapleson's Opera Company and pay the *impressario* of Her Majesty's Company the lion's share of the receipts, was at first met with incredulity by New York managers and speculators in the same field; their surprise was not less than their doubts when the result proved a magnificent pecuniary success for both manager and *impresario*, and showed that, despite hard times, Mr. Haverly's judgment of the ability and desire of the American people to pay liberally for everything good was not at fault.

Mr. Haverly is a native of Western Pennsylvania, about forty years of age; he is of medium height, slender, nervous, and very quick and active. His large auburn mustache and ready nod and smile give him the appearance of a genial good fellow. But on closer look you catch the glimpse of a keen, penetrating, gray eye and a firm, decisive mouth, and you see at once that you have before you a man of more than ordinary vigor and determination of character. He is of modest demeanor, retiring manners, and scrupulously polite, treating all persons, of whatever rank or station, in the one kind and affable manner, which is his nature. He is always accessible, at least long enough to say, personally, to please call again when he is not so busy.

In 1875 Mr. Haverly assumed the management of a comedy theatre in Chicago. He presented the very best of everything; novelty succeeded novelty, and attractive stars, new plays, accepted metropolitan successes, opera, burlesque, and minstrel shows, were all given with rapidity, and at an immense expense. With confidence, inspired by two years of heavily purchased experience, Mr. Haverly assumed control, in September, 1877, of Haverly's Theatre, Chicago. Since that date he has built up that establishment into the very first rank, and has embarked in a half-dozen or more new enterprises.

In certain sections of the country the portrayal of the eccentricities and humor of the plantation darkey is best appreciated when represented by the original darkey himself. Mr. Haverly's organization of colored minstrels, known as "The Georgia Minstrels," embraces the very best of the native talent of this description, having been carefully culled from many hundred aspirants for distinction in that line.

The theatre at Fourteenth Street and Sixth Avenue was opened under his auspices on Monday evening, March 31st, by the Alice Oates Comic Opera Company, with the representation of Lecoq's opera of "Le Petit Duc," in the presence of an immensely fashionable audience, and scored such an immediate triumph that all doubts of the success of that enterprise are set at rest.

Mr. Haverly has just concluded an engagement with Mr. Lester Wallack to appear first at his theatre in Chicago, and subsequently in several of the principal Western cities. Another of Mr. Haverly's recent engagements is that of the Union Square Theatre Company for Haverly's Chicago Theatre. This engagement is intended to follow close upon that of Mr. Wallack, and embraces all the members of the Union Square Theatre Company of this city, who are to represent their great success, Mr. Bronson Howard's play of "The Banker's Daughter," and other pieces of the Union Square Theatre *repertoire*.

Added to these enterprises, Mr. Haverly has, in connection with Mr. Charles E. Locke, of the Bush Street Theatre, San Francisco, the control of nearly all the combinations which visit San Francisco and desire to play either on their way back or going West through the circuit west of the Mississippi, which embraces a number of important cities.

Mr. Haverly attributes a large share of his success to his good fortune and judgment in the selection of his assistants. He has been particularly successful in being seconded by able and experienced gentlemen who have faithfully carried out his policy and plans.

MISS LUCIA ZARATE, THE WONDERFUL MEXICAN DWARF.

J. H. HAVERLY, THEATRICAL MANAGER.

THE MIDGETS.

MISS LUCIA ZARATE was born a short distance from Vera Cruz, Mexico. Her parents are medium-sized people, her father weighing 165 and her mother 160 pounds. At her birth she was but seven inches long and weighed but eight ounces. She is now fifteen years old and weighs only four and three-quarter pounds. General Mite, her companion, was born in Chenango County, this State. His proper name is Flynn, and his parents also are of the ordinary size. His father, Mr. E. F. Flynn, is a gentleman of culture, weighs over 150 pounds, and is nearly six feet high. The General, at his birth, weighed only two pounds, and now is fourteen years of age and weighs only nine pounds. Miss Zarate is twenty-five inches high, and the General about twenty-six and a half inches. Miss Zarate's bracelet will not fit on an ordinary-sized finger, and her ring will not go on a common pencil. General Mite's foot is two inches long, and his hat just fits on a gentleman's closed hand.

They have been exhibited in several cities in this country, and always created an excitement. This is the first time they were ever exhibited in this city together. Physicians have made an examination of them, and pronounced them in all respects perfect. Their daily food is precisely like that of other people. They eat anything and everything. They take their three meals a day with the rest of the family at their hotel. So far as their health is concerned, they have never been a day sick, not even being affected with the ordinary maladies incidental to childhood. The variations of climate do not appear to affect them a particle, and in their travels, which have been very extensive, they have not at any time been sick.

TEXAS.—NEW BUILDING OF THE COTTON EXCHANGE AT GALVESTON.

THE NEW COTTON EXCHANGE AT GALVESTON, TEXAS.

THE new building of the Cotton Exchange at Galveston, Texas, was begun in July, 1877, the corner-stone being laid with Masonic ceremonies, and completed in December last. It is three stories in height, and built of Philadelphia pressed brick and Austin limestone, the exterior being elaborately ornamented with carved stone, representing solely the cotton-leaf, flower and boll. The total cost of the building, which measures 120 by 67 feet, from outside to outside, was $80,000. There are two main entrances. The front (on Mechanic Street) is protected by a stone porch, in the spandrels of which the Horn of Plenty is tastily and delicately elaborated. On the top of the porch stands a cotton bale, and surmounting the bursting bale the crown of "Cotton, *the* King." Over the entrance at either side are two shields, upon which are carved, respectively, a bull's and a bear's head—a jocose indication of the buyers and sellers. On the pilaster through which the corner room is entered is carved a composition representing cotton in marine commerce—the rudder, the anchor, the pulleys and ropes, the cotton-plant creeping in and out.

The Exchange Hall is 38 feet high, 82 feet long, and 63 feet wide, with a gallery running all round it on a level with the third floor. The floor is inlaid walnut and oak. There are four mantelpieces in the hall, two supported on bears', two on bulls' heads. The ceiling is semi-arched and elegantly relieved by brackets representing the cotton-plant in its various stages. The carvings and inside woodwork are of oak and walnut; the lustres, gilt.

It was in this fine apartment that a ball and reception were given the members of the American Industrial Deputation on their return from Mexico, on the 1st of February.

TIMOTHY C. MURPHY.

THE Treasury Department, United States Life-saving Service, has recently directed a medal to be presented to Mr. Timothy C. Murphy, of Norwich, Conn., as a recognition of his exploits in saving persons from drowning. Mr. Murphy is yet a young man, being but twenty-one years of age, and has saved by his daring no less than twelve lives. He is the younger of three brothers who gained distinction as oarsmen in several races on the Thames River (Conn.), and at Silver Lake,

TIMOTHY C. MURPHY, WHO WAS AWARDED THE GOVERNMENT MEDAL FOR SAVING LIFE.

Digitized by Google

where he made a fine record. In many of the cases in which life was saved by him, he acted with an utter recklessness of risk and peril as to himself. A correspondent thus describes one of his feats: "On one occasion, when the steamer *City of Lawrence* was returning from an excursion with some 1,500 persons on board, a passenger was crowded off the gangplank at the landing. The night was very dark, but Murphy plunged into the water in search of the unfortunate person. In the darkness he was confused, and it was nearly an hour before he was rescued by a rope, with the man he had saved. The latter was unable to swim, and his rescue was, therefore, attended with great difficulty." All who have witnessed his exploits speak in the highest terms of his bravery and coolness, and there seems to be no room for doubt that the honor conferred by the Government has been worthily bestowed.

Are Plants and Trees Healthy?

As a proof of the humidity given to the atmosphere by trees, experiments show that the "Washington elm" at Cambridge, Massachusetts, with its 200,000 square feet of leaf surface, transpires seven and three quarter tons of watery vapor in twelve diurnal hours of clear weather. From this it is inferred that a grove, consisting of 500 trees, each with a leaf surface equal to that of the elm mentioned, would return to the atmosphere 3,875 tons of aqueous vapor in twelve hours. Indoors, transpiration is, during the day, only about one-half as active as in the open air, but at night it is about equal in the two situations; hence, the transpiration of a plant indoors is more than one-half as much in twenty-four hours as it would be outside. It follows that growing plants increase the humidity of the atmosphere in a closed room. This point is very important where rooms are heated by hot-air furnaces. In such apartments the air is drier than in apartments heated by a stove or open fireplace. In a dry atmosphere of the temperature of 65° to 68° Fahrenheit, a great demand is made upon the system to supply the air with moisture, the skin and pulmonary mucous membrane are dried, and a condition is induced which is expressed in irritability of the nervous system, paleness and susceptibility of the skin to cold, to pulmonary diseases, and, in short, deterioration of all the functions. If the presence of a certain number of thrifty plants in an occupied apartment, warmed by dry air, would have the effect of raising the proportion of aqueous vapor, it is clear that plants in rooms heated by a hot-air furnace would, in a hygienic point of view, be of very decided value, since they may become the means of obviating very distressing symptoms, or even disease itself. The absence of plants may be supplied by the introduction of the external air. That trees increase atmospheric humidity, absorb malaria, and produce a refreshing coolness, is an established fact. They are the most salubrious agents that can be introduced in densely populated cities.

Romance of a Capuchin Monk.

A CAPUCHIN monk, as one sees him walking about Rome, is an interesting and picturesque object. Few human scenes are likely to impress a stranger more deeply, especially if the monk be met in the famous cemetery of that Order. Some of these men have a history which strangers wot not of. Father Pavesi, provincial of the Capuchins in Rome, who was lately robbed of a large sum of money, has a story which is extremely pathetic. As told in the *Globe* of London, it is that he was an accomplished and handsome officer in the Papal army under Gregory XVI., and won the affections of a young Roman beauty of good family and considerable wealth. The young girl's parents permitted the intimacy to ripen into a passionate attachment, but at last formed other plans for their daughter, and directed her to break with her valiant lover, and at the same time told him they intended her for a more distinguished alliance. The lovers were astonished, and pleaded in vain. Friends interceded, but the parents would not relent. A total separation took place, and for several months they knew nothing of each other. One day Pavesi was sent for by the girl's parents. He went to their house and was shown into a darkened chamber where on a couch lay the young girl in the last stage of a fatal illness. The lovers took a last farewell, and on the following day the invalid passed away to her last sleep. Her funeral was observed with great magnificence, the wealth and fashion of Rome being present. A few weeks later Pavesi entered the Capuchin convent, forsaking the army, where a brilliant career was before him.

Habits of Ants.

SIR JOHN LUBBOCK has made out that ants do not recognize ants of the same nest by any sign or password, though he thinks it impossible that in the case of nests containing 100,000 each, all the ants know each other individually. The way in which he disproved the sign or password theory was exceedingly ingenious. He took pupæ from various nests, and gave to some of them attendants from their own nest, to others attendants from a different nest of the same species, so that if they were taught any sign or password, the ants thus brought up would know the sign of their nurse's nest, and not that of their own, except when the nurse had been taken from their own nest. Then he returned some of them to their own nest, and some to their nurse's nest. The result was as follows: Of pupæ brought up by friends, and returned to their own nest, none were attacked, but all welcomed. Of pupæ brought up by *strangers* (of the same species), and returned to their own nest, 37 were welcomed, and only seven were apparently attacked; but of these seven, SIR JOHN was doubtful in three cases. Of pupæ brought up by strangers of the same species, and put into the nest of those strangers, none were welcomed; all 15 were attacked. Hence, ants of the same nest do recognize each other, but not by any sign or password—probably by some smell, or other sense quite unknown to us.

Honorable Humility.

GENERAL BAUER, who commanded the Russian cavalry in Holstein, was a soldier of fortune, whose family and country were unknown to every one. When encamped near Hanau, he took a mode of discovering himself as novel as it was amiable. He invited all his field-officers and some others to dine with him, and sent his adjutant to bring a miller and his wife who lived in the neighborhood to the entertainment. The poor couple came, very much afraid of the summons, and quite confused when they appeared before the Muscovite general. Bauer seeing this, bade them be quite easy, for he only intended to show them kindness, and had sent for them to dine with him that day; at the same time, he conversed familiarly with them about the country. At dinner, the general placed the miller and his wife one on each hand, and nearest to him, and paid particular attention to them. In the course of the entertainment, he asked the miller many questions about his family and relations. The miller stated that he was the eldest son of his father, who left the mill he then possessed, and that he had two brothers and one sister.

"Have you no other brother?" asked the general.

"No," replied the miller. "I once had another brother, but he went away with the soldiers when he was very young, and must have long ago been killed in the wars."

The general observing the company much surprised at his conversation with the miller, said to them: "Brother soldiers, you have been curious to know who I was, and whence I came. I now inform you that this is the place of my nativity, and you have heard from this miller, who is my elder brother, what my family is." Then turning to the astonished miller and his wife, the general embraced them, saying that he was the brother they had supposed dead. The general then invited the whole of the company to meet him the next day at the mill, where a plentiful entertainment was provided, the general pointing out to his brothers in arms the room in which he was born, with as much evident joy as if he had been showing them the place where he had gained a victory.

Palmerston's Basket.

It appears that during Lord Palmerston's long stay at the British War Office he instituted a communication between his own room and the Registry. A basket, always at his side, could be drawn at any moment, on a given signal, into the Registry, and returned to him in the way in which it came. Whenever a visitor called on Lord Palmerston he was always desired to send in his name. The name was at once placed in the basket, whisked into the Registry, and returned with all the papers relating to the visitor's case. When Lord Palmerston had listened to his applicant's preliminary statement he used to interrupt him by saying, "Dear me, it's very remarkable, but I have your case actually before me now," and diving his hand into the basket, produced the very papers. The delighted applicant departed with the conviction that his own grievances had been engaging the Minister's attention all the morning. This anecdote furnishes a clew to the hold which this able, astute, and good-humored statesman obtained over his political friends.

FUN.

WHY don't some one write a song on the first fly of Summer?

YOU should be careful how you walk over the frozen wheel-ruts on a country road. Cart-ridges sometimes explode.

MEN who have been too feeble to bring in the fuel all Winter are now able to go up the river three or four miles and sit all day on a damp stone, fishing.

CAREFUL HOUSEWIFE (lifting a shoe from the soup-tureen): "Lal who'd a thought baby's shoe would turn up in the soup! But I know it wasn't lost. I never lose anything."

PROFESSOR: "What is a monarchy?" *Freshman*: "A people governed by a king." *Professor*: "Who would reign if the king should die?" *Freshman*: "The Queen." *Professor*: "And if the Queen should die?" *Freshman*: "The Jack."

TWO DARKIES were vaunting their courage. "I isn't 'feared of nothin', I isn't," said one. "Dan, Sam, I reckon you isn't 'feared to loan me a dollar?" "No, Julius, I isn't 'feared to loan you a dollah, but I does hate to part wid an ole fren forever."

"HAVE you given electricity a trial for your complaint, madam?" asked the minister, as he took tea with a feeble old lady. "Electricity!" said she. "Well, yes, I reckon it has. I was struck by the lightning last Summer and hove out the window, but it didn't seem to do me no sort of good."

A MEMBER of the rhetorical class in a certain college had just finished his declamation when the professor said: "Mr. ——, do you suppose a general would address his soldiers in the manner in which you spoke that piece?" "Yes, sir, I do," was the answer, "if he was half scared to death."

AT COURT—*Eminent Counsel*: "Yes, gentlemen of the jury, you will—oh, I know you will restore my persecuted client to the arms of his wife and little ones who——" *The Court*: "Your client is a bachelor." *Eminent Counsel* (with reproach): "Your Honor would even deprive my unhappy client of the pure joys of home and the family. (Weeps.)

A YOUNG woman whose apartments are very nicely furnished undertakes to dazzle a gentleman whose acquaintance she has just made, and, ringing the bell, says to the servant: "I think I'll take a drive out to the Bois. Susan, tell John to harness up the horse to the phaeton." The faithful servant returns in a few moments and says: "Missus, I can't find any John, or horse or phaeton at all—shall I go and get a cab?"

A WORD TO THE CORPULENT.

INSTEAD of regarding obesity as an abnormal condition, many people have erroneously considered it as an evidence of health, and any agent that reduces fat is therefore at once suspected of being injurious. Starting to reason from the false position that fat is an evidence of health, it is not surprising that they should, very naturally, fall into the error of supposing that an agent possessing properties capable of reducing corpulency would prove injurious to the health. Reasoning, however, from the rational basis, that an undue deposition of fat, constituting obesity, is not a healthy but a morbid condition, it is quite as natural for us to arrive at the opposite conclusion, which is sustained by experience and observation, *i. e.*, that the reduction of fat in cases of corpulency is invariably followed by an improvement of strength, spirits, and physical comforts. Allan's Anti-Fat will reduce a fat person from two to five pounds a week. Sold by druggists.

THESE old people whose blood has become thin and steps feeble are praising Hop Bitters for the good they have done them.

FOR the last quarter of a century the ST. NICHOLAS has stood foremost, and unites all the traditions of old-time hospitality with a foremost place in the improved requirements of the age. The guest finds here the level of the most exacting demands, superb cuisine, and the perfection of accommodations, at the moderate price of $3.50 per day.

THE exode of the plantation hands of Mississippi and Louisiana creates almost as much stir as the running of the Underground R. R. (of which William Still gives so full an account) did in slavery times.

THURBER'S RELIABLE CANNED GOODS.

GREAT progress has been made within a few years in the art of Preserving Fruits, Vegetables, Fish and Meats in tins, and in consequence the consumption has largely increased. As yet, however, canned goods are not generally thought to be "fresh," and some brands are not, perhaps, entitled to be so considered. Those packed by us, however, are Hermetically Sealed at the sources of supply, when they are in the best possible condition, by a process which preserves the much-to-be-desired fresh, natural flavors; and they are really in better condition, fresher, more palatable and wholesome than many so-called "fresh" articles which are exposed for sale during considerable periods of time in city markets. All goods bearing our name are guaranteed to be of superior quality, and dealers are authorized to refund the purchase price in any case where consumers have cause for dissatisfaction. It is, therefore, to the interest of both dealers and consumers to use THURBER'S BRANDS.

H. K. & F. B. THURBER & CO.,

Manufacturers of and Dealers in Food Products, New York.

ASBESTOS LIQUID PAINTS.

"THESE paints, made by the H. W. JOHNS' MFG. CO., have in a remarkably short time attained a position that could not have been possible without real merit. When the company received the contract to supply paint to cover the entire structure of the Metropolitan Elevated Railroad, the extent of the order was a matter of remark. Since then, the company have made a contract for all the white paint to be used, inside and out, upon that immense pile, the United States Capitol at Washington, and, if we mistake not, the other Government buildings. The magnitude of this order should not be a source of so much satisfaction to the H. W. JOHNS' MFG. CO. as the fact that it was made at all. Those who know the thorough investigation that is made by the engineers in charge of the public buildings appreciate that this is indeed a high indorsement of the paint. The Asbestos Paint is used upon another structure, which, though not so extended as the elevated railroad, or so prominent as the United States Capitol, is to the writer of far more importance than either—his own barn. It takes precedence of either of those in the fact that it was painted first. When the paint was applied, it was a comparative novelty. We noted then the ease of application and its covering qualities. Now, at the end of two years, we find the surface remarkably hard and glossy, and it shows every indication of wearing in a most satisfactory manner. The fact that it is furnished in a great variety of pleasing tints, and in a condition ready to be applied at once, will lead those intending to paint to look into its merits."—*American Agriculturist.*

THE great permanency of MURRAY & LANMAN'S FLORIDA WATER gives it a wonderful advantage over nearly all other perfumes; days and weeks after its application, the handkerchief or garment exhales a soft, rich fragrance, agreeable, refreshing and healthful.

PARALYTIC, nervous, tremulous old ladies are made perfectly quiet and sprightly by using Hop Bitters daily.

Blair's Pills.—Great English Remedy for Gout and Rheumatism. All Druggists have them.

Stuttering cured by BATES'S APPLIANCES. Send for description to SIMPSON & Co., BOX 2,236, New York.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

"BY a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast-tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—See article in the *Civil Service Gazette.*

Sold only in soldered tins, labeled,

Frank Leslie's

CHIMNEY CORNER.

The Most Popular Illustrated Family Paper.

The SUCCESSFUL RIVAL of ALL THE WEEKLIES for THIRTEEN YEARS past.

The CHIMNEY CORNER presents a constant succession of brilliant attractions.

The Best Writers in the country contribute to its columns; and new serial stories of the most absorbing interest, of great power, true to life, and embracing a wide range of subjects, are constantly appearing.

The Continued Novels are by such eminent writers as John Habberton, author of "Helen's Babies"; S. Robinson, author of "That Mother-in-Law of Mine"; Etta W. Pierce, Christian Reid, Meta Victoria Victor, M. T. Caldor, Frank Lee Benedict, J. W. De Forest, and others equally celebrated.

Short Stories are completed in each number; and the miscellaneous contents embrace Biographies, Adventures, Essays, Travels, Curiosities of Foreign Life, Marvels in Nature and Art, Legends, Anecdotes, Poetry, etc.

Beautiful Steel Engravings are frequently presented to the subscribers, far exceeding in value the price of a year's subscription.

Published every Monday, and for sale by all newsdealers, price 10 cents. Annual subscription, $4. Three months, $1. Sent postpaid.

JOHN HOLLAND'S Patent Record GOLD PEN

Patented Oct. 2, 1872.

Is the highest achievement in the manufacture of Gold Pens and the result of experiments for more than twenty years. The "RECORD" Pen is produced by a skillful combination of the two precious and non-corrosive metals; *16 kt. Gold* and *Platinum*, while the ordinary gold pen contains an alloy of copper, reducing its fineness without yielding that elasticity, density and steel like temper which the costly *Platinum* supplies. The "RECORD" Gold Pen *Points* are of the best *Iridium*. (Diamonds,) indestructible with fair treatment, and polished to glass like smoothness.

Steel pen writers have now every objection to gold fairly overcome, and every requirement in a Pen which will endure and not oxidize, squarely met. The "RECORD" Gold Pen is guaranteed to possess Durability, Permanency of Spring and Perfection of Point. Price, $2.50, sold by all Jewelers and Stationers in the United States. If not found order direct from *JOHN HOLLAND, Manufacturer, 19 W. 4th St., Cincinnati.*

WITH **$5** You can buy a whole

3 p. ct. Grand Duchy of Oldenburg Gov't Bond.

Frank Leslie's

SUNDAY MAGAZINE

FOR MAY.

Rev. Charles Force Deems, D.D., LL.D., **Editor.**

OPINIONS OF THE PRESS:

"This is the cheapest of all the magazines, and contains excellent reading for every member of the family, and full of pictures, which are a delight to all."—*South Churchman (Alex.) Va.*

"There is no better monthly magazine for the family issued in this country, having in each number so good a supply of healthful reading for persons of different ages, giving so large an amount at so little cost."—*Cumberland Presbyterian, Pa.*

"The illustrations in this number seem to be an improvement on those of former issues, if such a thing is possible, while the contents are as varied and interesting as ever. It would take more space than we can spare to enumerate the several articles, but they are all choice, very interesting and instructive."—*Albany (N. Y.) Sunday Press.*

"The Sunday Magazine is, as usual, far in advance of all the other periodicals. When we saw the April number we were reminded of the bright Spring days of sunlight and shower."—*The N. Y. Methodist.*

"The motto, 'Attractive, Useful and Interesting reading for everybody,' which adorns the cover of Frank Leslie's Sunday Magazine, is fully lived up to in the April number. Rev. Dr. Deems understands the art of making an attractive as well as able magazine, and has succeeded beyond a question of doubt in fulfilling his desire that it shall be worthy of a place in every American household."—*Orange (N. J.) Journal.*

CONTENTS OF MAY NUMBER:

Descriptive Articles: "The Ainos of Northern Japan," by William Elliot Griffis, 14 illustrations; "Culture," by Mrs. Elizabeth L. Brooks; "Gather the Fragments," by Rev. T. S. Adams, D.D.

THE DEMOCRATIC DOCTORS ATTEMPTING TO VACCINATE POLITICAL TRAMPS IN CONGRESS.

CONKLING—"*I never supposed it would come to this, that I should be obliged to consent to inoculation with such odious stuff.*"
DOCTORS THURMAN AND OTHERS—"*Well, submit gracefully, or we may have to repeat the dose.*"
BLAINE—"*Don't, I beg you, do any harm to my 'bloody shirt.'*"
BAYARD—"*Oh, that's in ribbons already!*"
MESSRS. HOAR AND EDMUNDS—"*And are we, too, to suffer this indignity?*"
CHORUS OF DOCTORS—"*There's no escape for you—you must take the virus.*"
CHORUS OF VICTIMS—"*Well, go ahead—perhaps the White House will supply an antidote.*"

Important to Mothers.

MRS. WINSLOW'S SOOTHING SYRUP is the only thing that mothers can rely upon for their children. It corrects acidity of the stomach, cures wind colic, regulates the bowels, and gives rest, health and comfort to mother and child. During the process of teething its value is incalculable. It softens the gums, reduces inflammation and allays all pain, thereby giving rest to the child and comfort to the mother.

THE LATE MADAME BONAPARTE.

Close of a Notably Romantic Career.

"I KNOW the most beautiful young woman in the world, whom you must marry"—this, in 1803, from a Baltimore lady to Jerome, brother of him who was destined to shatter empires by a nod. Jerome had served under General Leclerc (Pauline Bonaparte's first husband) in Santo Domingo, and, after carrying dispatches home to France, had gone to Martinique to command a frigate. He was invited to Baltimore, and there, at the house of Samuel Chase, one of the signers of the Declaration of Independence, he met Betsey Patterson, then eighteen. Her mind, richly stored by her tender, religious and highly cultured mother, was quick, her wit sparkling, her manners sprightly and coquettish, and her beauty simply dazzling. Patterson *père* was a frugal, thrifty, well-to-do business man, of strict integrity in business matters, but close and arbitrary in his family relations.

Miss Patterson was desirous of seeing the distinguished Frenchman, and Jerome's curiosity was piqued as the prettiest girl in Baltimore had been sent to Virginia in order to be kept out of *his* way. The young lady contrived to attend the city races, and came face to face with her fate. Miss Patterson wore a buff-colored silk dress, very scanty as to drapery, a large *fichu*, and a huge Leghorn bonnet, trimmed with pink gauze and long ostrich feather. Jerome was an ardent wooer; the maid was willing to be won, as it had been predicted that she was to wed a distinguished Frenchman, "a prince in disguise"; and on the twenty-ninth day of October, 1803, a license for their marriage was issued. A hitch occurred, however, and the marriage did not take place till Christmas Eve,

THE LATE MADAME BONAPARTE.—FROM AN OLD PAINTING

Bishop John Carroll, brother of Charles Carroll of Carrollton, tying the knot in accordance with the ritual of the Roman Catholic Church. The bride wore a plain and very scanty India dress, with old lace, and a string of pearls at her throat; the groom, a rich laced and embroidered purple satin coat, the white-lined skirts of which reached his heels, knee-breeches, diamond buckles and powder. Bonaparte, who had other views anent the career of his brother, was highly incensed at the marriage. On the 20th of April he caused the French Minister of Marine to write to the French Consul at New York his resolution "that no money shall be advanced on the order of citizen Jerome," and to "prohibit all captains of French vessels from receiving on board the young person to whom the citizen Jerome has connected himself," and to insist on Jerome's return to France by the first French frigate. Such were the wishes of the First Consul, "whose inflexibility can be compared to nothing but the vastness of his conceptions."

It was not until March 31st, 1805, that Jerome embarked at Baltimore on board the *Erin*, with his wife, for Spain. They had set sail on the previous August, but had been wrecked. Madame Bonaparte's wadded *pelisse* nearly proved her destruction, as its weight kept her under water; but a sailor fished her up, and shortly afterwards, at a hospitable farmhouse, she scandalized her aunt by "enjoying roast goose and apple sauce, instead of kneeling in thanksgiving." Arrived in Spain, Jerome quitted his wife and proceeded to Paris, and on the 3d of May, 1805, the report of the annulling of the marriage reached Philadelphia. Madame Bonaparte arrived in London, where, at Camberwell, July 7th, 1805, was born her son, Jerome Napoleon Bonaparte.

THE NEGRO EXODUS.

"THE Negro Exodus" from certain States of the South into the State of Kansas has assumed proportions which give to it the significance of a public event. Where such a tidal movement has set in, we may be sure that general and not individual causes are at the bottom of it. That these causes are complex might be inferred from the complexity of all general phenomena in the figure of modern society, but the variety of considerations which have given impulse to this popular migration may still further be inferred from the conflicting opinions of the men who undertake, from different points of view, to account for its origin.

That the movement indicates a state of unrest and dissatisfaction on the part of the colored population in certain quarters of the South cannot be disputed in the presence of the facts now passing before our eyes. And the force of the pressure which has set this column of emigrants in motion cannot be duly appreciated without taking into account the natural immobility of the negro race and the strength of its local attachments. Some, indeed, of the causes impelling this movement lie upon the surface; others there are which plant their roots deeper in the social stratification that prevails at the South.

That the negro in some parts of the South finds it difficult to exercise his political franchises; that in many cases and in many respects he suffers a curtailment of his civil rights, and that he often falls a prey to fraud in his business dealings with the superior race, are charges that have been so frequently made by party politicians, in the apparent interest of a profitable political agitation, that many people had come to be wearied with their iterance on the public ear. And if the present movement at the South shall have no other effect, we may at least hope that it will lift such disputed questions as these into the higher plane of social science, and therefore above the storms and clouds of purely controversial politics.

The Southern Democrat, who may have denied the truth of the accusations brought against his political confederates by the Northern Republican, will now find a new difficulty in clearing his skirts from these imputations. But just in proportion as he recognizes the tenability of the charges laid at his door he will be piled by incentives to work for a correction of the evils he can no longer ignore; for the present hegira of the colored people in Louisiana and Mississippi has a significance which is social and economical as well as political.

The abolition of slavery as a consequence of the late war disposed of the "Slavery Question" in the United States, but left behind it a question which lies still deeper—the right disposition of an inferior race suddenly absorbed in the body politic. Questions of race lie deeper than questions of politics or questions of public economy, as the experience of all nations has shown in all ages of the world. "The Turkish Question," which will not down in Europe at the bidding of all the Great Powers, is a question of race which concerns itself with the difficult task of finding a *modus vivendi* for populations residing within the same territorial limits but having no affinity in point of national lineage. "The Indian Question" in the United States is a question of right adjustment between inferior and superior races, between higher and lower civilizations, brought into contact by the necessities of their competing geographical distribution, without having been able to discover the just and proper relations imposed on each by the laws of Nature and Providence. And in like manner "the Negro Question" in the United States is one which calls for the large handling of statesmen, rather than for the petty bickerings of small politicians at the South, trampling on the rights of the colored race without pity or remorse, and of small politicians at the North, who would fain keep the "wrongs of the negro" as a part of their political capital, without laboring for the removal of those wrongs in their causes as well as in their effects.

And, hence, it is in this view that we augur beneficent results from the pending "exodus." Whatever men may affirm or deny with regard to its political aspects and its social bearings, they cannot deny that it brings home to the business and bosoms of the Southern people an economical question which is fraught with the most immediate and vital importance. The labor system of the South is in danger of being disturbed by this popular "landslide." The expulsion of the Huguenots from France impoverished the industry of that country for a whole century, and built up arts and manufactures in England and Germany at the expense of arts and manufactures in France. Unity of religious faith, purchased at the cost of reason and justice, was found to be a dear acquisition in the days of Louis XIV., and unity of politics in the "solid South" will be found a dear acquisition if purchased to-day at a similar sacrifice. For it requires no perspicacity to perceive that a fearful depletion will be wrought in the labor system of the South if this exodus should become chronic and general; and if the politicans of that section should be insensible to the economical aspects of the movement, it still remains to say that its purely political bearings would perhaps become apparent to them if, at the next Presidential election, it should be discovered that the influx of negro voters into the North had resulted in a "solid North" for the Republican Party. It would then be perceived, though perhaps too late for repentance, that the dilemma in which the South is placed has a political as well as an economical horn on which to gore its victims.

THE NATIONAL CREDIT.

NOW that we have got down to a specie basis, our national credit is scarcely second to that of any other country in the world. Outside of England and the United States, there is no nation that can float a four per cent. at par, taking present value of their respective securities as a basis of comparison, although France can very nearly do so. Her obligations bearing five per cent., and having long time to run, are quoted at 110 and 111. The United States has no five per cents. with long time to run, but measured by the value of our other obligations a long-time five would be worth now about 114. German fours are worth 96, and it is a singular fact that in the German markets a United States four per cent. obligation rates a little higher than a German. The credit of Italy ranks high, her fives being at par, but it is below that of the other countries named. The three per cent. consols of England are now worth 96. The four and a half per cents. of Russia are worth but 76, and those of Norway 96, while those of the United States are worth 108. The threes of Spain are rated at fourteen cents on the dollar, and South American securities are for the most part little more valuable. The threes of Mexico are worth but eight cents on the dollar. With wise financial management and a stable policy, our credit in time will surpass in the money markets of the world that of every other Power.

This result, however, will not be attained if the inflationists in Congress can prevent it. The action of the House of Representatives, last week, in amending its rules so as to permit the Committees on Ways and Means, Banking and Currency and Coinage, to report at any time, is most unfortunate in this connection, since the change will enable the inflationists on the committees named to deluge the House with all sorts of Bills proposing to tinker the finances, change the tariff, and alter the coinage and weights systems of the country. It is feared that the same majority which affected this change in the rules will now proceed to pass legislation hostile to the national banks, and may try to enact a law at the earliest possible day retiring the notes of those institutions and replacing them with greenbacks. In regard to silver, an effort may be made to secure free coinage and to authorize the issue of silver bullion certificates on a basis similar to that which is now provided for gold. The hard money men in Congress should stand together, without regard to party lines, in resisting by all constitutional means the enactment of measures so full of menace to our financial security.

THE AMERICAN DRAMA.

IT has been a significant feature of the Winter's dramatic season that the one society play which has achieved a veritable success, holding popular interest even beyond the traditional hundred nights, has been an American play. Other American plays before "The Banker's Daughter" have been crowned with signal triumph, and won merited and prolonged success. But the plays that have achieved such distinction have been of a very different order and class from Mr. Bronson Howard's drama.

The "Banker's Daughter" may be said, indeed, to mark an epoch in the history of the American drama. It is the first attempt which has been truly successful to construct an American play upon a French model, making use, however, not of French or foreign characters and situations, but of genuine American characters, and of incidents peculiar to American society. It is in Mr. Howard's happy inspiration to seize upon and reproduce such a typical American character as *George Washington Phipps*, a character as perfect in its way as *Colonel Sellers*, and quite as genuine and original as a type, that we discern the prophecy of what may yet be achieved by American dramatists.

It has been, and is still, the reproach of our young but growing school of dramatists that their highest aim seems to be to imitate, copy, and borrow their material, as well as the secrets of the art, from the French school. Few if any American plays, fitted to be called such, have as yet been produced—plays, that is, which can be considered as genuine American plays, the motive of whose action is found in typical American situations. American plays have, with two or three notable exceptions, been mere reproductions, adaptations and imitations, with little or no attempt to portray individual types of character, or depict such traits as smacked of the soil.

The reason of such a state of things is obvious. It is by virtue of its own inherent superiority and excellence that the French drama has impressed its peculiar stamp upon the whole field of dramatic art. The inventiveness, originality, and marvelous prolific industry of the French playwrights of the past twenty-five years find no parallel except in the Elizabethan era. It is but natural and inevitable that the master-pieces of French comedy and society plays should affect the form and character of all other foreign dramatists' work and composition. It is certain our own dramatists will find no better models, unless it be in Sheridan's works, upon which to build their productions, than in the study of these French marvels. In the infancy and early growth of any art there must be the training of the artist in some school of superior excellence. The French themselves, for nearly two centuries, were but servile imitators of the Greeks. Even as late as the present century Voltaire not only copied the ancients, but openly stole from all sources—the Italian, English and Spanish schools supplying him with both material and hints for construction. It is due to this study and universal acquaintance with all forms of dramatic composition that the French school to-day owes its purity of form and its endless variety and vitality.

But study of good morals is one thing, and too close an imitation and following after them is another. While the American dramatist cannot make too close a study of the best, wherever he may find it, he must look at home for his material if he wishes his work to have any permanent or original value. It is an encouraging sign that where the American dramatist has been fortunate enough to reproduce a genuine American type of character of real merit, his success has been immediate and permanent. *Solon Shingle, Rip Van Winkle, Colonel Sellers*, the *Professor* in "Big Bonanza," and *G. Washington Phipps* have the true national and local color, and by their truth and fidelity to nature have been crowned as masterpieces. It is only when the American playwright shall seek the source of his inspiration in our national peculiarities, eccentricities and characteristics, that he can hope to produce types which will be recognized as genuine and original.

It is a curious fact that our late war, prolific as it was in romantic and tragic situations, and yielding such a wealth of heroic material suitable for the dramatist's art, has not inspired any playwright to produce a great national drama. But then the whole field of American life and action is as yet an unworked one. The conditions of American life are especially favorable to dramatic compositions. Where else do such contrasts exist as here? Where else can one find, unless it be in Russia, in one country such extremes as are seen in the extravagant ostentation and princely magnificence of New York society life, and the wild, lawless career of the Western rancher, with its racy touch of savage freedom? In the excitement, intrigues, temptations and dangers incident to a commercial career; in the spirit of adventure and speculation which infects the very air; in the exquisitely humorous traits so peculiar to the American character, and in the vicissitudes which make of most American lives either a tragedy or a failure—surely, with such materials to work upon, the American dramatist must ere long arise who will write an American drama worthy of the name.

THE CRISIS IN CANADA.

THE political situation in Canada, which is just now attracting a good deal of attention, recalls that of forty years ago, when a series of events took place threatening for a time to make an end of British authority on any part of the mainland of the American Continent. Then as now the trouble originated with the French population of the lower provinces.

The cause of the present excitement is easily explained. A little over a year ago, Mr. Letellier, the Lieutenant-Governor of the Province of Quebec, having just occasion, as he thought, to be dissatisfied with his Cabinet, requested the resignation of its members, and, on their refusing to comply, dismissed them. The Lieutenant-Governor, at the same time, dissolved the Chambers, and appealed to the people. The dismissed Ministry, headed by Mr. De Boucherville, commanded a large majority in the dissolved Parliament. It was, therefore, very naturally expected that the Conservatives would be sent back to the House with an increased majority, and that De Boucherville would be triumphantly restored to place and power. The result was quite otherwise. The Liberals, with Mr. Joly at their head, came up with a majority of one. With this very slender majority, Mr. Joly, who had the sympathy and support of the Lieutenant-Governor, continued to hold the reins of power in the face of a united and bitterly hostile Opposition until the time of the late Tory triumph. Meanwhile the conduct of Lieutenant-Governor Letellier had become the subject of severe criticism. It was claimed by the Tories that he had acted unconstitutionally in dismissing a Ministry which was backed up by a large working majority, and which, therefore, deserved to be considered as fairly representative of the sentiments of the majority of the people. It was also claimed by them that the one member who turned the balance in favor of the Liberals in the new Parliament was secured by purchase. It has, on the other hand, all along been contended by Letellier and his friends that the De Boucherville majority in the previous Parliament had been obtained by bribery, purchase and other illegal means, and that in dismissing the Ministers and dissolving Parliament the Lieutenant-Governor was acting alike constitutionally and within the sphere of his duty. Such is the quarrel in its original features.

The later aspects of the affair are of more vital interest. During the last session of the Federal Parliament at Ottawa, an effort was made to secure the impeachment of Letellier. The Liberals, however, were yet in power, and the impeachment failed. With the advent to power of the Tories, the whole affair was revived, and the French Canadian Conservatives made the dismissal of Letellier the one condition on which Sir John Macdonald and his Cabinet could count on their support. They made good their word; for, as the matter was not taken up as promptly as they wished, they refrained from all participation in the recent debates on the tariff question. Finally, however, Sir John was forced to act; and, the question having been brought before Parliament, Letellier was censured by an overwhelming majority. It now became Sir John's duty to lay the matter before the Governor-General, and to demand the execution of the will of Parliament—the dismissal of Letellier. In the opinion of the Marquis of Lorne, the questions involved were somewhat complicated, as well as novel; and, being unwilling to take final action on his own responsibility, he decided to refer the whole matter to the Imperial Government. This course of conduct a large portion of the Canadian people, especially the French Conservatives of the Province of Quebec, resent as a violation of the rights and privileges secured them by the Act of Federation. Such is the general situation as it now presents itself.

For some few days it did seem as if there was, indeed, grave cause of alarm. The Tory newspapers blustered; seditious cries were heard in the streets and places of public resort, and resolutions almost revolutionary in their character were threatened to be submitted to Parliament. The most alarming feature of the entire situation was that, for a brief season, it seemed as if the Ministry and the Governor-General were, on this question at least, in open antagonism. While we write, the situation, has assumed a less gloomy aspect, and there is a reasonable prospect that the storm will blow over. Sir John Macdonald and his associates in office have publicly assumed equal responsibility with the Governor-General in referring the difficulty to the Imperial Government; the newspapers have assumed a somewhat milder tone, and the threatened motion, which implied a vote of censure on the Marquis of Lorne, has been wisely withheld. It is quite possible that the entire affair, which threatened to eclipse the rising reputation of the Queen's youthful son-in-law, may yet turn out greatly to his advantage. It is difficult indeed for the impartial observer to come to any other conclusion than that he has acted with becoming wisdom and caution in the premises. The Canadians are not yet prepared to come under the benignant folds of the Stars and Stripes. If they will maintain their connection with the Britis

Digitized by Google

Empire, and enjoy the benefit of its protecting care, they must recognize the superior authority.

IN THE OLD WORLD.

ENGLAND is much disquieted by labor troubles, although the first accounts of rioting in several colliery villages of Durham on the night of April 8th happily prove to have been exaggerated. How long must it be until the practical genius of the British people shall satisfactorily solve that problem of the age—the true relations between labor and capital? Parliament has adjourned to the 17th instant. The course of Lord Beaconsfield's foreign policy by no means runs smoothly. Among the first fruits of it was the Anglo-French financial and administrative intervention in Egypt. But, as might have been anticipated, the Khédive has broken loose from his leading-strings, as soon as he thought he had a favorable opportunity to play off his French against his English protectors and then other unseen influences against both. The Anglo-French protectorate of Egypt has long been regarded in France as simply a device for gaining time to establish complete English domination over Syria and the Euphrates route to India. The Khédive has counted on this fact to prevent England and France from cordially co-operating with a view to compel him to abandon his present course, which threatens the interests of both. He seems, however, to have miscalculated, and his miscalculation may cost him his throne. Ismail Pasha is, after all, a vassal of the Sultan of Turkey. Were England and France to agree upon requiring the Sultan to do what he has already offered—that is, to make the Khédive "resign"—the latter could not resist such a threefold interference with his plans for governing as well as reigning in Egypt. His dismissal of Messrs. Wilson and Blignières from his Cabinet has produced a crisis, but up to the 12th instant England and France had not yet agreed "what to do about it," and Oriental politics are proverbially uncertain.

It will be comparatively easy for the two Powers to settle their little difficulty about the Island of Matacong, which the French lately seized, claiming that it was ceded to them in 1878, and of which the British claim possession since 1826. The British authorities at Sierra Leone at once sent to the French officer who took the island a formal protest by the gunboat *Boxer*, which has now been followed by the British steam-corvette *Encounter*, the largest man-of-war on the West African coast except the United States steamer *Ticonderoga*.

Cetawayo, the wily King of the Zulus, is suspected of having feigned a wish to make peace merely in order to gain time. A few days after the unconditional surrender of his brother Cham, 4,000 Zulus surprised and cut to pieces a supply convoy guard of 104 men, killing also forty wagoners and followers. Captain Pearson, of the British force shut up in Ekowe, signaled that he could hold out until the 4th instant, and subsequent news is anxiously awaited in England. Yakoob Khan, the new Ameer of Afghanistan, appears to be almost as hard to deal with as his late father was, and an outbreak of the cattle-plague has added to the difficulties of the Anglo-Indian army which is invading his dominions. The King of Burmah, whose coronation was to have taken place the Sunday before last, threatens also to be a troublesome neighbor for the Viceroy of India. By the opening in July of the Natal and Zanzibar section of cable to be laid between Natal and Aden, South Africa will be placed within a week's communication of London.

Not the least important item of London news is that orders have been issued to the police of that city to summon any person seen dropping orange-peel on a sidewalk. Another sign of advancing civilization is the declaration of the Chancellor of the Exchequer, during the recent debate in the House of Commons on the electoral disabilities of women, that at a fitting time and under fitting circumstances he would be prepared to support the proposal to give the same rights to women as to men. Why not?

Among the notable persons who have just died is Eliza Meteyard, better known under her *nom de plume* of "Silver Pen." Miss Wordsworth, grandniece of the poet, and daughter of the Bishop of Lincoln, is to be Lady Principal of the College for Young Ladies, which it is proposed soon to establish at Oxford. The Queen of the Belgians, while in London, paid a visit to the Home for Lost Dogs at Battersea. She is an enthusiastic admirer of diminutive canines, and always carries in her arms a pet specimen arrayed in a coat of the same color as that of her dress. To the coming Exhibition, Mr. Millais will send five portraits, among them those of Carlyle and Gladstone, together with a representation of a touching episode in English history—the little Princess Elizabeth in the Tower, writing her letter to the Lords and Commons. The child is dressed in black, and the artist's own daughter has posed for the face. During the opera season, which is to begin on the 26th instant, Mr. Mapleson has promised that the *prima donna* to appear shall be Mesdames Christine Nilsson and Gerster, Mademoiselles Kellogg and Hauk, Madame Vanzini, Mademoiselles Stelger, Ambre, Libia Drog, Lido and Vanzandt, and that among the operas to be produced shall be Rossini's "Gazza Ladra" and "Semiramide," Verdi's "Aida" and "Forza del Destino," Gluck's "Armida," Boito's "Mestopele," Donizetti's "Linda" and Wagner's "Rienzi." Mr. Tennyson has written for the London Lyceum a drama, in verse and five acts, that embodies, says Mr. Greene, the author of the "History of the English People," a more vivid conception of the characters of Henry II. and his Court, than that historian himself had ever arrived at, with all his researches into the annals of the twelfth century. Dr. Isaac Butt, the leader of the Home Rulers, is again dangerously sick. Great excitement prevails in Edinburgh on account of Mr. Gladstone's Parliamentary candidacy for Mid-Lothian. Monsignor Capel, the original of Monsignor Catesby in "Lothair," has fallen, like good Archbishop Purcell of Ohio, into pecuniary trouble, in consequence of which he was summoned to Rome, where the case has been fully investigated. His ecclesiastical superiors have decided that it can best be settled by his honorable expatriation from England. And it is said that Cardinal Manning has promised to pay the large sum of money claimed by the ex-Rector of the English Catholic University, on the sole condition of his remaining henceforth on the Continent.

On the European Continent, the main features of the latest news are—in Italy, the Pope's letter of welcome to Queen Victoria and his still more important letter on education, the visit of Garibaldi to Rome, and King Humbert's call on the sick Hero of the Red Shirt; in Bulgaria, the well-merited tribute of the National Assembly, through the President, to the American, Eugene Schuyler, for his timely exposure of the Bulgarian atrocities; in Eastern Roumelia, the standstill, if not failure, of the scheme of a mixed military occupation; in Germany, the death of Karl Beck, the poet, the expectation that the new protective duties will yield a revenue of 100,000,000 marks, and the opposition to retaliatory duties; in France, the farmers' petition for import duties on grain, horses and beef-cattle, the probable election of the veteran and unpardoned revolutionist Blanqui as Deputy from Bordeaux, and a petty Bonapartist demonstration by "Popol" De Cassagnac and a few students at Paris; in Spain, the relapse of the Infanta Christine, daughter of the Duke of Montpensier, and the completed subscription for 250,000,000 pesetas' worth of the new Spanish Treasury bonds; in Belgium, the announcement of an International Maritime Exhibition to be held at Antwerp in 1880; and, finally, in Russia, the plague at St. Petersburg, a fatal railway accident near Moscow, and the arrest of 1,040 pestilent Nihilists at Charkoff.

IT is stated that ex-Governor Seymour will not, under any circumstances, accept the Democratic nomination for Governor of this State, which many leading members of his party propose to urge upon him. He has certainly, by his eminent public services, fairly earned a discharge from the annoyances and labors of official life.

THE Spring elections in Ohio and Michigan show considerable Republican gains. In nearly every instance where the Democrats coalesced with the Greenbackers they were beaten. This was especially true in Michigan, where the Republicans, by their stand for honest money, have fully recovered the prestige lost last year. It may be said with perfect safety that the Greenback Party is no longer an important factor in our national politics.

THE statements of nineteen Western railroads show an increase of $263,306 in gross earnings during the month of March compared with the same month last year. The roads by which the emigration movement is flowing in the direction of Kansas make exceptionally favorable returns. So far as railway traffic is a barometer of the business of the country, it certainly shows a steady progress towards genuine and substantial prosperity.

INQUIRIES develop the fact that there is a gratifying outlook for the building trade in this city for the coming season. The report of the Superintendent of Buildings for the three months ending March 31st exhibits a marked increase in the number of buildings and in the amount of money which it is intended shall be spent upon the additions to the improved property in the city. The number of plans entered during the period named was 211, including 393 separate structures, of which 138 were first-class dwellings, 55 second-class, and 46 French flats—the estimated cost of the buildings being $3,137,663. Of the whole number of buildings, 293 are situated north of Fortieth Street. During the quarter 237 new buildings were begun and 247 completed, and there are now in progress 672. Since 1872 no corresponding period has shown a greater number of plans presented than is reported for the quarter just closed.

IT cannot be said that the present Congress is deficient in members who are blessed with "the gift of gab." In the House, nearly eighty members entered themselves on the Speaker's list for speeches on the Legislative Appropriation Bill before it had been reported for action! When, the other day, the old list was discarded, at least fifty members rushed at once to the Speaker's desk to have their names placed on the new list.

A LETTER from Turin announces a new singer, Signora Vanzini, daughter of Madame Vanzini. As this young lady is engaged by Mr. Mapleson for his ensuing season of Italian opera, it will interest our readers to learn that her *début* was a real success. At the rehearsal, when only connoisseurs were present, the whole orchestra were enthusiastic and rose to their feet to applaud the coming *prima donna*, and it is not probably too much to say that a rival of Madame Patti has at length appeared.

THE State of Georgia is refunding its seven per cent. bonds by the issue of coupon bonds of the denominations of five and ten dollars, bearing four per cent. interest and having six years to run. The experiment is proving quite successful, the so-called bonds, which somewhat resemble greenbacks, selling as fast as the State Treasurer needs to sell them to take up the old bonds. Possibly the experiment may be attempted in other Southern States.

THE Democracy in Congress illustrate the sincerity of their clamor for "retrenchment and reform" by increasing the appropriations for clerical and other service in the Senate some $15,000 over the amount expended by the Republicans. The present House will also, it is said, expend about $1,100 more for pay of officers, and $10,352 more for contingent expenses, than the last House. It is apparent that neither party can be trusted to use the public moneys economically when once in the majority, with no restraint upon their natural impulses.

A MOVEMENT for the establishment of a sanitary cordon across the continent from north to south, with a view of protecting the seaboard States from infection by diseased live-stock, has been started by officers of the American Shorthorn Breeders' Association, and a convention to consider the subject will be held at the Canadian capital on the 17th of May. The cordon, it is thought, should be marked out by the line of the Alleghany Mountains, coming to which all cattle from the West would have to be unloaded, carefully inspected before going further eastward, and could then be placed on board such cars as had been inspected, cleaned and disinfected, if necessary, in an effective manner, under scientific direction. Another proposed precautionary measure is the appointment of a joint veterinary commission, Canadian and American, to ascertain whatever can be known of the presence, character and locality of cattle diseases. It is believed that such a measure as this would speedily put an end to any just apprehensions in England of the consequences of importing American cattle, and especially as regards Western cattle.

WHY cannot our churches and ecclesiastical bodies try offenders against their laws, and adjust difficulties as they arise, as all well-regulated families determine and settle their contentions and disputes, privately among themselves, and without intervention from without? Why must every scandal in the churches be thrust ostentatiously before the public, and the dirty linen of clericals and laymen washed in the eye of the world? Take the Talmage trial, for instance. Who does not see that the cause of religion is damaged by the bickerings, wranglings and mud-throwing which have marked its progress? The ecclesiastical court, by opening the door to all sorts of criminations and recriminations, has made itself responsible for amirching the reputations of persons who were in no way proper subjects of investigation, and the daily sessions might fitly have been denominated "public exhibitions of church scandal-mongers." How much better it would have been for all concerned had the whole matter been left to the decision of Mr. Talmage's own congregation, or that he had been tried by a jury of his peers in the seclusion and privacy of a church parlor, with the curious world altogether excluded.

NEWS OF THE WEEK.

Domestic.

SECRETARY SHERMAN has called in $10,000,000 of 10-40 bonds.

THE estate of the late Madame Bonaparte is valued at $1,100,000.

AT the monthly coal sale in this city, April 9th, there was a further decline in prices.

THE Army Bill, passed by the House of Representatives, has been reported to the Senate.

JUDGE HAMILTON W. ROBINSON of the Court of Common Pleas of this city died on the 7th instant.

THE trunk line railway presidents have determined to enforce the tariff rates on East-bound freights.

EX-SENATOR CHRISTIANCY, Minister to Peru, passed through Panama on April 26, *en route* for Lima.

EX-SENATOR HENDRICKS, of Indiana, declares that he will never accept a second place on any Presidential ticket.

JOHN P. PHAIR, after two reprieves, was hanged at Windsor, Vermont, on April 10th, for a murder committed in 1874.

THE Kentucky Republicans have nominated Walter Evans for Governor, and strongly endorsed General Grant for President.

THERE was $1,275,204 worth of gold mined in British Columbia last year. Of the 1,883 miners employed, 1,085 were Chinamen.

DISPATCHES from different places in Kansas report that copious rains have fallen throughout the State, and that the wheat crop never looked better.

GENERAL GRANT will arrive in San Francisco in the *City of Peking*, about the 1st of October, and will subsequently make a tour through the South.

GENERAL RICHARD TAYLOR, one the best known generals in the Confederate service, died on April 12th, at the residence of a friend in this city. He was 53 years of age.

A HEARING in behalf of the Police Commissioners of this city, whose removal has been certified to Governor Robinson, was given before the latter at Albany, April 9th.

THE will of Charles L. Jones, of Cambridge, Mass., left $30,000 to found six scholarships at Harvard College, and $10,000 to the Vermont Academy, which Mr. Jones founded.

THE Massachusetts General Assembly has passed a Bill giving women the right to vote for School Commissioners, and rejected a Bill to secure them the same right as to municipal affairs.

LETTERS printed in the daily papers which passed between William H. Vanderbilt and Cornelius J. Vanderbilt show that all family and pecuniary matters have been settled harmoniously and in a satisfactory manner.

THE Mormon Annual Conference was held at Salt Lake last week. John Taylor was re-elected President of the Twelve Apostles and Trustee of the Church. No President of the Church, to succeed Brigham Young, was elected.

MR. BELL, of New Hampshire, was admitted to his seat in the United States Senate, April 10th, by a vote of 35 to 28. Ten Democrats voted in favor of the claimant, and two Republicans—Carpenter and Conkling—voted against him.

A MEMORIAL, numerously signed by leading citizens of St. Louis, without distinction of party, has been sent to Congress, setting forth the facts as to the negro exodus, and urging that something should be done for the protection of the emigrants.

THE Bill known as the "Pittsburg Riot Act," making Pennsylvania liable for damages caused by the riots of 1877, and appropriating $4,000,000 for that purpose, was indefinitely postponed in the Lower House of the Legislature, April 9th, by a vote of yeas 103, nays 96.

FIVE steamships sailed from this port for Europe April 12th, with 250 cabin passengers, among whom were Chin Lan Pin, the Chinese Minister at Washington, and ten *attachés* of the Chinese Embassy; Signor and Signora Campanini, Dr. Carlo Gardini, and Mme. Gerster-Gardini.

THE House of Representatives has adopted an amendment to the Legislative Bill directing Secretary Sherman to issue the ten millions held in the Treasury for the redemption of the fractional currency, to meet the pension arrears. Speaker Randall announced his committees on April 11th. That on Ways and Means comprises many Protectionists; those on Banking and Currency and on Coinage, Weights and Measures are apparently in the interest of inflation; that on Post Offices is divided on the question of subsidies; those on the Judiciary and on Appropriations include some of the ablest men of the House.

Foreign.

FIVE hundred and thirty more French Communists have been pardoned.

THE revolution in Venezuela is ended and everything is quiet, all the States having given in their adherence to the present Government.

THE Canadian House of Commons has rejected, by a vote of 136 to 53, Mr. Mackenzie's free-trade amendment to the tariff resolutions.

IT is rumored that King Alfonso of Spain is to be married to the Archduchess Maria, daughter of the Archduke Charles of Austria, in July.

AT Charkoff, in Russia, 1,040 Nihilists have been arrested. A letter received at Charkoff says the assassin of Prince Krapotine, the Governor, has arrived in New York.

SEVENTEEN thousand persons in Szegedin, Hungary, and the neighborhood of that city, are still subsisting on charity. It has been raining for ten days. The supply of bread is becoming exhausted.

GARIBALDI'S visit to Rome has no political significance. He went there purely for the benefit of his health, which is greatly impaired. He was carried to his lodgings on a litter, being almost helpless.

IN twenty-one supplementary elections in France, on April 6th, for members of the Chamber of Deputies, thirteen Republicans and one Legitimist were elected. In several instances second ballots will be necessary. The moderate Republicans generally defeated their radical competitors.

A LETTER from the Cardinal Vicar in Rome is published, complaining bitterly of the existence in Rome of Protestant schools, supported chiefly by foreign money. It announces that the Pope has appointed a vigilance committee to increase and improve the Catholic schools, and appeals to the nobility and clergy to subscribe for their support.

HON. HENRY G. DAVIS,

CHAIRMAN OF THE SENATE COMMITTEE ON APPROPRIATIONS.

HENRY G. DAVIS, Chairman of the Senate Committee on Appropriations in the extra session of the Forty-sixth Congress, was born in Howard County, Md., November 16th, 1823. He received a country-school education, and lived and worked upon a farm until he was twenty years old. During the fourteen succeeding years he was in the employ of the Baltimore and Ohio Railroad Company. Upon severing this connection he began mining coal and banking at Piedmont, West Virginia. Besides being largely interested in the mining and shipping of coal, and the handling of lumber, he is President of the Piedmont National Bank.

His political advancement dates from 1865, when he was elected to the House of Delegates of West Virginia. Three years later he was a member of the National Democratic Convention which was held in New York, and in 1872 of the one held in Baltimore. In 1868 he was elected to the State Senate, and upon concluding the term was re-elected. It was during his second term that he was chosen as a Democrat to succeed W. T. Willey, Republican, in the United States Senate. He took his seat March 4th, 1871, and in 1877 he was elected for a second term.

In the Forty-fifth Congress he was Chairman of the Select Committee to investigate the Finance Reports, Books and Accounts of the Treasury Department, and a member of the Committees on Appropriation and Agriculture, and of the Select Committee on Transportation Routes to the Seaboard.

In the present Congress, besides being Chairman of the Committee on Appropriations, he is Chairman of the Select Committee to investigate Finance Reports, Books and Accounts of the Treasury Department and a member of the Standing Committee on Agriculture, and that appointed to Audit and Control the Contingent Expenses of the Senate.

HON. HENRY G. DAVIS, CHAIRMAN OF THE SENATE COMMITTEE ON APPROPRIATIONS, FROM A PHOTOGRAPH BY BRADY.

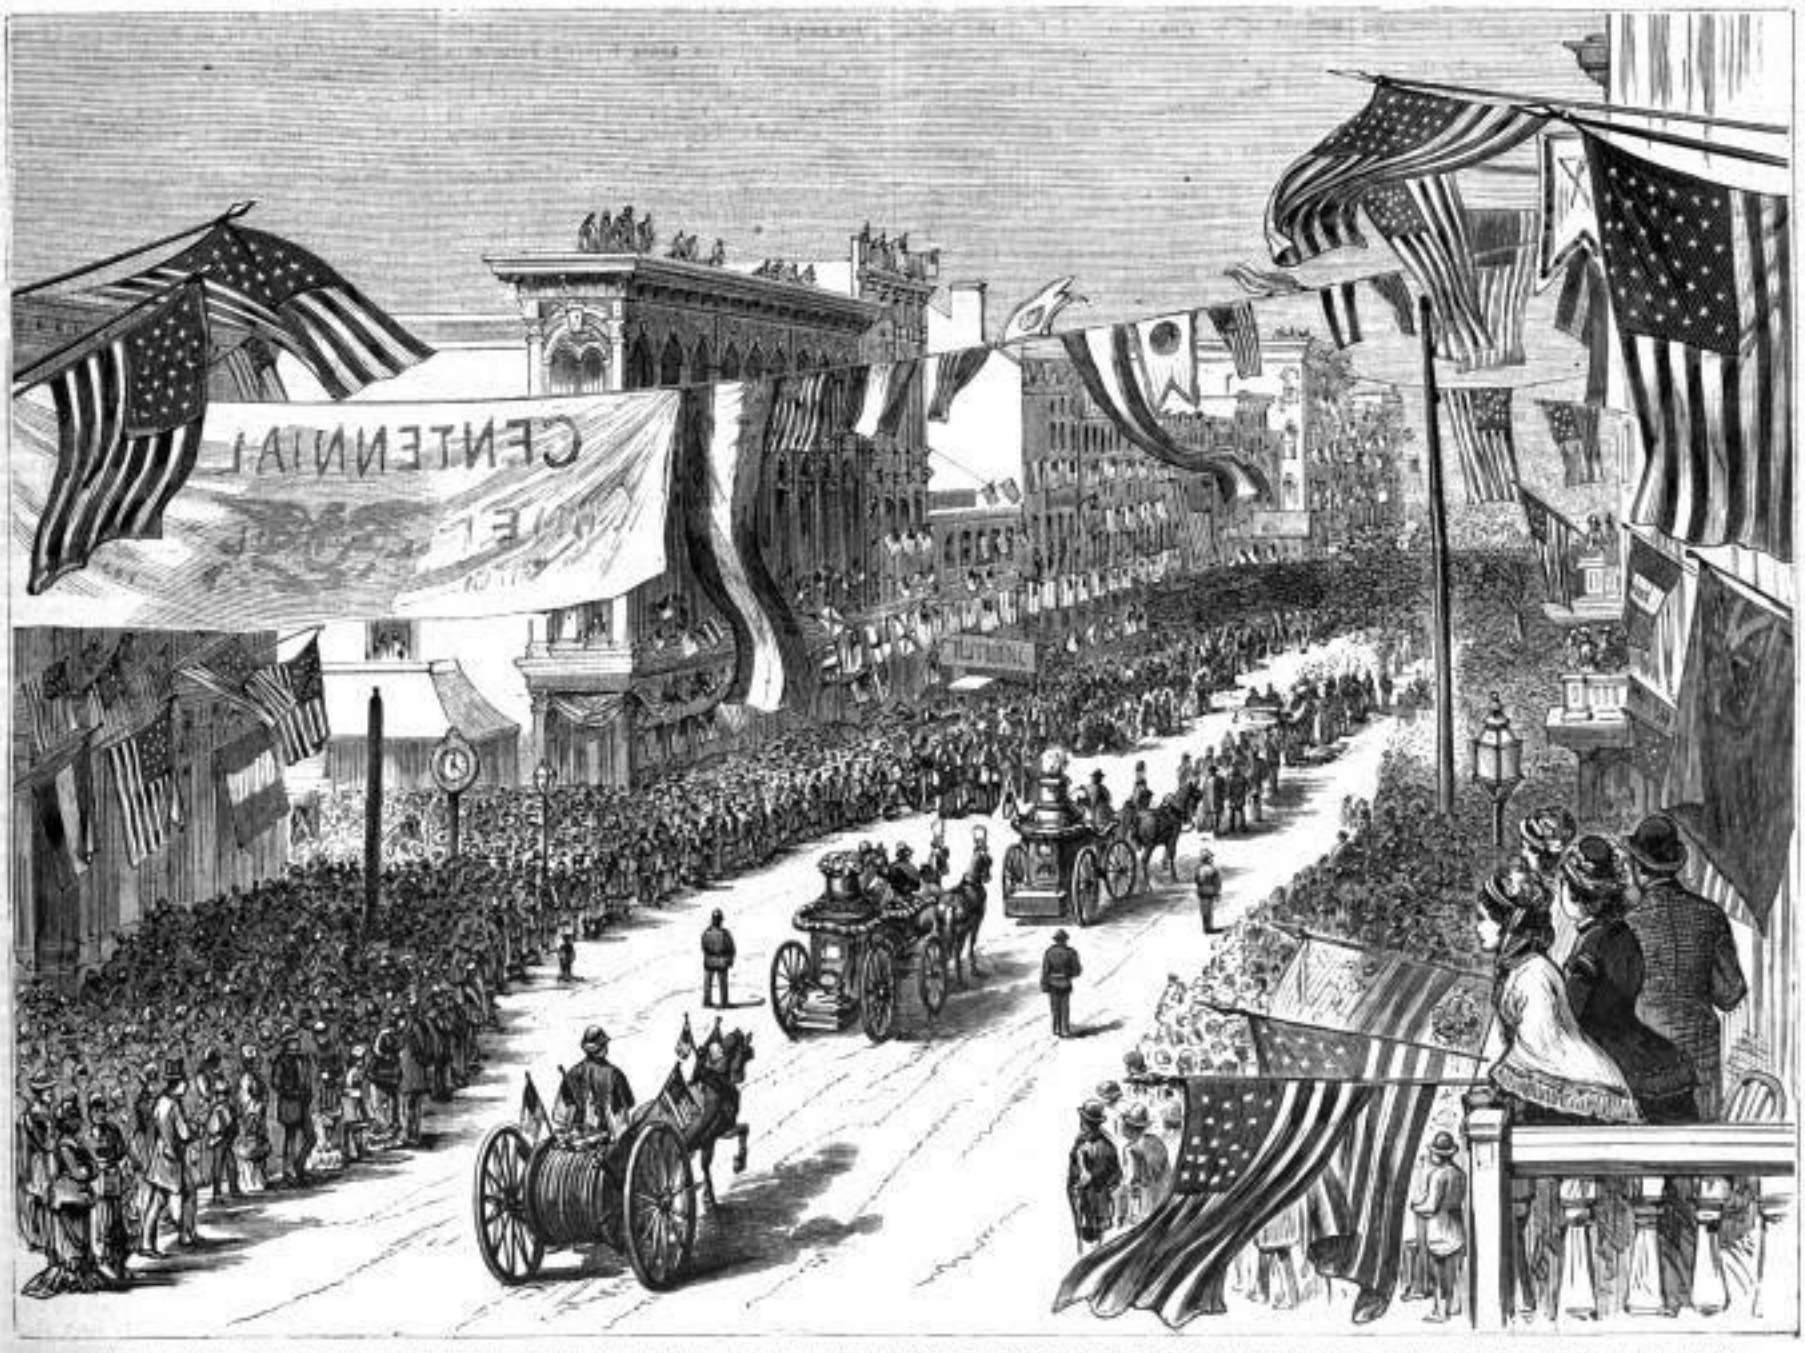
THE CENTENNIAL OF LEXINGTON, KENTUCKY.

THE town of Lexington, Kentucky, is one of the historic towns of the country. It was settled in April, 1779, by Colonel Robert Patterson and a small band of adventurous volunteers, who erected a log fort, designed both as their castle and their home. It was the first permanent white settlement north of the Kentucky River. The then country and now State of Kentucky was the favorite hunting-grounds of some of the fiercest and most warlike tribes of the North American continent. Here, for ages past, amid the deep shades and perfect solitudes of vast forests, the Indian, with foot-tread light as the rustle of a falling leaf, had tracked his game, undisturbed by the ruthless invasion of the white man. The varied climate, the romantic and picturesque scenery, and its wealth of vegetable and animal life, made it a spot cherished by its savage occupants.

In 1780 the first school was opened in the settlement; four years later a church was organized. As early as 1798 the manufacture of hats and caps was commenced in the town, and during the first two decades of the present century Lexington supplied, in the main, Cincinnati and the whole western country with these and other goods. In 1810 there were five dry-goods stores in the town, and, with one thousand looms in operation within the city and country, they placed upon the market annually 200,000 yards of hemp, flax and cotton cloth. The sale of agricultural implements began almost with the first agricultural pursuits. Outside of the fort, at a time where now stands the Court House and Cheapside, the first field of corn was planted in 1779. In 1787 the first mill was erected, and was run by water-power.

Lexington was the first capital of Kentucky. It was there, on the 4th of June, 1792, that General Isaac Shelby took the oath of office as Governor, and there was held the first session of the Legislature of the Commonwealth. Many of the settlers of the town came from the polished circles of Virginia, North Carolina and Pennsylvania, and its population has never lost its marked and distinctive character.

On the 2d instant the one hundredth anniversary of the settlement of this historic town was celebrated with great demonstrations of rejoicing. The city was gayly decorated, presenting a picture which will long be remembered by the thousands who thronged the streets. A procession, consisting of State and city officials, military and civic societies, Knights Templar, the fire department, individual organizations, Odd Fellows and Masons, etc., with several bands of music, marched through the city, pausing at several historic points, to Morrison Chapel, where the literary exercises took place. The exhibit of the fire department was especially fine, and the entire procession—over a mile in length—is described as "the grandest thing of the kind ever seen in Central Kentucky."



At Morrison Chapel addresses were made by Hon. B. P. Buckner, General Leslie Combs, Professor G. W. Hanck, and Colonel W. C. P. Breckinridge. Colonel Buckner, in the course of his eloquent address, said of Lexington: "She became the birthplace or the home of a long line of heroes, divines, statesmen and scholars, many of whom were trained and educated within the walls of this ancient institution of learning; who have won for her renown on many a blood-stained battlefield, in the pulpit, forum and halls of legislation — both State and national." Professor Hanck said, upon the same theme, "If history, as Carlyle says, is the essence of innumerable biographies, then the Lexington of the past can claim a paragraph at least in that ever-swelling volume. The sum of the ideas and the efforts that have signalized a number of our citizens is not to be utterly despised. Dr. Samuel Brown introduced vaccination into this country. Rafinesque was probably its greatest early scientist, and Dr. B. W. Dudley astonished the surgeons of Europe with the wonders of skill. Bascom, Menifee and Thomas F. Marshall enriched the field of eloquence, and Edward West claimed, in 1793, to be the inventor of the first steamboat that ever successfully moved upon the water. Joseph M. Davies, John Pope, William T. Barry and Robert Wickliffe were peers of power in politics and at the Bar. Dr. Charles Caldwell was the first prominent champion of phrenology in the United States. Dr. Holly was one of its most brilliant scholars. George Nicholas and John Breckinridge contributed to the statesmanship of the land, and the pencil of Jouett and the chisel of Hart gave it creations on canvas and in marble that will live no brief life in the realm of art. Thomas H. Barlow invented the wonderful planetarian, and Andrew M'Callan planned that noble public charity, the Eastern Lunatic Asylum, the second institution of its kind established in the United States. John C. Breckinridge, the soldier and the beloved of the people, needs no eulogy, and Henry Clay in the greatness of his gifts and in the grandeur of his character stands alone. We can claim, I think, with some degree of confidence, that the essence of these biographies has formed a part of the history of this country."

In every respect the centennial celebration appears to have been fully worthy of Lexington and its people.

The oldest living resident of Lexington, it may be added, is Nancy Lee, colored. She was born in Virginia, August 4th, 1775, and came to Lexington in 1782, where she has lived ever since. She is to-day 104 years old.

A SINGULAR STREET-RAILROAD.

SAN FRANCISCO has one peculiar street railroad. It is a mile and a half long, and runs in California Street over steep Nob Hill, a place of handsome residences. The cost of building it was

KENTUCKY.—CELEBRATION OF THE ONE HUNDREDTH ANNIVERSARY OF THE SETTLEMENT OF LEXINGTON.—THE PROCESSION PASSING DOWN MAIN STREET.—FROM A PHOTOGRAPH BY JOHNS & FAUGHT.

$800,000, and it has never paid a dividend; but the owners do not mind that, being among the wealthiest men on the Pacific Coast. The stranger is astonished to see the cars moving without any apparent motive power. Between the tracks is a continuous slit, under which moves a wire cable. An attachment of each car, operated by a lever, grips or lets go this cable as required, and the cable is moved by a powerful engine underneath the street. The plan works well, but is very costly. The cable must be coated anew with tar every two days, as a protection against the rasping of the car-clamps, and even then it wears out completely in six months. The power required is equal to that of 750 horses. The cars are luxurious, with floors only a foot from the ground, and with seats divided into spaces to prevent crowding. The roadbed, too, is not of an ordinary kind. A trench was dug, four feet wide and four feet deep, in which heavy V-shaped irons were placed, ten feet apart, and on the tops of these Vs the rails were laid and firmly bolted. The cable and its appurtenances were placed in position. Then the trench was filled with concrete, which became as hard as stone.

LUCKY GLAMORGAN—RED BEND, A. D. 1858.

WHEN he walked slowly down the trail that led over the hill to Rocky Gulch, and, dusty and ragged, stopped at Sandy Jim's hut, no one in the camp thought much of him. There was such an inexpressible idea of uselessness and despair pictured in his manner, in his dress, in the hesitating way with which his gaze wandered from one object to another, that we immediately voted him out of Red Bend as a person not suited to the climate, and, therefore, one who should be invited to travel further on.

We had just finished our breakfasts, and were about starting in for the morning's work, when his slouched hat showed above the hill and attracted the attention of Hen Ross, and we all waited to see what would come next. Then over the brow of the ridge rose his awkward figure, and we remained watching it as it descended to the slope where the camp stood. When he came in front of Sandy Jim's hut, the first at that end of the street, he stopped.

Sandy was standing in the doorway, smoking, and after the stranger had looked in that noted personage's eyes for a little time, he ventured on a low, "Good-mornin', sir."

"Good-mornin'," answered Sandy:

The stranger shifted his weight from one foot to another in a hesitating way for a few seconds, and then said, in a tone that seemed to deprecate the scorn such a remark might be expected to meet from so hale and rough looking a fellow as Sandy,

"It's tiresome travelin' over these hills, 'specially so when a chap hasn't had any food for some time."

"How long?" questioned Sandy.

"Nigh on to three days."

"Jerusalem!" whistled Sandy.

Then he shouted: "Say, you fellows, this man hasn't had any grub for three days. Just rake up some meat, for mine is all gone, and one of you bring a lot of sugar."

This said, he seized the stranger by the arm and gave him a shove through the door of the hut, an act that would have made breakfast a necessity to a well man, for Sandy was a giant, "standing six foot six in his boots," he said, and his hand was heavy when swayed by either kindness or anger.

He was a leader among us, not because we feared him, for the men who camped at Red Bend were not such as knew fear. Death had been too near, had grown too familiar, for us to dread him, and Sandy's leadership was more the result of proportion, than of anything else, for he rose head and shoulders above the tallest of us, and the short fellows looked like dwarfs when he stood near them.

What little strength remained in the man when he reached the camp was shaken completely out of him by Sandy's kind but vigorous push; and when we answered the latter's call, each one bringing a portion of his store, the result being a supply of food large enough to feed a company of soldiers, the stranger sat panting and speechless on the rough bench by the rude pine board that served as a table.

The quiet and trustful eyes he turned towards us, and the shadowy smile with which he greeted us, made us rescind the vote passed when he was coming down the trail. The smile was the most peculiar I ever saw on a human face. It was sunny and full of kindness, and seemed ready to run over into a joyous, ringing laugh, but to be held in by some repression, of trouble, or diffidence, or something of this nature. You felt, when seeing it, that the man was a warm-hearted and truthful fellow, whose merry nature had been toned down and curbed in by a strong and cruel fate.

Sandy and one or two of the other men were busy getting the new arrival's breakfast. Some of us had been inclined to question him, but Sandy immediately interfered.

"See here, boys," he said, "that man's stomach is empty; and a chap that has only got a lot of cold air to bruce him up don't feel like talking."

We acknowledged the truth of this remark, and adjourned to the street in front of Sandy's house, where, seated on rocks and heaps of earth, we smoked our pipes and discussed the new comer.

Quiet and not an over ambitious or particularly striking individual, seemed to be the general opinion, but no one spoke of his being cut. There was an interest in him manifested and a unanimous desire to hear his story that was new in the history of Red Bend. Usually we were a very reserved camp, and strangers were not welcomed with any degree of warmth.

If a man drifted in among us, he was, as our one seafaring comrade, Sailor Jack, said, "Sot on an' hoisted in," or "parted company with," according to the jury's decision. If he filled the first bill, he became one of us. If the second, the severity with which he was let alone made him feel that he was out of place, and he soon passed out from our midst and was forgotten.

The interest shown for the newcomer was, therefore exceptional, and his standing in our estimation high. This was all the more surprising from the fact that he did not possess any trait native to the turbulent men so patiently waiting his appearance. True, quarrels in Red Bend were of rare occurrence, for a code of laws had been promulgated that made quarreling and banishment synonymous.

In about a quarter of an hour he came out, accompanied by Sandy and the men who had helped prepare his breakfast. We all gathered about him, and Sandy led him to the most comfortable-looking rock in the vicinity, and said, "Now, spout away."

The man looked in the rough faces gathered about him, and seeing nothing but kindliness and sympathy there, his eyes grew moist and his lips trembled. He steadied up in a little time, and though there was a tremor of feeling in his voice, it was clear and brave.

"There's not much to tell, boys. I've been an unlucky stick ever since I was born; was always tumbling on the stove or down stairs when a baby, and my parents died while I was a little fellow. Next I lost my money, and then I fell in love with a girl who didn't care for me. I was a fool, but you can't rule your heart any more than you can make these rocks gold."

"That's so," said Sailor Jack. "If we could, I never would have got spliced to one girl in Liverpool and to another in New York. It was mighty convenient, though, to have a sweetheart each side of the ocean, and I couldn't tell which I loved best, 'specially when I was with one or the other; but that didn't prevent them swearing bigamy against me, bless the dears."

We could all vouch for the impartiality of Jack's love, as it was a solid fact that when he sent money home, which he often did, he sent both of his wives an equal amount.

"How did you hit on our camp?" questioned Hen Ross, "and how did you get to California?"

"I worked my way out, driving a team across the plains. Our train was stampeded just the other side of the mountains, and I was captured by the Comanches. They treated me well, though they told me I would be scalped if I tried to escape, but I only staid with them a month."

"How did you get clear?" questioned Sandy, for the stranger stopped when he made the statement of his escape.

"I was with a party that had a Shoshone girl captive. She was a bright and pleasant thing, and could talk a little English. Our being captives made us sympathize with each other, and I asked her if she should like to escape, and whether she knew the route she should take to reach her people. She answered that she did, and that to escape was her dearest wish. She also said that her place was a little north of the great mining-grounds. I told her to appear to be content, and we would lull their suspicions, and make them careless in their watch; and so it proved. We were Jacks-of-all-work, and one day, when camped in a large valley, were set at pounding corn; while busy at this, she pointed north and said, 'My home lies there,' and the longing in her voice made me resolve to rescue her. The men had been off on a long hunt, and their horses were tired, but there were two fresh ones that had strayed into camp. I had to look out for the cattle, and so I could visit them without arousing suspicion. Then, too, our being so quiet had made them less watchful, and there were other things that favored us. The hunt had been successful, and in honor of it, the Comanches had made a grand feast. This had lasted long into the previous night, and the warriors were still stupid from the effects of their excess. I said nothing to the girl, but, watching my chance, smuggled two bridles away to the horses, and got the fresh animals ready for a start. Then I came back, and asked the girl if she thought she could smuggle a rifle out from one of the tents. She wore a long blanket, and this would help. She said yes, and went in, and I sauntered down to the corral. There was an Indian stationed to watch this, but he was half-asleep, and did not notice me. I busied myself near the animals I had got ready, and soon the girl came to me, bringing a rifle. I whispered, 'Be steady, and keep on, no matter what becomes of me'; then threw her up on the horse that seemed the freshest, and gave it a blow that sent it racing north. Seizing my rifle, I sprang on the other and followed. A bullet whistled by me as I came out from the corral, and a loud whoop told me that it was only hard riding that would save us. The girl was ahead, and I soon saw that she was holding up for me to overtake her. 'Go on, go on!' I shouted, but she shook her head, and when I came alongside of her, said, as we went speeding on, 'Do you think I would leave you to die alone, you who have been more than a brother to me?'"

"She was a trump," said Sailor Jack.

"We went rushing on, and soon heard the shouting of our pursuers. They were bent on our destruction, and urged their horses to the extent of their speed; but our steeds were fresh, and I saw that we were drawing away from them all the time. I reined in a little and let our animals go on at a long, swinging and steady gate, and told the girl to lead, as I knew nothing of the way. Before noon came we had left our foes out of sight and then struck into a broad trail running up an ascending pass. There were fresh tracks in this, and just before sundown we overtook a party of hunters who gave us provisions and with whom we camped that night. We kept with them three days, and then the girl said her way was more to the westward; so we said good by and left them. They supplied us with food for our journey, and in less than a week we reached the main trail for the mines. Here we met some of the girl's people and she went with them, while I came on this way. I was robbed of my horse and rifle two days after parting with the girl, and have walked the remainder of the distance. When I got into the mines no one seemed to think me worth helping, and as I had no money I could do nothing, and food has been mighty scarce with me, for if the men in a camp shunned me I would travel on, and that is how I came here."

"By old Nep! but that girl was true grit," said Sailor Jack, whose soft spot was women. "I'd like to see her."

"She said we would meet again," said the stranger; "but I don't think we will."

"What do you intend doing?" said Sandy.

"I should like to mine if I could get started."

"How do you like us?"

"You have been very kind to me—more so than others have thought me worthy of being treated; but I don't want to cause you too much trouble."

"That's not answering my question."

"I should like to stay here, for I like you," said the stranger.

"All right. I have no chum and want one—so that is settled. Boys, let's put up a bunk, and if any of you has a spare blanket chip it in. We can get leaves and grass up the gulch, and that bandy-legged gambler from 'Frisco left the outfit he brought here to fool us. If he comes back we can pay for it. Now, stranger, what's your name?"

"Glamorgan—Royal Glamorgan."

"Aristocratic, by old Nep!" said Sailor Jack.

"Well, what if it is?" answered Sandy. "They have got a Perceval De Mortimer in Rocky Gulch, and a Maurice Montgomery at Sandy Flats. It's time Red Bend had something different from Jack and Hen and Jim, or we'll be looked down on and lose caste."

"I agree," said Sailor Jack; "and my remark was a compliment, and not a disparagement. Glamorgan is what we want, what the camp wants, to tone it up. However, this will not build the bunk, so let's set to work."

Jack's advice was followed, and a couple of blankets were chipped in, and the spare outfit brought forth from its seclusion under Hen Ross's bunk. Sandy took the stranger with him, and all went on as though Red Bend had not gained a new inhabitant.

Of course he could not remain without a nickname, and his good fortune soon supplied it. It was a wonder to all the old hands to see him rake in the gold. He soon picked up a fine knowledge of the business, and he never failed to show a good pan. Places that many of us had passed by as uninviting, or had left because our labor was unrepaid by any result, would yield him a rich harvest.

Sailor Jack avowed that Glamorgan could smell gold, and that he was the luckiest man in the mines, and from that time he was known as Lucky—Lucky Glamorgan.

He came to Red Bend in the Spring, and the following Fall the most terrific rainstorm ever known in the mines swept down the western slopes of the Sierras, and filled the valleys with a turbulent and muddy flood, in which surged and clashed the wreck of many camps.

Red Bend was situated about midway down a long range of valley, and the camp ran up towards the high ground. There were two or three camps above ours, and several below. Of course, being on the ridge, we did not think the rain could hurt us, even though the usually sluggish creek that flowed, red with the refuse of earth-washings, through the hollow, soon grew rapid and noisy, and each moment encroached on the level that lay on either side of it. This was quickly submerged, and the rush and roar of the water grew stronger all the time. Wrecks from the upper camps began to drift by, and in the afternoon of the second day we saw the lower huts of our settlement borne away.

Sandy's claim was the one highest up the run, and near the rough and pine-crowned hill, around which the valley wound, and whose reddish color and long, regular curve, had given the camp its name. As we stood watching the flood, he suddenly cried out, "By Jove! I left my pan up at the claim, and it had two or three ounces of dust in it;" and before we could say or do anything to stop him, he had rushed off through the storm towards the hill.

There was a hollow between the camp and his claim, and in this we lost sight of him. Then there came a roar as though some great mass had broken loose, and high among its chilling tumult rose the cry of human distress.

"It is Sandy," said Sailor Jack, "I shouldn't wonder but that there was a jam up by the hill, and it has got adrift, and the water has caught him in the hollow."

The sudden increase of the surging flood below told that he was right, and then Glamorgan's movements caused our gaze to turn to him. His face was stern and white. All of the diffidence that had been so familiar there was gone, and the determined light in his eyes made them shine as though they were lit by a brilliant fire. He had thrown off his coat, and his boots soon followed.

"Where are you going, man?" asked Hen Ross.

"If Sandy is in that flood, I shall try to get him out," he said, in a tone of voice that made us start, it was so firm and so different from what we had known.

"Nonsense, you'll only die with him."

"All right, but I will die in trying to save him," and he was running down to the water's edge, our astonishment preventing us from detaining him.

We followed in a moment, to see him spring into the surging flood and go, battling with floating drift, out towards the strongest current.

Following his course we saw a human form tossing helplessly among the wreck, and recognized it as Sandy's. Glamorgan was a good swimmer, and his actions showed that he was a cool and steady hand. As for Sandy, he appeared to be stunned and went swiftly on, making no effort to save himself.

"He is hurt, and hurt bad," said Sailor Jack. "Sandy is not the man to give up easily."

Glamorgan was steadily nearing Sandy, but the struggle was a fearful one, and we wondered, seeing this, how he would manage when he was incumbered with a helpless form. With anxious hearts we ran down the banks of the stream, keeping even with the men in the water, who seemed to be held up by the force of the flood.

At last we saw Glamorgan grasp Sandy, and rapidly swing round to face the current. Then he began to edge slowly for the shore, making but little effort to stem the tide, but exerting all of his strength to keep Sandy's head up. The latter had grown senseless, and was, of course, a dead weight. More than once did we stop, and feel our hearts grow cold, as a mass of water would surge over the two forms and hide them from sight. Often would our pulses grow still, as we saw some heavy drift whirled down towards them, but with a clear brain and a calm eye Glamorgan avoided them, and some four miles below the camp, where the valley broadened out and lessened the force of the flood, Sailor Jack rushed in and helped to drag Sandy on shore. A rude litter was formed, and while some of us carried him carefully back to the camp, Hen Ross ran over the ridge and down the east slope to the gulch to bring the doctor who had located there.

He borrowed the horse of the storekeeper, the only one in the neighborhood, and sent the doctor over on him, so that we had but just laid Sandy in his bunk when the clatter of hoofs told that help was near. Some restoratives soon brought back consciousness, and an examination showed that Sandy's right arm was broken and that there were several other severe bruises.

Glamorgan had got inside of a dry suit, and was helping the doctor. He was pretty near tired out, but the real character of the man showed forth now. Back of his diffidence and quietness was a store of pluck and endurance that was really wonderful, and he had passed from being held as a lucky but rather slow sort of man to the position of a hero.

When the doctor had set Sandy's arm and made him as comfortable as possible he said: "Now, all that remains to do is to watch him carefully and give him the medicine regular, to keep the fever down."

"I will see to that," said Glamorgan; and when the doctor heard him say it he knew that he would keep his word.

"I will be over to-morrow," he said, as he mounted his horse to ride back to the Gulch. "Quiet is what he needs most, boys, and you had best let his friend be alone with him. If he needs help he will call for it."

We obeyed, one of us keeping awake to be ready should Glamorgan call. He did not need us, however. The storm cleared away during the night, and when the doctor came the next day he said that Sandy was getting on all right, but that he would have to keep quiet for some time. Glamorgan cared for him as tenderly as if he had been his brother, never tiring, though Winter was gone and the grass on the ridge showing its Spring freshness before Sandy could get around.

Of course Glamorgan became one of our notables, for a man who will face danger as he did, simply for friendship's sake, will always command his fellows' admiration and respect. The camp prospered, though there were one or two of those lawless incidents that mark the footsteps of civilization not necessary to mention here.

The following Spring Glamorgan began to get restless. He would watch the trail and the crests of the hills that shut in the bend with a faithfulness that betokened expectation. Sandy averred that something troubled him, for he was tossing and dreaming all night, and Sailor Jack advanced the opinion that he was in love.

But who with? And did he expect her to come to the camp?

No one cared to intrude on his feelings, and so the time went on till May came. Glamorgan and Sandy had struck a new lead and were doing splendidly. Their claim was further towards the eastern hills than any other, and beyond it was a stretch of level ground flanked by a ridge.

It was about the middle of May, and early in the forenoon of a delicious day, when we were startled by a confused sound as of rushing horses and the shouts of pursuit. We all stopped work and looked towards the ridge beyond Sandy's and Glamorgan's claim, as the noise came from that direction.

Then, with hair and garments flying wildly in the wind, a woman came rushing over the ridge, her horse wet and foaming. A glance showed that she was an Indian and young, and the next instant Glamorgan had drawn his pistol, and was running towards her, while a dozen or more half-breeds and Spaniards appeared on the ridge in her trail, when Glamorgan made his demonstration. We had all dropped our pans and shovels, and got ready for other work, but he was the only one who acted quickly. The suddenness of the affair and our surprise left him alone some hundreds of yards away. Just as he met the flying girl her horse stumbled and fell, but she sprang to the ground unhurt, and the next moment was clinging to Glamorgan.

Seeing that he was alone, the girl's pursuers gave a shout of triumph, and came rushing down the ridge towards them. Then we were called to a knowledge of our duty by a shout from Sandy, who was speeding towards Glamorgan. We hastened to respond, but long before we reached him there was a rapid

Digitized by Google

succession of pistol shots, and we saw Glamorgan and one of his assailants fall. Then came another shot, and Sandy's pistol did its work, while the girl, seizing Glamorgan's shooter, took part in the fight.

Our near approach scared the remainder of the horsemen, and they turned and fled, a rattling volley giving zest to their flight.

When we came up, the girl was holding Glamorgan's head against her breast, and was crying and kissing his lips in a wild passion of grief.

We thought he was dead, but as we stood watching, he opened his eyes and gazed around in a dazed sort of way. Then his glance grew brighter and steadier, and when he saw the face that bent above him, he gave a glad cry and struggled to his feet. The bullet had grazed his head and stunned him, and that was all.

The girl's joy was as great as her sorrow had been deep, and she clung to him fondly, while he returned her caresses with others as warm. Then the sense of our presence seemed to come to them, and, seeing this, Sandy led us to look at the men we had shot. Luckily they were only wounded, and so we carried them to a vacant hut, and sent to the Gulch for the doctor.

Glamorgan had led the girl to his home, and shortly after this joined us. We had corraled the horses, and secured the arms of our prisoners, and were standing in front of Sailor Jack's hut, talking over the incidents that had enlivened the forenoon, when he came up to us. We stopped talking and looked at him.

"Well, boys," he said, seeing our look of expectation, "it is my Shoshone girl. She has come for me."

"Come for you? Why?" asked Sandy.

"Well, because she loves me."

"And you?" said Sailor Jack, eagerly.

"Why, I love her."

Sailor Jack danced about in great glee.

"Just as it should be, just as it should be," he cried. "Mutual love and a wedding."

"Yes, a wedding as soon as we can get a parson," said Glamorgan.

"There's been one holding meetings over at the bar, and he can be here by eight o'clock, if some one goes for him now," said Ross. "Why not go for him?"

"Will you?" asked Glamorgan.

"Of course," and Ross was gone, taking one of the Spaniard's horses to carry him and leading one for the parson.

"I thought you said you never expected to see the girl again," said Sandy.

"So I did, but I loved her and wanted to see her, and would have gone to look for her," said Glamorgan.

"Was that why you have been so restless?"

"Yes."

"I told you so," said Sailor Jack triumphantly.

The doctor's arrival stopped further talk. He dressed the wounds of our prisoners, and staid to the wedding. Sandy gave the bride away, and a prouder, happier or prettier bride than the graceful and dusky Lita is seldom seen.

The parson found his fee a heavy one, for Glamorgan was able to give, and did so. As for the camp, I believe we all thought we were getting married, and Sailor Jack was in a perfect gale of nuptial excitement.

He had recently heard that his Liverpool wife had obtained a divorce, and gone back to her home, while his New York bride still clung to him. The next day the excitement became too strong for his staying with us. He put his claim in charge of the boys and started for the East, carrying his gold along. I might as well finish up with him now. When he reached New York he had thirty thousand dollars. He found his American wife willing to be reconciled, now that the other lady had given up her claim. Sailor Jack insisted on being married over again, then he sent half of his money to his English wife that was, and staid long enough to have a good time, and receive a letter containing a receipt for the money and her forgiveness. Then he came back to us, bringing his wife along, and yonder is their home, that white house among the pines, for Jack has been lucky ever since.

As for Glamorgan, he is the same quiet but determined fellow. We sent him to Sacramento last year, and he has made his mark. His wife is one of the best and cheeriest women in the State, as bright and beautiful as a June morning, and sweeter than the roses in bloom then. And smart! She goes right ahead of her husband in learning, knows French and Spanish, and two or three other languages. Glamorgan taught her all he knew, and then they studied together. They have been East twenty months, and spent one year in Europe, and they say she just did honor to California. She is the most handsome and graceful Indian woman I ever saw, and it was a lucky day when he ran her off from the Comanches. The old hands are always sure of a welcome at her home, and Glamorgan will never forget the morning we took him into the camp. Sandy lives with him, and if you wish a good time, why, call at that house just showing around the bend, and you'll have it."

THE LATE MADAME BONAPARTE.

(*Continued from front page.*)

In September Robert Patterson was made acquainted with Napoleon's terms—a pension for life of 60,000 francs a year if Miss Patterson would return to America, and not take the name of Bonaparte. On the 12th of August, 1807, Jerome, who had been spurned by the Queen of Etruria, was married to the Princess Frederica Catherine of Wurtemburg.

Only once afterwards did he ever meet his American wife—in the gallery of the Pitti Palace at Florence in 1821. The princess was leaning on his arm; he started violently, whispered hoarsely, "That lady is my former wife," and hurriedly quitted the gallery and the city.

Mr. Patterson behaved very hardly to his daughter, and in dying bequeathed her some houses and his cellar of wine. Jerome sent her a thousand guineas on the birth of their son; he subsequently offered her, after his second marriage, the Principality of Smalcald, with $40,000 a year—an offer declined in the words, "Though Westphalia may be a considerable kingdom, it is not large enough to hold two queens." Napoleon was so pleased with this answer that he offered to befriend her. She asked to be created a duchess, which was promised, but the promise was never carried out. He forwarded her $20,000 in cash, and allowed her an annuity of $12,000 till he abdicated, permitting her to sign receipts "Elizabeth Bonaparte." Jerome taunted her with accepting money from his brother, but she retorted that she preferred shelter under the wing of an eagle to shelter under the wing of a goose. She refused to "pose as a victim of imperial tyranny" at the Court of Louis XVIII., and under the Restoration was one of the reigning beauties of Paris. She had "a spirited head, crowned with waving brown hair; large, lustrous, liquid, hazel eyes, promising a tender sensibility that did not exist; a nose of delicate Greek outline, mouth and rounded chin, nests for Cupid; arms, bust and shoulders to satisfy a sculptor."

Talleyrand said: "If she were a queen, with what grace she would reign"; Gortschakoff, then a diplomatic *débutant*, observed that if she had been "near the throne, the Allies would have found it more difficult to depose Napoleon"; and Prince Jerome Napoleon, who was not at all her friend, has characterized her as "ambitious, with an untamable spirit and a stainless reputation." Napoleon III. allowed her son an annuity of $14,000, discontinued, however, when she contested the ex-King of Westphalia's will, in which Jerome ignored his son; still the Emperor recognized his cousin at Court, and granted to Madame Bonaparte-Patterson's grandson a pension of $6,000, that only ceased with the Second Empire.

Her son, Jerome Napoleon Bonaparte, was graduated at Harvard in 1826 and studied law, but never practiced. He married the daughter of a wealthy resident of Roxbury, Mass., Miss Susan Mary Williams, who bore him two sons—Jerome Napoleon, born in 1832, and Charles Joseph, born in 1852. The elder was graduated at West Point, but soon after resigned his commission and entered the French Army, serving with distinction in the Crimea.

Madame Bonaparte of late years lived a secluded life. She was a woman of intense vitality, and, though several times, notably in 1838, her life was despaired of, she recovered to repeat her favorite prediction that she would live to be a hundred years old. She died on April 4th, at the ripe age of ninety-four years.

A PIG-PEDDLER ON HIS ROUNDS.

IT is the habit of dealers in "boneens," or little pigs, to start upon a sled, and rove through the mining districts of Pennsylvania. The advent of these peripatetic venders is eagerly looked forward to by the wives of the miners, who pay for the coveted squealer in meal or in malt, i. e., through the medium of money or exchange. The pig-peddler, with his squeaking load behind him, jogs steadily onward, as unmindful of the piggies as though he were engaged in carrying a cage full of turtle doves in full coo. He fixes his price according to the condition of the surroundings, and the "suppleness" of the pig, the sum demanded being usually in the ratio of double what he intends to take. Our illustration represents a pig-peddler on "high 'change." He has just disposed of one of his precious porkers to an elderly Irish lady, who, by a dexterity acquired in the old country, has succeeded in capturing her slippery charge, and, what is considerably of more importance, in securing the struggling, squirming squealer in her brawny arms. The peddler is engaged in huckstering with other ladies of that ilk—ladies who know the points of a pig as well the dealer himself. It is a regular case of nip and tuck, and his profit is likely to be but small if he listens to the forcible arguments of the elderly would-be buyer. It is a picture drawn from real life, and one that tells its own story in its own way.

Presidential Candidates in 1880.

THE New York *Times* has collected reports from the country at large showing the state and tendency of public opinion in reference to the choice of candidates for the Presidency by the Republican and Democratic Parties in 1880. The *Times* says: "Out of 157 points from which advices have been received, General Grant is the expressed choice of 130, Senator Blaine 10, and Messrs. Washburne, Garfield, Sherman, Conkling, Edmunds, and Chandler follow in the order named. The Democrats in 98 of the 157 districts prefer Tilden; Thurman comes next with 23 districts, Bayard with 11, and Hendricks and Hancock bring up the rear. Mr. Tilden, if the Democratic Convention were held to-morrow, seems sure of the votes of not less than 21 of the 38 States."

The Population of France.

IT appears from the French population tables, drawn up from the return of the census of December, 1876, the general results of which have already been given in the *Times*, that the foreigners resident in France numbered 801,700 persons, thus forming 2.17 per cent. of the total population. In 1851 the proportion was 1.06 per cent., and in 1861 1.33 per cent. Of these 801,700 foreigners, 374,500 were Belgians, 66,500 Germans, 165,000 Italians, 62,500 Spaniards, 50,000 Swiss, and 30,000 English. The most striking fact shown by the tables is, of course, the relatively very great number of adults in France and the small number of children. Whereas in England children—that is, persons under 15 years of age—form about 36 per cent of the population, and persons above 15 years 63 per cent., in France the former number only 29 per cent., and the latter 71 per cent. The figures are as follows: Under 15 years, 10,008,000; from 15 to 60, 22,527,000, and over 60, 4,361,000. As regards the occupations of the French people, 18,908,000, or 53 per cent., are engaged in agriculture; 9,274,000, or 26 per cent., in manufacturing and similar industries; 3,837,000, or 14 per cent., in trades, and 1,231,000, or 4 per cent., in liberal professions; 2,150,000 being of no occupation. Of the agricultural population, 10,620,000 cultivate their own property, 5,708,000 are farmers (*métayers*), and 2,620,000 are laborers and gardeners. Of those engaged in industries, 3,133,000 are attached to manufacturing. The numbers of those engaged in liberal professions are as follows: Religion, 229,600; police, 567,500; public instruction, 121,600; law, 148,900; medicine, 141,800; art and science, 90,600.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

The Zulu War.

In the disastrous battle of Isandlwhana, fought on the 22d of January, the British force numbered 700 European and 600 natives, and the Zulus some 20,000. The attack was begun by the Zulus, and was immediately met by Colonel Durnford's mounted men, who, however, were soon compelled to retreat, closely followed by the Zulus, who were described as swarming over the ridge in front like bees. Meanwhile the Zulu left was being rapidly pushed forward, driving everything before them in spite of the heavy artillery fire which was opened on it, and on the more slowly advancing centre. The infantry soon came into action all along the line, and from every account their fire was said to be steady and rapid; the enemy fell in hundreds, mowed down by the "Martini-Henry," but still came on in apparently undiminished numbers. Nothing seems to have deterred them; as rank after rank of the foremost fell, others pressed forward steadily and quickly. They do not appear to have made much use of their guns, but to have depended on their numbers to bring them at last to within such distance of the British that they could use their assegais. Young and old, regulars and volunteers, alike fought as gallantly as ever British soldiers did, side by side, but the overwhelming numbers were too many for them, and they died like heroes, sticking to their posts to the very last. Out of the whole number of men engaged in the affair, only nine escaped, who themselves looked upon their escape as miraculous. As soon as the fatal news had been communicated to Lord Chelmsford by Commandant Lonsdale, "The camp is in the possession of the enemy, sir!" the General resolved at all hazards to retake it. An officer sent forward to reconnoitre reported that the entire camp was swarming with Zulus like a disturbed ant-heap with ants. Many of the tents were burning, and 1,000 men were holding the road—the only outlet to Natal. After all, however, the Zulus did not wait for the advance of the British, they abandoned the camp, of which Lord Chelmsford took possession without resistance about 9 P. M. The troops bivouacked in the Isandlwhana neck. The position was far from a pleasant one. The ground was strewed with the dead and disemboweled bodies of their comrades, with dead oxen and horses, and the débris from plundered wagons. All around were the enemy's forces, whose bright watch-fires and the flames of the burning Mission House at Rorke's Drift were visible. Had the enemy ventured on an attack, it would have gone hard with the troops, who were exhausted by want of food and continuous marching, and had only some sixty rounds of ammunition per man. But nothing took place, and, as soon as daylight dawned on the morning of January 23d, the troops were again in motion, and performed the march to Rorke's Drift without incident.

Returning Victorious to Camp.

Recently a detachment of British troops made a very successful raid upon the village of Ragha Mighana, in Afghanistan—the village consisting merely of a number of cave dwellings hewn out of the rocky sides of a Nullah, or precipitous watercourse—and the crime of its inhabitants being numerous liftings of British cattle, accompanied by the murders of several grass-cutters. The detachment, consisting of infantry and cavalry, had instructions to surprise the robbers' village, capture the chiefs, and burn whatever dwellings existed. After a long march the Guides announced that the "village lay over there," i. e., on the other side of a steep hill, up which the troops crawled on their stomachs, and the officers, doffing their headgear, peeped over the ridge upon the scene beneath. There they waited patiently until the cavalry had been so placed as to cut off the retreat of the fugitives, and this done, the village was at once attacked, the inhabitants being far too startled to offer any resistance, and only thinking of escape. The troops advancing upon the village seized whatever loot they could, and after securing a large number of cattle and sheep, and placing the women and children in a place of safety, the village was fired and the troops started on their return, entering Jamrood in triumph with the captured flocks and herds and seventy-three prisoners.

The New Bulgarian Assembly.

The little Parliament of Bulgaria, after various postponements, met for the first time at Tirnova, on the 22d of February, being inaugurated by Prince Dondoukoff-Korsakoff with a brief speech congratulating his hearers on the opening of the "First National Assembly of their emancipated country, which is to establish a firm foundation for a State Government of the new Principality." The meeting-place of the Assembly is the old Turkish Konak, or Government House, the hall of which on that occasion was bountifully decked out with flags—the new Bulgarian colors, white, green, and red, being naturally the most prominent. The Deputies are already divided into two parties, the Moderates, who advise submission to the Powers, and the extreme faction or Irreconcilables, who clamor for immediate union with Eastern Roumelia. The latest reports show that the Assembly has passed forty-four Articles of the Constitution, including amendments in favor of triennial Parliaments, universal manhood suffrage, and equal electoral districts. It has resolved that there shall be no censorship of the press. Even religious publications are to be free, though a censorship therefor was demanded by some clerical deputies.

The Floods at Szegedin.

It is difficult for any but those who have actually witnessed such a calamity to form an adequate conception of the dreadful nature or the extent of the terrible disaster which recently happened in Hungary. Szegedin, the capital of Csongrad, is situated on a marshy plain, and was divided into the town proper, and the upper and lower suburbs. There were numerous churches, convents, schools and hospitals, a theatre, and an old Turkish fortress. The population numbered about 75,000, and it was a busy and prosperous commercial city. Standing upon ground below the general level of the rivers Theiss and Maros, it was only protected from inundation by a series of dikes or embankments, which frequently gave way when the rivers were swollen by melted snows from the mountains, or by heavy rains. There were three of these dikes—the first, which was some twelve miles from the city, gave way on the 4th of March; the second collapsed some days afterwards, in spite of the constant efforts of the people to maintain it, but on Sunday, the 9th, there was some abatement of the flood, and it was hoped that the danger was over. On the following Tuesday, however, a gale sprang up and drove the water furiously against the dike, rendering the work of repairing it so dangerous that the laborers were only kept to it by the military. By midnight the soldiers themselves saw that further effort was in vain. The general in command gave the word to abandon the work, and the order was announced in the city by the ringing of bells and the firing of guns. The waters, no longer resisted, leaped through and over the last embankment, and in an hour and a half the whole town was submerged. The destruction was instant and enormous. Most of the poorer houses, being built of sun-dried bricks, melted away at the first touch of the inundation, and out of the 2,700 houses about 1,200 were destroyed. Barges, boats and steam-vessels were at once employed to rescue those who still clung to the ruins of their houses, or who had taken refuge in the upper branches of trees, or upon the few high places which still remained above water. At least 74,000 persons were made homeless and completely ruined, and the loss of life was very great.

AT HOME AND ABROAD.

—THE Boston School Committee has abolished the kindergarten school.

—PRINCE BISMARCK intends to impose extra dues upon ships carrying foreign flags.

—THE sea has thrown up the sponge at Cedar Keys, Fla., to the value of $76,500 since January 1st.

—THE French Senate has adjourned until the 8th of May and the Chamber of Deputies until the 15th of May.

—A ONE-ARMED street singer was lately assassinated in Paris, and his body was followed to the grave by 300 beggars.

—NORTH CAROLINA has fifty-four cotton and woolen mills in operation. The capital invested amounts to $1,838,000.

—AN Alamo Monument Association has been formed in San Antonio, Texas, to erect a monument to the heroes who fell on that memorable spot.

—THE industrial authorities and tradesmen of the city of Berlin have arranged for an exhibition to be given on the 1st of May next in a prominent part of Berlin.

—NINETEEN hundred men are employed at one establishment in Philadelphia in manufacturing twenty-six locomotive engines for Government railroads in Australia.

—THE poultrymen of Long Island shipped last year to New York and Brooklyn eggs to the value of $122,000. The value of the Long Island poultry sold was $103,000.

—THERE is said to be much dissatisfaction among the cardinals resident at Rome on account of the number of foreign cardinals proposed to be made at the Consistory on the 20th of May.

—THIS year's congress of the British Social Science Association, to be held in Manchester, promises to be one of the most successful and popular gatherings which has been held for many years.

—KINGLAKE, the historian of the Crimean War, casts his eyes down when his photograph is taken, and this gives him a mild and retiring appearance. People will scarcely believe that he is sixty-eight years old.

—THE rinderpest is becoming increasingly formidable in Bohemia. Several hundred places are now affected. Agriculture in many places is at a standstill, draught cattle being locked up wherever the disease occurs.

—THE Spanish Government has ordered that the General Post Office Administration of the Island of Cuba be conducted from April 1st in accordance with the convention of the International Postal Union signed at Paris, June 1st, 1878.

—A CALL has been issued, signed by many prominent clergymen, teachers and social directors of the colored people of Louisiana, for a convention to meet in New Orleans on April 17th, to consider the condition of their race in that State.

—A SELECT committee of the British House of Lords, appointed in 1876, to investigate the subject of intemperance, is just ready to submit its report, which fills four blue-books and contains over 1,700 folio pages of the evidence collected.

—A BANK official in a Pennsylvania town has proved a defaulter from excessive and ruinous expenditures in the breeding of pigs. He was a man of honor and integrity, but Berkshire pigs, at the rate of $2,500 apiece, was too much for him.

—THE Russian Government is stated to have under consideration a proposal for the organization of a wholesale trade between Western Siberia and China, in pursuance of which trading depots would be established in the southeastern portion of the district of Semipalatinsk, near the Chinese frontier.

—GORDON PASHA, Governor-General of Southern Egypt, reports that the capture of all the slave depots is considered certain. The Egyptians, he says, killed ten chiefs and 2,000 men while following up a victory they had gained over the slave-traders.

—THE Finance Committee of the Municipality of Paris having a surplus in hand of twelve millions of francs. Four millions are to be devoted to the schools; four millions to the construction of new sewers; and four millions to the improvement of the roads and streets of the city.

—THE Khédive of Egypt, without consulting his Ministers, has drafted a budget in opposition to that submitted by Minister Rivers-Wilson. Seventy Pashas and ninety civil officers have signed this document, which pledges the Government henceforth to pay the interest on the funded debt in full, punctually.

—THERE is a strong probability that an embassy will be dispatched from Siam to the United States for the purpose of arranging for the appointment of consuls and regulating future commercial relations, which are expected to be large. The embassy, if sent, will leave in January for San Francisco *via* Hong Kong.

—THE total amount of salt sold in the United States during 1878 was 7,662,658 barrels, of which 3,075,533 were imported. About 1,554,000 were made in the Saginaw district of Michigan, about 1,434,000 in the Syracuse district of New York, 850,000 in Ohio and Virginia, and the rest at other points. The imported salt chiefly comes from Liverpool, but Trapani in Sicily, Cadiz in Spain, Hyeres in France, and Turk's Island and Curaçoa in the West Indies, furnish a large quantity. As the domestic manufacture yearly increases, the imports naturally decrease.

—THE Prussian Minister of Public Instruction has laid a plan before the Society of Medicine, according to which the regulation of doctors' fees is to be done away with. There is to be a tariff by which a Judge can decide when applications are made in court; but in general doctors are to demand what they like. The tariff in question is two marks, or fifty cents, for a first visit, and one mark for every successive visit. When consultations are held, every doctor is to get five marks for the first time, and three marks for the succeeding. In the physician's house thirty-seven and one-half cents is the charge for the first consultation, and eighteen cents for every succeeding one.

—AT Monte Carlo, when the bank is broken, or, rather, when the amount of money set apart to be staked in one day is won from it, the croupiers rise, the servants cover the table with a black cloth, and business is over until next morning. This does not often occur, as the chances in favor of the bank are very many. Recently, however, play has been very desperate at Monte Carlo, and the bank was broken by a Brother Jonathan. In glorious Nice, just opposite Monaco and Monte Carlo, there are no public gambling-rooms, but you need not leave the town to hunt the tiger. There is a large club—the Mediterranée—in Nice, where they are excessively glad to welcome strangers, and will give you every accommodation.

GUARDING THE MINE.

INTERIOR OF A STAGE-COACH — PASSENGERS COMPARING WATCHES.

THE NEW EL DORADO.

SCENES AND INCIDENTS IN LEADVILLE, COLORADO.

THE social aspects of Leadville, the new mining centre, are what might be expected in a mining camp. There are three daily newspapers, a school-house, two churches and sunday-schools—though there are five church organizations—and a branch of the Young Men's Christian Association. On the other hand, there are large gambling-houses, whose doors stand wide open, in which every kind of "skin" game is being played openly. There are two or three low variety theatres doing a driving trade. The income of one of them is said to be better than that of any mine save a few of the most successful ones. The gambling-houses recognize no artificial discriminations. Negroes gamble at the same table and drink at the same counter with white men. Nearly all carry arms, some having their belts full of weapons. Our illustration, from sketches taken on the spot, gives a striking picture of the inner life of these resorts. There is a large element of the roughest of characters, and accordingly an occasional affray and shooting; but the majority of the inhabitants are too eager fortune-hunters to indulge in such pastime. The law-loving people, aided by an efficient police force, keep the hoodlums and camp-followers in check, and any one can walk the streets in perfect safety.

The *Reveille* is the oldest of the newspapers. The office from which it is published does not possess the advantages of city establishments, but it is quite in keeping with the best of the earlier architectural achievements of the settlement.

The difficulties of travel in this newly populated region have been referred to in a previous issue. The accommodations for "man and beast" are of the rudest sort, and the adventurous explorer, in his journey from civilization to the new El Dorado, is often compelled to accept of shelter and fare which he would spurn under other circumstances. The staging from Carson City, the railroad terminus, is through magnificent scenery, but it is a process lasting two days of twelve hours each, and in Winter is really dangerous. The road winds along the edge of the mountains, around precipitous curves, with the incline invariably towards the chasm, and accidents are frequent. About the only diversion in which stage travelers can engage is that of "comparing watches," and as a stage-load frequently includes persons from New York, Chicago, Denver, and half-a-dozen other remote parts, each of whom insists that he has "just the right time," comparisons quite often give way to contentions that become serious.

AN EPISODE OF WATERLOO

THE battle was waning, the sun had set
Through clouds of smoke on the shrieking plain,
And the shattered bodies of men lay wet
In great pools of blood and great pools of rain.

The thunders of cannon still rent the air,
And the crimson field had been scarcely won,
While echoes of anguish drowned the blare,
And greeted the answer of brave Cambronne.

Thro' the dusk and gloom from the north advanced,
With helmeted heads and vigorous breath,
The dragoons of Blucher, equipped and lanced,
To swell the tide of the river Death!

And the Emperor stood on the gory field,
With his large, calm eyes as in utter rest;
But his forehead's marble ne'er revealed
All the anguish held in his tortured breast.

It was o'er; and the conquerors' maddening cry
Rose up in the night, while the piercing groans
Of thousands of warriors left to die
Blent shrill with the cannons' monotones.

Thro' the heat of fires, thro' the bullets' rain,
Thro' the sea of battle that stormed and raved,
That man on the proud white horse again
Led his legions on, for France might be saved.

And, though all was lost, he was still adored
By those hearts of gold that knew naught of fear;
And the wounded and dying with limbs begored,
As he hurried by would arise and cheer!

* * * * *

There was one poor soldier who lay between
Five mangled Prussians, and heard him pass.
He surmised it all, though he had not seen,
And he struggled to rise from the bloody grass.

He had left his mother in far Touraine,
His sister Jeanne, and his father blind,
But remembered naught of that love again,
When the thought of his Emperor passed his mind.

He mused as he wallowed in clotted gore,
Of the sweetheart he quitted against her will,
And the dear old home he would see no more;
But the Emperor held his heart's love still.

His left arm had been shattered by grape and shell,
And hung to the bone by a single shred,
But he heard his Emperor's voice, and well,
"I will give one last proof of my love," he said.

For he felt that his darling chief was nigh,
And wrenched the dead arm from his shoulder-blade,
And cried, with his weak, poor, feeble cry,
"It has served thee well, and for thee 'twas made!"

And he waved it high in his frantic might,
When Napoleon passed with a flash and whirr;
And his last words rang thro' the awful night,
"Vive l'Empereur! Vive l'Empereur!"

F. S. SALTERN.

THE FALLEN LEAVES.

BY WILKIE COLLINS.

CHAPTER XX.—(CONTINUED).

JERVY paid the bill, with all needful remembrance of the waiter. He was generous, he was polite; but he was apparently in no flurry to favor Phœbe with the explanation that he had promised. They had left the tavern for some minutes, and he was still rude enough to remain absorbed in his own reflections. Phœbe's patience gave way.

"I have told you everything," she said, reproachfully; "I don't call it fair dealing to keep me in the dark after that."

He roused himself directly. "My dear girl, you entirely mistake me!"

The reply was as ready as usual; but it was spoken rather absently. Only that moment, he had decided on informing Phœbe (to some extent, at least) of the purpose which he was then meditating. He would infinitely have preferred using Mrs. Sowler as his sole accomplice. But he knew the girl too well to run that risk. If he refused to satisfy her curiosity, she would be deterred by no scruples of delicacy from privately watching him; and she might say something (either by word of mouth or by writing) to the kind young mistress who was in correspondence with her, which might lead to disastrous results. It was of the last importance to him so far to associate Phœbe with his projected enterprise as to give her an interest of her own in keeping his secrets.

"I have not the least wish," he resumed, "to conceal anything from you. So far as I can see my way at present, you shall see it, too." Reserving in this dexterous manner the freedom of lying, whenever he found it necessary to depart from the truth, he smiled encouragingly, and waited to be questioned.

Phœbe repeated the inquiry she had made at the tavern. "Why do you want to know where Mr. Ronald is buried?" she asked, bluntly.

"Mr. Ronald's tombstone, my dear, will tell me the date of Mr. Ronald's death," Jervy rejoined. "When I have got the date, I shall go to a place near St. Paul's, called Doctors' Commons; I shall pay a shilling fee, and I shall have the privilege of looking at Mr. Ronald's will."

"And what good will that do you?"

"Very properly put, Phœbe! Even shillings are not to be wasted in our position. But my shilling will buy two sixpennys' worth of information. I shall find out what sum of money Mr. Ronald has left to his daughter, and I shall know for certain whether Mrs. Farnaby's husband has any power over it or not."

"Well," said Phœbe, not much interested so far—"and what then?"

Jervy looked about him. They were in a crowded thoroughfare at the time. He preserved a discreet silence until they had arrived at the first turning which led down a quiet street.

"What I have to tell you," he said, "must not be accidentally heard by anybody. Here, my dear, we are all but out of the world, and here I can speak to you safely. I promise you two good things. You shall bring Mrs. Farnaby to that day of reckoning; and we will find money enough to marry on comfortably as soon as you like."

Phœbe's languid interest in the subject began to revive; she insisted on having a clearer explanation than this. "Do you mean to get the money out of Mr. Farnaby?" she inquired.

"I will have nothing to do with Mr. Farnaby, unless I find that his wife's money is not at her own disposal. What you heard in the kitchen has altered all my plans. Wait a minute, and you'll see what I am driving at. How much do you think Mrs. Farnaby would give me if I found that lost daughter of hers?"

Phœbe suddenly stood still, and looked at the sordid scoundrel who was tempting her in blank amazement.

"But nobody knows where the daughter is," she objected.

"You and I know that the daughter has a deformity in her left foot," Jervy replied; "and you and I know exactly in what part of the foot it is. There's not only money to be made out of that knowledge, but money made easily, without the slightest risk. Suppose I managed the matter by correspondence, without appearing in it personally? Don't you think Mrs. Farnaby would open her purse beforehand if I mentioned the exact position of that little deformity as a proof that I was to be depended on?"

Phœbe was unable, or unwilling, to draw the obvious conclusion, even now.

"But what would you do," she said, "when Mrs. Farnaby insisted on seeing her daughter?"

There was something in the girl's tone—half-fearful, half-suspicious—which warned Jervy that he was treading on dangerous ground. He knew perfectly well what he proposed to do in the case that had been so plainly put to him. It was the simplest thing in the world. He had only to make an appointment with Mrs. Farnaby for a meeting on a future day, and to take to flight in the interval; leaving a polite note behind him to say that it was all a mistake, and that he regretted being too poor to return the money. Thus far, the truth had flowed from him in an uninterrupted stream. The time had evidently come to check the flow. Phœbe was vain, Phœbe was vindictive; and, more promising still, Phœbe was a fool. But she was not yet capable of consenting to an act of the vilest infamy in cold blood. Jervy looked at her, and saw that the foreseen necessity for lying had come at last.

"That's just the difficulty," he said; "that's just where I don't see my way plainly yet. Can you advise me?"

Phœbe started, and drew back from him. "*I* advise you!" she exclaimed. "It frightens me to think of it. If you make her believe she is going to see her daughter, and if she finds out that you have robbed and deceived her, I can tell you this—with her furious temper, you would drive her mad."

Jervy's reply was a model of well-acted indignation. "Don't talk of anything so horrible," he exclaimed. "If you believe me capable of such cruelty as that, go to Mrs. Farnaby and warn her at once!"

"It's too bad to speak to me in that way!" Phœbe rejoined, with the frank impetuosity of an offended woman. "You know I would die rather than get you into trouble. Beg my pardon directly, or I won't walk another step with you!"

Jervy made the necessary apologies with all possible humility. He had gained his end—he could now postpone any further discussion of the subject, without arousing Phœbe's distrust. "Let us say no more about it for the present," he suggested; "we will think it over, and talk of pleasanter things in the meantime. Kiss me, my dear girl; there's nobody looking."

So he made peace with his sweetheart, and secured to himself, at the same time, the full liberty of future action of which he stood in need. If Phœbe asked any more questions the necessary answer was obvious to the meanest capacity. He had merely to say, "The matter is beset with difficulties which I didn't see at first—I have given it up."

Their nearest way back to Phœbe's lodgings took them through the street which led to the Hampden Institution. Passing along the opposite side of the way, they saw the private door opened. Two men stepped out. A third man, inside, called after one of them, "Mr. Goldenheart, you have left the statement of receipts in the waiting-room." "Never mind," Amelius answered; "the night's receipts are so small that I would rather not be reminded of them again." "In my country," a third voice remarked, "if he had lectured as he has lectured to-night, I reckon I'd have given him three hundred dollars, gold (sixty pounds, English currency), and have made my own profit by the transaction. The British nation has lost its taste, sir, for intellectual recreation. I wish you good evening."

Jervy hurried Phœbe out of the way, just as the two gentlemen were crossing the street. He had not forgotten events at Tadmor, and he was by no means eager to renew his former acquaintance with Amelius.

CHAPTER XXI.

RUFUS and his young friend walked together silently as far as a large square. Here they stopped, having reached the point at which it was necessary to take different directions on their way home.

"I've a word of advice, my son, for your private ear," said the New Englander. "The barometer behind your waistcoat points to a downhearted state of the moral atmosphere. Come along to home with me—you want a whisky-cocktail badly."

"No, thank you, my dear fellow," Amelius answered a little sadly. "I own I'm downhearted, as you say. You see, I expected this lecture to be a new opening for me. Purposely, as you know, I don't care two straws about money. But my marriage depends on my adding to my income, and the first attempt I've made to do that has ended in a total failure. I'm all abroad again when I look to the future—and I'm afraid I'm fool enough to let it weigh on my spirits. No, the cocktail isn't the right remedy for me. I don't get the exercise and fresh air here that I used to get at Tadmor. My head burns after all that talking to-night. A good long walk will put me right, and nothing else will."

Rufus at once offered to accompany him. Amelius shook his head. "Did you ever walk a mile in your life when you could ride?" he asked, good humoredly. "I mean to be on my legs for four or five hours; I should only have to send you home in a cab. Thank you, old fellow, for the brotherly interest you take in me. I'll breakfast with you to-morrow, at your hotel. Good-night."

Some curious prevision of evil seemed to trouble the mind of the good New Englander. He held Amelius fast by the hand; he said, very earnestly, "It goes against the grit with me to see you wandering off by yourself at this time of night—it does, I tell you! Do me a favor for once, my bright boy—go right away to bed."

Amelius laughed and released his hand. "I shouldn't sleep if I did go to bed. Breakfast to-morrow at ten o'clock. Good-night, again."

He started on his walk at a pace which set pursuit on the part of Rufus at defiance. The American stood watching him until he was lost to sight in the darkness. "What a grip that young fellow has got on me, in no more than a few months," Rufus thought, as he slowly turned away in the direction of his hotel. "Lord send the poor boy may keep clear of mischief this night!"

Meanwhile Amelius walked on swiftly, straight before him, careless in what direction he turned his steps, so long as he felt the cool air and kept moving.

His thoughts were not at first occupied with the doubtful question of his marriage. The lecture was still the uppermost subject in his mind. He had reserved for the conclusion of his address the justification of his view of the future afforded by the widespread and frightful poverty among the millions of the population of London alone. On this melancholy theme he had spoken with the eloquence of true feeling, and had produced a strong impression, even on those members of the audience who were most resolutely opposed to the opinions which he advocated. Without any undue exercise of self-esteem, he could look back on the close of his address with the conviction that he had really done justice to himself and to his cause. The retrospect of the public discussion that had followed failed to give him the same pleasure. His warm temper, his vehemently sincere belief in the truth of his own convictions, placed him at a serious disadvantage towards the more self-restrained speakers (all older than himself) who rose, one after another, to combat his views. More than once he had lost his temper and had been obliged to make his apologies. More than once he had been indebted to the ready help of Rufus, who had taken part in the battle of words, with the generous purpose of covering his retreat. "No," he thought to himself, with bitter humility, "I'm not fit for public discussions. If they put me into Parliament to-morrow I should only get called to order, and do nothing."

He reached the bank of the Thames, at the eastward end of the Strand.

Walking straight on, as absently as ever, he crossed Waterloo Bridge, and followed the broad street that lay before him on the other side. He was thinking of the future again; Regina was in his mind now. The one prospect that he could see of a tranquil and happy life—with duties as well as pleasures; duties that might rouse him to find the vocation for which he was fit—was the prospect of his marriage. What was the obstacle that stood in his way? The vile obstacle of money; the contemptible spirit of ostentation which forbade him to live humbly on his own sufficient little income, and insisted that he should purchase domestic happiness at the price of a tawdry splendor of a rich tradesman and his friends. And Regina, who was free to follow her own better impulses—Regina, whose heart acknowledged him as its master—bowed before the golden image which was the tutelary deity of her uncle's household, and said resignedly, "Love must wait!"

Still walking blindly on, he was roused on a sudden to a sense of passing events. Crossing a side-street at the moment, a man caught him roughly by the arm, and saved him from being run over. The man had a broom in his hand; he was a crossing-sweeper. "I think I've earned my penny, sir," he said.

Amelius gave him a half-crown. The man shouldered his broom, and tossed up the money, in a transport of delight. "Here's something to go home with!" he cried, as he caught the half-crown again.

"Have you got a family at home?" Amelius asked.

"Only one, sir," said the man. "The others are all dead. She's as good a girl and as pretty a girl as ever put on a petticoat—though I say it that shouldn't. Thank you kindly, sir. Good-night!"

Amelius looked after the poor fellow, happy at least for that night! "If I had only been lucky enough to fall in love with the crossing-sweeper's daughter," he thought, bitterly, "she would have married me when I asked her."

He looked along the street. It curved away in the distance, with no visible limit to it. Arrived at the next side-street on his left, Amelius turned down it, weary of walking longer in the same direction. Whither it might lead him he neither knew nor cared. In his present humor, it was a pleasurable sensation to feel himself lost in London.

The short street suddenly widened: a blaze of flaring gaslight dazzled his eyes; he heard all around him the shouting of innumerable voices. For the first time since he had been in London, he found himself in one of the street-markets of the poor.

On either side of the roadway, the barrows of the costermongers—the wandering tradesmen of the highway—were drawn up in rows; and every man was advertising his wares, by means of the cheap publicity of his own voice. Fish and vegetables, pottery and writing-paper, looking-glasses, saucepans and colored prints—all appealed together to the scantily-filled purses of the crowds who thronged the pavement. One lusty vagabond stood up in a rickety donkey-cart, knee-deep in apples, selling a great wooden measure full for a penny, and yelling louder than all the rest. "Never was such apples sold in the public streets before! Sweet as flowers and sound as a bell. Who says the poor ain't looked after," cried the fellow, with ferocious irony, "when they can have such apple-sauce as this to their loin of pork! Here's nobby apples; here's a penn'orth for your money. Sold again! Hullo, you! you look hungry. Catch! There's an apple for nothing, just to taste. Be in time, be in time before they're all sold!" Amelius moved forward a few steps, and was half deafened by rival butchers, shouting, "Buy, buy, buy!" to audiences of ragged women, who fingered the meat doubtfully, with longing eyes. A little further, and there was a blind man selling shoe-laces, and singing a psalm; and, beyond him again, a broken down soldier playing "God save the Queen" on a tin flageolet. The one silent person in this sordid carnival was a Lascar beggar, with a printed placard round his neck, addressed to "The Charitable Public." He held a tallow-candle to illuminate the copious narrative of his misfortunes; and the one reader he obtained was a fat man, who scratched his head, and remarked to Amelius that he didn't like foreigners. Starving boys and girls lurked among the costermongers' barrows, and begged piteously on pretense of selling cigar-lights and comic songs. Furious women stood at the doors of public houses, and railed on their drunken husbands for spending the house-money in gin. A thicker crowd, towards the middle of the street, poured in and out at the door of a cookshop. Here the people presented a less terrible spectacle—they were even touching to see. These were the patient poor, who bought hot morsels of sheep's heart and liver at a penny an ounce, with lamentable little mouthsful of peas-pudding, greens and potatoes, at a halfpenny each. Pale children in corners supped on penny basins of soup, and looked with hungry admiration at their enviable neighbors who could afford to buy stewed eels for twopence. Everywhere there was the same noble resignation to their hard fate, in old and young alike. No impatience, no complaints. In this wretched place the language of true gratitude was still to be heard, thanking the good-natured cook for a little spoonful of gravy thrown in for nothing—and here, humble mercy that had its one superfluous halfpenny to spare gave that halfpenny to utter destitution, and gave it with right good-will. Amelius spent all his shillings and sixpences in doubling and trebling the poor little pennyworths of food, and left the place with tears in his eyes.

He was near the end of the street by this time. The sight of the misery about him, and the sense of his own utter inability to remedy it, weighed heavily on his spirits. He thought of the peaceful and prosperous life at Tadmor. Were his happy brethren of the Community and these miserable people about him creatures of the same all-merciful God? The terrible doubts which come to all thinking men—the doubts which are not to be stifled by crying "Oh, fie!" in a pulpit—rose darkly in his mind. He quickened his pace. "Let me get out of it," he said to himself; "let me get out of it!"

It was not easy to pass quickly through the people loitering and gossiping about him. There was greater freedom for a rapid walker in the road. He was on the point of stepping off the pavement, when a voice behind him—a sweet, soft voice, though it spoke very faintly—said: "Are you good-natured, sir?"

He turned, and found himself face to face with one of the saddest sisterhood on earth—the sisterhood of the streets.

His heart ached as he looked at her, she was so poor and so young. The lost creature had, to all appearance, barely passed the boundary between childhood and girlhood—she could scarcely be more than fifteen or sixteen years old. Her eyes, of the purest and loveliest blue, rested on Amelius with a vacantly patient look, like the eyes of a suffering child. The soft oval outline of her face would have been perfect if the cheeks had been filled out; they were wasted and hollow, and sadly pale. Her delicate lips had none of the rosy color of youth, and her finely-modeled chin was disfigured by a piece of plaster covering some injury. She was little and thin, her worn and scanty clothing showed her frail, youthful figure still waiting for its perfection of growth. Her pretty little hands were reddened by the raw night air. She trembled as Amelius looked at her in silence, with compassionate wonder. But for the words in which she had accosted him, it would have been impossible to associate her with the lamentable life that she led. The appearance of the girl was artlessly virginal and innocent; she looked as if she had passed through the contamination of the streets, without being touched by it, without fearing it, or feeling it, or understanding it. Robed in pure white, with her gentle blue eyes raised to heaven, a

Digitized by Google

painter might have shown her on his canvas as a saint or an angel, and the critical world would have said: Here is the true ideal—Raphael himself might have painted this!

"You look very pale," said Amelius. "Are you ill?"

"No, sir—only hungry."

Her eyes half-closed; she reeled as she said the words. Amelius held her up, and looked round him. They were close to a stall at which coffee and slices of bread-and-butter were sold. He ordered some coffee to be poured out, and offered her the food. She thanked him and tried to eat. "I can't help it, sir," she said, faintly. The bread dropped from her hand; her weary head sank on his shoulder.

Two young women—older members of the sad sisterhood—were passing at the moment. "She's too far gone, sir, to eat," said one of them. "I know what would do her good, if you don't mind going into a public-house."

"Where is it?" said Amelius. "Be quick!"

One of the women led the way. The other helped Amelius to support the girl. They entered the crowded public-house. In less than a minute, the first woman had forced her way through the drunken customers at the bar, and had returned with a glass of port-wine and cloves. The girl revived as the stimulant passed her lips. She opened her innocent blue eyes again, in vague surprise. "I sha'n't die this time," she said quietly.

A corner of the place was not occupied; a small empty cask stood there. Amelius made the poor creature sit down and rest a little. He had only gold in his purse; and, when the woman paid for the wine, he offered her some of the change. She declined to take it. "I've got a shilling or two, sir," she said; "and I can take care of myself. Give it to Simple Sally."

"You'll save her a beating, sir, for one night at least," said the other woman. "We call her Simple Sally, because she's a little soft, poor soul—hasn't grown up you know, in her mind, since she was a child. Give her some of your change, sir, and you'll be doing a kind thing."

All that is most unselfish, all that is most divinely compassionate and self-sacrificing in a woman's nature, was as beautiful and as undefiled as ever in these women—the outcasts of the hard highway!

Amelius turned to the girl. Her head had sunk on her bosom; she was half asleep. She looked up as he approached her.

"Would you have been beaten to-night," he asked, "if you had not met with me?"

"Father always beats me, sir," said Simple Sally, "if I don't bring money home. He threw a knife at me last night. It didn't hurt me much—it only cut me here," said the girl, pointing to the plaster on her chin.

One of the women touched Amelius on the shoulder, and whispered to him. "He's no more her father, sir, than I am. She's a helpless creature, and he takes advantage of her. If I only had a place to take her to, he should never set his eyes on her again. Show the gentleman your bosom, Sally."

She opened her poor threadbare little shawl. Over the lovely girlish breast, still only growing to the rounded beauty of womanhood, there was a hideous blue-black bruise. Simple Sally smiled, and said: "That did hurt me, sir. I'd rather have the knife."

Some of the nearest drinkers at the bar looked round and laughed. Amelius tenderly drew the shawl over the girl's cold bosom. "For God's sake, let us get out of this place!" he said.

(*To be continued.*)

THE DOG SHOW ÆSTHETICALLY CONSIDERED.

"My love shall hear the music of my hounds
Uncouple in the Western Valley."

SUCH is the beautiful remark of *Theseus* to *Hyppolita*, in the "Midsummer Night's Dream." The Duke of Athens cannot better entertain the Queen of the Amazons. Well does she answer him, the tall, straight huntress, appreciating his tastes:

"I was with Hercules and Cadmus once
When, in a wood of Crete, they bayed the bear;"

and *Theseus*, sure of a sympathetic listener, dashes into the famous description:

"My hounds are bred out of the Spartan kind,
So flewed, so sanded, and their heads are hung
With ears that sweep away the morning dew—
Crook-kneed and dewlapped like Thessalian bulls."

It is an old taste, this love of dogs. Indispensable to the hunter, dear to the lonely settler, always finding a *Rip Van Winkle* in even the most industrious of early settlements to bear him company in the long, purposeless ramble which is one of the conditions of a dog's life, the American dog has been a familiar but unrecognized force in the pioneer civilization. He has gone into the stiff metre of Alexander Pope, found a sculptor in Hoppin, who immortalized a dog who died on his master's grave, has been painted by Beard, and has made his appearance in the drama. Around the cities and in the thickly settled country the game so quickly disappeared that the fine pointers, setters and hounds were but imperfectly bred and nurtured, only a few sportsmen comparatively keeping up this expensive taste. *Theseus* was obliged to take his "love" indeed to a "Western Valley" to hear his hounds and to see him shoot prairie-chickens.

However, everybody has owned a dog once or twice in his life, and everybody (worth recording) loves dogs. It is, therefore, not strange that the dog fancy has now become an æsthetic taste, and that superb club kennels devote themselves to the perfecting of breeds; that now women take an interest; that Fashion smiles upon the dear doggies with that high accord which confers distinction. Dogs, as everybody knows, are quite as unlike each other in disposition as are people. They have their human traits, they can be venal, they love the hand which feeds however low it be, they are cowards sometimes, they are sometimes mean, they are treacherous. Some dogs can be depended upon, and some cannot. It is idle to say that all dogs are as good as some dogs. But the real dog, the ideal dog, is a very noble gentleman. He loves his master, male or female, with an undying, unquestioning fidelity; he is the servant, slave, friend of man. Some of them, notably the Newfoundland and the St. Bernard, have the noble instinct of saving life; others have the untamed wolf in them yet, and are savage and dangerous; but, from Bill Sykes's dog up, they generally have some one friend for whom they would willingly die. Perhaps "a dog's life" is not worth much: the old proverb would suggest as much—but he is always willing to lay it down for his friend.

It is curious to notice the rise of the dog from his lowly position in the East, where the Biblical saying, "Is thy servant a dog that he should do this thing!" is matched by the last of all suggestions of degradation, "He is going to the dogs." Now, what more elegant or correct thing can we do than to go to the dogs?

In those hot countries, however, where a dog becomes a jackal, a scavenger, he is in his lowest estate, and yet what noble hounds Gérome has brought from the East and painted! The mountains and the chase always rescue the dog, and bring him back to his nobility.

The Irish wolf-hound has ever been a favorite type with novelists. He has a perfectly reliable temper, he is gentle to his friends, dangerous to his foes. He is an embodiment of chivalry, and likes to walk with his young mistress—a new reading of Una and her Lion. Of this famous breed was Maida, whom Sir Walter Scott so loved.

Like all good things, they are rare, and the dog show of 1879, held at Gilmore's Garden last week, with nine hundred and fifty-three dogs in all, had but one—Bevis, owned by Mr. Lester Wallack—who is as handsome and as poetically grand as was Maida. Another set of emotions assail us as we look at the familiar mastiff, so long the synonym of honesty. Breeding has improved this always fine-tempered dog, and the show has many noble specimens. This dog is only useful as a watch-dog, a friend, a companion, and an ornament to society. The Newfoundlands have beauty, worth, and an exceptional character as to being able to save the drowning. Why should they not be more commonly kept on the seashore, at the Summer watering-places, and trained to save the lives of imprudent bathers? The show is rich in Newfoundlanders—magnificent ones.

Then come the Siberian bloodhounds, red-eyed, dangerous, grand. These splendid creatures walk about our streets with their masters very tranquilly, like Tartar nobles, trying civilization calmly; so they are probably not fierce when away from business.

The large, delightful family of the collies are well represented. These sensible Scotchmen are growing favorites in this country, and bring to the imagination the poetry and romance of the Cheviot Hills behind their twinkling heels, recalling Sir Walter, the Ettrick Shepherd, Burns and Christopher North. Sir Walter declared that his dogs understood language, and it was confidently reported that when he told a story to the disadvantage of one, the dog actually blushed; he certainly turned tail and went under the table. There is scarcely any story of the sagacity of a dog which the dog-lover will not believe.

The red Irish setters, most beautiful of gentle creatures, are so much of a novelty to most of us as to be looked upon like stray scions of a nobility on a visit to the United States. The kennels of Long Island have, however, known them for some time. They are highly esteemed by the sportsman, and are delightful about a house. It is, however, urged by sportsmen that dogs intended for hunting purposes are spoiled when they become household pets.

The toy dogs have a most satisfactory exhibition. The greyhounds, beautiful, slender, aristocratic creatures, in mouse-color, fawn-color and gray, are lying in silken pavilions; and yet we say to them:

"Lady Clara Vere De Vere,
I saw your game, and I retired.
The daughter of a hundred earls,
You are not one to be desired."

They are sensuous, selfish and ungrateful pets, caring only for warmth, good food, luxury and their own graceful selves. Is it that they are too plain a parody?

Far better as a *chien de luxe* is the black and-tan, who is so pretty to look at, so intellectual, so sympathetic. How could he be otherwise, with his large eyes and prominent brain? The only trouble with a black-and-tan is that he is too sympathetic. If his mistress has the vapors, he has them too. He takes his moral tone from the fair hand that caresses. He is a great adjunct to that fair hand; never does it look whiter, smaller, prettier than when on his back, except when buried in the black curls of a big Newfoundland.

The Skye terriers reach the *ultima thule* of petdom. They are healthy, quick-witted, funny little creatures, easily trained and most faithful in friendship. They have the grace of fidelity, and yet when pampered they sometimes show mean qualities. They are great aristocrats and prefer their mistresses when well-dressed. They scorn the *désagrémens* of travel, and believe in baths, good beds, regular meals and jeweled fingers. The prices which these dogs bring, when they have all the points, is something enormous.

Pugs, brought into fashion by the present royal family of England, it is said, have the *pas* as fashionable, much talked-of dogs. Certainly beauty is not their characteristic, although they are very *chic*. The tail curling round so peremptorily, makes a handle by which they can be lifted. Their black noses are very cunning and expressive. They must wear their skin like an overcoat, loosely-fitting and easily rubbed around.

Their fair owners love them to distraction; they are to the modern female what Mahomet's father was to the maidens of Mecca. When he married, 20,000 Arab ladies committed suicide, so beautiful was he! One pug in the exhibition is marked as worth $10,000, and enormous prices are constantly paid for these little dogs. They are constant, honest, loving dogs, and very pretty about a house. They "show breeding," it is said, more certainly than other dogs.

There was one beautiful specimen of a Blenheim spaniel, looking as if he had stepped out of the Vandyke picture, "The Children of Charles I. at the Show." These very pretty dogs have an almost humane expression in their black eyes. For beauty and picturesqueness they come next to the greyhound. No dog "draws" so well as a greyhound; no dog in a sylvan scene is so excellent in color as the red Irish setter.

Let us look at the bulldogs. Tenacity, that great moral quality, is written all over them. They are respectable for their strength, their enormous courage, their grip. Grip is an excellent thing; yet what low faces! What a "Bill Sykes" in dog-skin. How burglarious, ignoble and fierce they look, and yet their masters tell us that they are not ferocious—not dangerous—but loving and faithful. But can you ever believe any master when he talks about his dog? Certainly Viscount, Jack and Duke look as if they were splendid specimens of their race, and would die several times before they would surrender.

The St. Bernard dogs, rough-coated or smooth, are so dear to the imagination that one pauses to shake a paw with each. The vision of that traveler half-buried in the snow accompanies them. The old picture of the boy with his arms clasped round the neck of that fine old fellow, whose stuffed effigy stands to-day in the Museum at Berne, will ever make these strong, individual, courageous dogs dear to the heart. There are some beautiful specimens in the show, especially one from Albany, named Chamounix, and a superb York from the Fifth Avenue. What does he do with his unoccupied philanthropy in New York?

We should like to speak of all the champion pointers by name and pay them individual compliments, for one of this race was once a dear personal friend. He had belonged to a gentleman who used him for hunting on Western prairies, and to see him "follow his nose" was a picture! After several seasons of uselessness he was brought to a family home in the East and became a pet. How noble he was, on the piazza, extending a paw to each member of the family, as they came or went; how gracefully he curled on the parlor-rug, and rapped his tail as his master came in! How he knew his mistress, and watched her blue eyes, and how when a cowardly hand poisoned him, did he accept her ministrations with a look of gratitude which broke her heart! How, with his latest breath, did he try to lick her hand, and extended his paw for a farewell shake!

Vale, vale! Cato! there are some who cannot think of your death yet without tears. Never was Cato guilty of an ungentlemanly action; and he is now coursing a grand chase in the heavenly hunting-grounds. Of that his bereaved family are sure, quite sure. It consoles them. That is the worst side of the love which we feel for a dog. In dying they bequeath to us a human regret. Their short and much-assailed existence cannot be long counted on; they must die, and then we regret them too much. They are so curiously intelligent that we cannot make them brutes, and there is a pathos in their love. They seem to wish to speak to us. Many a *conchiste* has, after one bereavement, determined never to have another dog.

Vastly improved in dog-lot by all this æsthetic fancy, these carefully-attended kennels. The diseases of dogs are studied; they become the patients of highly scientific physicians; and yet they do not eradicate hydrophobia, the dreadful danger which accompanies the possession of a pet dog. The Spitz dogs are almost banished, from their well-known tendency to madness. Beautiful, white, fluffy snowballs that they are, how can we expect them to enjoy our climate in such an Arctic cloak as they bring down with them? They are undoubtedly heated to death, and the shocking tragedy of the death of one human being by the bite of a mad dog makes the very idea of a dog one to be put away. Three well-known actresses have died of the bite of a mad dog. One in England, Mrs. Barry; one here, Ada Clare, and one in France, whose name escapes us.

Mrs. Gore made her lapdog write a book, and it is very clever. The lapdog has great opportunities of learning the family secrets. He is not so dangerous as the parrot, for he cannot tell them, unless, as in Mrs. Gore's case, he learned the secret of authorship.

In looking over, then, the dog show from an æsthetic point of view, we cannot but believe that it is a taste which bleseth him that gives and him that takes. The dogs are better off and humanity is improved by the contact. Even the roughest man looks amiable when his dog kisses him. The pampered poodle may seem an asthmatic and ridiculous object. The affection one bestows on a dog might be given to a child. But still, how can we help respecting the innocent extravagance of a child's love for a dog? If a dog is lovable he must must be loved; and a woman who is childless, and, perhaps, yet freighted down with care, or, still worse, has nothing to do with a busy brain, she is to be envied if her little dog is a solace to her. He trots off with much of her nervousness; his freaks amuse her; his affection consoles her; she is his medium of communication with a higher race; she enjoys her office of interpreter; she sees her own character represented in his. If she is amiable, he is amiable; if she is passionate her dog snarls, he is a perpetual moral instructor, a warning! To see a party of men go forth with their dogs is to see the brightest and most healthy sight in all the world. The hunt, long an exotic here, now seems to be becoming a national institution. In New Jersey and on Long Island "poor puss" is being pursued by packs of hounds, and men and women riders are learning the art of "across country." These setters and pointers mean business. They are after birds, woodcock, snipe, partridge, duck. The hounds with

"So musical a discord, such sweet thunder,"

are piping for a fox. Let each have his outing, and realize his destiny.

Of the beauty of these improved dogs the visitor to England need not be told. Those who have seen a kennel in "Bucks or Wilts," will feel that we have much to learn. It is a significant fact of the growing dignity of the taste that a clergyman of the Church of England came over with his dogs last year to help us in our dog-dancying.

Douglas Jerrold said that dogmatism was puppyism grown to maturity. The dog has contributed to make many an epigram, perhaps none more graceful and touching than that of Arsene Houssaye, who, in describing Buffon, and the intellect, without heart, which the great naturalist brought to his work, said, "He has classified all the dogs, and described them all but one—he has left out the blind man's dog."

The show opened on April 8th and closed on the 12th. On the second day of the exhibition at least 9,000 visitors were present. The toy terriers and pugs were the best cared for. The tender feminine hand left its mark in soft couches and elaborately monogramed rugs. The dainty darlings did not herd with the common ruck of breathing automata. They had their own boxes, their own service, their own bed-clothes, while they were soothed to slumber by numerous gushing adjectives uttered by thousands of rich red lips. Who wouldn't be a Japanese spaniel! Who wouldn't be a Dandie Dinmont! Who would be a judge? The decision of Paris was as naught compared with the giving of the golden apple, yclept the first prize, in this case.

SCIENTIFIC INTELLIGNCE

M. Ferry, the new French Minister of Public Instruction, has visited the Sorbonne, the School of Medicine, and other buildings devoted to science, for the purpose of deciding what repairs must be done immediately.

Experiments in electric signaling and reconnoitring have been made at Mont Valérien on a large scale. Details are wanting, as the French Government think it prudent to keep secret almost all experiments relating to military matters.

Roman Antiquities have been recently discovered in the open space in front of the Votive Church at Vienna. The space is in course of transformation into a public garden. Among the objects found are some rare coins, toga-clasps, urns, as well as the remains of tombs and of a bath.

A Vacancy having occurred in the Professorship of Botany at the University of Innsbruck by the transference of Kerner to the important chair at Vienna as successor of Fenzl, Dr. Peyritsch, Director of the Botanic Garden at Vienna, has been appointed to the Professorship at Innsbruck.

Lake Garda, lying under the shadow of the Alps, is being excavated at its bottom for prehistoric relics; prior to 1866, the Austrian authorities found some and shipped them off to Vienna, and now Rome has officially undertaken the job.

Charts for Instruction in Technology.—Professor Rudolf Wagner calls attention to the admirable technological charts prepared by Lenoir & Forster in Vienna. The recent progress in sulphuric acid manufacture, the Bessemer process, condensation of muriatic acid, distillation apparatus, ammonia ice-machine, beer-brewing, etc., are all shown in large charts, which are accompanied by explanatory text in four languages.

Sulphuric Acid in Vinegar.—To test the presence of sulphuric acid in vinegar, J. H. Huber evaporates on platinum foil a few drops of molybdate of ammonia to dryness, then adds a small quantity of the vinegar to be tested, evaporates nearly to dryness, completes the desiccation by blowing over the mixture, and if the least trace of sulphuric acid be in the vinegar its presence will be announced by a delicate blue color.

A Remarkable Phenomenon is reported from Neufchatel. On February 10th the Lake of Neufchatel suddenly assumed a motion like the sea with its tides, only with the difference that the rise and fall of the water succeeded each other in much shorter intervals. The phenomenon began at noon and lasted until 2 P. M. Boys who were playing on the shore were so suddenly surprised by the rising lake that they were up to their knees in water before they had time to escape. In the evening there was a violent thunderstorm, which also visited Berne at the same time.

PERSONAL GOSSIP.

HEINRICH WILHELM DOVE, the celebrated meteorologist and writer, died at Berlin, aged 76 years.

THE REV. Theodore Noethen, Catholic Chaplain of the Albany Penitentiary, and author of several religious books, died in Albany, April 16th.

REV. DR. MOSES D. HOGE, pastor of the Second Presbyterian Church, Richmond, it is understood, has received a call from a wealthy congregation in Philadelphia.

LORD DUNMORE brought out a wedding march at the Opera, London, composed in honor of the Duke of Connaught. He led the orchestra himself, and the march was pronounced a success.

A FEW days ago Professor F. H. Bradley, formerly of East Tennessee University, and Assistant Geologist of Georgia, was crushed to death by the caving of a gold mine, near Necoochie, Ga.

THE REV. John Miller, D.D., of Princeton, late Professor in the Theological Seminary at that place, was formerly deposed from the ministry for heresy, April 8th, by the Presbytery of New Brunswick.

IT has been found that the schedules for the new Canadian tariff were prepared by Dr. Young, who was, until lately, Chief of the Bureau of Statistics at Washington. He is a Nova Scotian by birth.

RECENT letters from Mr. Welsh, United States Minister to Great Britain, received within a day or two in this city, show that all the rumors about his coming home are inaccurate. He has no such purpose.

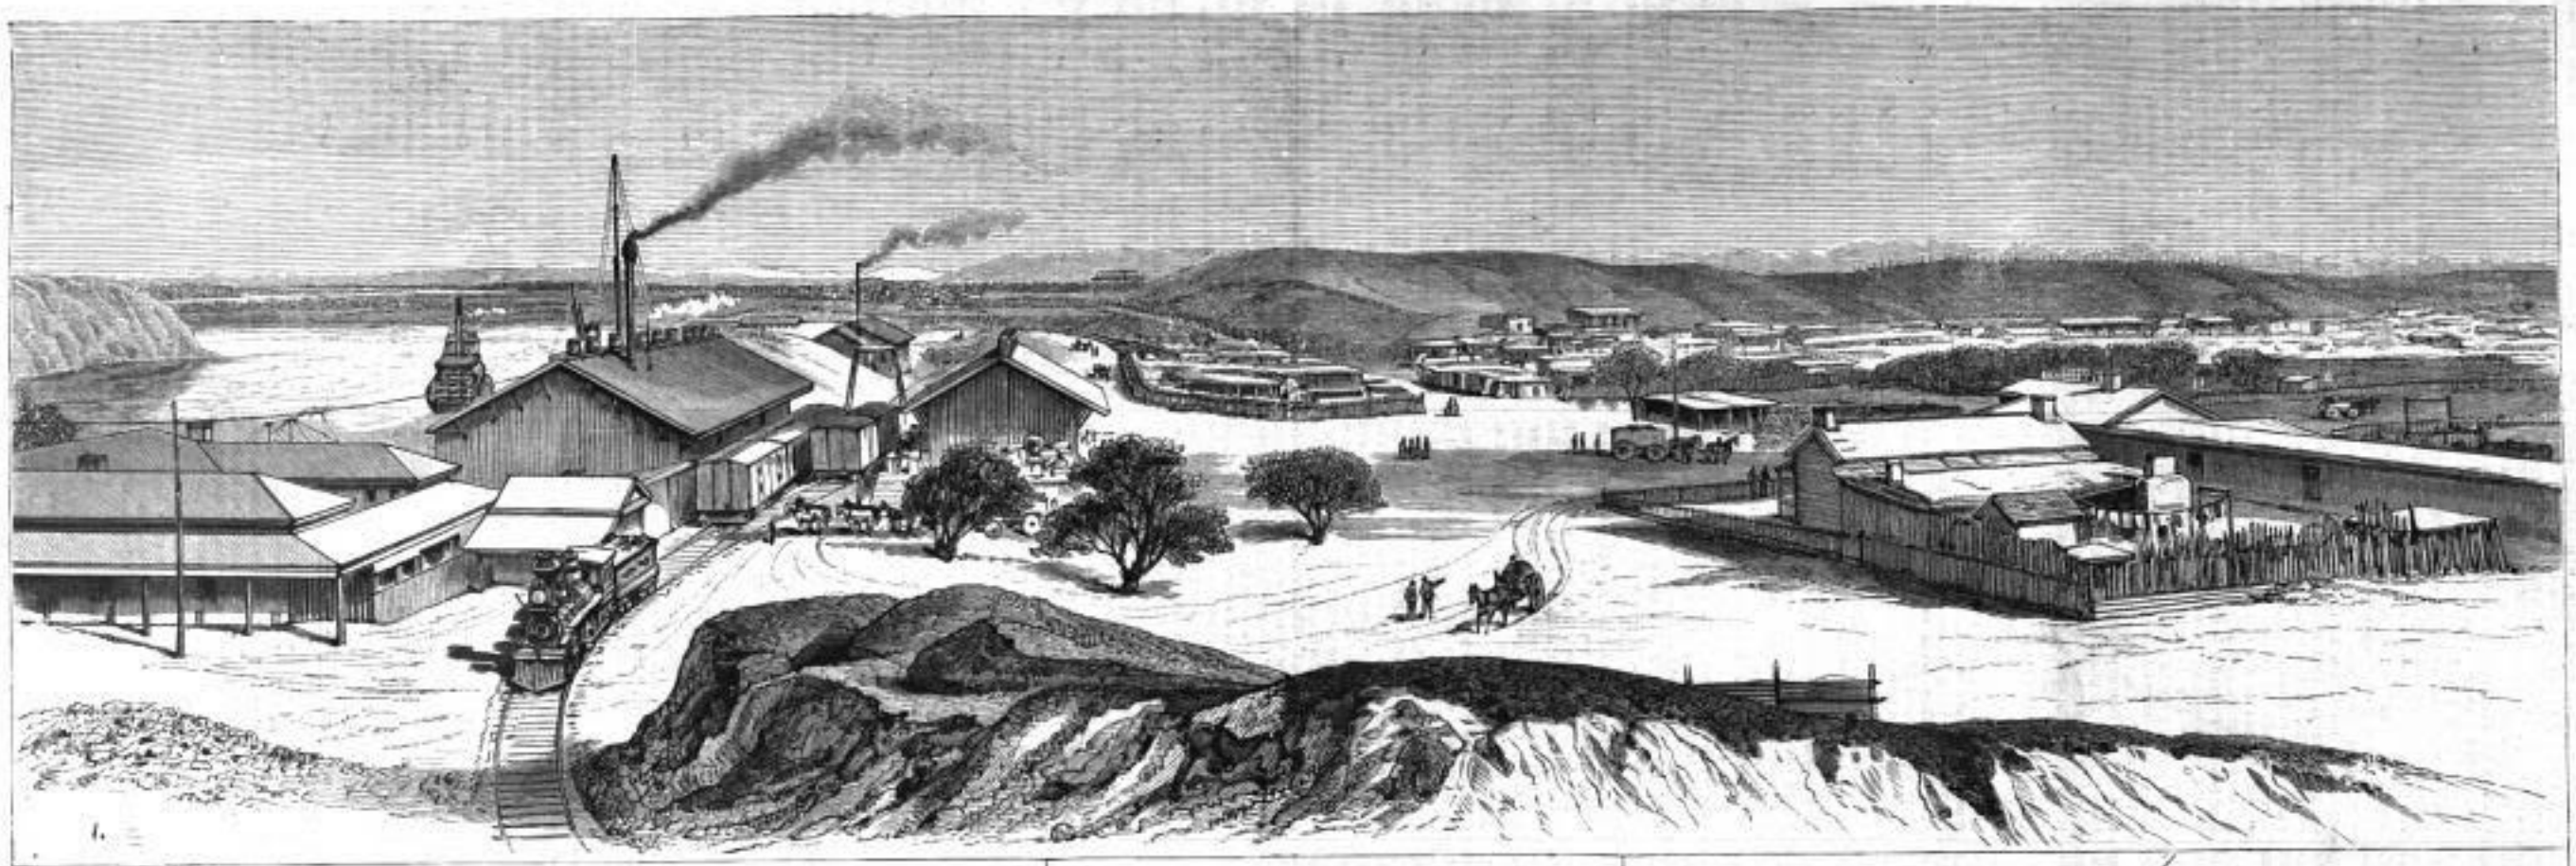
IT is now expected that Rev. William Ives Budington, D.D., of Brooklyn, N. Y., may wholly recover his health. The cancer which was cut from his face early in the Winter has shown no sign of reappearing.

BY the will of Charles L. Jones, of Cambridge, $30,000 are left to Harvard College, to be used in founding six scholarships. The Vermont Academy, which Mr. Jones founded and endowed some years ago, also gets $10,000.

DR. LOVICK PIERCE, the distinguished Methodist preacher of Georgia, was ninety-five years old on Monday, the 24th ult. He celebrated the day by baptizing eight children, five of whom were his great-grandchildren, and one great-greatgranddchild.

ARCHBISHOP PURCELL has received a letter from Cardinal Simeoni, Secretary to the Pope, declining to accept the Archbishop's resignation on account of his long service to the Church. The Archbishop was instructed to select a coadjutor with the right of succession to the See of Cincinnati.

PROFESSOR DANIEL VAUGHN, who was well known throughout the United States as an astronomer, linguist and mathematician, died at the hospital in Cincinnati, April 6th. He was born in Ireland, and came to this country when quite young. For the past twenty-five years he was a resident of Cincinnati.



DR. THOMAS WITHERS, one of the oldest and leading physicians of Southern Virginia, died April 8th, at Petersburg, aged seventy-one years. He was a descendant of William Withers, Secretary of the Colony under Governor Dinwiddie, and was President of the Commercial National Bank till the close of that institution recently.

THOMAS HARDY, who is the only rival of William Black for the honor of being the most popular of recent English novelists, is thirty-eight years old, and was educated in a provincial village, becoming, as one might fancy from his figures of speech, the apprentice of a country architect. In London, however, he became a student under Bloomfield, and a disciple of the Gothic school. He won prizes in architecture, and studied to be an art critic. Finally he chose fiction.

A BILL for the relief of General Fitz John Porter is in course of preparation by the friends of that gentleman, and when ready it will be introduced in the Senate. There has been some indecision as to what shape the legislation for redress ought to take. When General Porter was dismissed, he was a major-general of volunteers, and a lieutenant-colonel of artillery in the regular army. Had not his misfortune happened he would, in all likelihood, be now a brigadier in the regulars. The question is, therefore, how justly he may claim appointment to this rank in the army and to what extent he is entitled to pay for services which he was prevented from rendering, however willing he might have been to give them.

THE death is announced of Sir Anthony Panizzi, formerly Librarian of the British Museum. He was an Italian gentleman, born at Frescello, in the Duchy of Modena, September 16th, 1797, and was educated at Reggio and at the University of Parma, where he graduated as Doctor in Law in 1818. He took part in the Piedmontese Revolution of 1821, was condemned to death, escaped, and made his way to England. In 1831, through the influence of Lord Brougham, he was made an assistant-librarian at the British Museum; in 1837 was made Keeper of Printed Books, and Principal Librarian in 1856, which post he resigned in 1866, but continued connected with the library until the Autumn of 1878. He was knighted in 1869, in recognition of his great services in the creation of the largest library in the world.

THE SOUTHERN PACIFIC RAILROAD OF ARIZONA.

ON the Colorado River, ninety miles from its mouth and on its east bank, is located the old city of Yuma in Arizona. This location, which has heretofore lain mute with a history that perhaps rarely extended beyond its own domain except by an occasional exploring party or an inhabitant who had fortunately made his escape from the ravages of Indians or Mexican desperadoes, has now become of considerable importance. On the 29th of September, 1877, this point became the present terminus of the Southern Pacific Railroad of California, and about a year later became the initial point of the great southern trans-continental route now building eastward. For a year following the completion of the Southern Pacific the building of a second trans-continental railroad was agitated by two aspirants—the Southern Pacific and the Texas Pacific. The final presentation of the case to Congress last Summer by ex-Governor Leland Stanford and the Hon. C. P. Huntington, of the Southern Pacific, and the able paper read by ex-Governor A. P. K. Safford, of Arizona, showing the valuable fields of wealth which would be opened by the continuation of the Southern Pacific eastward across the continent, brought an end to the controversy. The results are that a complete southern trans-continental route is stealing an existence upon us as unawares as did the first road across the continent in 1869. Yuma is now the initial point of this new road—"The Southern Pacific Railroad of Arizona." When we realize the vast interests the opening of Arizona and New Mexico will offer to the geologist and historian we hail the event. It was late last Fall when the continuation of the road from Yuma was begun. It is now rapidly approaching Maricopa, a distance of 200 miles from Yuma, and by the middle of the present Summer will have penetrated the rich silver regions of the Santa Rita Mountains on its way through New Mexico, Colorado and the East.

Yuma is the new name of Arizona City, and is of strictly Mexican origin, although representatives of the ancient Yuma tribes of Indians constitute a large proportion of its present population. The town corporation was organized about 1855, under the name of Colorado City, subsequently changed to Arizona City and then to Yuma, after the Government fort across the river in California. The western bank of the Colorado is chiefly a long, low stretch of alluvial bottom land, overflowed by the great river and enriched by the detritus it has borne from the heart of the Northern Cordilleras for centuries past. Yuma itself is on a level, sandy plain, of one prevailing gray adobe tone. The principal street is broad, and fringed for nearly half a mile on either side by low, straggling adobe buildings and corrals. There are two or three side streets, ambitious in name if not in style. The sun is almost blinding, and the prevailing hue monotonous. And yet there is a wonderful feeling in the dry, ozonized atmosphere which makes you forget the heat and feel the value and pleasure of physical being. North of the main street is a low range of gravelly hills, behind which the Gila runs. On the western extremity of these hills is the new Territorial Penitentiary, and along the edge of the plateau the Atlantic and Pacific Telegraph runs until it descends to the street. There are reminiscences of the Texas-Pacific in the shape of a cutting for that road, along these foothills and across on the side of the hill on which Fort Yuma is situated. Beyond and across a wide expanse of valley and mesa is the range known as the Castle Dome, between which and another one exquisitely formed, marked on the map as the "Purple Hills," the Colorado forces its turbulent and devious way. Looking across California wards, and the eye rests upon the Picache peaks to the northwest, and on the "Cargo Muchacho" to the south. Both these elevated ranges, islands rising out of the silent sea—the wide waste of sand that glistens white in the burning sun, and marks where the waves once flowed—are full of the richest gold-bearing quartz—at least it is so affirmed here, and in proof of it nuggets of gold—the indestructible "what is it" of the geologist, chemist and assayist—are shown. The southern group lies close to the railroad, and if, as is asserted, the veins are rich and the quartz easily handled, there is a find of great value. Not only does this section represent the mineral wealth of the Territory, but the wonderful discoveries recently made in the Toltec syndicates of mines in the Santa Rita Mountains, and towards which the railroad is fast pushing, suggests a glorious future for Arizona. We look for excitements from this section soon as great as those from Leadville, or the great similar discoveries at Copper City, in Northern California. The geological formation hereabouts indicates comparative newness. The bluffs of unsolidified limestone, the rich, sandy alluvium and the detrital hill and buttes, all testify to this. So also do the granite

rocks of the "Cargo Muchacho." The old route from San Francisco—down the coast by ocean steamers and up the Gulf of California to the mouth of the Colorado, and thence by light-draught steamboats up the broad and shallow stream to Yuma and Ehrenberg—possesses many features of interest to travelers. As soon as steamships arrive at anchorage at the mouth of the Colorado River, barges are set alongside by river-boats, to receive freight which is handled with derricks. An ordinary cargo is discharged in twelve or fifteen hours. As soon as loaded, these barges are towed into the inlet or slough leading to Port Isabel, this being to protect them from heavy seas, which may come up any time.

It is to be regretted that when Arizona was purchased from Mexico, it had not included territory far south enough to have taken in the old town of Guymas. E. Conklin, in his "Picturesque Arizona," in writing upon this subject, says, "And, save the regret that the instrument of purchase did not record a section of country as far south as Guymas, which would have given us a port on the Gulf of California—a 'Golden Gate' to Arizona—the purchase is a satisfactory one." The boats do not start up the stream until the tide is nearly full, as a rifle three feet high is made where the tide and river waters meet, which is considered dangerous to the river boats. The flow of the tide also assists the steamers to ascend the stream. At the mouth of the river the highest tide rises and falls thirty-two feet, and lowest sixteen feet. The tide water line is about forty miles up the river. The river, from its mouth to Yuma, is very wide and crooked. The depth of water in the channel is from three to eight feet. The stream is highest in June, and lowest in December. It is replenished in the Summer seasons by melting snows from the Rocky Mountains, and drains an immense country, its tributaries extending into New Mexico, Colorado, Utah, Idaho and Wyoming. It is contemplated that the capital, which is now at Prescott, will be removed to Tucson, which point the road is expected to reach before the warm weather sets in.

THE VISIT OF QUEEN VICTORIA TO ITALY.

BAVENO, where Her Majesty Queen Victoria and the Princess Beatrice have gone to spend a month in quiet retirement, is a pretty little village of Italian Piedmont, situated almost on the confines of the frontier, and on the western shore of Lake Maggiore, at the head of a little bay, and nearly facing the well known Borromean Islands and "Isola Pescator," or Fisherman's Isle. There are some extensive quarries of granite in the neighborhood, while the snowy peaks of the Simplon range—the village being on the Simplon route—are clearly visible in the distance; but one of the attractions of the village is the ascent of Monte Motterone, which towers behind to the height of some 4,500 feet. The Villa Clara, where Her Majesty will reside during her stay, belongs to Mr. Charles Henfrey, and stands within grounds of great beauty between Baveno and Stresa, a little to the left of the village of Baveno. The building itself is of red brick, pointed and ornamented with a handsome clock-tower, and a wide loggia, or arcade. This runs the length of the house on the northeastern side, into which the sitting-rooms open, and from which there are splendid views of the lake and of the mountains which surround it. The interior is fitted up with great taste, Italian marble being quite a feature in the decoration. The chapel in the grounds was built entirely by Mr. Henfrey, for the use of the English visiting Baveno, and to which he appoints a chaplain during the Summer and Autumn months. It is built in the Lombardic style, being octagonal in shape, with an apse, the interior being rich with all that marble, stained glass, and color can give of beauty. The view from the garden of the Villa Clara looks across the lake to Tallanza and the "Isola Madre," belonging to the Borromean family, and includes the snowy peaks in the district of St. Gothard. Our illustrations give an admirable view of the place and its surroundings.

DEPARTURE OF THE MAPLESON COMPANY.

SATURDAY, the 4th instant, was a gala-day at the Inman wharf, in this city. The Mapleson operatic company were about to sail for Merrie England, and from an early hour the sweet singing-birds might be discerned sauntering leisurely towards the *City of Chester*, many of them engaged in humming snatches of those delicious arias which have so fascinated the New York public during the too brief stay of this talented troupe. As the hour for departure drew nigh, the crowd of well-wishers, desirous of saying *au revoir* and *bon voyage*, increased to an inconvenient extent; the decks of the *City of Chester* were crammed full, as were also the approaches to the gangway from the shore. Floral trophies and Brobdingnagian bouquets became thick as leaves in Vallombrosa, and as the bright particular stars appeared in the firmament, cheer followed cheer, hurra rapidly closed on hurra, while quite an ovation awaited the *impresario*, who was greeted *con amore*. Never have we seen Colonel Mapleson looking better, and as she clasped hand after hand of hundreds of anxious friends, it was with a cheery smile, having little of the *adieu* and all of the *au revoir* in it. Marie Roze was there with her genial husband, and many of the notables in the sweet world of music. A tug accompanied the *City of Chester* down the bay, and as the floating palace turned towards the East, three musical cheers arose from her decks, again and yet again repeated. Colonel Mapleson returns to us in the Fall accompanied by a galaxy of talent, including Gerster, Campanini, Galassi, and that most perfect of artistes, Trebelli Bettini.

"JEEMS PIPES" IN LONDON.

STEVE MASSETT has made quite a hit in his clever entertainment at the "Steinway Hall" in London. The fashionable journal, the *Morning Post*, speaks in the following complimentary manner of him:

"MR. STEPHEN MASSETT'S ENTERTAINMENTS AT STEINWAY HALL.—This gentleman has given three of his varied and amusing recitals or monologue evenings very successfully, and to large audiences, who appeared fully to appreciate his interesting programme. It was a brief evening among the poets, wits, song-writers and authors, the humorists and story-tellers, from whom he extracted the matter of which this *olla podrida* was composed. Mr. Massett's announcement that he would take the lecture-room at the Egyptian Hall was received with great applause."

Orange-culture in California.

ORANGE-growing in California has been assuming such dimensions as to make it doubtful whether in a few years it will pay to raise the fruit at all. Every landowner and settler in the neighborhood of Los Angeles is ambitious to have an orange grove: houses are surrounded by them, and they even border the streets. Many of the longer-headed cultivators of the ground are beginning to plant almond and walnut-trees, foreseeing a time when the market will be glutted with oranges. The success in raising bananas has not been very encouraging thus far, owing to the injury done to the young trees by the occasional night frosts. It is believed, however, that harm is to be fenced from the frosts only while the banana-trees are very young, and that if they can be nursed through their infancy, they will prove hardy enough to survive. Oranges, figs, almonds, olives, bananas—these are among the fruits produced by the wonderful Golden State, as well as the choicest grapes, fit for wine and raisin-making, and all the fruits of temperate climes in the greatest profusion and of the highest excellence.

The Population of British Towns.

THE Registrar-General has made his annual calculation of the population of twenty-three large towns of the United Kingdom. London heads the list, and its population, within the registration district, is stated as increasing from 3,577,304 in the middle of the year 1878 to 3,620,868 in the middle of 1879. Glasgow stands next, with an increase from 566,940 in the middle of 1878 to 578,156 in the middle of 1879. Liverpool shows an increase from 532,681 to 538,338; Manchester from 360,514 to 361,819, and its partner Salford from 170,251 to 177,849, making a total increase in the year from 530,765 to 539,668 for Manchester and Salford. Birmingham shows an increase from 383,117 to 388,884. Dublin is credited with 314,686 in both years. The increase stated for Leeds is from 304,948 to 311,860; Sheffield, from 289,537 to 297,138; Edinburgh, from 232,371 to 236,075; Bristol, from 206,419 to 209,947; Bradford, from 185,088 to 191,046; Nottingham, from 168,267 to 169,396; Newcastle-upon-Tyne, from 144,570 to 146,948; Hull, from 143,139 to 146,347; Portsmouth, from 129,461 to 131,821; Leicester, from 121,473 to 125,622; Sunderland, from 112,459 to 114,575; Oldham, from 107,366 to 111,318; Brighton, from 103,923 to 105,608; Norwich, from 84,620 to 85,222; Wolverhampton, from 74,340 to 75,100; Plymouth, from 73,593 to 74,293. The total increase in these twenty-three towns is from 8,373,363 souls in the middle of the year 1878 to 8,502,896 in the middle of 1879. It should be borne in mind that in some of these towns there has been a further increase, but, owing to its being beyond the municipal boundaries, it is not here included.

FUN.

NOW clean up the rubbish about your premises and dispose of it by tossing it over into your neighbor's yard.

"GOOD-MORNING, Mr. Brown, you're first at last; you used to be behind before, but I notice you have been getting early of late."

OLD LADY—"Ah, you bad boy, draggin' your little brother along like that! S'posin' you was to kill him?" *Bad Boy*—"Don't care. Got another indoors!"

GRANDDAUGHTER—"But you will go to the funeral of your old friend, grandpa?" *Octogenarian*—"Oh, I don't know. Don't talk to me o' funerals. Much as ever I shall be able to get to my own."

IN the room of a sick man: "You have suffered a good deal, my poor friend?" "I should think so. I have had pneumonia." "Why, where the deuce could that have come from?" "I looked for the word in the dictionary; it comes from the Greek."

NEW TRUSTEE: "Well, Mr. SYNTAX, you have a very fair school here." *Mr. S.*: "Yes, sir, the school's well enough, but the curriculum is defective." *New Trustee*: "What, the curriculum defective? We must see the architect at once about it, and have it raised a few feet higher."

A WESTERN boy thought his mother was praying overtime the other morning, and he said, "Oh, mother! there's a hawk over the hens." The old lady brought her devotions to a poultry standard of measurement in double-quick time, and sprang to her feet with "Amen! Out wid yees, Thomas, and save thim hins."

LADY (to French governess): "I am shocked to find that my daughter has been receiving letters in French from a young man." *Governess*—"Pardon, madame. It is only my little ruse to cheat mam'selle into study. When she would reply to an unknown lover—a Frenchman—mon Dieu, how quickly she will learn my language!"

TO ESTIMATE what a bridge will cost any city if it is done by contract: Take the highest figures presented by any engineer and multiply them by the length of the bridge in inches, point off two places, and then add enough to prosecute any one who has anything to do with handling the funds, and the result is—that the bridge is an obstruction to navigation.

AN art-critic, who has an unfortunate habit of occasionally indulging in more wine than his health demands, recently determined, one day after luncheon, to pay a professional visit to a private art collection. Arrived in the first room, he found himself opposite a large mirror. Mechanically he drew out his pocket-book and therein wrote, "No. 1—Study of a head; unnamed; an old toper. Fuddled condition excellently rendered; most likely a portrait. Seem to be acquainted with the original."

GHOSTS.

NOT Colonel Ingersoll's "aristocracy of the air," but real human ghosts. Ghosts that were once healthy men and women, but are now simply the "ghosts of what they once were." As we meet them and inquire the cause of all this change, they repeat the old, old story, "a cold," "neglected cough," "catarrh," "overwork," or "dyspepsia," "liver complaint," and "constipation," with unsuccessful physicians and remedies. In offering his Golden Medical Discovery and Pleasant Purgative Pellets for the cure of the above affections, Dr. Pierce does not recommend them as a "sure cure" *in all stages*. For if the lungs be half wasted away, or there be a cancerous complication, no physician or medicine can cure. The discovery is, however, an unequaled pectoral and blood-purifier. It speedily cures the most aggravated cough or cold, and in its early or middle stages, consumption. By correcting all irregularities of the stomach and liver, it really cures blotches, pimples, scrofulous ulcers, "bunches," or tumors. Hundreds testify that it has restored their health, after eminent physicians had failed. For constipation use the Pellets. As a local remedy for catarrh, use Dr. Sage's Catarrh Remedy.

THURBER'S RELIABLE CANNED GOODS.

GREAT progress has been made within a few years in the art of Preserving Fruits, Vegetables, Fish and Meats in tins, and in consequence the consumption has largely increased. As yet, however, canned goods are not generally thought to be "fresh," and some brands are not, perhaps, entitled to be so considered. Those packed by us, however, are Hermetically Sealed at the sources of supply, when they are in the best possible condition, by a process which preserves the much-to-be-desired fresh, natural flavors; and they are really in better condition, fresher, more palatable and wholesome than many so-called "fresh" articles which are exposed for sale during considerable periods of time in city markets. All goods bearing our name are guaranteed to be of superior quality, and dealers are authorized to refund the purchase price in any case where consumers have cause for dissatisfaction. It is, therefore, to the interest of both dealers and consumers to use THURBER'S BRANDS.

H. K. & F. B. THURBER & CO.,
Manufacturers of and Dealers in Food Products, New York.

CLEANSE and moisten the dry sticky mouth of patients and refresh them with Hop Bitters diluted with cool water.

THE PERFUME OF AN HEMISPHERE.—Throughout an area occupied by more than one hundred millions of civilized beings, MURRAY & LANMAN'S FLORIDA WATER is to-day the standard perfume in society.

INDIGESTION, DYSPEPSIA, nervous prostration, and all forms of general debility relieved by taking MERSMAN'S PEPTONIZED BEEF TONIC, the only preparation of beef containing its *entire nutritious properties*. It is not a mere stimulant like the extracts of beef, but contains blood-making, force-generating and life-sustaining properties; is invaluable in all enfeebled conditions, whether the result of exhaustion, nervous prostration, overwork, or acute disease; particularly if resulting from pulmonary complaints. CARWELL, HAZARD & Co., Proprietors, New York.

A TIMELY use of Hop Bitters will keep a whole family in robust health a year with but little cost.

Blair's Pills.—Great English Remedy for Gout and Rheumatism. All Druggists have them.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast-tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—See article in the *Civil Service Gazette*.

Sold only in soldered tins, labeled,

50 *Perfumed Bouquet, Snowflake, Lace* CARDS, 10c. Name in Gold & Jet. ELLA RAY, E. Wallingford, Ct.

Frank Leslie's
SUNDAY MAGAZINE
FOR MAY.

REV. CHARLES FORGE DEEMS, D.D., LL.D., Editor.

OPINIONS OF THE PRESS:

"This is the cheapest of all the magazines, and contains excellent reading for every member of the family, and full of pictures, which are a delight to all."—*South Churchman (Alex.) Va.*

"There is no better monthly magazine for the family issued in this country, having in each number so good a supply of healthful reading for persons of different ages, giving so large an amount at so little cost."—*Cumberland Presbyterian, Pa.*

"The illustrations in this number seem to be an improvement on those of former issues, if such a thing is possible, while the contents are as varied and interesting as ever. It would take more space than we can spare to enumerate the several articles, but they are all choice, very interesting and instructive."—*Albany (N. Y.) Sunday Press.*

"THE SUNDAY MAGAZINE is, as usual, far in advance of all the other periodicals. When we saw the April number we were reminded of the bright Spring days of sunlight and shower."—*The N. Y. Methodist.*

"The motto, 'Attractive, Useful and Interesting Reading for Everybody,' which adorns the cover of FRANK LESLIE'S SUNDAY MAGAZINE, is fully lived up to in the April number. Rev. Dr. Deems understands the art of making an attractive as well as able magazine, and has succeeded beyond a question of doubt in fulfilling his desire that it shall be worthy of a place in every American household."—*Orange (N. J.) Journal.*

CONTENTS OF MAY NUMBER:

DESCRIPTIVE ARTICLES: "The Ainos of Northern Japan," by William Elliot Griffis, 14 illustrations; "Culture," by Mrs. Elizabeth L. Brooks; "Gather the Fragments," by Rev. T. S. Adams, D.D.
